

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

ANTIDUMPING LEGISLATION.

In view of the general and widespread interest in proposed legislation to prevent what is popularly known as "dumping," the Bureau of Foreign and Domestic Commerce has prepared the following general statement on the legislation in Canada, South Africa, and Australia:

In Canada the antidumping law and regulations are made a part of the customs tariff and their administration a part of the work of the customs authorities. The customs tariff of 1907 contained the following provisions on this subject:

Sec. 6. In the case of articles exported to Canada of a class or kind made or produced in Canada, if the export or actual selling price to an importer in Canada be less than the fair market value of the same article when sold for home consumption in the usual and ordinary course in the country whence exported to Canada at the time of its exportation to Canada, there shall, in addition to the duties otherwise established, be levied, collected, and paid on such article, on its importation into Canada, a special duty (or dumping duty) equal to the difference between the said selling price of the article for export and the said fair market value thereof for home consumption; and such special duty (or dumping duty) shall be levied, collected, and paid on such article although it is not otherwise dutiable.

Provided, That the said special duty shall not exceed 15 per cent ad valorem in any case.

Provided also, That the following goods shall be exempt from such special duty, viz: (a) Goods whereon the duties otherwise established are equal to 50 per cent ad valorem; (b) goods of a class subject to excise duty in Canada; (c) sugar refined in the United Kingdom; (d) binder twine or twine for harvest binders manufactured from New Zealand hemp,istle, or tampico fiber, sisal grass, or sunn, or a mixture of any two or more of them, of single ply and measuring not exceeding 600 feet to the pound.

Provided further, That excise duties shall be disregarded in estimating the market value of goods for the purposes of special duty when the goods are entitled to entry under the British preferential tariff.

(2) "Export price" or "selling price" in this section shall be held to mean and include the exporter's price for the goods, exclusive of all charges thereon after their shipment from the place whence exported directly to Canada.

(3) If at any time it appears to the satisfaction of the Governor in Council, on a report from the Minister of Customs, that the payment of the special duty by this section provided for is being evaded by the shipment of goods on con-

shipment without sale prior to such shipment, the Governor in Council may in any case or class of cases authorize such action as is deemed necessary to collect on such goods or any of them the same special duty as if the goods had been sold to an importer in Canada prior to their shipment to Canada.

(4) If the full amount of any special duty of customs is not paid on goods imported, the customs entry thereof shall be amended and the deficiency paid upon the demand of the collector of customs.

(5) The Minister of Customs may make such regulations as are deemed necessary for carrying out the provisions of this section and for the enforcement thereof.

(6) Such regulations may provide for the temporary exemption from special duty of any article or class of articles, when it is established to the satisfaction of the Minister of Customs that such articles are not made or sold in Canada in substantial quantities and offered for sale to all purchasers on equal terms under like conditions, having regard to the custom and usage of trade.

(7) Such regulations may also provide for the exemption from special duty of any article when the difference between the fair market value and the selling price thereof to the importer as aforesaid amounts only to a small percentage of its fair market value.

From time to time since that date regulations by order in council and by the Department of Customs have been issued on the subject of special duty, or "dumping duty," as it is called. For some years the Canadian regulations provided that when it appeared from the invoice that the purchase price was more than $7\frac{1}{2}$ per cent (or 5 per cent in the case of some iron and steel products) lower than the fair market value, the dumping clause should be immediately applied. For certain products no exemption allowance at all was granted. New regulations were put in force on September 1, 1914. The dumping duty was made applicable in all cases when the difference between the fair market value and the selling price of the goods to the importer in Canada should exceed 5 per cent of their fair market value. The entire difference is taken into account for dumping duty purposes when exceeding 5 per cent. The dumping duty under the customs tariff applies, *without exemption allowance*, to articles of a class or kind made in Canada when admitted free of ordinary duty, and also to round rolled wire rods of iron or steel.

The amount of any advance in the market value of goods between the time of their purchase by the importer and the date of their exportation to Canada is not subject to dumping duty, provided the goods have been exported in the usual course and the actual date of purchase is established to the satisfaction of the collector of customs by contracts or other sufficient documents produced for his inspection and attested to. In computing the difference for customs-duty purposes between the "fair market value" in the country of export and the "selling price to the importer in Canada," the fair market value of goods is estimated on the usual credit basis, except when the article is universally sold in the country of export for cash only, in which case the fair market value is estimated on a cash basis. A bona fide discount for cash not exceeding $2\frac{1}{2}$ per cent, when allowed and deducted by the exporter on his invoice, may be allowed in estimating the fair market value of goods for duty purposes. For example, hats sold for home consumption in this country at \$100 on credit, subject to 7 per cent cash discount, would be liable to dumping duty if sold to a purchaser in Canada on usual credit at \$93, but would not be liable to dumping duty if sold to a purchaser in Canada for \$93 cash. Machinery sold for home consumption in this country at \$100 on credit, subject to $2\frac{1}{2}$ per cent cash discount, would not be liable to

dumping duty if sold to a purchaser in Canada for \$93 cash, as the difference does not exceed 5 per cent after raising the *cash* price (\$93) by 2½ per cent to its *credit* equivalent.

When the invoice shows that the purchase price is the same as the fair market value, but complaint is made or suspicion is aroused, a special agent of the Canadian Government makes investigation to ascertain the home market value. If the seller of the merchandise is in the United States, a special agent often goes to his place of business and asks to see his books, price lists, etc. The Customs Department of Canada has accumulated a considerable mass of information in regard to the prices of many classes of commodities and is often able to determine the fair market value of merchandise; but hearings are usually granted by the Commissioner of Customs to dissatisfied parties, and a special agent is sometimes sent to make additional investigations if there appears to be any ground for believing that the Customs Department has been misinformed as to the home market value of merchandise.

The Canadian law and the regulations under it were taken as a model for the antidumping clause which was introduced into the Underwood tariff bill for consideration in 1913. This section was included in the bill as it passed the House of Representatives, but was cut out in the Senate Committee on Finance.

In 1914, the Government of the Union of South Africa included an antidumping clause in its new tariff act. This clause, likewise, was modeled almost exactly after the Canadian clause. The South African act provides that in the case of goods imported of a class or kind made or produced in the union, if the export or actual selling price is less than the true current value of the same goods when sold for home consumption in the usual and ordinary course in the country from which they are exported, there may be collected, in addition to the duties otherwise prescribed, a dumping duty equal to the difference, which dumping duty shall not in any case exceed 15 per cent *ad valorem*.

The Australian Government as far back as 1906 enacted legislation against dumping. The Australian provisions are included in what is known as the Australian industries preservation act, which is the Australian law against monopoly and unfair competition in general. Under that act unfair competition has in all cases reference to competition with those Australian industries the preservation of which, in the opinion of the comptroller general or a justice, as the case may be, is advantageous to the Commonwealth, having due regard to the interests of producers, workers, and consumers. Competition is deemed to be unfair, unless the contrary is proved, if—

(a) Under ordinary circumstances of trade it would probably lead to the Australian goods being no longer produced or being withdrawn from the market or being sold at a loss unless produced at an inadequate remuneration for labor; or

(b) The means adopted by the person importing or selling the imported goods are, in the opinion of the comptroller general or a justice, as the case may be, unfair in the circumstances; or

(c) The competition would probably, or does in fact, result in an inadequate remuneration for labor in the Australian industry; or

(d) The competition would probably, or does in fact, result in creating any substantial disorganization in Australian industry or throwing workers out of employment; or

(e) The imported goods have been purchased abroad by or for the importer from the manufacturer, or some person acting for or in combination with him, or accounting to him, at prices greatly below their ordinary cost of production where produced or market price where purchased; or

(f) The imported goods are imported by or for the manufacturer, or some person acting for or in combination with him or accounting to him, and are being sold in Australia at a price which is less than gives the person importing or selling them a fair profit upon their fair foreign market value, or their fair selling value if sold in the country of production, together with all charges after shipment from the place whence the goods are exported directly to Australia (including customs duty).

In determining whether the competition is unfair the Australian Government takes into consideration the management, processes, the plant, and the machinery employed or adopted in the Australian industry affected by the competition, and these are required to be reasonably efficient, effective, and up to date. The Comptroller General, whenever he has received a complaint in writing and has reason to believe that any person, either singly or in combination with any other person, within or beyond the Commonwealth, is importing into Australia goods with the intent to destroy or injure any Australian industry by their sale or disposal within the Commonwealth in unfair competition with any Australian goods, may certify to the Government accordingly. In making such certification the Comptroller General is required to set forth in detail the grounds of unfairness in the competition.

The comptroller general, moreover, is required, before making his certificate, to give the importer an opportunity to show cause why the certificate should not be made, and to furnish him with a copy of the complaint. Upon receipt of the certificate the Government may refer to a justice the investigation and determination of the question whether the imported goods are being imported with the intent alleged, and, if so, whether the importation of the goods should be prohibited, either absolutely or subject to any specified conditions or restrictions or limitations. While such a question is the subject of investigation, the goods involved are not allowed to be imported, unless the importer gives a sufficient bond or other security. The courts, in such cases, are required to base their decisions on the substantial merits, without regard to legal forms or technicalities, or whether the evidence before them is in accordance with the law of evidence or not. The determination of the courts is final and conclusive and without appeal, and can not be questioned in any way. Notifications of the findings of the courts are required to be published in the official gazette, and if the courts shall have found that the imported goods are being imported with the intent alleged, and that their importation should be prohibited or restricted, the published notice has the same effect as a proclamation under the customs act prohibiting or restricting the importation of the merchandise.

It should be pointed out that while the Canadian and South African antidumping provisions are part of the customs laws, the special or antidumping duties are to be considered not as ordinary customs duties, but rather as penalties to prevent unfair competition with industries within the two dominions. They were included in the customs laws, and regulations under them are issued as customs regulations probably for the reason that the customs administration appears to be the most effective means of administering the antidump-

ing laws. Moreover, the question of fair market value is always involved, and that is a question with which the customs authorities, for regular duty purposes, are always having to deal. In Canada and South Africa the question of unfair competition is just as much involved as it is in Australia. In the latter Commonwealth, however, dumping is treated purely as a phase of the laws of unfair competition, and the administration of the antidumping legislation is intrusted primarily to the courts in the same manner as any other laws aiming at the prevention of unfair competition. The results are substantially the same under either system of administration, and it is merely a question as to the best means of enforcing the laws.

CALIFORNIA-BRAZIL TRAFFIC THROUGH CANAL.

A steamer which was recently sent by W. R. Grace & Co. from San Francisco, to proceed through the Panama Canal to the east coast of South America, is the first to be employed in traffic over that route. Plans have not yet been made for any service extending beyond this initial voyage. A miscellaneous cargo was loaded to be taken down the west coast as far as Balboa; the vessel will go through the canal in ballast, and a full cargo of Brazilian coffee will be brought from Santos on the return voyage.

Much interest has been shown in California in this voyage as a possible means of inaugurating regular service between the east coast of South America and the Pacific coast of the United States. Enthusiasm regarding the possibilities of trade relations has also been shown, it is reported by Commercial Agent E. G. Babbitt, of the United States Bureau of Foreign and Domestic Commerce, in connection with the important exhibit that Brazil has at the Panama-California Exposition at San Diego.

CONSULAR TRADE CONFERENCES.

John Edward Jones, Esq., formerly American consul general for Italy, recently promoted to Lyons, France, will be in Washington until about November 15, 1915, where he may be addressed in care of the Consular Bureau, Department of State, by American business men, firms, and organizations who desire information regarding the promotion of American trade with those sections of the world in which Mr. Jones has served.

ONTARIO NOTES SOLD IN NEW YORK.

[Consul Julius D. Dreher, Toronto, Canada, Sept. 24.]

The treasurer of Ontario has just borrowed in New York \$3,000,000 for 9 months at $4\frac{1}{2}$ per cent per annum to pay off maturing Ontario treasury bills at $4\frac{1}{2}$ per cent in London. This follows a loan of \$2,500,000 obtained in New York last week by the city of Toronto for 9 months at 5 per cent.

Telephone systems in China exist at Shanghai, Hongkong, Tientsin, Peking, Dairen, Mukden, Hankow, Soochow, Tsingtau, Kinkiang, Sanjoabu, Harbin, Antung, and Hangchow.

GREEK CURRANT MARKET.

[Consul A. B. Cooke, Patras, Sept. 4; supplementing dispatches in COMMERCE REPORTS for Sept. 4 and Sept. 9, 1915.]

Contrary to all forecasts, even those made as late as August 1, which predicted a rather larger harvest of currants than normal, the actual harvesting, which is now practically finished, seems to prove that the crop of 1915 will turn out hardly 130,000 tons of fruit altogether as compared with a normal of about 155,000 tons.

Quality of the Fruit.

The quality of the fruit, too, which promised during the summer to be good, proves with harvesting to be only medium. It appears that the disease of peronospora, which appeared in the vineyards in early summer in apparently mild form, actually caused poor nutrition of the fruit, with the result that much of it failed to mature, and fell off at ripening season. In addition, the fruit was caught by rains in several of the provinces while it was upon the drying grounds, and large quantities of it became rain-damaged, especially in the Pyrgos-Catacolo regions, from which Provincial and Amalias grades of currants are mostly shipped to the United States.

Condition of the Local Market.

Many of the local currant exporters made forward sales on the foreign markets, some as early as last May. These sales were practically all made at low figures, the merchants apparently calculating that with a large harvest predicted and with foreign markets restricted by European hostilities the market would be flat and prices nominal. In view of the short crop, however, the growers are holding back their fruit and demanding prices unknown on this market for many years. Merchants who have made forward sales for September delivery must find fruit to fill their foreign engagements and are compelled to buy at whatever price they can. Most of them supposed that they had covered themselves safely by contracts drawn with middlemen for delivery of fruit at an agreed price in September. Many middlemen, being unable to secure the fruit from growers except at great loss to themselves, have forfeited their contracts and left the exporters to fill their foreign engagements as best they may.

Prices Prevailing on Market.

To-day's prices, as given by two responsible export firms, are as follows, in shillings (24½ cents) per hundredweight (112 pounds):

	s.	d.		s.	d.
Provincials	21	4	Gulf	26	3
Amalias	21	5	Gulf fine	26	6
Amalias fine	22	5	Gulf choice	26	10
Amalias choice	23	3	Gulf choicest	27	0
Amalias choicest	24	0	Vostizza	27	3
Patras	24	10	Vostizza fine	27	9
Patras fine	25	8	Vostizza choice	29	0
Patras choice	26	6	Vostizza choicest	30	0
Patras choicest	26	9	Vostizza shade	30	6

These prices are higher by 5 to 8 shillings than the prices prevailing for same grades on October 1, 1914, when the local market had recovered from the shock of war, and had become fairly firm for 1914-15 crop.

GROWTH OF COOPERATION IN SCOTLAND.

[Consul Rufus Fleming, Edinburgh, Sept. 14.]

The report of the Scottish Cooperative Wholesale Society for the first half of the current year shows that the volume of business transacted was greater than in any corresponding period in the past. All records were broken. To some extent this was due to the higher market prices of goods, but in nearly every department the quantities of goods sold showed large increases. The net sales for the six months amounted to \$26,388,577, this being an increase of \$4,377,061 over the first six months of 1914, or 19.8 per cent.

In the productive departments the value of the output was \$8,652,705, an increase of \$2,109,141, or 32.2 per cent, over the corresponding period of the preceding year. The flour mills of the society flourished as never before. For the year ended June, 1915, they delivered to the retail societies 1,388,480 barrels, an increase of 169,596 barrels over the year ended June, 1914. The society has been milling wheat at the rate of fully 4,500,000 bushels per annum. This great quantity, based upon the average production of wheat in Canada (the source of supply), would require 250,000 acres to produce. The question of securing land for the production of their own wheat supply has been receiving the attention of the board of directors. Since the starting of their wheat depot at Winnipeg in 1906 they have purchased 17,194,556 bushels, for which \$17,725,180, exclusive of charges, has been paid.

The profits of the Wholesale Society on its entire trade for the past half year amounted to \$1,301,833, from which the directors have recommended a dividend of 10 pence (20.3 cents) per pound (\$4.86) on purchases.

No little importance is attached to the economic significance of this growth of cooperation in a time of stress. It seems to indicate an increasing tendency of the public to get as close as possible to the sources of supply, in the matter of food products at least, and affords clear evidence of the breaking down of the opposition to co-operative trading. Both as to the production and distribution of goods the cooperative movement is a positive force in Scotland, and the distributive societies and agencies are likely to become greater commercial factors year after year.

Census of Manufactures for Pocatello, Idaho.

The census of manufactures for the city of Pocatello, Idaho, is the subject to a preliminary statement issued by the United States Bureau of the Census, in which it gives a general summary for the industries of that city. The capital invested in 1914 amounted to \$2,213,000, and the value of the products totaled \$1,876,000. Other figures presented are: Number of establishments, 19; persons engaged in manufactures, 876; proprietors and firm members, 18; salaried employees, 76; wage earners (average number), 782; primary horsepower, 3,828; services, \$875,000; salaries, \$93,000; wages, \$782,000; materials, \$864,000; value added by manufacture (value of products less cost of materials), \$1,012,000.

DEPRESSION IN FAR EASTERN COAL TRADE.

[Consul General George E. Anderson, Hongkong, Aug. 19.]

One of the results in the Far East of the war in Europe has been extraordinary ups and downs in the coal trade, the export trade in Japanese coal and the demand for Japanese coal in Hongkong being considered general barometers of the trade. For a time after the declaration of war there was extraordinary demand for coal of all sorts in the Far East. Large stocks were accumulated at Hongkong and various other important shipping and industrial centers, and prices of the fuel ran high.

Later exports of coal from Japan were restricted by certain conditions imposed by the Japanese Government, Manila, and other Philippine ports especially being affected (see Daily Consular and Trade Reports for Nov. 23, 1914). For a time the situation in the Philippines was serious inasmuch as there was considerable doubt as to whether or not Philippine railways and power plants and other public services, not to mention great tobacco and other manufacturing establishments, could be properly served. The removal of these Japanese restrictions (see COMMERCE REPORTS for Jan. 6, 1915) served as the turning point in the general fuel situation. Since that time the price of fuel on the whole has declined materially and the demand for coal in Hongkong, Manila, and other Asiatic ports has steadily declined.

Of the coal coming to Hongkong around 80 per cent usually is brought under annual contract between the producers and the various steamship companies, dockyards, refineries, and other industries, the contracts usually being made in Japan or in the home ports of the companies concerned. Of the rest of the annual imports a few local industries take a large part. Even in these industries, however, consumption has been less than usual, while the amount of coal taken by the various shipping lines is far below normal. The result is that there are now on hand in Hongkong stocks of about 100,000 tons, as compared with a normal stock of from 45,000 to 50,000 tons. One-third of the present stock is of Kaiping or other Chinese coal, most of which is intended for Canton.

The regular shipment of Japanese coal to Hongkong by the largest Japanese coal interests ceased in the third week of July, and further shipments will not be undertaken until the situation is materially improved. Imports of Japanese coal in various Far Eastern ports have decreased from 30 to 50 per cent in the past few months.

Japanese collieries have announced a 20 per cent reduction in their output, but stocks on hand continue to increase, the latest newspaper figures indicating 546,000 tons on hand at the mines and 738,000 tons on hand in the Moji and Wakamatsu markets, a total of 1,284,000 tons, or at least 1,300,000 tons when stocks in other Japanese markets are included. Freight rates have had a material influence upon the situation, rates from Australia to Hongkong at present averaging about \$5 gold per ton. Rates from Moji to Hongkong, usually taken as the basic rates for all local freights in the Far East, have recently averaged 3 yen, or \$1.50 gold, per ton—substantially twice the usual rates. Such rates, of course, mean comparatively high rates for coal in Hongkong in spite of depression in the trade and overproduction in Japan.

CORRECTED FIGURES FOR ARGENTINE OIL OUTPUT.

[Consul General W. Henry Robertson, Buenos Aires, Aug. 13.]

The Argentine Minister of Agriculture states that the figures for the output of the Comodoro Rivadavia oil fields, published in La Nacion of Buenos Aires [which were reduced to American equivalents and published in COMMERCE REPORTS for May 27, 1915], were actually liters and not cubic meters, as stated in the newspaper article (1 cubic meter=1,000 liters). The correct figures are as follows, in barrels of 42 gallons:

Wells.	1909	1910	1911	1912	1913	1914	Jan. 1- Mar. 26, 1915.
	<i>Barrels.</i>	<i>Barrels.</i>	<i>Barrels.</i>	<i>Barrels.</i>	<i>Barrels.</i>	<i>Barrels.</i>	<i>Barrels.</i>
Number 2.....	11,784	714	422	6,801	2,380	20,786	8,353
Number 3.....	623						
Number 4.....	6,424	19,340	1,918		105,001	111,565	20,940
Number 7.....		609	10,781	28,004	8,045	15,512	3,649
Number 8.....				12,202	7,777	58,900	26,323
Number 9.....					5,286		
Number 11.....					1,844	17,738	3,667
Number 12.....						28,542	417
Number 13.....					95	17,524	4,151
Number 14.....						7,933	13,757
Number 15.....							4,078
Total.....	18,831	20,753	13,119	47,007	130,618	275,600	85,344

In 1907 and 1908 the only well working was No. 2, and the yield in the two years was 101 barrels and 11,472 barrels, respectively. The grand total of the output of all the wells from the commencement of extraction in 1907 to March 26 of the current year is 602,746 barrels.

CONDITIONS IN CANADIAN NORTHWEST.

[Consul Felix S. S. Johnson, Kingston, Ontario, Sept. 13.]

As a result of this year's harvesting operations, general business throughout western Canada is expected to show a pronounced improvement because of the money that the farmers will receive from the sale of their grain. This winter obligations are likely to be generally reduced, this applying not only to debts in connection with the purchase of implements, but to all outstanding liabilities. The farmers in western Canada are economizing to-day as never before, and will probably continue to do so for some time to come. At the same time there is a point beyond which economy can not pass, and necessary purchases will have to be made. Stocks of goods throughout the west have been seriously depleted, and these will have to be at least partly replaced to meet the needs of the coming winter. In consequence a gradual improvement may be expected in orders from dealers and sales to the people.

So far as the sale of implements is concerned, binders are practically the only article in demand. While the sale this year has been carefully restricted by importers, the need of these machines to cope with the big crop was so imperative that fully twice as many were sold as last year. Even under these circumstances the number disposed of was not as great as in 1910, 1911, or 1912, though the need for them is greater. Probably the number sold was about three-fourths of that in the years mentioned.

VINTAGE PROSPECTS IN EASTERN FRANCE.

[Consular Agent N. Chapuis, Dijon, France, Aug. 21.]

In the consular district of Lyon, the Departments of Côte d'Or, Saône et Loire, Jura, Doubs, and Haute-Saône are important wine-producing centers, and the situation in regard to the 1915 crop may be summed up as follows:

Considerable damage has been done to the vines in the Department of Côte d'Or by mildew and various plant diseases, which has been aggravated still further by the lack of labor and chemicals with which the damage might have been repaired in time. Excessive rain and premature cold have also impaired the prospects of a full crop. Nevertheless, the percentage of a normal crop may be taken at 80 per cent for ordinary table wine and at 40 per cent for better classes. The harvesting will be in full progress on or about September 15, and the quality will be good. However, prices are already from 30 to 40 per cent above those of last year and are still increasing.

In the Department of Saône et Loire the average for the entire Department will be about 55 per cent of the normal crop, while in the Department of Jura, where plant disease was attacked in proper time and where there was no shortage of labor, the crop will be about equal to that of normal years.

Heavy rainfall and premature cold are the main reasons for the crop in the Department of Doubs being only 20 per cent of that in ordinary times, while mildew accounts for a loss of 50 per cent for the crop in the Department of Haute-Saône.

To sum up the prospects for the five departments for 1915, it may be said that they will amount to about 50 per cent of that in normal times, and the prices will be 40 per cent higher.

REDUCED EXPORTS OF COAL FROM NAGASAKI AND MOJI.

[Consul E. Carleton Baker, Nagasaki, Japan, Aug. 16.]

There has been a marked decrease in the exportation of coal this year from the ports of Nagasaki and Moji. During the six months ended June 30, 1914, the combined exports of coal from these two places amounted to 604,695 tons, while those for the corresponding period of 1915 amounted to only 277,215 tons. Not only were the exports less, but the coal supplied to foreign vessels has decreased in almost the same ratio.

Collieries have, therefore, limited their output to meet the new conditions. In spite of this, however, the markets are greatly overstocked. The collieries have a large stock of coal which they are unable to dispose of, and considerable stocks have accumulated not only at Nagasaki, Moji, and Wakamatsu, but also at Hongkong, where the surplus is greater than ever before. It is estimated that the amount of coal already stocked at these places exceeds one and a quarter million tons.

The intense competition lately offered in South China by dealers in Chinese coal has probably affected the situation to a certain degree, and it is likely that this factor will become increasingly important from year to year as the Chinese develop their own coal fields.

SOUTH ASIA FREIGHT RATES.

[Consul General George E. Anderson, Hongkong, Aug. 14.]

While there has been a temporary easing up in the demand for tonnage from Hongkong to the Pacific coast of the United States, the demand for tonnage on most other routes continues with little or no abatement and on some routes it is stronger than ever. The demand for freight space from Hongkong to the Philippines and to Australia is very strong and the shortage of accommodations has seriously interfered with some lines of trade. On the run from Japan to Australia by way of Hongkong the demand for tonnage is greater than anything of the sort ever experienced in the trade. This traffic is largely in the control of Japanese companies, though an English company maintains a regular service with the same vessels it ran previous to the war. The Japanese concerns have increased the number of vessels regularly in the service materially, the Nippon Yusen Kaisha, which formerly had the *Tango Maru*, the *Hitachi Maru*, and the *Nikko Maru* in the service, now also maintaining the *Totomi Maru* and the *Tientsin Maru* on the same run and preparing to take other vessels from other services. Japanese cargo for Australia includes considerable grain, phosphates, and cement, as well as silk and other piece goods, matches, furniture, and other goods of ordinary Japanese export.

Freights along the China coast have risen in an unprecedented manner and are at a point which materially influences trade in American flour. A number of vessels which formerly served the Hongkong trade north and to Formosa are now in the Hongkong-Saigon-Singapore trade. Rates on rice from Bangkok to Hongkong, which were 25 cents local currency per picul (133½ pounds) in the fall of 1913, and 22 cents in June, 1914, are now from 45 to 51 cents local currency per picul, according to the course of the market recently. Rates from Saigon to Hongkong, which in June were 19 cents per picul as a normal rate, and fell to 14 cents per picul in June, 1914, are now from 36 to 40 cents per picul. A ship of around 1,300 tons net now charters for around \$15 local currency per ton per month, as compared with about \$7 local currency per ton a year ago. There is a strong demand for shipping for service along the south Asiatic coast, and a number of vessels have been purchased from other services for use along the coast, including several out-of-date mail boats. Ship building concerns in Hongkong have in hand quite a number of vessels for local services hereabouts, including a steamship intended for the cold-storage trade between Singapore and Bangkok.

CUBAN GOVERNMENT ISSUES HANDBOOK.

"Cuba: What she has to offer to the Investor or the Home-seeker," is the title of a 73-page, finely illustrated booklet recently issued by the Cuban Government. It contains valuable information concerning the island's resources, industries, railways, cities, etc. Copies may be had on application to the "Minister of Cuba, Washington, D. C."

MARKET FOR AMERICAN TOYS IN SCOTLAND.

[Consul H. D. Van Sant, Dunfermline, Sept. 2.]

The attention of American toy manufacturers is directed to the depleted stock of toys in Scotland, with the idea of introducing a new supply of American toys for the holiday trade if practicable.

The heretofore large stock of European toys seemed to command the Scottish market, some shops dealing exclusively in them, though the English, American, and Japanese were securing a share of the trade. A leading toy dealer explained that owing to the war many British toy dealers and makers are giving attention to more important matters, and "now that the stock is almost exhausted and much space for new and varied toys could be found, there should be a much increased demand for American toys under these reverse conditions, provided they could be sent in time for the Christmas trade, not forgetting the right assortment at prices to meet the times." This dealer has already sent in an order for American toy express wagons at our suggestion along with other orders, and hopes to get this first order on hand for Christmas. Animals and dolls especially were conspicuous by their absence from the various shops visited. Like conditions in different parts of the district leads the writer to suggest that Scotland might be canvassed to advantage in the interest of American toys.

Toys from the United States are said to be higher in price than others, yet the novelty, durability, and finish of the American toy is usually a drawing card. All things being equal, especially under present conditions, the toys from the United States should easily take first place until at least the home trade is ready to supply a larger share of the demand. Once established, the trade is likely to remain to a greater or less degree, as the Scotch do not easily change after a permanent trade is established.

HARVARD EXPEDITION REACHES CANARIES.

[Consul George K. Stiles, Tenerife, Aug. 16.]

The Kitty A West African Islands Expedition which left Newport, R. I., on June 29 in the 22-ton schooner yacht *Kitty A*, reached the port of Tenerife on the morning of August 15 with all on board well. The yacht is owned and commanded by Henry R. Amory, a graduate of Harvard University. He has put his vessel at the disposal of the expedition, which is aimed to collect rare species of birds and to investigate the races of value to ethnological science.

Prof. Charles W. Furlong, the writer-explorer on ethnology, will make special efforts to gather information relating not only to the Guanches, the primitive people of the Canaries, but also in relation to the present inhabitants and to complete his ethnic studies among the North Africans along the same lines as his previous work among the inhabitants of Tierra del Fuego and other little-known sections of South America.

Dr. William G. Erving, the naturalist of the expedition, made daring trips through North Africa, including a canoe journey on the Nile from Khartum to Alexandria. He was also a member of the Bigham expedition in Peru.

MAKES INVESTIGATION OF MANILA ENVELOPES.

The cause of deterioration in samples of manila envelopes submitted for examination by the Panama Canal has been found by the Bureau of Standards, with the result that the manufacturer whose product was under investigation will be assisted by the bureau in obtaining a substitute for the material that was objectionable.

The samples received from the Panama Canal were faulty in the fact that the adhesive had absolutely disappeared, and had left the paper brittle and lifeless where it had been applied. The Bureau of Standards found that sulphuric acid had been used in the manufacture of the adhesive. The contractor who had furnished the envelopes to the Government was informed of this fact, and admitted that sulphuric acid had been used as a preservative, and with the intention of making the adhesive "take hold" on the paper.

The bureau suggested that a preservative could doubtless be found that would not be injurious either to the adhesive or to the paper, and the manufacturer has submitted samples of adhesive and paper for test. These are now being examined.

LANGUAGE TEST OF SEAMEN'S ACT EXPLAINED.

The requirement in the seamen's act establishing a language test to be applied to 75 per cent of the crew of any vessel of 100 tons gross and upward, except those navigating rivers exclusively and the smaller inland lakes, is the subject of a circular issued through the Bureau of Navigation by Secretary of Commerce William C. Redfield, who states the interpretation placed upon the language of the act by the Department of Commerce.

The requirement that the stated proportion of the crew shall be able to understand any order given by the officers of the vessel is construed to mean the necessary orders that may be given to members of the crew in each department in the course of the performance of their duties. No particular language is understood to be required.

The department holds that among the duties to which this applies shall be included lifeboat work or emergency work for such members of the crew as may be called upon to perform these classes of work.

AMERICAN PRODUCTS IN PORTUGAL.

[Consul General W. L. Lowrie, Lisbon, Sept. 1.]

Imports into Portugal from the United States in July held second place in value, aggregating \$737,000, as compared with \$1,807,632 from England. Other sources were as follows: Argentina, \$11,040; Brazil, \$31,076; France, \$92,189; Holland, \$230,486; Italy, \$13,000; Norway, \$269,432; Sweden, \$24,864.

It is certain that a considerable part of the goods credited to England originated in the United States. One of the leading commercial papers of Portugal comments on the excellent showing of the United States.

During the month 200 cargo ships entered the harbor of Lisbon, including 1 American steamer with oil and 2 American schooners laden with American coal. Since January 1, 11 ships flying the American flag have entered and cleared Lisbon.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Iron pipes, etc., No. 18409.—An American consular officer in Brazil submits a list of articles used by one of the departments in that country, which may be of interest to manufacturers in the United States. Further information may be obtained from the Bureau or its branch offices. (Refer to file No. 66048.)

Ice machine, No. 18500.—A letter to the Bureau states that a man in Porto Rico wishes to purchase a second-hand ice machine capable of making 5,000 pounds of ice per day of 12 hours.

Stoves, No. 18501.—A report from an American consular officer in France states that a firm desires to receive quotations from American manufacturers of petrol heating stoves of all classes, ordinary and blue flame, and kitchen petrol and gas stoves, ordinary and blue flame. Quotations must be c. i. f. port of delivery; cash against documents.

Copper tubes, drilling machines, etc., No. 18502.—A commercial attaché of the Department of Commerce reports that an American consular agent in Spain has requested the names of firms in the United States able to supply copper tubes, planing, drilling, and punching machines, bending rolls, woodworking machines, electric motors, and automatic tools.

Sewing thread, No. 18503.—An American consular officer in the Far East reports that a firm in his district states there is a large market for sewing thread in black and white; Nos. 8, 9, and 10 on wooden spools, containing 200 yards, and Nos. 30, 40, and 50 on wooden spools, containing 500 yards; one dozen spools to be packed in a card box and 25 gross per case. The spools must be marked at one end with firm's trade-mark, for which the necessary sketch would be supplied. Bank references given.

Vegetable dyes, No. 18504.—An American consular officer in France reports that a firm wishes to purchase large quantities of vegetable dyes and coloring matter extracted from woods. It is also interested in industrial chemical products used in spinning, weaving, and tanning.

Pencils, No. 18505.—An American consular officer in Spain reports that a firm is in the market for indelible pencils. Correspondence should be in Spanish and the prices clearly stated in order to facilitate the purchase. Cash will be paid against documents in Spain.

Wheat flour, iron and steel, etc., No. 18506.—The Bureau is advised that a man in Brazil desires to represent American manufacturers of wheat flour, iron and steel bars, brass wire for fencing, zinc roofing, and codfish, etc. References given.

Machinery, No. 18507.—A commercial attaché of the Department of Commerce reports that a firm in Russia desires to be placed in touch with manufacturers of machinery necessary for the equipment of a pencil-manufacturing plant. The production required will be 2,000 gross pencils per day and 200 gross penholders.

General representation, No. 18508.—The Bureau is in receipt of a letter from a man in France stating that he would like to represent American manufacturers or exporters. Correspondence should be in French. He does not specify any particular line.

Jute thread, No. 18509.—An American consular officer in Brazil reports that a firm in his district desires to import jute thread for the manufacture of bags for cereal. It is stated that 50 tons will be required per year in monthly shipments. The quantities are desired in equal parts of Nos. 7 and 8. Prices and samples are requested. References given.

Trade journals, No. 18510.—The Bureau is in receipt of a letter from a man in Canada requesting names of the principal trade papers devoted to the fancy-goods trade, toys, and earthenware. The man wishes to secure an agency for these lines.

- Buttons, No. 18511.**—A report from a commercial attaché of the Department of Commerce states that a firm in Russia desires to correspond with American manufacturers of snap buttons, such as are used on women's garments and gloves.
- General representation, No. 18512.**—The Bureau is in receipt of a letter from a man in the Netherlands stating that he wishes to represent American exporters. No particular line is mentioned.
- Wire, No. 18513.**—An American consular officer in England reports that a firm in his district is in the market for weaving wire similar to the sample which may be examined at the Bureau or its branch offices. (Refer to File No. 65385.)
- Thread, No. 18514.**—A machine company in New Zealand informs an American consular officer that it is in the market for thread to be used in the manufacture of boots and shoes. Catalogues, price lists, samples, etc., should be sent at once.
- Flour, No. 18515.**—An American consular officer in the Netherlands reports that a business man in his district desires to act as commission agent for American manufacturers and exporters of flour, the agency to become effective at the conclusion of the war. Correspondence may be in English. References are given.
- Celluloid, No. 18516.**—A business man in Italy has requested an American consular officer to put him in touch with American manufacturers and exporters of celluloid in sheets—white, colored, and transparent. He desires to act as an agent. References are given. Correspondence should be in Italian or French.
- Haberdashery, No. 18517.**—An American consular officer in Greece writes that a business man in his district desires to communicate with American manufacturers and exporters of general lines of haberdashery. Correspondence is preferred in French, but English may be used. Catalogues, samples, etc., are desired.
- Tools, No. 18518.**—A school official in Siberia has written an American consular officer requesting catalogues, price lists, and full information relative to tools for locksmiths, tinsmiths, blacksmiths, carpenters, coopers, and bookbinders. The tools are to be used for educational purposes. In forwarding catalogues, etc., the conditions of sale and probable date of delivery should be indicated. Correspondence should be in Russian language.
- Cabinet hardware, No. 18519.**—An American consular officer in England transmits the names and addresses of a number of firms and business men in his district, stating that they desire to communicate with American manufacturers and exporters of hinges, catches, and other fittings for the cabinet-case trade.
- Pumps, No. 18520.**—An American consular officer in Burma reports a possible opportunity for the sale of pumps. He transmits the names and addresses of three firms which desire to receive catalogues and full information relative to pumps.
- Pharmaceutical products, No. 18521.**—A business man in Italy informs an American consular officer that he desires to represent American producers and exporters of alkaloids derived from opium, and other pharmaceutical products. Payment will be made against shipping documents in foreign ports. Correspondence should be in Italian or French. Prices should be stated in lire of francs. References are given.
- Corks, bottles, air-compressors, etc., No. 18522.**—An American consular officer in South Africa transmits the name of a business man in his district who desires to represent American manufacturers and exporters of goods to be used in the mineral and aerated water trade, such as steel boxes used in shipping, corks, bottles, air-compressors, gas-cylinders, and stills, etc. Catalogues and illustrated literature should be sent at once. Correspondence may be in English.
- Cotton goods, No. 18523.**—A firm in India writes an American consular officer that it desires to communicate with American manufacturers and exporters of cotton goods.

COOPERATIVE CLUBS FOR PURCHASE OF AMERICAN PRODUCTS.

[Consul William J. Grace, Aden, Arabia, June 25.]

At various times this consulate has received complaints from merchants arising from the alleged inattention given to their orders by American manufacturers. It is true that the orders have usually been small. However, the American manufacturer apparently fails to realize that these small orders create a demand for American products and thereby lead to larger ones and often to an enormous trade in a particular article.

The American cotton-piece-goods trade in the Near East started in a small way, by bartering cotton piece goods with the natives for the products of the countries bordering on the Red Sea and Indian Ocean, and one of the largest markets in the world for American cotton piece goods was thereby created.

In order to obviate some of the difficulties arising from small and miscellaneous orders, this consulate suggests the organization by American manufacturers, with the assistance of American consuls, of cooperative-purchasing clubs throughout the East, South America, and Europe (if the plan be feasible in Europe).

Organization Would Stimulate Interest and Create Mutual Advantages.

A special discount could be given these clubs on purchases made through the organization. A coupon issued by the secretary of the club, showing the merchant to be a member, would bring this discount. Catalogues and advertising matter could be sent to these clubs and in this case the merchants would undoubtedly consult them, although they might not take the trouble to read similar catalogues at an American consulate. Other attractive features could be added as the plans for the clubs develop. Such a club, belonging to the merchants, would interest them more than any outside agency.

As to purchases made through clubs, the questions of credit and payment could easily be worked out in a way satisfactory to the buyer and the seller, once the plan proposed be decided upon. The clubs would also furnish a forum where representatives of American manufacturers could set forth the merits and benefits of American products.

If this proposition interests American manufacturers, the writer will be pleased to assist in every way in working out a practicable plan for the organization of such clubs.

STONE INCOME NEARLY EIGHTY MILLION DOLLARS.

The value of the stone produced in the United States during 1914 totaled \$77,412,292. The Geological Survey statistics give \$20,028,919 as the value of granite; "trap rock," \$7,865,998; marble, \$8,121,412; common limestone, \$33,894,155; sandstone, \$7,501,808.

Exports of stone fluctuate, but have risen considerably, the value being \$209,587 in 1900 and \$1,363,242 in 1914, of which \$982,102 went to Canada, the largest market. The next largest purchasers are Cuba, Russia, Australia, Great Britain, Panama, Germany, and Mexico.

Imports of stone show little variation from \$1,500,000 annually. The leading item is marble from Italy—\$1,127,139 worth in 1914, or a reduction of 17 per cent from 1913, due to the war and labor troubles in the Carrara quarries.

THE COFFEE TRADE AT AMSTERDAM.

[Consul Frank W. Mahlin, Amsterdam, Netherlands, Sept. 2.]

According to information from importers of coffee in Amsterdam, the stock in this city on August 31 was 315,314 bags. The stock at the corresponding date of 1914 was 490,186; of 1913, 184,180; of 1912, 217,690. These figures represent approximately three-fourths of the entire stock of coffee in the Netherlands, excluding, of course, supplies with retailers and consumers.

About 40 per cent of the present stock is Brazilian coffee, 15 per cent Java, and the rest from various parts of the world. The price of good Java is 20 American cents and of superior Brazil 18 cents, an increase of $3\frac{1}{2}$ cents for Java and of 4 cents for Brazil as compared with the corresponding period of 1914.

The arrivals of coffee at Amsterdam in August this year amounted to 154,941 bags, compared with 20,263, 30,599, and 34,173 bags in August of 1914, 1913, and 1912, respectively. During the first eight months of this year the total arrivals at Amsterdam amounted to 2,210,059 bags, against 618,965, 314,313, and 375,985 in the corresponding periods of 1914, 1913, and 1912, respectively. The figures for the deliveries are much the same as those for the arrivals.

Census of Manufactures in Fargo, N. Dak.

The 1915 census of manufactures for the city of Fargo, N. Dak., on which a preliminary statement has been issued by the United States Bureau of the Census, shows that the capital invested increased 43 per cent, from \$2,077,000 to \$2,970,000, in the period from 1909 to 1914. The number of establishments increased from 61 to 76, and the average capital per establishment from \$34,000 to \$39,000. Increases in other items were: Primary horsepower, 61.5 per cent; wages, 37.5; wage earners, 35.1; materials, 23.5; value of products, 21.4; value added by manufacture, 18.6; and salaries, 10.4 per cent.

TESTS MADE FOR VARIATIONS IN CLOTH TAPES.

Tests to determine just what degree of accuracy may be expected in the use of cloth tapes as compared with steel tapes were recently made by the Bureau of Standards. The conclusion is reached that unless the cloth tape is frequently compared with a steel tape while in use it should not be relied upon to possess an accuracy better than 1 part in 500 or 1,000.

The investigation was conducted in connection with a test of 90 cloth tapes for the Department of Commerce with the object of learning some of the variations likely to be encountered with such tapes. They were found to be accurately graduated for a 100-foot interval when under a 2-pound tension within 0.5 inch. An increase of 1 pound in tension lengthened the tape 0.3 inch, as a rule, in 100-foot intervals. A 100-foot tape under 5-pound tension for five minutes increased the length of the tape at that tension by about 0.3 inch.

Upon stretching a tape under an 8-pound tension for 10 minutes and then reducing the tension to 2 pounds (the tension of the first measurements), a 100-foot interval was found to have increased 0.9 inch over its original length at 2 pounds. While part of this increase was temporary, with each stretching of the tape at a tension higher than the usual 2 or 5 pounds the tape becomes gradually longer.

The Bureau of Standards learns from these experiments that even with extreme care in the use of such tapes, as it is difficult without the use of a spring balance to judge of the tension being applied to a tape, it is inadvisable to expect an accuracy greater than one part in 2,500, while for ordinary use the variation is as given above.

GOVERNMENT AIDS IN TESTS OF INGOTS.

Representatives of the United States Bureau of Standards have been assisting in the securing of data regarding 100 tons of Hadfield ingots acquired by an Eastern railroad, which were rolled at a near-by steelworks, and also a companion lot of Maryland ingots. The bureau, in cooperation with these concerns, is making a study of the properties of the rails rolled, and an examination of representative ingots and of blooms. Valuable information as to the relative properties of the two types of ingot is expected.

The Bureau of Standards has also continued its test ingot research, to determine to what extent the presence of blowholes should cause rejection of samples.

The bureau, in its monthly report, states that the use of the plant of a Maryland steel company for experimental purposes is of great value to the bureau, as it permits the taking of observations under actual manufacturing conditions and on a scale that would otherwise be impossible. Among the experiments conducted at the plant were those to determine whether it is possible to control the operation of the Bessemer, open-hearth, and other furnaces by aid of the pyrometer.

Chinese chambers of commerce exist in New York, San Francisco, and Manila.

FRICTION-TOP CANS FOR AMERICAN CANDIES.

[Commercial Attaché Julian H. Arnold, Peking, China., Aug. 13.]

A report from our consul general at Yokohama, Japan, directs the attention of manufacturers of candies, who are desirous of securing markets abroad for their products, to the necessity of having these candies packed in tin boxes after the individual pieces have been wrapped in tin foil. This office wishes to add that the friction-top can is used extensively for this purpose, and lends itself well to the handling necessitated when being used by those who purchase the candies for their own consumption, for the friction top allows a can to be opened and closed in a manner so as to preserve the contents from the disastrous results of the warm summer in the Orient. It has been suggested by this office in previous communications that the American producers of dried fruits use the friction-topped tin container for high-class goods, especially such fruits as California dried prunes, which find an increasingly large sale in the Oriental markets. Cans may also be used advantageously for packing American crackers and biscuits, as these are very susceptible to the humidity of the climate in the Far East. It would seem that American candies, especially on account of their superior quality, would find a market throughout the east if they were shipped in small tin boxes or cans with a layer of paper shavings at the top and bottom. As pointed out by our consul general at Yokohama, small-sized containers should be used in order to prevent the candy from being crushed in transportation by the weight of the layers placed one above the other.

CANADIAN BOND SALES SINCE THE WAR.

[Consul General John G. Foster, Ottawa, Sept. 22.]

According to a published statement, the Dominion Securities Corporation, Toronto, has compiled and forwarded to Ottawa a report of Canadian securities sold between August 1, 1914, and August 15, 1915. The total given is \$232,198,282. Since the date covered in this statement the city of Ottawa has sold about \$3,000,000 additional, and it is understood that the city of Montreal is preparing to do somewhat extensive borrowing in the United States.

Canadian securities sold.

Nature of securities.	Sold in United States.	Sold in Great Britain.	Sold in Canada.
Government issues	\$73,325,000	\$24,333,333	\$7,450,000
Municipal issues	31,306,079		30,019,905
Railway issues	28,190,000	20,610,332	
Public service corporations	13,920,000	15,000	125,000
Industrial and miscellaneous issues			750,000
Unspecified issues		1,433,333	630,300
Total	146,831,079	46,361,995	34,075,205

CONSULAR TRADE CONFERENCES.

Mr. Albert G. Ebert, American vice consul at Montevideo, Uruguay, is in the United States on leave of absence and may be addressed in care of the Consular Bureau, Department of State, by those who desire to consult him in regard to the extension of trade between the United States and Uruguay.

PALM AND PALM-KERNEL OIL INDUSTRY.

[Consul William J. Yerby, Dakar, Senegal, Aug. 9.]

The value, extent, and importance of the palm and palm-kernel oil industry of West Africa is but faintly realized by persons other than those directly interested in the trade. The amount of oil annually exported from British West Africa alone is now probably about 110,000 tons, and of kernels, 220,000 tons.

The palm tree from which the palm fruit is obtained is indigenous, and grows in enormous quantities on the West Coast, the area extending from 300 to 400 miles back into the interior. It is most prolific from the Kongo to French Guinea, the territory included embracing the Belgian and French Kongo, the Cameroons, Southern Nigeria, Dahomey, Togoland, the Gold Coast, the Ivory Coast, Liberia, Sierra Leone, and a part of French and Portuguese Guinea. The trees are about 30 feet or more in height. They begin to bear in the third or fourth year, being then only 12 to 15 feet high. Each tree bears, after it is 6 or 8 years old, as many as seven or eight cones of fruit, and in the fully matured trees the yield is often larger.

Plucking the Cones—Character of the Fruit—Prices.

As the cones are usually very high on the tree, it is necessary to exercise some care in plucking them. In this the natives have become expert, climbing with ease the tall, straight trunks of the trees and cutting down the cones with sharp knives or cutlasses. When the fruit is detached from the cones it consists of a soft, fibrous outer covering or pericarp, which contains the thick, orange-red palm oil, and the inner hard part or palm nut, which, when the hard covering or shell is cracked and removed, yields the palm kernel, a hard, white, nutty body still covered with a thin brown or blackish coat. The kernel contains about 50 per cent of palm-kernel oil, which differs from the palm oil in quality and uses, and is more valuable.

The average price in Liverpool for kernels during the months preceding the war was about \$100 per ton; the average during the six months after the war was about \$86 per ton; while the price on March 2, 1915, was \$95 per ton, and on June 1, 1915, \$75 per ton. The average price paid for palm oil in Liverpool just before the war was \$145 to \$150. Lagos palm oil was \$176 to \$180 per ton on March 12, 1915, and on June 1, 1915, \$140 per ton. Lagos palm kernels were \$93 to \$96 per ton on March 12, 1915, and on June 1, 1915, \$75 per ton.

The pericarp usually holds about 60 per cent of its weight in oil, and as this pericarp is approximately 40 per cent of the whole fruit, the amount of palm oil in the fruit is somewhere in the neighborhood of 24 per cent.

Extraction by Machinery—Opportunity for Invention.

There is practically no cultivation of the trees beyond allowing them to grow and gathering the cones of nuts so that others may take their places. All the work connected with hulling the nuts and extracting the oil from pericarp and kernels is crudely done. The fruit is usually first boiled and then placed in a mortar and pounded until practically all the fiber is off the nut, when the oil, together with the fiber, is again boiled and the oil collected upon the top of the water. Some pound the fruit in the mortar, then boil it, and

collect the oil on the top of the water. This latter is called by the natives soap palm oil, being shipped to Europe principally for manufacturing soap.

After practically all the fiber has been removed by being pounded in the mortar, the nuts are spread out in the sun to dry, that they may be more easily cracked for the kernels. The natives sit about on the ground with a stone between their legs, breaking away the outer shell with another stone or iron hammer—200 natives doing the work in one day that one machine might do. Some palm-kernel oil is also made by the natives roasting the kernels and then boiling them. It would appear that some one of inventive mind might contrive a machine to hull or remove the pericarp of the nuts, and then after they are dried crack the shells and remove them from the kernels.

The attention of engineers (chiefly, perhaps, in Germany) has been turned for some years to the subject of extracting palm oil and palm-kernel oil by machinery in West Africa, with the result that there are now on the market several machines which, it is claimed, are capable of dealing with very large quantities of the fruit. It is considered probable that the next few years will see a large number of them set to work and many factories established in West Africa, not only for extracting the palm oil but for shelling the nuts and obtaining the kernel oil, this latter having up to the present been done almost exclusively in Europe. Many concessions have already been granted by the governments of the British colonies giving exclusive rights in certain prescribed territories for the manufacture of palm oil and palm-kernel oil by machinery; but it appears that these have met with little practical success, except perhaps in the manufacture of palm oil.

The machine in demand is one that will first remove the fibrous pericarp from the fruit, then crack and remove the shell covering the kernel. After this the extraction of the oil from the fiber and that from the kernel by means of compresses would be an easy matter. For many years hand nut-cracking machines have been in use in Nigeria and elsewhere, but these have not proved a success and have been for operation on a small scale. It is with much larger, power-driven machines, capable of outputs of 100 tons or more of oil per week, that future developments may be expected. Yet small machines capable of removing the pericarps and successfully cracking and removing the shells of the kernels would be in great demand.

The Question of Transport—Future of the Industry.

The only bars to the widespread development of the palm-oil industry in West Africa at present are the difficulty just mentioned and the problem of transport from some of the best palm districts. The transport problem will not be overcome until much of the country is opened up. Steady progress toward this goal was, however, being made up to the beginning of the war. But there are very large palm-bearing areas not far from the coast and on the verge of wide navigable rivers where the transporting of the oil for shipment involves no great difficulty or expense, and it is in these districts that the first steps will be taken on a large scale.

When it is remembered that palm oil will bring normally about \$150 and kernels \$100 per ton in Europe, and that on a moderately

large scale the oil could be delivered in Liverpool far under \$100 per ton and the kernels far less than \$75 per ton, including absolutely all charges, with guaranteed cost of production, it is not difficult to understand that future developments may be rapid and may have an important bearing on the general prospects of West African trade.

The palm and palm-kernel oil industry of West Africa bids fair to rival the cottonseed-oil industry of America. It is only waiting for improved methods in cultivation and preparation for the market. The greater part of the oil and nuts has been shipped to England and Germany, to be used in the manufacture of soaps, candles, lubricating oils, oleomargarines, etc. Much of the oil, however, is used in cooking and for salads.

Value of Exports.

The following table shows the value of West African exports of kernels and oil for the last three years:

Colonies.	1912		1913		1914	
	Palm kernels.	Palm oil.	Palm kernels.	Palm oil.	Palm kernels.	Palm oil.
British West Africa:						
Gambia.....	\$31,710	\$43,921	\$35,025
Sierra Leone.....	3,359,604	\$327,549	4,431,304	\$275,703	2,721,617	\$157,423
Gold Coast.....	999,101	549,186	774,158	319,397	431,473	183,165
Nigeria.....	13,600,405	8,061,249	15,129,365	9,021,578	12,362,690	7,646,262
Total.....	18,490,820	8,937,984	20,428,648	9,616,678	15,553,808	8,016,800
French West Africa.....	8,261,440	1,963,579	2,917,817	1,352,429	(a)	(a)
German West Africa:						
Togoland.....	361,718	401,793	(a)	(a)	(a)	(a)
Cameroons.....	1,048,664	386,128	(a)	(a)	(a)	(a)
Total.....	1,900,382	787,921

(a) Statistics not available.

In addition to the above, British West Africa exported \$153,170 worth of palm-kernel cake in 1913 and \$45,945 in 1914, and \$629,740 of palm-kernel oil in 1913 and \$305,858 in 1914.

DISPLAY OF RUSSIAN PEASANTS' HANDWORK.

[Commercial Agent E. C. Porter, New York, Sept. 14.]

The Russian Department of Agriculture has sent Mr. Theo. Krysh-tofovich as a special commissioner to the United States, with the intention of making known to American merchants the products of Russian peasants' handwork. The commissioner has brought with him a large display of laces, embroideries, linen cloth, tablecloths, doilies, fancy boxes, metal work, etc. Everything is made by hand and is artistically done. These goods illustrate the kind of handwork which Russian peasants are doing and for which there might be a market in America.

[Russian peasant industries, the products of which are known as "kustarny" goods, were described in detail in Daily Consular and Trade Reports for Feb. 4, 1913; see also the issue for Sept. 3, 1912.]

CANADIAN MARKET FOR SHOE BLACKING.

[Consul O. Gaylord Marsh, detailed as vice consul at Ottawa, Aug. 10.]

Shoe blacking, under the Canadian customs classification, is included with shoemakers' ink and shoe, harness, and leather dressing. The imports from the United States, under this classification, greatly exceed those from all other countries combined, but the following statement for the last three fiscal years shows a steady decline in imports from the United States, with a corresponding increase from Great Britain, imports from other countries being negligible:

Imported from—	1913	1914	1915
Great Britain.....	80,507	\$30,943	\$35,967
United States.....	116,725	101,836	92,013
All other countries.....	17	268	223
Total.....	126,249	133,047	128,223

There are no available statistics as to the Canadian production of these articles.

It is not practicable, on account of the classification, to determine the actual or comparative amount of shoe blacking imported from the United States. Window displays in Ottawa and inquiry at a number of shoe stores show a few American brands in stock, but English and Canadian blackings predominate. Some of the very popular American brands appear to be entirely absent from this market. One well-known American polish is found in nearly all stores, but is the output of a Canadian branch factory. Retail prices are about the same as in the United States.

The regular import duty on shoe blacking is $27\frac{1}{2}$ per cent plus $7\frac{1}{2}$ per cent war duty, a total of 35 per cent ad valorem. Great Britain is allowed a preferential duty of 15 per cent plus 5 per cent war duty, a total of 20 per cent ad valorem.

While this market appears well supplied, and while the duty might appear high to some manufacturers, it would seem that American brands of shoe blacking, particularly those with patent openers that make them attractive to the large number of persons who shine their own shoes, should find a ready sale in this part of Canada, even though offered at a higher price than is asked for less convenient brands.

SMALL IMPORT STOCKS IN NEW ZEALAND.

[Consul General Alfred A. Winslow, Auckland, Aug. 18.]

Importers' warehouses in New Zealand contain smaller stocks at this time than for many years, with a good demand from the general public. The imports for the first five months of 1915 were, in value, \$38,713,280 against \$46,831,419 for the like period in 1914; and there is nothing promising as yet from the European supplies, which leaves a great opening for American goods until some time after the war closes at least.

This decline of imports is not for lack of a demand, but because of the inability to secure the stock from the old sources, and a delay in forming new connections, with the hope that the supply might come later from the old source. This should be taken advantage of by American exporters by going after this business in earnest.

SUGAR PROSPECTS IN THE FAR EAST.

[Consul General George E. Anderson, Hongkong, Aug. 12.]

At the present time sugar prospects in the Far East are much brighter than usual. The Philippines promise a large crop, that of Negros and Panay probably reaching 4,000,000 piculs, or about 266,666 short tons, and exceeding all previous records. The Board having charge of the erection of sugar centrals in the Islands under the new plan of assisting such projects by loans from Government funds (see COMMERCE REPORTS for Apr. 14, June 2 and 28, July 20, and September 18, 1915) has decided to promote the erection of at least one new mill to care for the 1916-17 crop.

Prices of sugar all over the Far East have held up well, the demand in America supplementing the reviving demand in China and India. The Hongkong refineries have been crippled in their operation both by the restricted market in China and other consuming centers and by the difficulty of securing raw sugar from Java and other producing countries. This has led to an increase in the import of sugar from the Philippines and from Chinese ports. The imports into the Colony for the first half of the current year are placed by commercial interests at 189,133 short tons, as compared with 270,333 short tons during the same period of 1914. The imports in detail (in the same unit) have been as follows:

	1914			1915		
	White.	Raw.	Total.	White.	Raw.	Total.
Java	100,000	113,333	213,333	27,333	86,667	114,000
China (Hoihow)		5,667	5,667		9,800	9,800
Philippines		51,333	51,333		55,333	55,333
Total	100,000	170,333	270,333	27,333	151,800	189,133

Prices of Java white sugar have ranged from \$12 to \$15, local currency (\$4.72 to \$5.89 United States currency), per picul of 133½ pounds, as compared with \$7 to \$8 (\$3.20 to \$3.66) during the first half of last year. For raw sugars the prices have ranged from \$9 to \$10, local currency (\$3.54 to \$3.93), per picul, as compared with \$5.40 to \$6.40 (\$2.47 to \$2.93) last year. Hoihow sugar has ranged in price around \$7.50, local currency (\$2.95), per picul, as compared with \$4.80 (\$2.20) last year, and Philippine sugars have run from \$8.10 to \$8.20 (\$3.18 to \$3.22) as compared with \$5.20 to \$6 (\$2.38 to \$2.75). Of the sugar from the Philippines this year about 32,000 tons came from the Iloilo field and the rest from Luzon.

Smaller Output of South African Mines.

According to figures supplied by Vice Consul John W. Dye, of Cape Town, the total value of the products of the South African mines for the year 1914 amounted to \$220,773,639, or \$36,781,007 less than in 1913. Of this decrease, \$28,722,083 is accounted for by the closing of the diamond mines (described in Supplements Nos. 66a, 66b, and 66c to COMMERCE REPORTS for Jan. 18, June 25, and Aug. 5, 1915).

BLIGHT-PROOF COFFEE FOR THE PHILIPPINES.

[From the Manila Daily Bulletin.]

When, 25 years ago, the coffee blight which was then sweeping over the entire East visited the Philippines it destroyed, so far as production for export was concerned, a formerly flourishing industry; and since that time the cultivation of coffee in the islands has been confined to one or two isolated mountainous districts where the altitude was sufficient to exclude the blight. In these localities almost every house has had its coffee patch, and on them, despite careless methods of cultivation, an excellent quality has been grown, as travelers who have passed that way can testify. The quantity of this product has been inconsiderable, however, from a commercial point of view, and coffee has never again taken a place of any importance in the list of Philippine exports.

There has never seemed, however, any conclusive reason why a blight-proof stock should not be successfully introduced, as had been done in Java and Ceylon, with the result of rehabilitating the coffee industry of those countries to a great extent, though they had originally been almost as hard hit as the Philippines. Experiments with this end in view have been somewhat numerous, and not long ago it was announced that measures would be taken to import a supply of the *robusta* variety of coffee plants for distribution. For some time, however, it proved impossible to secure satisfactory stock in sufficient quantities; and it has only lately been announced that, as a result of negotiations with the Dutch Indian Government, a supply has at last been assured from Java. The chief of the plant-breeding station at Buitenzorg now writes that he will send 200 pounds of seed of selected varieties, and it may be that this will mark a definite beginning of the work of putting an industry, which at one time made a good many fortunes in the Philippines, on its feet again.

JAPANESE SUBSIDY FOR DYE INDUSTRY.

As a result of the continued scarcity of dyes and certain other chemicals, both houses of the Japanese Diet have passed a bill for the granting of subsidies to companies engaged in the manufacture of dyes (including aniline salt, aniline dyes, alizarine dyes, and synthetic indigo) and chemicals in Japan, provided that more than half the capital of any such company is subscribed by Japanese subjects, according to a statement published in the British Board of Trade Journal. The amount of subsidy to be granted will be sufficient to enable the companies to pay a dividend of 8 per cent on the paid-up capital. The subsidies will be for a period of 10 years from the date of the promulgation of the law.

Medicines or perfumery specified by imperial ordinance, manufactured from coal-tar by-products, will be regarded as manufactured dyes and chemicals. The manufacture of the materials for gunpowder will also be regarded as the manufacture of dyes and chemicals.

As has been the case with other countries, Japan has suffered severely from the shortage of dyes and chemicals since the outbreak of the war. In normal times the imports of dyes were valued at about \$3,500,000 a year, nearly all of which came from Germany.

INDEX NUMBERS OF WHOLESALE PRICES IN THE WORLD.

Investigations of prices and the computation of index numbers for the purpose of measuring changes in the level of prices of commodities have been very numerous both in this and foreign countries, especially since the beginning of the world-wide rise in prices in 1896-97. At the present time there are in the United States not less than five series currently maintained—four of them by financial papers. In England there are three important series; in France, two; and Germany, three; while the Governments of Italy, Denmark, Netherlands, Russia, Canada, Australia, and Japan publish official index numbers, and private investigators have made series for Belgium, Norway, Austria, Spain, New Zealand, and India. Even this imposing list may be incomplete and is almost certain to require additions within a short time.

Most of the series of index numbers of wholesale prices above referred to have been established but recently. The oldest, that of the London Economist, has been published since 1869; Sauerbeck's English series dates from 1886; Conrad's German series from 1887; and Bradstreet's American series from 1897. Of the remaining index numbers regularly published at the present time all date from years since 1899, and the majority from years since 1909. Descriptions of these index numbers and summaries of the stories which they tell of the course of wholesale prices in the various countries of the world are given in Bulletin 173, just issued by the United States Bureau of Labor Statistics. The aim of this bulletin is to make the index numbers of wholesale prices currently published in the United States and foreign countries more accessible, more intelligible, and more useful. To this end the leading series of index numbers compiled by official bureaus, financial journals, and private investigators both at home and abroad are described in detail. The history of each series, the source from which quotations are taken, the number and description of the commodities including the methods of averaging, the statistical results obtained, etc., are set forth as far as the facts could be learned so that anyone wishing to use the figures in question would know how they are derived and what they mean.

This systematic description of the series now being published is preceded by a critical analysis by Prof. Wesley C. Mitchell of the various methods employed to measure changes in the level of prices, an analysis which shows the advantages and the defects of these methods, the purposes for which the different index numbers may properly be employed, the reasons for the discrepancies which usually appear when two or more series for the same time and country are computed side by side, the safeguards which are necessary in making comparisons between different series, and the confidence which index numbers merit as measured by price fluctuations.

In all the bulletin describes in detail 32 different series of index numbers, covering all the leading countries of the world where studies of wholesale prices have been made. In addition an annotated bibliography describes briefly a large number of less important studies of wholesale prices in which index numbers have been computed.

A few years ago China was without a native press. To-day several hundred newspapers are published.

NEED OF STEAM TRAWLERS AT LA ROCHELLE.

[Consul Kenneth Stuart Patton, La Rochelle, France, Sept. 2.]

The fishing industry, one of the most important of La Rochelle, has been greatly affected by the war. In normal times 28 steam trawlers supply the local and surrounding markets with fish. The French Government has already requisitioned 25 of these trawlers and may ultimately take the remaining three. The result is that the local market has not sufficient fish to supply the demand, and the price has more than doubled. The trawlers average about 140 feet in length, 200 tons gross and 100 tons net. They make a maximum speed of 10 knots and burn an average of 7 tons of coal for each 24 hours run. Bunker coal is now selling at 55 francs (\$10.62) per ton.

The fish usually taken by the trawlers and their present prices per kilo (2.20 pounds) are as follows: Hake, 2 francs (\$0.386); bream, 2 francs; whiting pollock, 0.75 franc, (\$0.146); skate, 1.25 francs (\$0.24); trap fish, 2 francs; red gurnet, 1.50 francs (\$0.29); red mullet, 4 francs (\$0.77).

The trawlers fish off of Ouessant, the Grand Sol, and Porcupine Bank. The average catch per boat and trip is about 15 tons. As two or three trips are made each month, the monthly catch averages 40 tons and will sell for about 50,000 francs (\$9,650).

In normal times the total monthly operating expenses, including interest on the capital, insurance, bait, ice, coal, crew, etc., for a trawler of 200 tons gross will not exceed 15,000 francs (\$2,895). At present 17,000 to 18,000 francs (\$3,281 to \$3,474) should easily cover all these expenses. A foreign trawler should add to these expenses the duty of about 23 centimes (4.44 cents) per kilo (2.20 pounds) of fish to cover harbor dues. Fish, the product of French fisheries, are exempt from import duty. The capital in a trawler of 200 tons gross is estimated at about \$20,000.

The crew as a rule consists of captain, mate, chief engineer, second engineer, and 10 men. They are paid fixed salaries and a percentage of the catch, as follows: Captain, 150 francs (\$28.95) and 3 per cent; mate, 150 francs and one-half of 1 per cent; chief engineer, 200 francs (\$38.60) and 2 per cent; second engineer, 150 francs and one-half of 1 per cent; firemen, 140 francs (\$27.02) and three-tenths of 1 per cent; crew, 120 francs (\$23.16) and three-tenths of 1 per cent.

One or more American trawlers would be welcomed here, inasmuch as they would not be liable to requisition by the French Government, and they should be able to make large profits.

Parties interested in this subject should address Mr. A. F. Lloyd (British proconsul), 16 Cours des Dames, La Rochelle, or the Syndicat des Chalutiers, La Rochelle, France.

NEWSPAPER FOR THE MOROS.

The Habar Sing Tau Sug is a new Moro newspaper, published by the Sulu Press, of the Moro Mission at Zamboanga, P. I. The publication is printed in Arabic and has as its object the uplift of the Moro people, among whom it is widely circulated.

CITRUS-FRUIT CROPS IN MALAGA DISTRICT.

[Consul Percival Gassett, Malaga, Spain, Aug. 26.]

Interviews with the largest consignees of oranges and lemons in Malaga, as well as the steamship companies, indicate that the production of these fruits in Malaga Province in 1914-15 was: Oranges, 120,000 boxes, averaging 154 pounds, making a total of 8,400 metric tons; lemons, 80,000 boxes, averaging 101 pounds, making a total of 3,680 metric tons (metric ton=2,204.62 pounds).

The total production in the Malaga consular district in 1914-15 may be given as follows:

Provinces.	Number of trees.	Boxes (oranges, 154 pounds; lemons, 101 pounds).	Weight in metric tons.
ORANGES.			
Almeria	304,314	152,157	10,652
Granada	32,025	10,012	1,121
Malaga	223,000	111,500	7,803
Total	559,339	279,669	19,578
LEMONS.			
Almeria	11,600	5,800	267
Granada	5,190	2,595	119
Malaga	207,100	103,550	4,763
Total	223,890	111,945	5,149

SILK PRODUCTION IN THE PHILIPPINES.

[From the Manila Daily Bulletin.]

There has been a good deal of activity from time to time in the way of attempts to put the production of silk in the Philippines on a commercial basis. Hitherto these have mainly concerned themselves with the Christianized people, and especially with the Provinces around Manila; but interest has now been aroused in the possibility of accomplishing something along this line for the economic betterment of the Mountain Province of northern Luzon, which is very densely populated when the primitive character of its people and its utter lack of diversified industry are taken into consideration.

An important effort of this character is being made by the Catholic Mission at Bontoc, the capital of the Province, with the encouragement of the Government. In view of the impracticability of securing locally a competent man to take charge of this work, negotiations have been entered into with the Japanese high school of agriculture, with a view to obtaining the service of an expert. If this can be done, the chances for the new industry should be much improved.

The possibility of accomplishing something definite seems increased, moreover, by the discovery that a variety of silkworm which feeds on the leaves of the castor oil plant—which grows like a weed throughout the country—has been found to be easily acclimatized in the islands, and effort are also to be made to acquire a supply of this stock.

AMERICAN MOTOR CARS IN SCOTLAND.

[Consul Rufus Fleming, Edinburgh, Sept. 6.]

A representative of an automobile manufacturing company in the United States recently visited Scotland, partly on business, but chiefly to shoot grouse. While staying at a shooting lodge in a northern county he sent to an American friend in this city an account of his exploits on the moors, and added these observations on the automobile trade:

In my tour of Scotland I find evidences everywhere of the satisfaction our car and—to be entirely candid—other American motor cars are giving to all users. Since the beginning of the war low-priced American cars have been in great demand, and one sees them on almost every road in the lowlands and highlands and islands. They seem to be especially in favor here in the north, where not many people think they can afford to pay more than \$1,000 for a car. Moreover, the doctors, judges, and lawyers have long distances to travel and horses are scarce and “traps” an abomination, and a reliable motor car of low initial cost is a boon.

Higher-priced American cars are also securing an important position in the market, and some of these owe their introduction largely to the fact that all American automobiles have been well advertised by the pronounced success of the cheaper cars among every class of buyers, the logic of the case being that a country that turns out durable and dependable little cars must also produce durable and dependable big cars. So you see that we representatives of different types of American machines are helping one another. Of course, the war has tied up several British makers, whose works are now shell factories; but this does not by any means fully account for the advance of American cars in the British markets, as we were going ahead rapidly before the war started. There's nothing like getting a reputation for giving customers the value of their money, and we have that reputation and expect to keep it. So long as we continue to build cars that meet the requirements of the American market we can sell them in Great Britain.

WHAT THE DEPARTMENT OF LABOR DOES IN NEW ZEALAND.

[Consul General Alfred A. Winslow, Auckland, Aug. 17.]

Since the organization of the Department of Labor in New Zealand in 1908 practical assistance has been afforded to 109,524 workers, with 141,346 dependents. The number assisted during 1914 exceeded those for 1913 by 1,970, and the system is very beneficial and popular.

Car fare is often advanced in order to help a person to get where work can be had. During 1914 the Government advanced \$56,767.72 for that purpose, of which \$48,416.81 was refunded. Also small sums are advanced for board, medical bills, etc., to tide over worthy cases.

The department also builds homes for working people when their net earnings do not exceed \$851.63 per annum, which has done much to put the laborer in an independent position and able to take care of himself.

This department also publishes a monthly journal that contains a large amount of useful information for the worker, covering the cost of living in different localities, where work is most plentiful along certain lines, etc.

The laboring man's condition in New Zealand is probably in advance of that enjoyed in any other part of the world. He is protected on all sides, and if he is any good, can make a fair living, and even own a home in a few years.

BEEF SUPPLY OF THE PHILIPPINES.

[From the Manila Daily Bulletin.]

One of the early economic effects of the European war was to interfere in a serious manner with the beef supply of the Philippines. At present, as a result of stock diseases, which have never been wholly eradicated, though greatly reduced in amount, there are practically no beef cattle kept in the Islands, and the whole supply for consumption is imported. As regards the foreign population this importation consists mainly of cold-storage beef from Australia, and the trade was of course in prospect of being cut off entirely by the embargo placed on meat exportation by the Commonwealth Government. It is understood, however, that this difficulty has been so adjusted as to insure an ample supply, though advices do not state precisely in what manner.

The importation of cold-storage beef has no effect on the supply for the native population, as few Filipinos will eat anything but freshly killed meat. Formerly a great part of the live-cattle supply for Manila had been obtained from Indo-China, but five or six years ago this was excluded by the Philippine authorities, as a step in the campaign against rinderpest, and since that time the principal cattle importer has brought in his stock mainly from Western Australia. This source was, however, also cut off by the war, and when an attempt was made to turn again to Indo-China as a market it was frustrated by a period of exceedingly stormy weather, which made the shipment of live stock practically impossible, and indeed caused the loss of all but three out of 300 head in two cargoes which were actually started.

Under these conditions the Philippine authorities turned to the West River Valley in South China, for which Canton and Hongkong are the markets. An embargo had long been in effect at Manila on importations of cattle from this region also on account of disease, but in view of the imminent danger of shortage, there being at one time only five days' supply in the Manila markets, arrangements have been made whereby, with careful selection of stock, this embargo has been lifted without any serious peril of the introduction of disease. It was expected that these measures would have the desired effect of bringing down beef prices in Manila, which had risen by more than a third in two or three days.

ANOTHER GREAT DOCK IN JAPAN.

[Extract from Japan Times of Aug. 19, by Consul General George H. Scidmore, Yokohama.]

Though Yokosuka Naval Port has several docks, it has not a dock large enough to accommodate a superdreadnaught. Therefore, every time repairs have to be done to the *Kongo* and the *Hiyei*, these vessels have to be brought to Kure or to Saseho.

This inconvenience will be, however, soon removed. On July 13, 1911, the construction of a dock 800 feet in length, 120 feet in breadth, and over 40 feet in depth was commenced at the port, at an estimated cost of about a million yen (\$198,000). Its completion was scheduled for next year, but the work will be accelerated and completed by the end of next October at the latest, with a view to employing it for the new superdreadnaught *Yamashiro*, which will be launched by November next.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its branch offices. Request for each opportunity should be on a separate sheet and the file number given.

Licorice root, alfalfa, etc., No. 18524.—A business man in Siberia informs an American consular officer that he desires to receive the names and addresses of American firms which would be interested in importing from Turkestan licorice root, alfalfa, sheep casings, and astrakhan, as well as "lapis lazuli" from Central Siberia. Correspondence may be in English, but German or French is preferred.

Haberdashery and leather, No. 18525.—An American consular officer in Persia writes that a merchant in his district desires to correspond with American manufacturers and exporters of cotton goods, haberdashery, and leather. It is stated that he is a wholesale dealer. Catalogues, price lists, samples, and full information should be sent. Correspondence may be in English.

Surgical instruments, etc., No. 18526.—A business man in Italy writes an American consular officer that he desires to represent American manufacturers and exporters of instruments of precision for medicine and surgery. Payment will be made against shipping documents in foreign countries. Correspondence should be in Italian or French. Prices, etc., should be stated in lire or francs. References are given.

Haberdashery and millinery, No. 18527.—An American consular officer in India reports that a firm in his district desires to be placed in communication with American manufacturers and exporters of hats, bonnets, collars, hosiery, lace, embroidery, dress fabrics, etc., for women; also general lines of haberdashery, including walking sticks and boots and shoes.

Machinery, No. 18528.—A representative of an oil company in Brazil informs an American consular officer that he is desirous of obtaining catalogues, price lists, and full information relative to a barrel-tiering apparatus. This device is desired to facilitate the handling of oil barrels. Correspondence may be in English.

Glue, No. 18529.—An American consular officer in Burma transmits the name and address of a firm in his district which desires to receive full information relative to glue. The firm desires to act as an agent. Prices should be made c. i. f. destination.

Selling agency, No. 18530.—A firm in China informs an American consular officer that it wishes to form connections in San Francisco with a reliable firm which will act as its selling agent for such products of China as are marketable in the United States. Some of the principal commodities to be exported are egg albumen, sesamum seed, wood and other oils, beans, antimony ore and regulus, hides, skins, bristles, etc.

Paper, glass, toys, etc., No. 18531.—An American consular officer in India writes that he is in receipt of a letter from a firm of commission agents in his district which is interested in hardware, paper, glass, beads, toys, fancy goods, etc.

Underwear, No. 18532.—A manufacturer's agent in England informs an American consular officer that he wishes to represent American manufacturers and exporters of underwear for women. References are given.

Tallow and greases, No. 18533.—A firm in Italy informs an American consular officer that it wishes to act as agent for American producers of tallow and greases. Samples and price lists c. i. f. Italy should be submitted. Correspondence may be in English. References are given.

Machinery, No. 18534.—An American consular officer in Australia reports that a merchant in his district desires to be placed in immediate communication with manufacturers and exporters of machinery for making margarine as a substitute for butter. Catalogues and full information should be forwarded.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, 752 Oliver Building; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Panama Canal supplies, No. 2475.—Sealed proposals will be received at the office of the general purchasing officer of the Panama Canal, Washington, D. C., until November 3, 1915, for furnishing by steamer, ready for erection by the Panama Canal, material for a complete locomotive jib crane of 50 gross tons capacity for Dry Dock No. 1, Balboa terminals, Balboa, Canal Zone, Isthmus of Panama. Circular No. 973.

Construction work, No. 2476.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until October 5, 1915, for the construction complete (including mechanical equipment, excepting lighting fixtures, and approaches) of a one-story-and-basement brick and stone-face building for the United States post office at New Braunfels, Tex. Drawings and specifications may be obtained from the custodian at New Braunfels or at the Washington office.

Post office, No. 2477.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, until November 6, 1915, for the construction complete (including mechanical equipment and approaches) of the United States post office at East Pittsburgh, Pa. Drawings and specifications may be obtained from the custodian of the site at East Pittsburgh or at the Washington office.

Chain shafts, No. 2478.—Sealed proposals will be received at the office of the United States Reclamation Service, Washington, D. C., until November 8, 1915, for furnishing chain shafts and chains for the rolling crest of Grand River diversion dam, Grand Valley project, Colorado, consisting of 1 safety chain, 1 chain shaft, 1 operating chain, and 1 guard chain, all for the 60-foot roller; and 1 for 6 safety chains, 6 chain shafts, 6 operating chains, and 6 guard chains for the six 70-foot rollers. Further information may be had on application to the United States Reclamation Service, Washington, D. C.

Construction work, No. 2479.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until November 10, 1915, for the construction complete (including mechanical equipment and approaches) of the United States post office at Van Wert, Ohio. Drawings and specifications may be obtained from the custodian of the site at Van Wert or at the Washington office.

Cylinder gates, No. 2480.—Sealed proposals will be received at the office of the United States Reclamation Service, Washington, D. C., until October 20, 1915, for furnishing the operating mechanism for two cylinder gates of 12 feet diameter for Sherburne Reservoir, Milk River project, Montana, and a duplicate set for Keechelus Reservoir, Yakima project, Washington. Further information may be had on application to the United States Reclamation Service, Washington, D. C.

Painting materials, No. 2481.—Sealed proposals will be received at the office of the Superintendent of Prisons, Department of Justice, Washington, D. C., for furnishing and delivering at the United States Penitentiary, Leavenworth, Kans., painting materials for interior surfaces of east main cell wing, in accordance with specifications. Copies of specifications, together with further information, may be had on application to the Washington office.

Concrete work, No. 2482.—Sealed proposals will be received at the office of the United States Engineer, room 415 Customhouse, Cincinnati, Ohio, until October 15, 1915, for reconstructing, in concrete, top of spillway at Dam No. 4, Muskingum River, Ohio. Drawings will be on exhibition at the Cincinnati office and at the United States Engineer suboffice at Zanesville, Ohio. Blue prints of the drawings may be had on application to the Cincinnati office.

ESTIMATED SHORTAGE OF FRENCH WHEAT CROP.

[Commercial Attaché C. W. A. Veditz, Paris, Sept. 9.]

A recent issue of *Le Bulletin des Halles, Bourse et Marchés* points out that the annual consumption of wheat in France averages 120,000,000 hectoliters [340,529,000 bushels], and that this quantity is about equivalent to the total average annual production of the whole of France in normal times. It is estimated that the total production this year will represent a shortage of approximately 25,000,000 hectoliters [70,943,600 bushels], and that the crop of the invaded sections, which must be deducted from the available supply, will represent a further 20,000,000 hectoliters [56,754,800 bushels], whence it would appear that the total available output will be approximately 75,000,000 hectoliters [212,830,600 bushels]. If the large influx of Belgian refugees be taken into account as partially offsetting the decreased consumption attributable to the fact that a portion of France is invaded, it is estimated that the total consumption will approximate 110,000,000 hectoliters [312,151,600 bushels] during what may be called the approaching agricultural year. It will therefore be necessary to import about 35,000,000 hectoliters [99,321,000 bushels] of wheat, representing a value of approximately \$180,000,000.

FOREIGN COMMERCE OF SPAIN.

[Commercial Attaché C. W. A. Veditz, Paris, France, Sept. 9.]

The foreign commerce of Spain during the first half of 1915 amounted to 1,138,260,830 pesetas, of which, in round figures, 514,000,000 represented imports and 624,000,000 exports. [The Spanish gold peseta is worth 19.3 cents United States currency.] This is an unusually favorable balance (110,000,000 pesetas) for the period.

The imports during the first six months of 1915 were 75,000,000 pesetas less than those of the corresponding period of 1914, whereas the exports exceeded those of the first half of last year by 156,000,000 pesetas. The gain in exports consisted mainly of manufactured goods, which increased by 202,000,000 pesetas; shipments of raw materials declined by 45,000,000 pesetas, as compared with January-June, 1914.

GUAYAQUIL MARKET CONDITIONS FOR AUGUST, 1915.

[Consul General Frederic W. Godling, Guayaquil, Ecuador, Sept. 7.]

The weak demand for cacao obtaining during the latter part of July [see **COMMERCE REPORTS** for Sept. 7, 1915] continued into August, with few buyers; but the Association of Agriculturists maintained the price at \$10.30 per 100 pounds and purchased most of the quantity received. Few orders have arrived from New York and Europe. The receipts for September are increasing. The total quantity this year arriving up to August 31 was 24,603,400 pounds. The exports for the month, in pounds, were: To Argentina, 90,113; Chile, 13,510; France, 494,583; Spain, 351,971; United Kingdom, 575,239; United States, 2,870,967; Uruguay, 22,529; total, 4,418,912.

The coffee market was also weak, the price for first class being \$8.19 for 100 pounds, and \$7.56 for second class. The exports were: To Chile, 394,402 pounds; Panama, 10,269; Spain, 406; a total of 405,077 pounds.

Hides, Ivory Nuts, and Rubber—Exchange.

The demand for hides was firm, with no variation in prices, which were, for serranos, \$12.60 per 100 pounds; for criollos, \$11.81; and for picados, \$5.84. Of the 94,984 pounds exported the United Kingdom purchased 25,580 pounds and the United States 69,404 pounds.

There was a decided improvement in the market for ivory nuts during the month, \$1.22 per 100 pounds being paid for shelled nuts. France took 102,680 pounds, the United Kingdom 102,680 pounds, and the United States 8,214 pounds.

The demand for rubber was moderate, maroma selling for \$25.21 for 100 pounds, hojas for \$21, and serrano blanco for \$8.40. New York purchased the total quantity exported, 15,977 pounds.

The bank rate of exchange on New York averaged 238, which is now decreasing, recent exchange having been made at 232. The Banco Comercial y Agrícola received this month a further \$50,000 to increase its gold reserve.

MORE FISH FOR INLAND LAKES OF ONTARIO.

[Consul Julius D. Dreher, Toronto, Canada, Sept. 16.]

A report is now being prepared by the Fisheries Department of Ontario on the advisability of stocking the inland lakes of the Province with fish for commercial purposes. According to the Minister of the Department of Public Works, it is felt that the introduction of commercial fishing with proper safeguards for the protection of game fish would have a beneficial effect upon the lakes in addition to providing revenue. Fish such as whitefish, etc., are not game fish and are not taken by the line, while pike and carp, which could be taken by commercial fishermen, now make the problem of restocking the lakes with commercial fish much more difficult than it would be if they were kept within limits. Should commercial fishing be permitted, the inland lakes could be stocked with whitefish and herring just as Lake Erie is now.

It is proposed to cooperate with the Dominion fisheries officials in securing a large supply of spawn for the Sandwich hatchery. It is expected that most of this spawn will be obtained from the fishermen at Port Stanley, Ontario.

SODIUM SALTS FOR PURIFYING AND CASTING CLAYS.

In Technologic Paper No. 51, just issued by the Bureau of Standards, Department of Commerce, the results of some work involving the addition of small quantities of sodium carbonate and sodium silicate to clay suspensions are published.

Clays, mixed with water, may be considered to consist of a system of fine particles varying from comparatively coarse to very fine grains, 0.003 mm. and less in diameter. It is a curious fact that these fine particles are very sensitive to the influence of small quantities of alkalis, salts, and acids, and hence the properties of the clays as a whole are affected to an important degree by such additions.

Alkalies tend to break down the grains into still finer particles and to hold them in suspension. At the same time the fluidity of the system is increased so that a separation is possible between the particles capable of greatest dispersion (the clay substance proper) and the coarse particles which comprise the principal impurities.

A method of purifying clays is thus suggested.

Acids and salts act in the opposite sense, tending to coagulate the particles and to precipitate them. In the casting process employed in the manufacture of sanitary ware and other clay products the effect of the alkalies consists essentially in reducing the water content, and with it the drying shrinkage, which is essential in preventing the cracking of the ware.

The characteristic effect of the alkalies upon different American clays was studied from several standpoints, particularly with reference to the viscosity of the clay suspensions, the absorption of the reagents, the strength of the treated mixture in the dried state, and the influence of time. The effect of different clays upon each other was also studied.

This publication is for free distribution, and copies may be obtained by those interested upon request of the Bureau of Standards, Washington, D. C.

INTRODUCING AMERICAN COAL IN SPAIN.

[Consul Wilbur T. Gracey, Seville, Aug. 21.]

On June 2 this office reported a shortage of coal at this port. As a result many letters were received from coal dealers in the United States who were interested in introducing American coal in Spain. These were placed before local parties by this office and have resulted in the purchase of two sample shiploads of coal.

The first shipment which arrived here, I am informed, was wet and extremely slack, and in consequence it became difficult to secure orders for American coal. One coal dealer informs me that as a sample shipment its effect was almost disastrous, and has resulted in a prejudice against American coal which it will be difficult to overcome.

This coal dealer informs me that through the offices of this consulate he has received an offer from an American firm to act as its exclusive agent for all Spain. He has just ordered a trial shipment of 2,000 tons, which he expects to receive about the end of this month, and upon its arrival hopes to do a large and lucrative business. His connection with the American dealers was entirely accomplished through this consulate.

EMPLOYEES IN LIGHTHOUSE SERVICE COMMENDED.

Several persons in the United States Lighthouse Service have been commended within the past 10 days by Secretary of Commerce William C. Redfield for meritorious services performed under conditions of a trying or hazardous nature. Effective work during the hurricane that visited the Texas and Louisiana coasts on August 16 and 17, 1915, has received recognition, while numerous boats in distress, one wreck, and a disabled airship afforded opportunities for rescues that are entered upon the records as calling for special commendation from the head of the department.

Employees of the service in the Eighth Lighthouse District, with headquarters at New Orleans, La., are largely represented on this roll of honor, as a result of their aid given during the hurricane on August 16 and 17. Their names, with the reasons for special mention, are:

Mr. Benjamin B. Dorry, inspector, eighth lighthouse district, for energy and good judgment displayed in taking personal charge of the situation in Galveston, Tex., and promptly restoring aids to navigation to service condition.

Mr. William B. Thompson, keeper, and Mr. Charles C. Sapp, assistant keeper, Sabine Pass Light Station, La.; Mr. Harry C. Claiborne, keeper, Mr. James P. Brooks, first assistant keeper, and Mr. Christopher T. Morris, second assistant keeper, Bolivar Point Light Station, Tex.; and Mr. Sidney Gibbon, keeper, and Mr. John D. Balsille, assistant keeper, Brazos River Light Station, Tex., for maintaining, by hand, characteristic of lights under their charge when vibrations of the towers had put clockwork out of order. The keepers at the Brazos River Light Station, Tex., were also commended for efforts made to recover Government property.

Mr. George R. Smith, keeper, and Mr. Leon R. Smith, assistant keeper, Red Fish Bar Out Light Station, etc., Tex.; Mr. William Hill, keeper, Calcasieu Range Light Station, La.; Mr. Albert B. Modawell, keeper, Mr. James Brew, first assistant keeper, Mr. Joseph W. Gauthier, second assistant keeper, and Mr. Ulysses M. Gunn, third assistant keeper, Sabine Bank Light Station, Tex., for maintaining lights under their charge. The keeper at the Calcasieu Range Light Station, La., was also commended for efforts made to recover Government property which had been carried away by the storm.

Rescues Made from Boats in Distress.

The Secretary, on September 24, 1915, addressed the following letters of commendation:

To Capt. William E. Gregory, commanding the tender *Kukul*, for the rescue on August 21, 1915, of three members of the crew of the gasoline boat *Favorite*, of Cordova, Alaska, which was wrecked near Point Hook, on Hinchinbrook Island, Alaska. The men were found in a destitute condition and were landed at Cordova.

To Mr. Elmo C. Mott, assistant keeper of Deer Island Light Station, Mass., for assistance rendered to the disabled power boat *Alice*, which was towed to the station and food and lodging given to the 11 men who were on board.

To Mr. Alfred A. Howard, keeper of Stage Harbor Light Station, Mass., for giving assistance to the catboat *Tribby*, which, with a party including several women aboard, was discovered to be in distress and was towed by him to safe anchorage.

To Mr. John T. Shipp, keeper of Neuse River Light Station, N. C., who on September 8, 1915, discovered the launch *Susie Swindell* with a party of several children and men aboard. The supply of oil being gone, the occupants of the boat had been paddling for several miles with small pieces of plank and were exhausted. Keeper Shipp gave what assistance he could and towed the launch to Oriental, N. C.

To Mr. John Safe, assistant keeper of South Buffalo South Side Light Station, N. Y., for going to the rescue of two men who with their disabled airship had dropped into the water about a mile from his light station.

A letter of commendation was sent September 25, 1915, to Mr. Malcolm N. Huse, keeper of The Narrows Light Station, Mass., for the assistance given by him on August 13, 1915, to the launch *Nautilus*, which had grounded on Lovell's

Island, Mass., and for assistance given by him on August 15, 1915, to a motor boat with three persons on board, which was found to be out of gasoline.

On September 23, 1915, the Secretary commended Mr. William F. Rhodes, keeper of Romer Shoal Light Station, N. Y., for rescuing, on September 17, 1915, two men whose boat had capsized off the station.

JAPANESE BANKS FOR CHINA.

[Extract from Japan Advertiser, Aug. 17, by Consul General George H. Scidmore, Yokohama.]

Sino-Japanese Bank.

The Japanese financial authorities have for some time been investigating the best means of establishing a Sino-Japanese financial organ to meet the necessity of developing closer relations between the two nations, and it is now reported that the authorities have drafted a definite plan, obtained the consent of the Cabinet Council, and have submitted the same to the consideration of prominent bankers and business men. The main points of the scheme are said to be as follows:

The Establishment of a Manchuria Bank.

It is urged by some people that since the Sino-Japanese bank would require considerable capital in order to perform its functions satisfactorily, it is now advisable to earmark a part of the capital for the establishment of a Manchuria-Mongolia bank. But the authorities have decided to establish an organ apart from the Sino-Japanese bank to deal with Manchuria and Mongolia.

The Object of the Sino-Japanese Bank.

The business of the Sino-Japanese bank will include general banking business, loans against the securities of real estate, flotation of loans, and the issue of bank notes. No details have yet been decided upon.

It was first reported that the capital of the new bank will be 50,000,000 yen (\$24,900,000), but the authorities have consented to only 20,000,000 yen (\$9,960,000). It was originally intended that the new bank would be a joint-stock concern, with Japanese and Chinese capital in equal amounts, but since such a course may delay the opening of the bank, it has now been decided to open the bank first with Japanese capital only and let the Chinese take shares afterwards, if they desire to do so, and elect directors from among Chinese shareholders, if they hold sufficient shares.

It has been decided that the Government will guarantee a certain minimum dividend for the shares, and will further afford various facilities for the enterprise.

The shareholders shall, as far as possible, be limited to prominent bankers and business men, so that the basis of the new bank will be sound and strong, though, of course, some shares will be offered to the public. No details are yet definitely settled.

The Manchuria-Mongolian Bank.

The capital of this bank will be 10,000,000 yen (\$4,980,000), other arrangements being similar to those of the Sino-Japanese bank, except that the latter bank is to be devoted mainly to the exploitation of wealth in the region concerned. The question as to the relation of the new bank with the Yokohama Specie Bank, the Bank of Chosen, and the South Manchuria Railway Co. is yet to be considered.

The above being the general plan of the Government, it is subject to change, according to the opinions of the bankers and business men to whom the whole scheme has been submitted.

WAGES IN HOSIERY AND UNDERWEAR INDUSTRY.

The United States Bureau of Labor Statistics has just issued its Bulletin No. 177, showing the rates of wages, hours of labor per week, and weekly earnings of employees in hosiery and underwear manufacturing. The report is based on figures secured from the pay rolls of 75 representative establishments located in 14 States, these establishments employing in 1914 more than 32,000 persons, or more than 25 per cent of the total employees in the entire industry. Figures showing full-time hours of labor per week and rates of wages (or earnings) per hour are presented for the years 1907 to 1914, inclusive, and full-time weekly earnings for the years 1910 to 1914, inclusive.

The average full-time weekly earnings of the employees in this industry in 1914 were 2 per cent higher than in 1913, 8 per cent higher than in 1912, and 12 per cent higher than in 1911 or 1910. The average full-time hours of labor per week in 1914 were 1 per cent lower than in 1913, 3 per cent lower than in 1912, and 5 per cent lower than in 1911 and 1910. In the several establishments visited the hours of labor per week in 1914 did not exceed 60, except in a few cases, the average being slightly less than 55 hours. The average rates of wages per hour in 1914 were 3 per cent higher than in 1913, 11 per cent higher than in 1912, 18 per cent higher than in 1911, and 19 per cent higher than in 1910. Owing to the reduction of hours the increase in full-time weekly earnings between 1910 and 1914 was not so great as in rates of wages per hour.

The average full-time weekly earnings of employees in 1914 in a few of the principal occupations were as follows:

Boarders (males).....	\$12.65
Finishers, underwear (females).....	9.73
Inspectors and folders (females).....	8.15
Knitters, footers or toppers, hosiery (males).....	8.45
Knitters, footers or toppers, hosiery (females).....	8.24
Knitters, web or tube, underwear (males).....	12.74
Knitters, web or tube, underwear (females).....	8.00
Loopers (females).....	8.59
Menders, rough, hosiery (females).....	8.11
Seamers, underwear (females).....	9.60
Winders (females).....	8.36

The bulletin also contains a statement relative to the variation of employment in the industry, based on the number of days the plants were in operation, the number of employees on the pay rolls, and the amount of the pay rolls for each pay period for the year ending March 28, 1914. The figures as a whole indicate that the industry had no specially dull or active season. The number of employees on the pay roll in the industry during the year stated reached the highest point in the eight weeks ending December 6, 1913, when it was 102 per cent of the average for the year, and the lowest point in the two weeks ending January 3, 1914, when it was 94 per cent.

It is the intention of the Chinese ministry of interior to allow only doctors who have received a recognized course of training in medicine and surgery to practice in the future. Some time must necessarily elapse, however, before the old type of Chinese doctor disappears.

AGRICULTURAL PRODUCTS IN THE NETHERLANDS.

[Vice Consul Gerhard H. Krogh, Rotterdam, Aug. 20.]

The statistics given below have been compiled by the instructors of the Governmental Schools for Agriculture in accordance with particulars furnished by the Direction of Agriculture. In June, 1915, the burgomasters furnished information regarding the various agricultural products in their districts, as they have done in previous years. Although the statistics may not correspond exactly with those that will be issued definitely later on, it may be assumed that there will be little deviation.

This table shows the number of acres under cultivation for the years 1913, 1914, and 1915:

Products.	1913	1914	1915
Wheat:	<i>Acres.</i>	<i>Acres.</i>	<i>Acres.</i>
Winter.....	130,723	139,012	151,109
Summer.....	10,487	8,728	9,049
Rye:			
Winter.....	558,681	558,098	545,313
Summer.....	5,187	4,285	3,637
Barley:			
Winter.....	51,347	52,867	49,485
Summer.....	14,957	13,793	13,717
Oats.....	347,739	348,206	350,624
Buckwheat.....	25,815	24,100	20,885
Beans (various).....	41,859	39,912	38,940
Peas.....	68,214	64,814	61,071
String beans.....	18,550	19,383	19,093
Rapeseed.....	2,948	4,287	4,315
Mustard seed:			
Brown.....	1,997	1,594	1,465
Yellow.....	1,925	2,234	4,327
Caraway seed.....	13,057	13,050	9,583
Blue poppy seed.....	1,506	1,226	1,806
Flax.....	36,200	19,084	21,424
Tobacco.....	1,149	986	835
Canary seed.....	4,465	8,186	8,710
Potatoes:			
For table.....	341,396	346,642	344,270
For factories.....	78,674	77,167	80,132
Sugar beets.....	149,001	156,251	141,069
Chicory.....	1,769	1,648	2,313
Onions.....	6,528	9,006	7,559
Sugar-bee' seed.....	761	432	462
Onion seed.....	247	240	220
Spinach seed.....	1,831	2,234	1,767
Radish seed.....	820	744	531
Red-clover seed.....	72,173	72,400	68,195

It will be seen that the figures for 1915 do not differ greatly from those for previous years. The only marked difference is the extension of the area under wheat cultivation and the diminishing of the area under rye and sugar-beet cultivation.

TACKS IN METRIC BULK.

[Commercial Attaché V. L. Havens, Santiago, Chile, Aug. 21.]

Local hardware merchants have informed the writer that they have heretofore purchased tacks, such as are used for carpets, picture framing, household use, etc., in small packages from the United States, but in bulk from France. This latter source of supply is now cut off. It is suggested that American manufacturers offer their Latin American trade, and other places where the metric system is used, tacks and small nails done up in packages containing 1 kilo (2½ pounds), and also that they offer them tacks in bulk, put up in small nail kegs.

[The name of the Santiago hardware firm referred to may be had from the Bureau of Foreign and Domestic Commerce; refer to file 670.]

AMERICAN TRADE METHODS IN ARGENTINA.

[Consul General W. Henry Robertson, Buenos Aires, Aug. 6 and 16.]

Local newspapers—*La Nación* and *La Prensa* of July 30 and the *Buenos Aires Herald* of July 31—contain references to a meeting of the board of directors of the *Camara Sindical de Comercio*, held on July 29, that should be of interest to American manufacturers and exporters.

This meeting considered statements that had been published in newspapers of this city in regard to the causes restricting the development of commerce with the United States. After an interchange of ideas it was agreed that if American commerce is to realize its ambition to secure this market it will be obliged to modify its methods of sale, manufacture, and shipment. A reminder was given in the meeting that European manufacturers grant to retailers here credits of 3, 6, 12, and even 18 months in which to pay for the merchandise; that the manufacture of the various products is carefully done and is perfectly adjusted to the needs of the country; and that the execution of orders is effected exactly in accordance with instructions. Therefore so long as American manufacturers do not adopt these methods it is thought that they will not be easily able to realize their desires here.

American Methods Not Like European—The Question of Credits.

Opinions were expressed to the effect that the methods used by American manufacturers are not the same as those employed by the French, English, and others, and that the European commercial development with Argentina is not due entirely to the credits granted by the wholesale houses but to factors of a different nature as well. The meeting referred to the fact that there had already been several American commissions in Argentina for the purpose of investigating and studying the reasons for the backwardness of American commerce.

Without admitting the full force of the criticisms that are more or less implied in these observations of the meeting, it can not be denied that American exporters would do well to consider the question of determining the amount and length of credits to be given in this market with greater regard for the financial strength of the purchasers here than is now the case. There are many houses here to which it is quite as safe to give long credits as to those in the United States or any other country. Repeated conversations with American and other importers here have afforded convincing evidence that the American method of selling on the basis of cash with the order, or part cash with the order and the remainder against shipping documents in the United States, or cash against documents upon arrival of the goods in Argentina, is seriously resented here, especially by responsible wholesale importers who have to give long credits to local retailers. There is also no doubt that many American exporters are careless of their failure to observe detailed shipping instructions that are given here with special purposes. It is certain also that some manufacturers often ship articles to South America of quite a different character from those ordered, seeming to have the altogether erroneous idea that the next closest thing will suit as well.

American Interests Must Build for Future.

Now above all times is the opportunity for American goods of almost all sorts to compete for this valuable market, but present efforts should be made with a regard for lasting future results rather than for immediate profits. A solid foundation should be laid now with the greatest carefulness, in order that when the war is over American interests as a whole will have taken advantage of the situation to intrench themselves securely here. Americans must remember that the Argentine people are quite as reluctant as they themselves would be to pay for articles of any sort that they have never seen.

Article Published in La Nación.

As illustrating the Argentine view of the conditions that it is desired to emphasize in the present report, there is given below a translation of an article appearing in the local newspaper *La Nación* of August 5, 1915, under the heading "American Commercial Policy." An article of this kind, published in such a leading journal, assuredly deserves careful consideration by American manufacturers and exporters who are competing for the markets of this or any other country. The situation here could scarcely be stated more forcefully and conservatively, and it is the belief of the writer that this presentation of it merits wide publicity:

The disturbance in the currents of our commerce with the countries of Europe has resulted in their deviation toward the markets of North America, which country now replaces them in transactions that have become restricted or are suspended. As the European conflict is prolonged, the Americans will continue to strengthen and to expand the positions that fatal force of circumstances has caused the belligerent powers to abandon. This auspicious situation for North American trade, however, will be but transitory if they do not take pains to consolidate these positions in such a manner as will enable them successfully to meet competition in the future. If, on the one hand, fortuitous circumstances are facilitating the action and the expansion of North American trade relationships, on the other they also involve contingencies that will have to be faced when the nations at present in arms recover their commercial and industrial activity. To-day, North American supplantation is imposed; it does not result from effort nor from initiative, but from the conjunction of advantages acquired in competition with other clients of the Argentine Republic, temporarily incapacitated from trading in our markets.

The North Americans are in the exceptional situation of being able to establish exclusive and arbitrary conditions, and this abnormal state of affairs might induce them to believe that they have no occasion to sharpen their judgment and to display commercial aptitude in order to conquer definitively the positions they have obtained through the European conflagration.

American Exporters Should Modify Systems.

This situation will be neither lasting nor tenable unless they modify their systems of sale, manufacture, and supply, conforming to reciprocal conveniences that will fit them to compete on equal terms with their rivals when these resume their normal operations.

The North Americans ought to model their methods on those of the countries of Europe, offering the same advantages and facilities, and adapting themselves to the exigencies and the peculiarities of the consumers whom they supply. They need to create an atmosphere favorable to their relationships, which will secure them a preference or which at least will not place them in a precarious position of inferiority.

To suppose that the boom and the accidental conditions under which they are now replacing the countries at war will continue after the disappearance

of this abnormal situation would be to fall into disconcerting error or negligence, which would inevitably condemn them to be ousted. * * *

Present Situation Abnormal—Conditions After Establishment of Peace.

Once the present fortuitous circumstances have disappeared, they will be unable to sustain their positions unless they prepare to confront the rivalry of those who have temporarily withdrawn. The Germans, the English, the French, will return, each with their commercial systems, with their goods manufactured at prices and under conditions that consult the requirements of our market, favored, moreover, by valuable traditional relationships long cultivated, and the North Americans will assuredly be dislodged if they do not adhere to a commercial policy of expansion, settlement, and reciprocity analogous to that of these competitors.

The American Government and trade should not allow themselves to be misled by the advantages and temptations of this abnormal situation. The time is now ripe for employing methods that will propitiate markets accidentally occupied, since these will otherwise be irretrievably lost or would be reduced to a mere ephemeral expansion.

Such a result may also be contributed to by the fact that the intermediaries and agents in the present accidental commerce are European houses and firms, who have recourse to North America only provisionally and who logically will endeavor to resume their original relationships as soon as circumstances allow. In order to prevent such a failure and to consolidate their situation the Americans must act with foresight, liberality, and a discreet and broad-minded realization of the precarious situation that they enjoy by favor of the present course of events.

CONSUMPTION OF MEAT IN BUENOS AIRES.

[Consul General W. Henry Robertson, Buenos Aires, Argentina, Aug. 9.]

Figures recently issued by the Bureau of Agricultural Statistics and Rural Economy of the Ministry of Agriculture indicate that during the past four years there has been a gradual diminution in the consumption of meat per inhabitant in the city of Buenos Aires.

During 1914 the total amount of meat consumed in the federal capital was as follows: Cattle, 598,386 head, 294,378,194 pounds; sheep, 713,407 head, 41,034,884 pounds; pork, 165,464 head, 31,513,488 pounds.

The consumption of meat per inhabitant for the years 1911 to 1914, inclusive, was as follows:

Year.	Inhabitants.	Beef.	Mutton.	Pork.	Total.
		<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>
1911.....	1,360,406	275	11	12	343
1912.....	1,428,042	255	37	15	307
1913.....	1,484,010	233	26	15	274
1914.....	1,584,103	187	26	20	233

From these figures it will be seen that there has been a diminution of 32 per cent during the last three years in the consumption of beef and 50 per cent in that of mutton, while the consumption of pork has increased 28 per cent, although the aggregate consumption has never assumed large proportions.

The highest prices for meat ruled during 1914, and during the first four months of the present year there has been a marked decline, especially in pork. This sharp decline has caused considerable alarm among pork raisers, although it is believed that with the recent establishment of the new Armour freezing plant in La Plata better facilities will be had for the exportation of frozen pork, and this will have a stimulating effect on local prices.

NEW DOCK AND WAREHOUSE AT HABANA.

[Consul Henry M. Wolcott, detailed as vice consul at Habana, Cuba, Sept. 2.]

The new terminal dock and warehouse of the Peninsula & Occidental Steamship Co. were opened for business to-day in the port of Habana. The Peninsula & Occidental is the first steamship line to possess its own dock and terminal in this port. The inauguration of this service means added convenience and comfort for passengers arriving and departing, since it obviates the necessity of using tugs or lighters for their transfer to and from the vessels. Apparently no detail has been overlooked to make the dock and warehouse buildings complete and modern in every respect. The brick and iron construction renders them as nearly rat-proof and fireproof as possible. Space has also been provided at the new terminal for the offices of the company, but a city ticket office will be maintained as before for the added convenience of passengers. The erection of the terminal has involved a considerable expense to the company.

The idea of the late Henry M. Flagler to unite Cuba with the United States by means of the over-sea railway extension of the Florida East Coast Railway and the P. & O. ferry-steamer service is now bearing abundant fruit. The business of the ferry service is growing so rapidly that the company has, it is reported, already ordered the construction of a second ferry steamer similar to the *Henry M. Flagler*, now in operation, making daily trips between Habana and Key West. This vessel can carry 30 loaded standard freight cars. The service has been a complete success in every detail and will be a special boon to the fruit and vegetable shippers of Cuba, as it does away with the necessity of transferring freight from car to steamer and vice versa at the terminals.

GERMAN RAILWAYS ANALYZE ACCIDENT RECORD.

[Consul Henry C. A. Damm, Aix la Chapelle, Germany, Aug. 28.]

The Association of German Street and Interurban Lines has issued a report relative to accidents in 1914. This association embraces 178 lines which, during the year, operated 750,000,000 car kilometers (466,027,460 car miles) and carried 2,750,000,000 passengers. The lines averaged one accident of a serious or fatal nature for 561,827 car kilometers (349,103 miles) operated.

For Aix la Chapelle, which has the largest interurban system in Germany, the average was one accident for 647,225 kilometers (402,166 miles).

The report shows that, as heretofore, more pedestrians were injured or killed than passengers. The association, taking an average for the 15 years from 1899 to 1914, says that 31.81 per cent of the passengers injured suffered accidents through carelessness while boarding or leaving cars. Of the pedestrians injured it reports that 54.46 per cent were careless in crossing or walking along car tracks.

The percentages of liability to injury for pedestrians and passengers, respectively, increased in 1914 over 1913 by 2.5 and 2.9 per cent. The fact that during the last five months of the year many cars were operated by new and less skilled men may account largely for this increase. Accidents which occurred in spite of safety appliances, such as guards and fenders, demonstrate that there is still room for improvement in such appliances.

BACK-YARD GARDEN CONTEST IN TORONTO.

[Consul Julius D. Drcher, Toronto, Canada, Sept. 11.]

The interest taken in Toronto in making practical use of vacant lots as set forth in a report from this office on "Vacant-lot gardens in Toronto" (see **COMMERCE REPORTS** for Aug. 26, 1915) is further illustrated by the meeting of several thousand people in Massey Hall on September 10 to witness the distribution of the prizes in the second annual Dovercourt Back-Yard Contest. In this contest 616 gardens were entered, of which 513 produced vegetables. The average size of the gardens was 1,500 square feet and the average space devoted to vegetables 1,000 square feet. The value of vegetables produced for each 1,000 square feet was \$30. About 70 of the contestants raised chickens at an average profit of \$30 for each contestant. It was stated by the chairman of the meeting that if 11 per cent of the back-yard gardens in Toronto was used for raising poultry the total value of the product would be \$264,000, and that if 80 per cent of the back-yard gardens of the city was devoted to the cultivation of vegetables the net value of the production would amount to \$1,875,136.

Archdeacon Cody in presenting the prizes said that the back-yard-garden contest was a good thing for four reasons:

(1) Hygienic—it helps to make the city more wholesome; (2) physiological—it is the best exercise a man, woman, or boy could indulge in; (3) it enhances the beauty of the city; (4) utility—it increases the productiveness of Toronto, of Ontario, of Canada.

If there was one lesson more than another that all Canadians should learn at present, he said, it was the lesson of saving and of production. In the Dominion of Canada the people would have to meet the burdens of war by spending less and producing more.

TOURIST TRAFFIC IN SWEDEN, 1915.

[Consul General Ernest L. Harris, Stockholm, Sept. 1.]

It has been the general impression both in Sweden and Norway that the Scandinavian countries would do a good tourist business traffic during 1915. In fact it was generally supposed that tourists from Germany would travel to Sweden and Norway this year in ever-increasing numbers for the reason that with the exception of Switzerland and Netherlands there were no other countries in the world where it would be possible for them to go.

Thus far, however, this has not been realized. On the contrary, the war has so greatly increased the cost of living in neutral Sweden that with the exception of a few articles of food it costs more to live in this country than it does in Germany.

The season is now so far advanced and the weather on the whole has been so bad that it is safe to predict that the tourist season is ended. The truth of the matter is there has really been no tourist season in 1915, and the travelers arriving from foreign countries have come in the interests of the business concerns which they represent.

There is every indication that the German tourist this season has sought some watering place in his own country.

LOSS OF TONNAGE ON THE PACIFIC.

[Extract from Japan Advertiser of Aug. 26, by Consul General George H. Scidmore, Yokohama.]

The withdrawal of the Pacific Mail steamers from the trans-Pacific trade will have a most serious effect upon the Japan-America trade in these days of scarcity of bottoms. Just to demonstrate the tonnage to be taken out of the service between San Francisco and Japan ports via Honolulu we append the following table showing the cargo capacity of the Pacific Mail liners and that of the Toyo Kisen Kaisha liners:

	Cargo capacity.	Average shipment in Yokohama and Kobe.
Pacific Mail liners:	Tons.	Tons.
Mongolia.....	15,000	6,500
Manchuria.....	15,000	7,000
Korea.....	8,700	4,000
Siberia.....	8,500	4,000
China.....	3,800	1,700
Total.....	51,000	23,200
Toyo Kisen Kaisha liners:		
Tenyo Maru.....	6,500	4,550
Chiyo Maru.....	6,500	4,550
Shinyo Maru.....	6,500	4,550
Nippon Maru.....	3,000	2,100
Total.....	22,500	15,750

It will thus be seen that the Pacific Mail liners assigned about 46 per cent of their cargo capacity to shipments in Yokohama and Kobe, and the Toyo Kisen Kaisha liners about 70 per cent, the rest of the space being assigned to shipments from China ports and Manila. It follows that the withdrawal of the Pacific Mail liners from the trans-Pacific business means a decrease of cargo capacity of 23,200 tons, as far as Japanese trade is concerned. Even if the entire capacity of the Toyo Kisen Kaisha liners be devoted to the Japan-America trade, though such is in reality impossible, there would still be a shortage of 16,000 tons. Various Japanese steamship companies and individual shipowners are said to be contemplating filling the vacancy, but nothing definite has yet been decided upon. It is impossible to fill the vacancy perfectly, and the probable result will be an increase in freight rates.

AMERICAN CONSUL WANTS MORE CATALOGUES.

[Consul Felix S. S. Johnson, Kingston, Ontario, Sept. 7.]

In response to the request of this consulate for American catalogues, published in COMMERCE REPORTS for August 30, 1915, fewer than 50 catalogues have been received. It was hoped to obtain as many as 500.

American manufacturers should realize that the present is an exceptionally opportune time for the extension of their trade abroad, and that it is most desirable for them to cooperate with American consuls in foreign lands in an effort to obtain a foothold in places where in the past their goods have been insufficiently known. With the European supply largely cut off, a greater trade in Canada should be enjoyed by American manufacturers.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its branch offices. Request for each opportunity should be on a separate sheet and the file number given.

Office furniture, No. 18535.—An American consular officer in India transmits the name and address of a business man in his district who desires to communicate with American manufacturers and exporters of office furniture, sporting goods, etc. The man desires to act as sales agent or is in a position to take over the management of a business in that country.

Typewriters, numbering machines, etc., No. 18536.—An American consular officer in Australia reports that a business man in his district desires to be placed in communication with manufacturers and exporters of office furniture and furnishings, typewriters, numbering machines, etc. Catalogues, price lists, and full information should be supplied.

Jewelry, novelties, etc., No. 18537.—A firm in Burma has informed an American consular officer that it is interested in American jewelry, collar buttons, novelties, etc. Catalogues and full information should be sent at once.

Musical instruments, heating devices, etc., No. 18538.—An American consular officer in Russia has forwarded the name and address of a man in his district who is in a position to represent American manufacturers and exporters of musical instruments, gas heaters, and water-warming devices. References are given. Correspondence should be in English. Weights, measure, etc., should be stated in Russian equivalents. Quotations should be made c. i. f. Vladivostok.

Air valves, No. 18539.—An American consular officer in Scotland transmits a letter from a firm in his district which desires to receive small metal air valves and metal stoppers, such as are used in rubber hot-water bottles.

Agricultural implements and machinery, No. 18540.—An American consular officer in Burma writes that a firm in his district has requested to be supplied with full information relative to an exclusive agency for the sale of agricultural implements and machinery. Quotations should be made c. i. f. destination.

Machinery, No. 18541.—A printer and stationer in England informs an American consular officer that he desires to receive catalogues and full information relative to machines for making conical paper tubes for yarn and spinning purposes.

Dry goods, provisions, and novelties, No. 18542.—A citizen of the Philippine Islands who is now visiting in China has informed an American consular officer that he contemplates establishing a branch office in a Chinese city for the purpose of retailing dry goods, provisions, and novelties. Correspondence should be in Spanish or Chinese. Catalogues, price lists, and full information should be sent.

Paints, varnishes, and enamel, No. 18543.—A company in Burma informs an American consular officer that it desires to secure a sole agency for the sale of paints, varnishes, and enamel. Quotations should be made c. i. f. destination.

Boots and shoes, No. 18544.—An American consular officer in India transmits the name of a business man in his district who wishes to establish commercial relations with American manufacturers and exporters of boots and shoes for women. Correspondence may be in English.

Wharf extension, No. 18545.—The office of the British Trade Commissioner in Canada reports that tenders are invited by the Ministry of Public Works for the carrying out of wharf extension work at the entrance to the Mission River at Fort William, district of Thunder Bay, Ontario. Sealed tenders, on the proper forms, will be received by the Department of Public Works, Ottawa, where copies of specifications and forms of tender may now be obtained. The date for the receipt of bids is not stated. Each tender must be accompanied by a certified check for 10 per cent of the amount of the offer, made payable to the Ministry of Public Works. Local representation is necessary. The Bureau has no further information relative to this opportunity.

Umbrella frames and metal snap fasteners, No. 18546.—The Bureau is in receipt of a letter stating that a business man in Spain desires to purchase umbrella frames and metal snap fasteners for women's dresses, the umbrellas to be of the fast system, size 64 centimeters, of 8 ribs, with ring, colors to be black and maroon. Quotations for 1,000, 5,000, and 10,000 dozens. Sample to be submitted with prices.

Dredger, No. 18547.—In pursuance to a royal order, tenders are invited until October 17, 1915, for the construction and delivery to the Spanish Royal Navy of a dredger for the royal dockyard at La Carraca, San Fernando, Cadiz, Spain. Tenders will be received at the Spanish Ministry of Marine, Madrid. The Bureau has no further information relative to this opportunity.

Jute and burlap, No. 18548.—The Bureau is in receipt of a letter from a business man in Canada requesting the names of jute and burlap manufacturers.

Cotton goods, etc., No. 18549.—A commercial attaché of the Department of Commerce reports that a firm in Australia desires to communicate with manufacturers of white and printed muslin, printed volles, white pique, linings, and buttons for women's blouses, skirts, and children's dresses. Catalogues for winter goods to reach firm by November 1. References given. Cash against documents.

General representation, No. 18550.—A letter to the Bureau states that a man in Spain wishes to represent American exporters in that country and Portugal. No particular line is mentioned. The letter states that references can be furnished.

Railways, No. 18551.—An American consular officer reports that bids will be received by the "Dirección-General de Obras Públicas, Ministerio de Fomento," Madrid, for the construction of strategic railways (1) from Estada and Tamarite to Balaguer and (2) from Gibráleon, via Palmogo, to the Portuguese frontier. The lines will be of meter gauge. The minimum weight per linear meter of the rails to be used will be 30 kilos (66 pounds). The troop trains must have a speed of at least 25 kilometers (about 15½ miles) per hour. Tenders for electric traction will be considered. Bids will be received at the "Dirección General" until February 19, 1916, for No. 1 and until November 20, 1915, for No. 2.

Flannel, No. 18552.—The Bureau is in receipt of a letter stating that a firm in Ecuador is in the market for white, sky-blue, pink, and red flannel. The width of the flannel and the cost per bolt are requested. Sample of flannel may be examined at the Bureau or its branch offices. (Refer to File No. 66).

White pine lumber, No. 18553.—A commercial agent of the Bureau reports that a firm in Greece wishes to secure 71,000 feet of white pine or spruce. Further information may be obtained from the Bureau or its branch offices.

Mesh wire screen, No. 18554.—The Bureau is in receipt of a letter stating that a business man in Spain is desirous of obtaining mesh wire screen cloth for filters. The price per square meter, f. o. b. any port having direct service with Spain is desired. Sample of the cloth is transmitted, and may be examined at the Bureau or its branch offices. (Refer to File No. 65.)

Structural iron, paints, hosiery, etc., No. 18555.—A representative of a Greek firm who is now in this country informs a commercial agent of the Bureau that he is interested in purchasing structural iron, paints, hosiery, and boots and shoes.

Glue, buttons, mirrors, etc., No. 18556.—A letter to the Bureau states that a firm in Australia desires to correspond with manufacturers of glue, buttons, mirrors, pins, musical strings, shellac, and novelties. Catalogues, price lists, and full information are requested. It is stated that the firm is willing to act as a representative.

Machinery, No. 18557.—An American consular officer in Brazil reports that a man in his district has a number of requests for information relative to machinery for the manufacture of corn products, such as corn flour, etc. Catalogues and price lists of corn machinery and agricultural implements are requested.

- Electric-light accessories*, No. 18558.—An American consular officer in the United Kingdom reports that a firm in his district desires catalogues and price lists from manufacturers of brass parts for electric-light accessories. Samples accompany the report and may be examined at the Bureau and its branch offices. (Refer to file No. 66372.)
- Barium dioride*, No. 18559.—A dealer in chemical products in Spain informs an American consular officer that he wishes to purchase barium dioxide. Correspondence should be in Spanish.
- Pumps*, No. 18560.—A firm in India informs an American consular officer that it desires to correspond with manufacturers of pumps.
- Building material, etc.*, No. 18561.—A report from an American consular officer in the United Kingdom states that a firm is in the market for light building material and general merchandise. The firm states that it is willing to act as agent for products of any description.
- Machinery*, No. 18562.—An American consular officer in Australia reports that a business man desires to correspond with manufacturers of the most modern machinery for the equipment of a plant to manufacture Portland cement. Prices, catalogues, and dates of delivery are requested.
- Railway supplies*, No. 18563.—By royal decree of August 19, 1915, the "Ministerio de Fomento" is authorized to purchase, by public competition, locomotives and railway materials for the railway from Betanzes to Ferrel. The cost and specifications are not mentioned, but they are on file in the "Ministerio de Fomento." Madrid, Spain, where they may be seen. Proposals should be submitted in Spanish language. The Bureau has no further information relative to this opportunity.
- Seeds*, No. 18564.—An American consular officer in Argentina reports that an importer of seeds desires to receive catalogues and price lists of garden, vegetable, and flower seeds. Catalogues and correspondence must be in Spanish.
- Iron, lead, etc.*, No. 18565.—A report from an American consular officer states that a firm in Portugal desires to get in touch with exporters of iron, lead, copper, tin plates, lathes, and chain cables. Catalogues and price lists are desired at once. Correspondence may be in English.
- Scrap steel*, No. 18566.—An American consular officer in the Far East reports that there is a good market there for scrap steel. One request for 2,000 tons has already been received, and it is probable that the demand will largely exceed this, provided a supply can be obtained at reasonable cost. Quotations should be made, if possible, for delivery at Hankow or Shanghai. Reference given.
- Malt*, No. 18567.—A report from an American consular officer in Switzerland states that a firm in his district desires to correspond with manufacturers or exporters of malt. References given. Correspondence may be in German or French.
- Haberdashery, etc.*, No. 18568.—A firm in Spain informs an American consular officer that it desires to represent American exporters on a commission basis. Agencies for haberdashery and inexpensive jewelry are preferred. Correspondence should be in Spanish.
- Cotton goods*, No. 18569.—An American consular officer in Brazil reports that a firm is extremely anxious to import white, dyed, colored, and printed Manchester type cotton goods, 26 to 27 inches wide, weight 80 to 90 grams per square meter, and more than 102 grams per square meter, the last weight must be guaranteed by reason of certain tariff classifications. Samples and prices with complete information are solicited. Weights to be in metric system. Cash against documents.
- Ochers, oxide of iron, etc.*, No. 18570.—A firm in India informs an American consular officer that it desires to find a market for red and yellow ochers, oxide of iron, galena, and bauxite.

SHIPMENTS FROM LONDON TO UNITED STATES.

[Cablegram from American Consulate General, London.]

The total value of the articles invoiced through the American consulate general at London, England, for the United States during the nine months ended September 30, 1915, was \$104,159,183, compared with \$98,202,629 for the corresponding months in 1914. The shipments of rubber were valued at \$43,080,562, compared with \$25,303,056 for the 1914 period; tin, \$7,635,665, compared with \$11,315,356; wool, \$6,417,593, against \$4,321,405; precious stones, \$5,993,397, against \$4,907,783; tea, \$2,660,402, against \$2,691,852; and indigo, \$374,413, against \$34,693. The value of the exports for September was \$11,819,822, compared with \$10,704,442 for August.

FRENCH CROPS FOR CURRENT YEAR.

[Cablegram from American Consulate General, Paris.]

The Minister of Agriculture publishes in the Journal Officiel the following estimates of French crops for 1915: Wheat, 6,472,020 metric tons, against 7,870,321 tons in 1914; spelt, 114,210 tons, against 133,976 tons; rye, 992,820 tons, against 1,138,326 tons; barley, 786,275 tons, against 1,004,493 tons; and oats, 3,746,220 tons, against 4,665,472 tons.

The reason for the stronger tendencies and record buying of low-grade apples in the Pacific Northwest recently was made known in the fact that practically all the recent purchases were for shipment to Europe, states a Portland, Oreg., press report. Conservative estimates of the orders places the total at almost 500 carloads.

NICARAGUAN MORATORIUM LAW EXTENSION.

[Consul Harold D. Clum, Corinto, Aug. 27.]

The general moratorium established by the law promulgated October 23, 1914, and extended for six months by the law passed by the Nicaraguan Congress on February 25, 1915, expired August 26, but certain provisions remain in force.

It is provided that after the expiration of the six months referred to in the law, and while the present European war lasts, to every debtor who may be sued and who proves that he has more protected assets than liabilities, in a summary proceeding with the creditors and with the presence of the representative of the public ministry, the judge will grant a stay proportional to his business, which can not be prolonged for more than a year, counting from the date of the petition. This petition for a stay will suspend every other executory action pending against the petitioner, and once it is granted it will be understood that the stay allowed is for all his business, and in no case can it be granted to him a second time in accordance with the law.

May Be Declared Fraudulent Bankrupt.

Against the decision of the judge no recourse whatever will be admitted. The fact of his giving a false or incomplete declaration, to the damage of his creditors, will be sufficient cause for the debtor to be declared a fraudulent bankrupt. The judge will put an end to the stay on petition of any creditor, if it is shown that the assets have diminished through lack of care or fraud on the part of the debtor.

It is also provided that for the duration of the European war and until the National Bank of Nicaragua (Inc.) resumes the sale of foreign exchange for córdobas, debts owned by concerns of this country and payable in American or other foreign currency can not be collected by judicial means unless the creditors will accept payment in Nicaraguan córdobas on a par with United States gold (1 córdoba for \$1) and stand the loss to be incurred in purchasing exchange or currency for remittance to the United States or other foreign country.

Rate for Drafts on United States.

Drafts on the United States now sell at about 15 per cent premium. It is reported on apparently good authority that the National Bank will probably resume the sale of exchange within two or three months, but no official announcement has yet been made.

In view of the financial conditions existing in Nicaragua at present, and the provisions of law quoted, it would be advisable for American exporters to confine credit operations to those firms with whose standing they are acquainted.

According to the Hochi, the Japanese Department of Agriculture and Commerce intends, from next fiscal year, to start the expansion of the Edamitsu Iron Foundry, the work to be spread over six years. The total cost is estimated at 35,000,000 yen (\$17,500,000). The program contemplated is the establishment of a factory for the manufacture of dyestuffs.

DANGER IN OXIDATION OF FUSIBLE TIN BOILER PLUGS.

The attention of the United States Bureau of Standards has been directed to the failure and deterioration of fusible tin boiler plugs in service. In some cases such plugs have failed to melt and so give warning of dangerous boiler conditions, and investigation has shown that the tin filling in these cases had become oxidized to tin oxide (SnO_2), which has a melting point above 1600°C . (2900°F .).

About 1,050 plugs, of which 100 were plugs which had been in service, were obtained through the courtesy of the United States Steamboat-Inspection Service, and subjected to examination. This included inspection of design and construction, condition, and purity of the tin filling, and in the case of the used plugs their classification according to the type of deterioration undergone by them in service.

One pronounced and dangerous type of deterioration is the oxidation of the tin along the grain boundaries, by which is formed a network of oxide throughout the tin. This is shown to be due to the presence of zinc in amounts as low as 0.3 per cent.

Lead and zinc are found to be the principal impurities in tin plug fillings, and since all "failed" plugs contained these or other impurities the conclusion is reached that if these impurities are eliminated by strict specifications and inspection, which will allow only admittedly superior qualities of tin, such as Banca and some others, the danger of failures of these plugs will no longer exist.

Directions are given for the testing of the purity of the tin in such plugs. Copies of the report upon this investigation, Technologic Paper No. 53, may be obtained without charge by interested parties upon application to the Bureau of Standards, Washington, D. C.

SWEDISH TRADE WITH JAPAN.

[Consul General Ernest L. Harris, Stockholm, Aug. 23.]

Swedish trade journals are commenting upon a report issued by the Japanese Secretary of the Interior, which deals with the development of Swedish-Japanese trade. It shows conclusively that Swedish merchants and manufacturers have been able to utilize the opportunities created by the war and greatly increase the turnover of the business done with the Far East. The trade summary is for the first four months of the present calendar year and shows that the exports from this country to Japan during that time amounted to \$1,332,299, against \$969,469 in 1914 and \$662,835 in 1913.

The success of Sweden in this direction is due primarily to the initiative and energy of the Swedish-East Asiatic Steamship Co. This company was founded about three years ago and began running a regular line of vessels from Goteborg to Yokohama, with intermediate ports of call at Bombay, Singapore, and Shanghai.

The progress made in the exportation of Swedish merchandise to Japan is the more remarkable when one considers that the exportations of some other countries to the Far East, especially England, show a noticeable decrease. While the war situation generally has considerable to do with fluctuations in export statistics, yet the efforts of Sweden to gain a foothold in China and Japan are apt to meet with definite and lasting results.

REPORT ON CONSTRUCTION OF STANDARD OHMS.

Although electric light and power are to-day in almost universal use, the average consumer pays little attention to the manner in which the amount of his bill is determined. He knows that his consumption of current is reckoned from his meter, but he does not know how his meter was originally adjusted or how it is checked from time to time to determine if its indications are correct. Only in rare instances does he know very much about the electrical units in terms of which his measurements are expressed, and still less concerning the fundamental electrical units to which these measurements are referred.

These fundamental units, the ohm (the unit of resistance), the ampere (the unit of current), and the volt (the unit of electromotive force), were defined by the International Congress on Electrical Units and Standards (London, 1908), and have since been internationally adopted.

The United States Bureau of Standards has just issued a publication, Scientific Paper No. 256, dealing with the construction of four standard ohms. This unit was defined by the London Congress as the electrical resistance offered to an unvarying electric current by a column of mercury at the temperature of melting ice, 14.4521 grams in mass, of a constant cross sectional area and of a length of 106.300 centimeters. The work done at the Bureau of Standards consisted in the construction of material standards representing the unit realized in the form of mercury columns in glass tubes, and the work involved measurements of the highest accuracy of the length, the departure from uniformity of the cross section, and the mercury content of each tube, as well as their comparison with working standard. All measurements had to be made at the melting temperature of ice prepared from specially purified water, which was used in order to avoid any temperature uncertainty due to possible impurities in the ice.

Electrical comparisons of the four standards showed the average deviation of their individual values from their mean value to be less than one one-hundred thousandth of an ohm.

England, Germany, France, Russia, Japan, and the United States now have mercury standards of resistance, which all agree to a high accuracy.

Similarly accurate work has been done at the bureau with regard to the ampere and the standard volt, so that the public can be assured that the electrical standards maintained at their national standardizing laboratory are of an accuracy far exceeding any commercial requirements.

Copies of the publication referred to may be obtained, without charge, from the Bureau of Standards, Washington, D. C.

Enlargement of Kingston Pumping Plant Recommended.

Consul Felix S. S. Johnston, of Kingston, Ontario, reports that the Canadian Fire Underwriters' Association has recommended that the capacity of the local pumping plant be increased, that a new boiler be purchased for the pumps, and that the water main be renewed between the pumping station and standpipes.

IMPORTS AND EXPORTS OF COPPER.

The total imports of copper at the customs districts of New York, Massachusetts, Philadelphia, Maryland, Virginia, Galveston, New Orleans, San Francisco, Washington, and Michigan during the week ended September 25, 1915, were as follows: Ore, matte, and regulus (copper contents), 3,089,314 pounds, valued at \$362,953; pigs, ingots, and old, etc., 3,706,464 pounds, valued at \$472,501. Of the ore, matte, and regulus imported, 1,039,360 pounds came from Cuba, 646,606 pounds from Canada, 618,093 pounds from Chile, and 508,000 pounds from Peru. Of the imports of ingots, etc., 2,030,827 pounds came from Peru, 786,560 pounds from England, and 760,826 pounds from Chile.

Of the total domestic exports of pigs, bars, etc., amounting to 8,273,626 pounds, valued at \$1,568,448, 5,257,786 pounds went to France, 1,368,899 pounds to England, and 1,273,266 pounds to Italy.

AMERICAN COTTON STATISTICS.

Census report shows 2,900,007 bales, counting round as half bales, ginned from the growth of 1915 to September 25, compared with 3,393,752 for 1914 and 3,246,655 for 1913. Round bales included this year are 32,263, compared with 3,394 for 1914 and 26,983 for 1913. Sea island included 19,094 for 1915, 13,927 for 1914, and 10,570 for 1913.

Cotton consumed during August, 1915, amounted to 464,486 bales. Cotton on hand in consuming establishments on August 31 was 1,166,190 bales, and in public storage and at compresses 1,676,231 bales. The number of active consuming cotton spindles for the month was 31,064,519. Domestic cotton exported during September, 1915, was 494,532 running bales, and foreign cotton imported 26,092 equivalent 500-pound bales.

JAPANESE CHAMBER OF COMMERCE AT SAN FRANCISCO.

[Commercial Agent E. G. Babbitt, San Francisco, Sept. 8.]

At a recent meeting of the Japanese Business Men's Association of San Francisco the form and name of the organization was changed and the field of its commercial activity enlarged. Hereafter the body will be known as the Japanese Chamber of Commerce, and will have as its main object the promotion of business relations between the United States and Japan. Its headquarters are at 444 Bush Street, this city.

Mr. T. I. Kawashima, the secretary, states that the new chamber is desirous of receiving trade literature and will particularly welcome industrial samples.

ROSARIO FUNDS FLOATING DEBT.

[Consul William Dawson, jr., Rosario, Argentina, Aug. 25.]

The Rosario City Council sanctioned on August 24, 1915, a project for funding the present floating debt, as well as that likely to arise through this year's deficit and future payments for expropriations. The executive is authorized to issue bonds to the amount of 6,000,000 paper pesos (\$2,547,600) in six series of 1,000,000 pesos (\$424,600) each. Bonds will bear 6 per cent interest and an accumulative annual amortization of 2 per cent is provided for. Bonds will be offered to the city's creditors at par.

CONSTRUCTION WORK ABROAD.**ARGENTINA.**

[Consul William Dawson, jr., Rosario, Aug. 25.]

Projected Railway.

The Argentine Government has authorized the Administration of State Railways to trace a line to run from San Luis on the Pacific Railway to Milagro on the Northern Argentine (State) Line and pass through Candelaria, Quines, and San Francisco. An appropriation of \$23,353 is made for preliminary studies.

The Government considers that the construction of the line should be commenced as soon as practicable in view of the present difficult economic situation which the work would tend to improve. The presence of water in the zone to be crossed will facilitate the work and also fill a want experienced on the Northern Argentine Line between Serrezuela and Tello.

School Buildings—Port Works.

The Government of the Province of Santa Fe has signed a contract with the firm of J. Allende Posse, Avenida Vélez Sarsfield 240, Cordoba, for the construction of four school buildings—two in Rosario and two in Santa Fe. The total cost of the four buildings will be approximately \$255,000. Work is to start as soon as possible.

The Rosario port works (Sociedad Anónima del Puerto del Rosario) have been authorized to install a telephone service in the port zone to be connected with the city lines. The work will cost approximately \$8,000.

CHINA.

[Consul General Edwin S. Cunningham, Hankow, China, July 29.]

Projected Reconstruction of Hankow.

There has recently been renewed agitation with respect to the proposed rebuilding on modern lines of that part of Hankow destroyed during the revolution. An account of the conclusion of the loan agreement, whereby an English company is to furnish \$50,000,000 for this purpose after the restoration of peace, was published in *COMMERCE REPORTS* for December 8, 1914. According to an article appearing in the Hankow Daily News, for July 23, 1915, Commissioner Yan Tu has drawn up a comprehensive scheme of improvement. In a memorandum to the President of China, he compares Hankow to Liverpool in Great Britain and Chicago in the United States. One preliminary survey and one minute survey have been made, and all necessary preparations for laying out the sites, digging the new canal, and constructing the river bridges are, this article states, being actively pushed on.

An excellent idea of the general character and scope of the project may be obtained from the following translation from the Chinese National Gazette of July 26:

Existing Conditions—Request for Extension of Concessions.

The best part of Hankow is the strip of land along the river (Yangtze). At present this strip has been turned into concessions, and nothing can be done in regard to it. Next in quality is the land between the river and the old Hankow market place, which is the only area on which developments can be made. As the lower end of the old market place is connected with the concessions, no extension can be made on that side. At the rear is a lake, which

is low, and, except with great effort, can not be turned into a market. It therefore appears that this strip district is very narrow indeed. During the late régime, when Chang Chih Tung was viceroy of Hupeh, he proposed developing the lake at the back of the native city of Hankow, but on account of the enormous expenditure and the vast amount of work involved the proposal was dropped. As a result of the war at present existing in the world the President wishes to carry out an administration that will enrich the people; therefore, in the first place, it is necessary to remodel the old market into one like those existing in civilized countries. On the other hand, a new market place must be found, so that the trade may extend, and this can be done by developing the lake at the rear of Hankow, so that it may be amalgamated with the old trading area for the formation of one huge mart.

The boundary of the concessions nearly touches the Peking-Hankow Railway at the back, and the intervening space may be developed. During past years, when in need of earth, the railway company has dug away the soil. Thus many dirty pools have been formed and filthy, stagnant water has collected. During the summer plague may be engendered, and the consular body, taking this fact as an excuse, desires the extension of the concessions. The Ministry of Foreign Affairs refuses their request in a reasonable way and has asked that this place be taken into consideration in conjunction with this undertaking. It is believed that when work is undertaken this strip of land can not be neglected; thus foreigners may not complain.

Difficulty of Transportation—Plan to Open a Canal.

The strip of land behind the concessions and the site of the lake are all distant from the river, hence transportation is difficult. Even when the market place has been completed and traders flock to the place, the river traffic will not be comparable to that of the concessions. Therefore, if it is desired that Chinese commerce should extend and expand, other undertakings must be effected. Let us take this future importance of Hankow into consideration, for it will be not only the commercial center of China, but the industrial metropolis of the whole country. If it is desired that factories may stand "like the trees of a forest," river transportation must be acquired. Having studied the investigation reports and learned much from discussion, those in charge of the project now intend to open a canal beginning at the upper part of the Han River, extending along the rear of the concessions and joining the Yangtze River, so that the old mart, the lake, and the concessions will be surrounded by the new canal.

Thus Hankow will be a triangular island; on every side of it vessels will be able to cast anchor, and communication will be much facilitated. The prosperity of the place and the development of industries and commerce will go forward by leaps and bounds. Moreover, the low situation of the lake makes it impossible for it to be as elevated as the old mart unless it is filled in. If the earth is taken from afar, the expenditure will be great. If the canal is dug, the earth out of the canal can be used for filling the low places of the lake. Therefore the opening of a canal will supply earth for filling the lake and will afford water transportation facilities to the market.

Construction of Bridges—Other Projected Improvements.

The Wuhan cities are like "the feet of an incense pot." The travelers and traders go to and fro by means of boats, but the rivers are too widely separated. When there is a strong wind and the waves are high, communication between the cities seems wholly interrupted. Moreover, the termini of the Hankow-Szechuan, Canton-Hankow, and Peking-Hankow Railways are severed by natural barriers. Thus there are many obstacles. It is therefore proposed to construct a Wuhan bridge and a Hanyang bridge, joining the triple cities into one. Eventually the railways will form one trunk line, but the passengers will walk from one city to another by land instead of going by water and will not be exposed to the dangers formerly incurred. Thus transportation will be greatly facilitated and industries and commerce stimulated and encouraged.

In addition to the above, river banks, public roads, drainage, tramcar service, water and electric light, parks, hospitals, schools, and other public works will be gradually made so that Wuhan may become the foremost market place in the whole country.

In March, 1914, an English consulting engineer and a party of surveyors were sent to Hankow to make a preliminary survey. Upon this an estimated expenditure was drawn up as a basis for the flotation of a foreign loan.

was contracted from Samuels & Co., a British firm. But immediately after the contract was signed the European war broke out. Capital can not be imported during such abnormal conditions. In January, 1915, deputies were sent to Hankow for the establishment of an office there, and during the last five months a second survey has been made.

PHILIPPINES.

[From Manila Daily Bulletin.]

Road Construction in the Philippines.

Complete figures showing the results of first-class road construction throughout the Philippines during the first six months of the present year have just been received, and show that out of an existing total of 1,680 miles 136 miles were constructed during that period. Increases are reported from a great majority of all the Provinces. First place is held by the Province of Pangasinan, with a total of 131 miles and an increase of 26. The amount of money expended during these months has been \$1,717,335, which is more than has been applied to this purpose during any similar period in the past. This increase of mileage is the more noticeable because the proportion of the available funds which must be devoted to maintenance of roads, as distinguished from new construction, naturally increases from year to year. Practically all the existing mileage is the creation of the last seven years, for on June 30, 1908, the total was but 245 miles.

The expenditure on public works, other than roads and bridges, also increased heavily during the first half of this year, though not to as great an extent. This is particularly true of the drilling of artesian wells.

PORTUGAL.

[Consul General W. L. Lowrie, Lisbon, Sept. 7.]

Port of Lisbon Improvements.

A loan of 5,000 contos gold (about \$5,000,000) has been authorized by the Portuguese Government for the improvement of the port of Lisbon. The money will be employed as follows: Modification of the Alcantara dock and construction of the west mole of Santos dock, 1,000,000 escudos; construction of the east mole of the same dock, 1,600,000 escudos; construction of the third section of Alcantara dock, 1,300,000 escudos; Alfandega quay, material, equipment, and warehouses, 1,100,000 escudos.

All contracts, expenditures, etc., are under the direction of the Conselho de Administração do Porto de Lisboa.

SPAIN.

[Consul Wilbur T. Gracey, Seville, Aug. 28.]

Proposed City Improvements.

Plans for the improvement of the city of Seville, approved August 13, 1915, by the city council, have just been published, and when they are completed will largely transform the conditions in the city, especially as regards the water supply, drainage, etc., widening certain streets, construction of schools, markets, a great hotel, and paving the city streets in the most modern system.

In order to cover the expenses of this work a loan is authorized, amounting to 33,000,000 pesetas (at exchange of 19.8 equaling \$6,369,000), with an amortization period of 10 years, and drawing interest at 6 per cent.

The first plan contemplated the purchase of the San Telmo Palace and Garden and their conversion to public use, but owing to shortage of funds this plan has been discontinued or possibly postponed.

The measures approved and about to be undertaken in the near future are as follows:

1. 500,000 pesetas (\$96,500) are to be advanced to the water company (a British corporation) for improving and completing the present water system, a completely closed-in water system, taking its supply from Alcala and from the Guadalquivir River, which has been under construction for the past 10 years. The proposed extensions and improvements have been shown to be very necessary by the exceptionally hot summer which Seville has had this year, resulting in shortage of water supply, lack of sufficient power to pump the water to the roof tanks which are on every house, resulting in continued complaints by the people and the public press and compelling many of the householders to install hand pumps in the house to supplement the power pumps of the water company. Water has only been turned on by the company for short periods of a few hours during each day.

2. 50,000 pesetas (\$9,650) to be devoted to constructing, furnishing, and providing with necessary scientific apparatus a tuberculosis hospital.

3. 500,000 pesetas (\$96,500) to be used for improving the city and suburban roads.

4. 400,000 pesetas (\$77,200) to be devoted to the necessary improvements in the existing markets.

5. 4,000,000 pesetas (\$772,000) for the new paving of the city streets.

6. 400,000 pesetas (\$77,200) for repairs to the city hall.

7. 3,000,000 pesetas (\$579,000) for payment of the interest, amortization, and other expenses incident to the loan.

8. 4,000,000 pesetas (\$772,000) to be paid to the committee of the Spanish-American Exposition for expenses incident thereto.

9. 1,000,000 pesetas (\$193,000) to be paid to the same committee for constructing a hotel in the Eslava Gardens. (See *COMMERCE REPORTS* for July 24, 1915.)

10. 1,000,000 pesetas (\$193,000) to be paid to the war office for reconstruction of barracks.

11. 500,000 pesetas (\$96,500) for expenses incurred for the parks, gardens, and promenades.

12. 3,251,450 pesetas (\$627,520) to be devoted to paying the expenses of widening the streets of Santo Tomas, Puerta de Jerez, Campana, and Larana.

13. 3,700,000 pesetas (\$714,100) for acquisition of land to be used in widening the city streets, and for erecting schools and other municipal buildings.

14. 1,500,000 pesetas (\$289,500) for constructing a municipal home for boys, and aged men and women.

15. 600,000 pesetas (\$115,800) for three buildings to be used for municipal officers, fire stations, pharmacies, and civil-guards barracks.

16. 500,000 pesetas (\$96,500) for five schools.

17. 200,000 pesetas (\$38,600) for a vegetable market.

18. 450,000 pesetas (\$86,850) for three new markets.

19. 200,000 pesetas (\$38,600) for the purchase and repairing of Don Fadrique tower and the adjoining land.

20. 250,000 pesetas (\$48,250) for construction of a central park to be used for public cleaning.

21. 129,847 pesetas (\$25,060) for a public dump and crematorium.

22. 1,867,500 pesetas (\$360,427) for purchase of the existing drainage system now owned by a private corporation.

23. 1,600,000 pesetas (\$308,800) for work in the amplification of the city zones.

24. 400,000 pesetas (\$77,200) for expenses of complementary work.

25. 1,500,000 pesetas (\$289,500) for filtration beds.

26. 250,000 pesetas (\$48,250) for construction of laborers' houses.

27. 1,241,202 pesetas (\$239,551) for all other incidental expenses.

[From *Gaceta de Madrid*, Sept. 4.]

Telephone Exchange Construction.

Tenders were to be received until September 30, 1915, for constructing and working for 20 years central telephone exchanges at

five Spanish cities. Following the awarding of the concessions there may be an opportunity for the sale of American telephone equipment. The cities are as follows: Huesca (Province of Huesca), Lorca (Province of Murcia), Orihuela (Province of Alicante), Borjas Blancas (Province of Lerida), and Aguilas (Province of Murcia). The awards are made by the "Registro de la Direccion General de Telefonos," Madrid.

USE OF DETACHABLE ROWBOAT MOTORS IN BERMUDA.

[Consul Carl R. Loop, Hamilton, Bermuda, Sept. 10.]

Bermuda presents a fairly good market for detachable rowboat motors. The colony has a population of 20,000, two-thirds of which is colored. The chief municipalities are the city of Hamilton, population 3,000, and St. George, population 1,200. It is estimated that there are now about 30 detachable motors in use in the colony, all of American make, 20 being of a well-known motor. These 30 were purchased during the last five years, and it is estimated that normally it might be expected that from 5 to 10 motors could be sold during a calendar year. The immediate prospect, however, on account of abnormal conditions, is somewhat speculative.

Bermuda depends in a very large degree for its prosperity upon the success of the tourist season, and the proportions of this trade during the coming season are somewhat uncertain.

Transmitted herewith is a list of local firms in a position to consider agencies for detachable rowboat motors. It is suggested that a single exclusive agency, preferably in Hamilton, is more satisfactory than two or more agencies, even though they be located in different parts of the colony.

[Copies of the list of firms mentioned may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 66159.]

AMERICAN MANUFACTURES THROUGH LONDON AGENTS.

[Consul E. A. Wakefield, Port Elizabeth, South Africa, Aug. 18.]

A few weeks ago a Port Elizabeth importing house brought a line of sample calendars into this office and desired to be placed in communication with the manufacturers. The calendars had been made in America, but had been obtained through a London agency, and all manufacturers' identification marks had been omitted or obliterated.

The samples were forwarded with a trade opportunity report in April, 1915, and price quotations obtained through a New York firm apparently acting as agent of the manufacturers. These prices were slightly higher than those quoted by the London agency for the same or similar products. This makes it appear that American goods may be purchased more cheaply through London agencies than direct from the United States.

The United States Bureau of Standards, which has just issued a report on the difference in weight between raw and clean wool, announces that copies of this publication, Technologic Paper No. 57, will be mailed to any interested person upon request to the Bureau of Standards, Washington, D. C. Results of an investigation of the loss of weight of raw wool when it is scoured or cleaned are presented.

READY-MADE CLOTHING IN NEW ZEALAND.

[Consul General Alfred A. Winslow, Auckland, Aug. 17.]

There is a growing demand in New Zealand for factory-made clothing for men, women, and children, and the tailor shops are suffering. In 1910, being the latest date for which figures are obtainable, there were 196,825 suits manufactured in clothing factories in this Dominion, 94,249 dozen shirts, and 355,445 other garments, of a total value of \$683,364, against 101,113 suits, 45,239 dozen shirts, and 27,985 other garments, at a total value of \$328,917, for 1905. The war has caused New Zealanders to economize until the demand for ready-made clothing has increased very materially. In consequence the tailoring business is very dull, with not much promise for the future.

The imports of ready-made clothing greatly increased during the four years ending with 1913, as shown from the following table:

	1910	1911	1912	1913
United Kingdom and possessions.....	\$3,907,989	\$4,542,391	\$5,085,780	\$5,880,211
Germany.....	27,262	18,230	35,632	27,496
Belgium.....	56,932	47,492	52,373	43,818
Japan.....	24,045	47,350	47,862	58,412
United States:				
East coast.....	78,531	131,449	116,348	158,584
West coast.....	7,606	16,692	15,247	46,470
All other countries.....	1,518	1,727	6,258	7,387

The imports of ready-made clothing for the first five months of 1915 were valued at \$2,030,460, against \$2,932,164 for the same period of 1914. This decline was due to the impossibility of the English manufacturers supplying the demand and the lack of American connections to supply the trade and the general disposition to economize at this time by wearing out old clothes.

The duty on ready-made clothing is the same from all countries—25 per cent.

It would seem that here is a splendid opening for American ready-made clothing, if the field be canvassed, since the European supply is so largely cut off. American styles, with a few modifications, might take well here, and a fine, permanent business be built up. With this in view, I am forwarding a list of dealers in position to handle such lines, and I believe it would pay to send samples with prices and, when possible, an expert to study conditions and arrange for agents.

[The list may be had from the Bureau of Foreign and Domestic Commerce or its branches. Refer to file 66,005.]

"MEMO CHARGE" ON SAMPLES.

[Consul Paul H. Foster, Jerez de la Frontera, Spain, Aug. 14.]

It is suggested that where samples are forwarded to prospective customers on "memo charge" sheets, where no actual charge is intended, that this should be clearly stated. The writer had an experience recently with a Spanish merchant who was highly indignant at being charged for samples. "All samples that I receive from other countries are free." A glance at his bill, and it was explained to him that no payment was expected for the samples, but that it was the manufacturer's method of retaining a record of samples sent. Many such misunderstandings would be avoided by clearly stating, in the language of the country, the purpose of the invoice in such cases.

BANK OF JAPAN MAKES REPORT.

[Extract from Japan Times of Aug. 24, by Consul General George H. Scidmore, Yokohama.]

The bank of Japan held a general meeting on August 21, 1915. The chairman presented the report on the business for the past half year, and, after having it approved by the meeting, recommended the following profit and loss account:

Net profit for the term.....	\$1, 374, 621. 95
Brought over from last account.....	1, 029, 733. 41
Total	2, 404, 355. 36
To be distributed :	
Ordinary dividends at 6 per cent per annum.....	560, 250. 00
Reserve	249, 000. 00
For depreciation in properties.....	4, 980. 00
Bonuses for officers and social expenses.....	81, 174. 00
Secondary dividends at 6 per cent per annum.....	560, 250. 00
Carried forward to next account.....	948, 701. 36

As may be seen in the account just quoted, some items were sacrificed to maintain the usual rate of dividends in spite of the rather poor result of business obtained for the term. Compared with the preceding term there is a decrease of \$1,992 in bonuses and social expenses and of \$81,032 in the balance carried forward, for example. Perhaps because of the high rate of discount having been maintained in the teeth of the slackening tendency in the money market on one hand and of the disturbances attending the war on the other there is an all-round falling off in the items in the accounts presented. In the first place, under the profit head there is a decrease of \$286,848 in the receipts from advances of \$70,716 in interest on Government bonds, \$85,656 in receipts from discounting paper, and of varying magnitude in all other items, thus bringing up the total loss in receipts to \$343,012. But as the result of retrenching expenses and other items under loss heads the net loss in the accounts is brought down to \$18,571.

A NEW BANK FOR FOREIGN TRADE.

The establishment of a new banking institution under the name of the Mercantile Bank of the Americas, with offices in New York, marks a step in advance in the matter of providing adequate facilities for the financing of our foreign trade. It has an authorized capital of \$5,000,000, of which, at the beginning of operations, \$400,000 has been paid up, in addition to which there is a cash surplus of \$100,000. The shares issued have been taken in equal proportions by two important private banking houses.

This bank is organized to carry on a commercial banking business in and with the Latin-American Republics, especially Central America, Venezuela, Colombia, Ecuador, and Peru, where it is understood that active arrangements are now being made for the appointment of agents. It is proposed to conduct operations on the same lines as has been done for many years by European institutions of a similar character in the same regions.

The prime object is to provide financial and other facilities in connection with American trade to and from Central and South America.

VENEZUELAN COMMERCE REVIVING.

[Consul Homer Brett, La Guaira, Sept. 2.]

The manner in which Venezuelan commerce is adjusting itself to changed conditions may be seen from the following figures for La Guaira. Trade was by no means good during the first six months of 1914, but imports, nevertheless, amounted to 20,000,000 bolivars (bolivar=\$0.198). In the next six months this shrank to 7,000,000, and for the first half of 1915 it has again increased to 16,000,000. Comparing figures for the first six months of 1914 and 1915 it is seen that American sales increased from 6,000,000 bolivars in the former period to almost 10,000,000 in the latter. While before the war the United States supplied 30 per cent of La Guaira's imports, it is now supplying 62½ per cent.

Export trade to the United States shows an even greater rate of increase. The exports to that country during the first six months of 1915 were more than twice as great as for any entire year before. The declared export returns from the La Guaira consulate show these figures:

Articles.	July-Dec., 1914.	Jan.-June, 1915.	Articles.	July-Dec., 1914.	Jan.-June, 1915.
Balata.....	\$4,788	Hides and skins—Con.		
Bones.....	212	Cattle.....	\$96,769	\$147,569
Books.....	303	Deer.....	4,929	6,621
Cebadilla.....	7,428	Goat.....	6,295	4,745
Cocos.....	165,498	\$1,268,610	Pearls.....		2,032
Coffee.....	57,355	161,594	Rubber, old.....	86	302
Copper, old.....	815	III	Sugar.....	11,000
Cylinders, empty.....	742	2,159	Total.....	377,493	1,594,809
Gold.....	21,063			
Hides and skins:					
Calf.....	16	309			

AMERICAN TRADE EXTENSION IN PERSIA.

A Persian firm's desire to purchase leather, copper sheets, and bar solder was made known in the United States through the Trade Opportunity page of COMMERCE REPORTS and through a confidential circular supplied to American dealers in these wares by the Bureau of Foreign and Domestic Commerce. Vice Consul Ralph H. Bader, of Teheran, who transmitted the original information, has now forwarded a letter from the inquiring firm, which is self-explanatory:

We take this opportunity of tendering to you our thanks for having enabled us to receive so many responses to our inquiry for leather samples and for solder and sheet copper. During the past week we have received over a hundred letters and samples from American firms, and these are now engaging our most careful consideration.

In addition to the above commodities it may interest you to learn that there is an increasing demand for silver in Persia, and it is to be hoped that business in this direction may also ensue; but it must be remembered that the ever-rising exchange quotations are having a very serious effect on the trade of Persia, owing to the high prices which Persian merchants are called upon to pay for foreign goods through depreciation of the local currency.

The vice consul adds: "With the close of the present European conflict, Persia should become a fertile field for the sale of American manufactured products."

FUR-SEAL CENSUS SHOWS INCREASE.

A census of the seals resorting to the Pribilof Islands has been taken by the resident officials of the United States Bureau of Fisheries. The first part was made at the height of the harem formation in July. From the preliminary figures that have been received by wireless messages it appears that the number of harems on St. Paul Island this season was 1,789, against 1,316 in 1914, an increase of 35 per cent; while on St. George Island the number of harems increased from 243 in 1914 to 362, or 49 per cent. The number of idle bulls on St. Paul Island this year was 546 and on St. George Island 127, making a total for both islands of 673, an increase of 501 over 1914.

The second-part count, made early in August, was addressed to the pups. The number of pups born this year was 86,137 on St. Paul Island and 15,389 on St. George Island, a total of 103,526. The births this year exceeded those of last year by 10,276, or 11 per cent. The number of dead pups found was 1,810, or 1.7 per cent, indicating no abnormal mortality among either the pups or their mothers. The average number of cows per harem this year, calculated by dividing the total number of pups born (equivalent to the number of breeding cows) by the total number of harems, was 46. In 1914 it was 59.8; in 1913, 65.8; and in 1912, 60.4.

These figures indicate that the Alaskan seal herd at the end of the breeding season of 1915 consisted of approximately a third of a million animals of both sexes and all ages, an increase of about 40,000 over 1914.

The killing of seals on the Pribilof Islands was restricted in 1914, through provisions of existing law, to such numbers of male seals as were needed to supply food for the native inhabitants. The Secretary of Commerce fixed upon 3,500 as the maximum number which might properly be killed for that purpose. There were 1,764 seals killed on St. Paul Island and 971 on St. George Island. The annual shipment of fur-seal skins, to the number of 2,884, was made in October, and because of the depression in the fur trade these skins, which had been forwarded to St. Louis, remained unsold at the end of the year.

RESULTS OF TRADE-EXTENSION WORK.

[From Vice Consul John N. Wardrop, Sandakan, British North Borneo, July 16.]

During the past quarter the efforts instituted last year in the matter of trying to arrange direct shipments of rattan from this country to the United States have been continued. As a result an initial shipment, some 25 long tons in weight, was dispatched from here in June via Hongkong. Arrangements are now in line for further exports, and all the indications go to show that this business will probably become a permanent one.

The rattan is bought here by weight in Straits Settlements currency, while the freight from here to Hongkong, and the transshipment expenses there, are paid in Mexican currency, and after that the freight is based on measurement and payable in sterling. This will serve to show that, apart from the freight difficulties, this has not been an easy matter to arrange, but as the greatest trouble is always with the initial shipment the probabilities are that things will improve from now on.

ZINC AND COAL PRODUCTION OF Breslau DISTRICT.

[Consul Harry G. Seitzer, Breslau, Germany, Aug. 14.]

The Hohenloherwerke A. G. is one of the most important mining enterprises in the Breslau consular district. Its annual report, recently issued, shows that during the fiscal year 1914-15, the two zinc ore mines, Brzosowitz and Neue Helene, produced 283,512 metric tons of calamine-blend against 394,037 tons in the preceding year; the amount of calamine and blend treated or dressed was 396,918 tons as compared with 431,837 tons. Out of this there were produced 131,021 tons of zinc ore, lead ore, and iron pyrites, against 173,862 tons in 1913-14. The Hohenlohe corporation again handled 75 per cent of the total production of the Brzosowitz mine and 85 per cent of the production of the Neue Helene mine; the rest was sold in the adjacent districts.

Output of Furnaces and Rolling Mills.

The zinc furnaces produced 23,825 tons of pig zinc, 2,731 tons of zinc dust, 380 tons of soft lead, and 3,520 kilos (7,760 pounds) of cadmium, as compared with 36,324 tons of pig zinc, 2,654 tons of zinc dust, 624 tons of soft lead, and 3,673 kilos (8,098 pounds) of cadmium in 1913-14. The corporation erected several new furnaces for the production of refined zinc during the second half of the year.

The zinc plate rolling mills produced 7,867 tons of sheet zinc, of which 7,778 tons were sold, as compared with a production of 10,559 tons in the preceding year. The roasting furnaces produced 54,206 tons of calamine-blend, as compared with 82,960 tons last year, and 12,777 tons of sulphuric acid, as against 11,476 in the preceding year.

Hard Coal and Briquets—Improvements Contemplated.

The five coal mines of the corporation produced 1,591,080 tons of hard coal, against 2,082,480 tons in the preceding year. Of this amount 336,762 tons were consumed, against 405,438 in the preceding year; and 1,243,632, as compared with 1,689,407 tons, were sold. There were manufactured 38,950 tons of briquets, of which 36,769 tons were sold, as compared with 29,937 tons manufactured and 28,023 tons sold in the preceding year.

Improvements are contemplated at each of the five coal mines looking toward a greater production and more satisfactory working conditions. Old shafts are to be extended and new ones opened. More powerful electrical machinery is also to be installed.

SHIPPING AGREEMENT ON SOUTH AMERICAN TRADE.

[Consul General Ernest L. Harris, Stockholm, Sept. 1.]

According to advices received, the Swedish Rederi-AB. Nordstjernan and the Norwegian South American Steamship Co. have formed a compact on the freight-carrying trade between the Scandinavian countries and the River Plate.

The Norwegian line, which has been formed and launched by some of the most prominent business men in Christiania, has agreed, it is stated, to refrain from entering Swedish ports, providing the Rederi-AB. Nordstjernan also keeps clear of Norwegian ports.

It is thought that the object is to counteract the threatening competition of Danish steamship lines.

THE JERKED-BEEF INDUSTRY IN SOUTHERN BRAZIL.

[Consul General Alfred L. Moreau Gottschalk, Rio de Janeiro, Aug. 20.]

With the marked interest now being shown in meat packing in Brazil and the growing enthusiasm for cattle raising that is observable in many parts of the country, it is interesting to note that Brazil has for many years been manufacturing and producing very large quantities of the salt beef known locally as "xarque." It is the same product as the "tasajo" of the Spanish Americas, the "biltong" of South Africa, the "viande boucanée" of the French West Indies, or the "jerked beef" of our early frontier settlements.

Only fragmentary data as to the total production of the country are available, but one of the chief cattle-raising States of the Brazilian Republic, Rio Grande do Sul, which has the advantage of being on the seaboard and possesses, therefore, easy exporting facilities, has recently furnished figures that are of considerable interest.

Quantity and Value of Production—Prices at Seat of Production and at Rio.

This State produced and sold during the five years 1909 to 1913 as follows (values are in United States currency) :

Years.	Pounds.	Value.
1909.....	112,935,140	\$8,060,472
1910.....	124,468,915	7,601,735
1911.....	131,086,757	8,514,828
1912.....	153,374,985	10,208,406
1913.....	141,237,610	10,274,741

During the last of these years (1913) prices per kilo (2.2046 pounds) were locally as follows in the various towns in the State:

Towns.	Price.	Towns.	Price.
Porto Alegre.....	\$0.194	S. Borja.....	\$0.097
Pelotas.....	.205	Itaquy.....	.097
Rio Grande.....	.203	Livramento.....	.113
Uruguayana.....	.097	Quarany.....	.130

These prices, of course, are those of the seat of production, not the market prices in other cities, which have varied with supply and demand.

The local internal-revenue tax of the State of Rio Grande do Sul on salted beef produced in 1913 was \$326,649 in United States currency.

The maximum freight rates that have prevailed are said to have been the following: For Rio de Janeiro, by sea from Rio Grande, about \$10 at the present rate of exchange; across the frontier, about \$13.33; to Pernambuco by sea, about \$11.50; to Bahia by sea, about \$11.75; across the frontier, about \$14.50.

The selling prices of xarque (salted beef) during the past four years at Rio de Janeiro are given as follows, per kilo (2.2046 pounds) :

Years.	Minimum.	Maximum.
1911.....	\$0.155	\$0.285
1912.....	.188	.317
1913.....	.272	.401
1914.....	.250	.373

[Consul Madden Summers, Sao Paulo, Aug. 1.]

Opening of Continental Products Co., of São Paulo.

The last few years have witnessed in the south of Brazil a rapid development of the meat and hide trade. Rio Grande do Sul has long been known as a cattle section, large quantities of hides and animal products yearly finding their way to the United States and other markets. This great cattle section has gradually extended northward, and the pasture lands at Parana, São Paulo, and Matto Grosso have been found exceptionally suited to cattle raising. This industry at present bids fair to become one of the great sources of income of this section of Brazil.

Only a few years ago the Brazil Land, Cattle & Packing Co., an American firm, began the purchase of ranches and the importation of American cattle for breeding purposes. A little later the Companhia Frigorifica e Pastoral, an adjunct of the Paulista Railway Co., established at Barretos a large slaughterhouse and frozen-meat plant.

Realizing the future of the industry here, the Continental Products Co. began in 1913 the erection of a large refrigerating plant at Osasco, a small town on the Sorocabana Railway, about 10 miles from São Paulo. Work on the plant was delayed by reason of the loss of a large amount of machinery on the steamship *Santa Catharina*, sunk off the coast of Brazil. All the machinery came from the United States, and the plant was constructed by American engineers.

Description of Plant—Insufficient Tonnage a Handicap.

The plant was completed in March and opened recently. It has a capacity of 800 head a day. It is built on the unit system, and can at any time be extended without interfering with operations, and without additional labor cost in the handling of the various products. Great attention has been paid to sanitary requirements, and the plant is one of the most modern yet constructed.

The products will be exported to the United States and to Europe, according to the demands of the foreign markets. Several shipments of frozen meat have already been made. The company is embarrassed at present because of the fact that sufficient space can not be found on steamers for the transport of its products, but it is hoped that this will be remedied in the near future.

The local manager is Mr. Leopold Plant, and the purchasing agent Mr. Maurice Silverman. The address of both is Alameda Cleveland, No. 44, São Paulo.

[Consul General Alfred L. Moreau Gottschalk, Rio de Janeiro, Aug. 20.]

The Companhia Frigorifica e Pastoral.

The Companhia Frigorifica e Pastoral, referred to in the above report by Consul Summers, was formed in 1910 at São Paulo. Its capital is said to have been \$1,000,000, which was increased in 1912 to \$1,666,667. The concern held a 40-year concession from the municipality of Barretos to build and exploit a municipal slaughterhouse and use chilling processes in the preservation of meat. Barretos, the scene of the company's enterprise, is about 10 hours by rail from São Paulo, in one of the best natural grazing zones in Brazil.

The slaughtering capacity of the establishment is 400 head of neat cattle and 400 sheep or swine per day. The company acquired a total of 363,000 acres of pasture, at a cost said to have been \$403,933. It

has now in the city of São Paulo a packing house near the São Paulo Railway station, for distributing purposes, with three freezing rooms capable of holding 1,200 carcasses each. It was intended to put up a similar depot and distributing establishment at Santos for the company's export trade, but here so determined an opposition was encountered that the plan of acquiring land and erecting a building in the port itself was given up. In lieu of this the company obtained from Buenos Aires a large steamer, the *Rothsay*, which was turned into a floating packing house. It is described as double-decked, containing four chilling rooms, with a capacity of 2,507 cubic yards and a holding capacity of 1,900 carcasses. There are aboard two large steam ammonia compressors. The ship is lighted throughout by electricity.

The company reports that in June and July of this year it exported through the port of Santos 2,000 tons of refrigerated meat, valued at \$500,000. According to a statement recently attributed to one of the concern's most prominent directors, the future of the chilled-meat industry in Brazil depends wholly on two factors: First, the fostering of production in the country, which can be accomplished only by care of the range, the planting of suitable pastures, and the encouragement of individual property owners; and, second, proper care and supervision of cattle quarantines.

[Reports on the jerked-beef industry of Uruguay were published in *Daily Consular and Trade Reports* for June 27, 1911, Mar. 16, 1912, and June 24, 1912.]

REMOTE MARKETS REACHED THROUGH CONSULS.

[Consul George A. Chamberlain, Lourenco Marques, Portuguese East Africa.]

At a post so remote as Lourenco Marques from the United States, propaganda for the introduction of any given article must continue for a period of at least a year before the preliminaries in the way of business connections can be settled and sales appear in statistical returns. When such sales are effected, those of which the consulate has any knowledge naturally fall into one of two classes: (1) Government importations that have been brought about or aided by the action of the consulate or (2) private purchases reported to this office by the importers themselves as having been due to the initiative of the consulate.

Among the more important of the Government purchases of American goods for which this office may claim credit are a dredge for the Port of Quelimane, value \$21,000; a coal-handling plant, value approximately \$200,000; steel rails (delivery not completed yet); two locomotives, value \$50,000; and a dredge for the Port of Lourenco Marques, to be delivered as soon as the war is over, value \$100,000. General importations traceable to the influence of this consulate covered a wide range of American commodities and included agricultural machinery valued at \$5,000; 20 steel wheel farm trucks, value \$1,000; a carload of wall board; \$2,000 worth of flour; trial orders for linoleum, scales, and electrical goods; \$10,000 worth of cube sugar, beer, flour, and barley; and a \$4,300 order for boots, shoes, lacers, and socks.

FRENCH MARKET FOR STAPLING-MACHINE WIRE.

[Vice Consul De Witt C. Poole, Jr., Paris. Sept. 3.]

American manufacturers may be able to develop in France a small market for American stapling-machine wire for use in book-binding, etc. It is estimated that before the outbreak of the war the annual consumption of this wire in France was between 750 and 800 metric tons of 2,204.6 pounds each. It was furnished principally by German manufacturers. One French manufacturer (Labeye, of Meximieux, Department of Rhône, near Lyon) had had some success in the face of German competition, because of the low price of his article. This house has now closed down. Stocks of German wire are exhausted. The supply that can be had at present comes principally from a small French plant in the Jura and from Birmingham, England. One firm in Birmingham is supplying considerable quantities of round wire, but there is a perceptible scarcity of flat and flattened wire. Recently there have been imports from Switzerland.

Kinds of Machines Used—Prices of Wire.

The gauge and form of the wire vary according to the machines in which it is used. These machines are almost exclusively of German manufacture. The best known are those of Gebrüder Brehmer, of Leipzig; Karl Krause, Preusse & Co., and A. Albrecht; also La Saxonne and the Regina. Gebrüder Brehmer had their own house in Paris before the war and the other makes all had representatives here. The only well-known French make is a hand machine (Lotz, 51 Rue d'Hauteville, Paris).

It is said that there are more than \$5,000,000 worth of the Brehmer machines in use in France, and that this house furnished, before the war, from one-fourth to one-third of all the wire used in this country on their own and other machines.

The wire is round, round flattened, or flat. The German wire, which was in almost exclusive use before the war, was imported round or flat, the flattened being made from the round wire by drawing it through a special machine. The wire is tinned, galvanized, or coppered. The coppered is used only for cheap work.

Selling prices to large consumers before the war were as follows, per 100 pounds: No. 20, \$7.88; No. 21, \$7.88; No. 22, \$8.80; No. 23, \$9.68; No. 24, \$10.12; No. 25, \$10.56; No. 26, \$11.43; No. 28, \$12.74; No. 30, \$16.68; flattened wire, No. 1, \$11.43; No. 2, \$10.56; No. 3, \$9.68; No. 4, \$9.68.

Flat wire is also used in different sizes, the most usual being of 8-millimeters (0.11811-inch) width.

The wires most in use are Nos. 25, 26, and 28. The German wire was imported in large coils measuring 16 to 18 inches in diameter, packed in casks lined with waterproof tarred paper. These coils were received by the local agents of the manufacturers who sold the stapling machines, and by them the wire was put on small reels, each holding 2 to 2½ kilos (4.4 to 5.5 pounds) and furnished to the consumers in this form.

A gauge and sample card of the French firm of Labeye, mentioned above, is transmitted with this report [and will be loaned by the Bureau of Foreign and Domestic Commerce. Refer to file No. 66177].

CONSULAR ADVERTISING AIDS AMERICAN TRADE.

[Consul Maxwell K. Moorhead, Rangoon, Burma, Aug. 9.]

Commencing July 1, 1915, the Rangoon consulate adopted the policy of having inquiries from American firms in regard to the extension of their trade in Burma printed in pamphlet form and distributed among local dealers and importers. The idea of publishing these inquiries was obtained from Consul General Anderson at Hongkong. [Advertising in connection with trade-extension work is resorted to by many American consular officers. For recent references to this form of publicity see Daily Consular and Trade Reports for Dec. 14, 1914, and COMMERCE REPORTS for Aug. 26 and Sept. 14, 1915.] These pamphlets read somewhat as follows:

Specimen Trade Notices.**AMERICAN CONSULATE, RANGOON.****TRADE-INQUIRY LIST NO. 3.**

Rangoon importers and exporters are invited to correspond with American firms seeking Rangoon connections as listed below:

No. 24. *Smith indicator for typists*.—The Smith Indicator Co., 326 West Monroe Street, Racine, Wis., seeks a Rangoon agent for its indicator which automatically points out and follows the lines or notes to be copied from notebook, form letter, report sheets, etc. Price list and descriptive pamphlet on file in the consulate.

No. 95. *Paper towels and toilet paper*.—The Jones Paper Co., Twelfth and Glenwood Avenue, Dubuque, Ia., seeks an agent in Rangoon for the sale of its paper towels, napkins, and table cloths, and toilet paper. Catalogue and samples on file in consulate.

All those interested in the above inquiries are requested to inform the American consulate, Rangoon, where there are in addition on file catalogues and American trade publications. The public is cordially invited to make use of the commercial reading room in the consulate, and to inform the consulate when they are in the market for American products or wish to export Burma produce.

Brought New Acquaintances—Prices an Essential.

Up to the present, three such lists have been published, comprising 95 inquiries. Rangoon firms have reported to the consulate their interest in 25 of these, and it is probable that many other dealers have written direct to American firms. These lists have more than justified their publication, and will no doubt be of great assistance in the extension of trade in this district. A number of merchants who have never imported American goods and whose names were not on the mailing list of the consulate, having heard of the publication of the trade-inquiry lists, have applied for copies.

The trade-inquiry lists would be of much more value if American exporters would always send along with their inquiries illustrated catalogues and prices c. i. f. Rangoon. Trade discounts should also be furnished. Catalogues without price lists and discounts are practically useless. Recently a hardware dealer, seeking information as to wire nails, called at the consulate, but, unfortunately, the catalogues on file were without prices. This dealer stated that if he could have obtained prices an order would have been sent at once. It will take three months to get a quotation from the United States by mail and at least another four months before the goods could arrive in Rangoon, or seven months from the date of writing for prices. Supplies can be obtained from England in one-fourth this time.

Delayed Shipments—Ore for Sale.

A prominent Rangoon merchant complained that American exporters were very slow in making shipments and often failed to notify the foreign buyer of date and route of shipment. This merchant stated that on March 28, 1915, he ordered through a traveling salesman of a New York commission house several rotary pumps and that up to August 8 he had received no notification of shipment nor even an acknowledgment of the receipt of the order. This dealer does not feel inclined to order any more goods from the United States.

The manager of The Sun, the largest daily newspaper in Burma published in the Burmese language, has asked to be supplied with copies of all the trade-inquiry lists published by this consulate, in order that he may republish them in his newspaper for the benefit of his Burmese readers. In this way trade inquiries from American manufacturers will be circulated all over the Province and among a class of people with whom otherwise it would be difficult to get in touch. The manager of this paper also desires to obtain a list of American manufacturers or importers who would be interested in purchasing lead, chromite, and other ores. Any American firms interested should write direct to the manager of the Sun Press (Ltd.), 39-40 Sule Pagoda Road, Rangoon, Burma.

MOTOR-PLOWING DEMONSTRATION IN DENMARK.

[Consul General E. D. Winslow, Copenhagen, Aug. 24.]

At the agricultural fair held at Vejle, Denmark, in July a demonstration was given of three different motor plows—one manufactured in Denmark, one in Sweden, and one by the International Harvester Co. of America. These plows were of the smaller type, suitable for an average-sized farm. Two of the outfits were equipped with 16-horsepower engines and one with a 12-horsepower engine; their traveling speeds ranged between $1\frac{1}{2}$ and 2 miles per hour. All were of the one-man type. When the necessary attachments are at hand the same tractors can be used for pulling binders. Two of them can be used for thrashing purposes or other belt work without any changes, while in order to do this with the Danish tractor an extended shaft with pulley is required.

No calculation was made at this demonstration as to what the cost of plowing per acre would be, but it is clearly evident that power plowing is considerably cheaper than when horses are employed, considering that horses at the present moment are very expensive and that feed and labor are high. At present there are in Denmark quite a few larger plowing outfits at work, and while these smaller outfits seemed to arouse considerable interest among the owners of average-sized farms, it is yet to be seen to what extent they can be sold.

RUSSIAN COPPER PRODUCTION.

[L'Économiste Européen, Sept. 3.]

The production of copper in the Ural region of Russia during the first four months of 1915 reached a total of 6,460 short tons, an increase of 600 tons over the corresponding period of 1914.

VISCOSITY OF PORCELAIN BODIES HIGH IN FELDSPAR.

In the firing of porcelain, the deformation of the pieces due to softening is a serious source of loss, which led the Bureau of Standards to conduct a series of tests for the purpose of obtaining data for selecting compositions showing least deformation at the highest kiln temperatures. It was thought desirable to measure the degree of softening of a series of porcelain mixtures by molding them in the form of bars with enlarged ends, similar in shape to the halves of cement briquets, and subjecting them to a tension of 14.5 pounds per square inch at different temperatures by means of suitable fire-clay weights. The degree of softening was determined by measuring the distance between two marks 4 inches apart. The porcelains were first fired, under no tension, to a certain temperature, and then, under tension, carried to a series of temperatures between 1,275° and 1,380° C.

Higher contents of feldspar reduce softening of low compositions markedly. In a 45 per cent kaolin-clay body, 35 and 40 per cent of feldspar are most effective in increasing the softening, but higher percentages again decrease it. Still higher clay contents cause the softening effect of feldspar to diminish decidedly. Flint, in high-feldspar bodies, does not seem to be an important factor in governing the softening. For high-temperature porcelains, high-clay content is essential. High-clay bodies having feldspar as the only other constituent show very great rigidity.

The function of viscosity is not a continuous one. After attaining a certain degree of softening, a well-defined rigid state ensues which does not tend to approach further softening until a temperature of 1,345° has been reached. Beyond this point the second stage of decided softening is entered upon. Although showing the same degree of viscosity at 1,388°, bodies may be divided into several classes, according to the degree of softening observed between 1,300° and 1,345°. Within this temperature range greatest rigidity was shown by the following compositions:

Kaolin and clay.	Feldspar.	Flint.
<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>
40	20	30
45	35	20
45	50	5
50	30	20
50	50

Copies of Technologic Paper No. 50, describing the tests made and giving the results, may be had upon application to the Bureau of Standards, Washington, D. C.

SPANISH IMPORTS OF AMERICAN WHEAT.

[Vice Consul Jose M. Gay, Madrid, Sept. 3.]

The Gaceta de Madrid of August 30, 1915, states that during July, 1915, Spain imported 70,500 short tons of wheat, of which 40,300 tons were from the United States.

CANADIAN ADVERTISING CAMPAIGN FOR FRUIT CONSUMPTION.

[Consul Julius D. Dreher, Toronto, Sept. 17.]

In a report from this office on "The Apple Crop of Canada," published in Daily Consular and Trade Reports for November 6, 1914, it was stated that in order to encourage the home consumption of apples the Dominion Department of Trade and Commerce at Ottawa had issued and advertised extensively for free distribution an attractive illustrated booklet, entitled "The Book of Apple Delights," which contained, among other matter, 209 recipes for preparing apples.

The fruit branch of the Dominion Department of Agriculture has now begun an educational advertising campaign to promote the consumption of peaches and other fruits in Canada. The Toronto World of September 16 contains an official advertisement four columns in width and 5½ inches long, a reading notice 4 inches long, and an inch card calling attention to the Government's advertisement. In this advertising matter the superior quality of Canadian fruits and the hygienic benefits of eating good fruit freely are emphasized. It is urged that fruit which can not be consumed at once should be canned or preserved. The advertisement says, "More fruit and less meat should be the rule this winter. It would mean better health and greater economy. * * * Eat plenty of Canadian fruit—lock the medicine chest and lose the key." This official prescription might be followed in the United States with good results.

SUCCESS OF TORONTO'S HYDROELECTRIC SYSTEM.

[Consul Julius D. Dreher, Toronto, Canada, Sept. 22.]

The fourth annual report and balance sheet of the Toronto Hydroelectric System just issued shows that the gross revenue for 1914 amounted to \$1,501,291.47. The cost of current and operating expenses, including repairs and maintenance, amounting to \$874,358, giving a gross profit on operating account of \$626,932.89. Charges and allowances not strictly attributable to operating expenses in 1914 and other charges applicable to previous years absorbed \$69,536.10. Interest, depreciation, and sinking funds for the year absorbed \$556,513.55, leaving a net profit on the year's operations of \$883.24. It will be noted that the actual profits on the year's operations amounted to \$70,419.34, but that it was practically absorbed in liquidating liabilities carried forward from previous years, the actual earnings being approximately 9½ per cent on the capital invested. During the year the business of the system increased 40 per cent.

When it is borne in mind that the aim of the Toronto Hydroelectric System is to furnish electric light and power without any profit to the city, and that the low rates already prevailing were reduced by 10 per cent in the spring of this year, the showing made should prove encouraging to municipalities that are considering the advisability of undertaking for the benefit of the public the distribution of hydroelectric power obtained from Niagara Falls through the Hydroelectric Commission of Canada.

SEA COMPETITION BY SUBSIDIZED JAPANESE LINES.

[Vice Consul M. D. Kirjasoff, Yokohama, Japan, Aug. 17.]

The Imperial Japanese Diet at a recent session made arrangements for contracts which may be concluded for the grant of shipping subsidies within the limits of amounts available for four years (from the financial year 1916 to the financial year 1919, inclusive) in accordance with the provisions of the ocean-navigation subsidy law in aid of navigation on the European, North American, South American, and Australian lines. The amounts are:

European Line.—1916, \$902,331; 1917, \$863,590; 1918, \$841,523; 1919, \$782,747.

North American Line.—1916, \$1,468,608; 1917, \$1,395,455; 1918, \$1,329,623; 1919, \$1,249,575.

South American Line.—1916, \$148,184; 1917, \$145,023; 1918, \$141,862; 1919, \$134,136.

Australian Line.—1916, \$86,557; 1917, \$79,806; 1918, \$84,495; 1919, \$93,872.

Contracts may also be concluded for the grant of subsidies within the limits of \$139,440 on the South Sea Line, \$49,800 on the Dairen Line, and \$124,500 on the Japan Sea Line in the fiscal years 1916 and 1917, subject to conditions.

When it is deemed necessary the Government may order an addition to or change in the ports of call. Passenger and freight rates shall be fixed with the Government's sanction. When it is deemed necessary the Government may cause passenger and freight rates to be lowered, specifying the different classes.

Government May Purchase or Charter Vessels.

Mails are to be carried by the vessels free of charge. The Government, by issuing orders, may purchase or charter the vessels on these lines at a proper remuneration. The Government may make the subsidized companies carry not more than three apprentices on board each vessel at the expense of the company. In times of emergency, the Government may use the vessels and the crews on service on those lines, but in this case expenses shall be paid.

Subsidies are granted in accordance with the provisions of the decree. In case the number of trips is reduced, or the mileage is shortened consequent upon the failure to visit the regular ports of call, the subsidies to be granted will be reduced in accordance with the provisions of the decree. In case the vessels to be used do not conform to the requirements of the conditions, either under the Government's sanction or under inevitable circumstance, the subsidies may be reduced in accordance with the provisions of the decree.

It is required that security corresponding in value to 10 per cent of the amount of the subsidy shall be deposited with the Government. In case the number of journeys is reduced without adequate reason, or proper vessels are not used in the service, or repairing is not attended to, or the time schedule is delayed or altered, or the contract is not fulfilled in taking or discharging mails, or the regular ports of call are omitted, or otherwise it is found that acts have been performed contrary to the provisions of the decree, a fine will be imposed according to the merits of the case, per day, per less than 12 hours, or per each journey.

Provision for Canceling Contract and Confiscating Security.

If the contractor has shifted his obligations to another party without the Government's sanction, or has not carried out the details provided for in the decree in the period of one year, the contract will be canceled and the grant of subsidies stopped. Further, the subsidy due for the navigation carried out during that year will be refunded, and the security confiscated.

Tables of salaries paid by the Toyo Kisen Kaisha, the Mitsui Busan Kaisha, and the Pacific Mail Steamship Co. give some idea of the comparative cost of operating Japanese steamers and those under the American and British flags.

The salaries paid by the Pacific Mail Steamship Co. have been uniformly higher than those paid by the two other companies. The Toyo Kisen Kaisha has been paying approximately the same salaries to its foreign officers as the Pacific Mail, but, as the salaries to native officers are lower, the average has been necessarily less. When the large subsidies paid to the Japanese companies are considered, it will be seen that the cost of operating Japanese steamers is much less than that for American and British ships.

[Previous articles relating to Japanese ship subsidies appeared in *COMMERCE REPORTS* for July 13, July 2, June 14, and May 14, 1915, these articles also containing references to general shipping conditions.]

IMPORTS OF MOTOR CARS INTO NEW SOUTH WALES.

[Consul General Joseph I. Beittain, Sydney, Australia, Aug. 25.]

The following table shows the value of motor cars imported into New South Wales during the six months ended June 30, 1915. It will be observed that the imports from the United States occupied the leading position, except in motorcycles, which came chiefly from the United Kingdom. Naturally the war has, to an extent, unsettled conditions here. The decrease is also due in part to the disastrous drought of 1914-15.

Imported from—	Chassis for motor cars.		Bodies for motor cars.		Motor cycles.	
	1914	1915	1914	1915	1914	1915
Belgium.....	\$31,457	\$18,305	\$585	\$7,353	\$98
Canada.....	177,798	87,543	40,518	\$22,478
Commonwealth of Australia.....	321
France.....	161,325	28,410	1,997	1,470
Germany.....	124,236	6,940	7,609	1,245	827	229
Italy.....	82,273	70,726	7,354	4,813
Netherlands.....	73
New Zealand.....	218
Switzerland.....	606	780
United Kingdom.....	433,656	245,924	88,759	50,675	136,822	92,035
United States.....	482,922	281,823	122,100	82,300	1,893	6,691
Total.....	1,433,718	739,579	266,000	163,303	147,576	99,753

The numbers of cars and cycles in use, drivers registered, etc., up to the end of June, 1915, are: Cars, 10,570; motor cycles, 6,461; drivers registered, 17,432; motorcycle riders, 8,463; commercial vehicles, 639; taxicabs, 236; drivers licensed, 377.

Personal representatives of two extensive manufacturers of motor tires in the United States have been canvassing the territory of New South Wales and New Zealand and have been very successful in securing large orders.

DEMAND FOR BREADSTUFFS IN HONDURAS.

[Consul E. M. Lawton, Tegucigalpa, Aug. 27.]

From November 1, 1914, until August 25, 1915, there were imported into this consular district from the United States 6,324,700 pounds of corn, or about 100,000 bushels, and 6,772,500 pounds of flour. The imports into this district supply approximately one-half of the 600,000 population of Honduras. The purpose of this report and the investigation being made by this consulate is to discover, if possible, the probable demand for further importations of breadstuffs during the coming months.

No careful record is maintained of grain crops in Honduras. In this consulate's annual report on commerce and industries in Daily Consular and Trade Reports for September 9, 1914, it was stated that the Government reports showed 553,536 bushels of corn and wheat, these figures having been computed from the official report of the Minister of Agriculture, which was given in "fanegas," a Spanish unit of measure of about 100 pounds. It has since developed that the Honduras "fanega" is a variable quantity, in different parts of the republic running from 750 to 1,500 pounds, and the report by this consulate was correspondingly incorrect.

From a rather careful series of inquiries it has been estimated that an average corn crop for Honduras is 5,000,000 bushels, and that the present year's crop will not yield more than 40 per cent normal. Moreover, due to famine conditions which have existed for some months, a large part of the present crop is being consumed in the milk, so that probably not more than 30 per cent of a normal crop may be available for reserve.

It is further estimated that besides corn for seed and stock feeding Honduras consumes half a pound of corn daily for every inhabitant, or, say for all uses, not less than 1,500,000 bushels of corn is required for a conservative annual consumption.

The present year has been most seasonable as to rains and climate generally for crop growing, in marked distinction to the preceding year, which was the driest in 30 years. But a grasshopper plague has devastated the crops. For many weeks the authorities in this city have been offering a bounty of 4 cents silver (\$0.01½ U. S. currency) per pound for the young insects, and an average of 3,000 pounds are brought in daily and destroyed. The same tactics are being tried in other districts, and the amount of larvæ destroyed is almost incredible, yet the crops in some sections are total failures.

While from the preceding figures it would appear that the corn crop of the present year will be sufficient for the actual needs of the country, it is the opinion of this consulate that not less than 100,000 bushels of corn and 2,000 tons of flour will be imported from the United States during the next 12 months. As an indication, the fresh corn is now selling in this market for \$2.50 United States currency per bushel which in normal years at this season would be selling for \$0.75 per bushel.

In addition to the names of corn and flour importers heretofore submitted I suggest the "Banco de Comercio, Commercial Department," as possible large importers of breadstuffs during the coming year.

MANUFACTURE OF PAPER AND PAPER PULP IN INDO-CHINA.

[Consul Lawrence P. Briggs, Saigon, Aug. 12.]

With the industrial development of Tonkin during the past few years, two mills have been established for the manufacture into paper or paper pulp of the abundant supply of suitable wood growing along the banks of the Rouge River and its tributaries.

The Société des Pulpes et Papeteries du Tonkin has its main office at Haiphong, but its mills are located at Vietri at the junction of the Rouge and Claire Rivers. This company was organized in 1910 with a capital stock of 660,000 piasters (a little more than \$300,000). Its machinery was imported in 1911 from the United States and Europe, and the factory began to operate in April, 1912. So far this factory has not attempted the manufacture of paper, but has been engaged in the manufacture of pulp from bamboo. Its capacity is said to be 3,000 to 4,000 tons per year.

War Results in Closing of Mill.

During 1912 the company exported 5 tons of paper pulp to France and 14 tons to Hongkong. The exports to France were largely experimental, and the French manufacturers were well pleased with the product. During the next year 210 tons of pulp were sent to France and 69 tons to foreign countries. The pulp is said to have been very satisfactory and to have sold in the London market for as much as £13 per metric ton (\$63.26 per 2,204.6 pounds). During the first three quarters of 1914, 814 tons were exported to France and 22 tons to foreign countries. The outbreak of the war deprived this industry of its French market and high freight rates have closed other European markets to it. Consequently, the mill closed in September and has not since reopened. The subsequent rise in the price of caustic soda has made it impossible to manufacture pulp for less than 110 piastres (a little more than \$50) per metric ton f. o. b. Haiphong. The company is ready to resume operations if it can secure an order for 1,500 tons at this price.

Paper-Manufacturing Company Finds Ready Market.

The Société Anonyme de Papeteries de l'Indochine was organized in 1913 with a capital stock of 1,500,000 francs (about \$300,000). Its headquarters are at Grenoble, France. Its plant, located at Dap-Cau, near Hanoi, was constructed during 1914 and began operations during the latter part of that year. This plant manufactures paper out of various woods and plants, using only a small proportion of bamboo. The company has had no trouble finding a local market for its product.

FLOOR COVERINGS IN USE IN BRAZILIAN HOMES.

In connection with the article on floor coverings in use in Brazilian homes that was published in *COMMERCE REPORTS* for July 28, 1915, Consul General Alfred L. M. Gottschalk, of Rio de Janeiro, has forwarded a set of samples of carpet material and tapestry showing the types and styles of these products most in demand in that Brazilian metropolis. These samples may be inspected at the Bureau of Foreign and Domestic Commerce and its branch offices. Inquire for file No. 65430.

TRADE OF SWATOW DURING SECOND QUARTER.

[Consul George C. Hanson, Swatow, China, Aug. 7.]

The trade of Swatow for the second quarter of 1915 shows an improvement over that of the corresponding quarter last year. American flour has disappeared from the market, but American kerosene still holds its commanding position. The tonnage of British shipping increased, as compared with 1914, though the number of vessels fell off. Japanese shipping decreased in both respects. Dutch and Norwegian shipping figures were augmented, these countries having apparently picked up much of the shipping lost by certain of the belligerent nations. Tonnage is still scarce and freight rates high.

Imports of cotton cloth, except T cloths and Japanese cotton cloth, show heavy declines. The decline in Chinese cotton cloth indicates that the desire to encourage native industry has not as yet created any large demand in this line. Woolen goods show a general falling off. The metal trade was dull.

Most of the articles usually exported registered a decrease. This fact is attributed to a lack of buying power among Chinese residents in the South Seas, to whom most of Swatow's exports are sent. Eggs, fans, garlic, nankeens, oranges, brown sugar, and vegetables share in this decline. The war in Europe has affected very seriously the Swatow grass-cloth industry. Increased amounts of cotton clothing, pottery, white sugar, and green and black teas were exported.

AUTOMOBILE ACTIVITY IN MANITOBA.

[Consul General Frederick M. Ryder, Winnipeg, Canada, Sept. 20.]

Manitoba is receiving upward of \$100,000 this year from the motor business. Licenses have already been issued for 8,600 automobiles and probably 500 more applications will be filed. The straight license fee of \$10 would make a total of about \$90,000. In addition, licenses have been granted to 1,144 chauffeurs at \$5, making a total of \$5,720, a falling off of about 400 from the number granted in 1914, indicating the tendency of auto owners to handle their own cars. Owners of 888 motorcycles have been licensed at \$2 apiece, aggregating \$1,676. These figures are significant, indicating Winnipeg's prosperity during a year of recognized financial depression. For instance, there was a total of 7,000 automobile licenses granted in the Province last year, showing that fully 2,000 cars have been purchased by residents during 1915, an increase of about one-third of those previously owned. The jitney business is supposed to be responsible for this increase. There has been but a slight increase in the number of motorcycle licenses granted for 1915.

Contract has been awarded to a local firm for a \$200,000 automobile assembling works in Winnipeg for a popular-priced American car. When in operation 200 men will be employed.

China is planning universal education. Its 40,000,000 children within school age will require 400,000 public schools, according to the Minister of Education.

CANADA'S EXPORTS OF CATTLE.

[Consul Felix W. S. Johnson, Kingston, Ontario, Sept. 14.]

The statistics below show the value of exports of live cattle from Canada for the fiscal years named (ended Mar. 31) and where they were sent. The increase noted in 1913 and 1914 to the United States was occasioned by the removal of duty on cattle entering that country.

Fiscal years.	United States.	England.	Other countries.	Total
1890	\$1,491,137	\$7,579,080	\$100,559	\$8,680,776
1901	891,340	8,028,478	144,746	9,064,562
1902	787,864	9,742,738	133,217	10,663,819
1903	292,286	10,442,433	207,986	11,342,632
1904	119,942	10,046,861	258,078	10,424,671
1905	152,084	11,047,167	161,718	11,360,969
1906	206,102	11,045,463	405,284	11,656,829
1907	478,765	10,200,137	253,637	10,932,539
1908	585,790	8,544,806	130,588	9,301,184
1909	543,456	10,115,703	113,117	10,771,366
1910	642,674	9,979,918	169,584	10,792,156
1911	465,079	7,942,144	130,250	8,537,473
1912	615,389	8,343,626	139,155	4,008,179
1913	1,116,523	913,964	208,258	2,237,153
1914	7,043,086	697,807	165,901	7,906,794

Recent figures show that of the live cattle exported for the Canadian customs year ended March 31, 1915, 183,652 head went to the United States and 2,251 to other countries. For the year ended March 31, 1914, the number exported was 219,397, of which 206,446 head went to the United States. For the year ended March 31, 1913, the figures were 44,296, of which 28,268 went to the United States.

NEW CURRANT INDUSTRY FOR UNITED STATES.

A display of 56 species of California grapes was installed during the latter part of September in the California section of the Palace of Horticulture at the Panama-Pacific Exposition, San Francisco. The grapes came from the Bureau of Plant Industry's experiment vineyard, conducted by the United States Department of Agriculture at Fresno, where over 150 varieties of grapes are grown. That the best varieties of currants can be raised commercially in the Fresno district has also been demonstrated at the Government experiment station vineyard. George C. Husmann, pomologist in charge of viticultural investigations, urges the establishment of a currant industry here to displace the enormous importations (83,000,000 pounds annually), mostly from Greece. It is probable that the growing of currants will be begun in a small way in the Fresno section either this winter or next fall.

Sugar Mills in Three Brazilian States.

Consul A. T. Haeberle, at Pernambuco, Brazil, has transmitted a list of sugar mills in the States of Pernambuco, Parahyba, and Alagoas. The Bureau of Foreign and Domestic Commerce will loan this to interested persons. Refer to file No. 65419.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its branch offices. Request for each opportunity should be on a separate sheet and the file number given.

Snap clasps, No. 18571.—An American consular officer in Spain reports a possible market for snap-clasp buttons.

Motorcycle and cycle cars, No. 18572.—The bureau is in receipt of a letter stating that a firm in Portugal desires to correspond with exporters of motorcycles and cycle cars. It also wishes to subscribe to a motorcycle review of a technical nature and not one devoted to sports.

Stationery, underwear, drugs, etc., No. 18573.—A letter to the bureau states that an importing company in the Netherlands is interested in stationery supplies, typewriters, underwear, drugs, safety pins, sewing thread, and sewing machines. Full particulars in regard to these articles are requested.

Flour, barbed wire, etc., No. 18574.—The bureau is in receipt of a letter stating that a firm in Brazil desires to import flour, barbed wire, cotton seed oil, cement, and press printing paper. The firm desires to represent or act as agent for the various articles mentioned.

Corset materials and machinery, No. 18575.—A letter to the Bureau states that a firm in Chile desires to obtain full particulars regarding dry goods, embroidery, ribbons for holding the steels of the corsets, silk ribbons for decorating, elastics for garters, pressers for same, eyelets, and all other articles that enter into the manufacture of corsets, and corset machinery. Catalogues of corset machinery are solicited.

Agricultural machinery, No. 18576.—A letter to the Bureau from a business man in Spain states that he is desirous of purchasing agricultural machinery, especially reapers.

Glue, No. 18577.—An American consular officer in India reports that a firm in his district desires to receive catalogues and price lists of glue. Quotations are desired c. i. f. Rangoon. The firm states that it can supply references.

Machinery, No. 18578.—A report from an American consular officer in France states that a commission house desires to be placed in direct communication with manufacturers of machines for winding sewing thread on card-board. Correspondence should be in French.

Buttons, No. 18579.—An American consular officer in the United Kingdom reports that a firm of manufacturing clothiers wishes to purchase plain and fancy buttons in quantities of 10 and 50 gross for women's costumes, coats, and robes. Samples and quotations c. i. f. Liverpool or Bradford are requested.

Catalogues, etc., No. 18580.—A report from an American consular officer in India states that the consulate needs catalogues and price lists of all kinds. No particular line is mentioned, but in order to keep the file complete manufacturers are requested to forward catalogues and price lists of all kinds.

Sewing machines, No. 18581.—A firm in France informs an American consular officer that it desires to represent American manufacturers of sewing machines. Correspondence may be in English.

Asbestos, No. 18582.—An American consular officer in Brazil reports that a man in his district states that he is authorized to sell or lease a valuable deposit of asbestos.

Phonographs, medicines, etc., No. 18583.—A report from an American consular officer on the east coast of Africa states that a wholesale merchant desires to receive catalogues on phonographs and accessories, patent medicines, spectacles, and toilet requisites. All articles are to be of a cheap grade. Prices and discounts should be given in each case. Correspondence may be in English.

Wearing apparel, No. 18584.—A commission merchant in Chile desires to communicate with American manufacturers of women's and children's wearing apparel. Catalogues, price lists, and discounts are solicited. Reference given. Correspondence may be in English, but Spanish is preferred.

- Machinery, No. 18585.**—An American consular officer in New Zealand reports that a business man in his district wishes to receive catalogues, price lists, and full particulars regarding machinery for stamping leather in imitation of crocodile, and pigskin, etc., for the manufacture of purses and handbags.
- Cotton cloth, hardware, etc., No. 18586.**—A letter to the Bureau states that a commission agent in one of the Spanish possessions is interested in representing American exporters of cotton cloth, hardware, nails, food products, flour, and tobacco. References given.
- Paper towels, etc., No. 18587.**—An American consular officer in India reports that a firm in his district requests price lists and full particulars in regard to paper towels and toilet paper. Quotations c. i. f. Rangoon.
- Shower-bath attachments, No. 18588.**—A report from an American consular officer in Canada states that there is a scarcity of shower-bath attachments of the kind provided with collar spray, which fits about the neck. American manufacturers of collar-spray attachments should investigate this opportunity.
- Agricultural machinery, No. 18589.**—An American consular officer in India reports that a firm in his district desires to get in touch with manufacturers of agricultural machinery and implements.
- Wearing apparel, etc., No. 18590.**—A business man in France desires to represent American exporters or manufacturers of draperies, toys, socks, shoes, and other clothing for children. Reference furnished. Correspondence may be in French or English.
- Nickel-plated ware, No. 18591.**—An American consular officer in Chile reports that a business man desires to represent or act as a manufacturer's agent for nickel-plated ware, such as tea services, coffee pots, percolators, fancy ware and novelties. Catalogues, samples, and price lists are requested.
- Cutlery, No. 18592.**—A firm in India has requested an American consular officer to place it in touch with American manufacturers of cutlery.
- Agate, cornaline, and aquamarine, No. 18593.**—A report from an American consular officer in Switzerland states that a firm in his district is in the market for agate, cornelian, and aquamarine to be used in the manufacture of clocks and watches. Correspondence may be in English.
- Chemicals, drugs, etc., No. 18594.**—A report from an American consular officer states that a business man in Greece wishes to purchase chemicals, drugs, and leather.
- Soap, furniture, etc., No. 18595.**—A wholesale merchant on the east coast of Africa informs an American consul that he wishes to receive catalogues on chairs, of the cheaper grade; laundry soap; paints; and oils for paints and varnishes. Prices and discounts should be given. Correspondence may be in English.
- Wagon and carriage parts, No. 18596.**—A letter to the Bureau from a commercial agent states that a dealer of hardware and machine-shop supplies in Argentina desires to correspond with American manufacturers of axles, and all the various parts for the assembling of sulky rods, wagons, and carriages, etc. All information, including prices, terms, etc., should be given in Spanish.
- Enameled and aluminum ware, No. 18597.**—The Bureau is in receipt of a letter from a commercial agent stating that a representative of a Russian firm is interested in getting in touch with American manufacturers of enameled and aluminum ware. The firm is anxious to act as exclusive agent for these goods.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 400 United States Customhouse; Boston, 733 Oliver Building; Chicago, 504 Federal Building; St. Louis, 408 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1090 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce.

SHIPPING FACILITIES BETWEEN JAPAN AND AMERICA.

[Consul General George H. Scidmore, Yokohama, Aug. 20.]

There is at present a considerable quantity of cargo here for shipment that is being held up by reason of a scarcity of bottoms. It is expected that the departure of certain vessels not regularly engaged in the trans-Pacific carrying trade may considerably relieve the existing situation. In the event of the withdrawal of the Pacific Mail Steamship Co. from the trans-Pacific carrying trade, however, a discouraging shortage of vessels available for freight traffic would at once ensue.

It is stated that the Pacific Mail Steamship Co. will discontinue the trans-Pacific trade, beginning in October, 1915, transferring its vessels to another company for use on the Atlantic. The shortage of carriers caused by this step will be detrimental to existing trade relations between Japan and China, particularly to the cotton trade, 40 per cent of the freightage thereon having been in the hands of the Pacific Mail. Unless other vessels quickly take the place of the freighters of that line, business conditions as affecting Japan and the United States will be decidedly unsettled.

There is now only one steamer belonging to the Great Northern Steamship Co.—the *Minnesota*—on the Pacific carrying the American flag. The *Minnesota*, it is understood, is under long charter to the Russian Government and will not be available, for the period of the war at least, for carrying private cargoes.

Under existing conditions it would appear that any American ships finding their way to Oriental ports after the withdrawal of the Pacific Mail boats from the trans-Pacific service, beginning October 10, 1915, can be assured of full cargoes on the homeward voyage.

It is reported that the Japanese steamship companies, the Toyo Kisen Kaisha and the Nippon Yusen Kaisha, are now making every effort to obtain vessels with which to enter the field that will thus be left vacant.

[A report by Consul General Anderson at Hongkong, China, covering in some detail the various elements in the Far Eastern freight situation, was published in COMMERCE REPORTS for Sept. 20.]

AMERICAN CHAMBER OF COMMERCE FOR BRAZIL.

[Consul General A. L. M. Gottschalk, Rio de Janeiro.]

An American Chamber of Commerce for Brazil, with 22 charter members, has been organized at Rio de Janeiro. As stated in the preliminary draft of its by-laws, the objects of the chamber are "to further the development of commerce between the United States of America and Brazil; to collect information and to examine questions pertaining to their commercial and industrial relations; to encourage and facilitate the transaction of business between them; and especially to promote American interests in Brazil."

All American citizens, firms, and corporations interested in the objects of the chamber are eligible for admission to the new body, and the list of members already includes some of the most important industrial corporations of the United States.

SHORT-PAID POSTAGE ON FOREIGN MAIL.

Announcement was made in **COMMERCE REPORTS** for May 5, 1915, that the Post Office Department had issued instructions to the postmasters of the United States to make special efforts to abate the evil of short-paid postage on letters going abroad. Inquiry by the Secretary of Commerce as to the effectiveness of this effort elicits the following reply, dated September 30, from the Postmaster General, Mr. A. S. Burleson:

With reference to your letter of August 23, 1915, relative to short-paid postage on mail for foreign countries I am pleased to inform you that this department's instructions to postmasters to hold such matter whenever practicable and request the senders to supply the deficient postage is producing satisfactory results. Reports received indicate that the more important post offices are carrying out the instructions effectively, and that, as a rule, the senders of short-paid mail are grateful for the opportunity given them to prepay fully the postage and thereby relieve the addressees of any postage charges when the mail is delivered to them. Continued compliance with instructions on the part of postmasters can not but result in a continued lessening of the short-paid postage evil.

GREAT FRUIT CROPS IN HOLLAND.

[Consul Frank W. Mahin, Amsterdam, Netherlands, Sept. 16.]

The present crops of pears and apples in this district are the largest in years. The orchards are a remarkable spectacle. It is a literal fact that pears and apples grow on the trees nearly as thickly as currants on their bushes. It would seem that practically every spring blossom has developed into a pear or an apple. The limbs of the trees would break down under their heavy burdens if they were not supported by forked poles.

Growers are selling these fruits at less than an American cent a pound.

However, there are pessimists who say that fruit in such abundance will not be good keepers.

IMPORT AND EXPORT TRADE FOR ONE WEEK.

The imports, duties collected, and exports for the week ending October 2, 1915, at 13 principal customs districts of the United States follow:

Districts.	Imports.	Duties collected.	Exports.
Georgia (Savannah).....	\$84,725	111	\$3,916,874
Massachusetts (Boston).....	1,901,733	142,517	2,514,555
New York.....	23,102,188	2,714,493	36,118,357
Philadelphia.....	1,086,425	292,436	1,378,315
Maryland (Baltimore).....	486,752	17,001	2,671,485
Virginia (Norfolk).....	36,323	2,559	1,829,198
New Orleans.....	671,750	17,178	3,885,073
Galveston.....	40,583	3,885	7,543,913
San Francisco.....	876,755	61,551	2,201,579
Washington (Seattle).....	1,890,458	31,820	833,089
Buffalo.....	932,594	15,205	1,164,624
Chicago.....	507,522	112,080	101,188
Michigan (Detroit).....	672,001	18,229	3,680,882
Total.....	32,279,809	3,428,965	67,749,631

The above figures show a favorable balance on merchandise transactions for the week ending October 2 in the 13 customs districts of \$35,469,722. The 13 districts cited handled about 91 per cent of the import and export business of the country, based on the transactions in July, 1915.

Cotton exported during the week ending October 2 amounted to 217,914 bales, making the total since August 1, 1915, approximately 655,119 bales.

BRITISH LINE TO START NEW PACIFIC SERVICE.

[Extract from Daily Journal of Commerce, San Francisco, Cal., Sept. 24, by Commercial Agent E. G. Babbitt.]

Closely following the announcement that the Java-China-Japan line will enter the trade between San Francisco, China, and the Philippines comes the report from Andrew Weir & Co., in London, that the Bank Line also will enter this service.

The British company operating this line controls more than 40 vessels, a number of which are now plying between New York, China, Japan, and the Straits Settlements. Some of the steamers from New York to Japan are using the Panama Canal, while those going to other parts of the Orient are routed via the Suez Canal.

According to a cable from London to E. C. Evans & Son, local agents of the Weir Line, the steamer *Inveric*, a vessel of 4,800 tons, will be the first to arrive here in connection with the new service. It will commence loading at Hongkong for the Golden Gate about the 1st of November.

Although the details of the new service have not as yet been worked out fully, it is expected that the announcement of other sailings will be made before the *Inveric* reaches this port.

It is believed that many steamship companies that intended to enter the Pacific trade but were prevented from doing so by the European war will before long commence sending vessels to the Golden Gate. The Foreign Trade Department of the Chamber of Commerce is attempting to induce a number of big steamship companies to establish schedules which will include San Francisco.

SCOPE OF SECTION 14, SEAMEN'S ACT.

The United States Steamboat-Inspection Service has published the following information in regard to dates of effect of section 14 of the act of Congress approved March 4, 1915, entitled "Seamen's act," for various classes of domestic and foreign steam vessels, which information is contained in Department Circular No. 266, dated September 24, 1915, which reads as follows:

September 24, 1915.

To chief officers of customs, supervising and local inspectors, Steamboat-Inspection Service, and others concerned:

The following statement of the scope of application of section 14 of the seamen's act of March 4, 1915, based on the opinion of the Attorney General dated August 25, 1915, and opinions of the Solicitor of the Department of Commerce dated September 3 and September 4, 1915, is issued for your guidance:

1. Section 14 of the act will apply on and after November 4, 1915, to steam vessels of the United States referred to in the act, except such steam vessels admitted to American registry under the ship-registry act of August 18, 1914.

2. Section 14 will apply, on and after September 4, 1916, to steam vessels of the United States admitted to American registry under the ship-registry act of August 18, 1914.

3. Section 14 will not apply at any time to—

(a) Foreign steamers not carrying passengers to or from the United States.

(b) Foreign steamers carrying passengers to the United States.

4. Section 14 will apply on and after March 4, 1916, to foreign steamers carrying passengers from the United States under the flags of those countries whose inspection laws do not approximate those of the United States, unless in the meantime those countries adopt inspection laws approximating those of the United States, and accord reciprocal privileges to vessels of the United States in their ports.

5. Section 14 will not apply to foreign steamers carrying passengers from the United States under the flags of those countries whose inspection laws approximate those of the United States and that have entered into reciprocal relations with the United States. The countries which have such approximate laws and which have entered into such relations are Denmark, France, Germany, Great Britain, Canada, New South Wales, New Zealand, Japan, the Netherlands, and Norway.

WILLIAM C. REDFIELD,
Secretary of Commerce.

THE ENGLISH HOP CROP.

[Consul Samuel M. Taylor, Birmingham, Sept. 16.]

With reference to the English hop crop it is stated that in many of the gardens in the counties of Worcester, Hereford, Surrey, Hampshire, Kent, and Sussex the blight has mastered the plant, and many of these gardens will not have a hop picked in them, while others of these badly blighted gardens may secure a few hundredweights to the acre. The low temperature and absence of rain which prevailed during June and the first half of July retarded the growth of the plant and is accountable for the shortness of bine in most gardens. The rains which commenced in the middle of July materially assisted those gardens that had been thoroughly washed, and by the middle of August the aphid blight had run its course, so the cones are perfectly clean and free from all disease, and having been produced on a slight bine have had the advantage of exposure to the sun, which has put condition into them. It can be safely said that the crop will not exceed half of that of last year, perhaps some 250,000 to 260,000 hundredweights (28,000,000 to 29,120,000 pounds).

STEAMSHIP SERVICE BETWEEN NEW YORK AND ARCHANGEL.

[Commercial Attaché Henry D. Baker, Petrograd, Russia, Sept. 10.]

The Russian-American Line between New York and Archangel has given notice that it will continue its present direct service of steamers, one every 11 days, between these two ports until the end of January. It is stated, however, that as these steamers can not leave Archangel during the winter months in ballast, as they have been doing lately, it will be necessary to arrange export of goods from Russia to America on these steamers, up to about 1,500 tons per sailing, which would stiffen the vessels for their run across the Atlantic.

It is hoped that the practical lifting of the embargo on the exportation of many classes of goods, such as skins, now in great demand in the United States, through the arrangement¹ whereby such goods can be consigned to the Secretary of Commerce under guarantees that they will not be reexported in any form, will release for export to the United States a great quantity of goods purchased before the outbreak of the war but detained here because of the embargo. The immediate exportation of these goods, as well as furs and skins purchased at the present fair at Nizhni Novgorod and certain other classes of goods that have been on the embargo list, may assist the Russian-American Line to maintain its sailings during the winter up to the end of January. After this time it is planned to have a service with Kola in northern Lapland until May, when Archangel will again be free of ice.

The steamers of the Russian-American Line between New York and Archangel include the *Kursk*, *Czaritza*, *Czar*, and *Dvinsk*, which make the trip between New York and Archangel in about two weeks. They pursue a short northerly course, which takes them between Iceland and Greenland. During the summer this line erected large warehouses at Archangel, sufficient to store temporarily all the goods arriving or departing by its ships.

PHILIPPINE CEMENT PLANT IN OPERATION.

[From the Philippine Free Press.]

Information has been received from Manila that the first shipment of cement from the plant of the Rizal Cement Company, at Binangonan, Province of Rizal, has been received by a local firm. The works have been under construction for some time, but were completed only a few weeks ago. They have a capacity of 500 barrels a day. Tests of the product, both here and abroad, have been very satisfactory, proving it equal to the best imported cement. Some account of the plant, before its actual erection, was published in the Daily Consular and Trade Reports for September 27, 1912.

¹ To secure such shipments, it is necessary (1) to file application for approval of their release with the Bureau of Foreign and Domestic Commerce; (2) to guarantee that no part of such shipments will be exported from the United States; (3) to file a bond with the Imperial Russian Government covering the entire value of the shipment, such a bond to run for three years or until peace shall have been declared with all belligerents. Forms of application may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices.

ARGENTINE NATIONAL BUDGET PREPARED.

[Consul General W. Henry Robertson, Buenos Aires, Aug. 13.]

The estimate of the receipts and expenditures of the Government of Argentina for 1916, as submitted in an executive message to Congress, gives as the amount to be expended for all purposes \$144,876,786 in cash (in terms of United States currency) and \$849,200 in bonds and obligations. The figures for the revenue given in the estimate show that more than one-third of the amount is expected to be derived from the receipts of the customhouses, while the inland taxation has been increased by new taxes on wine, sugar, and beer.

The public debt will be considerably augmented by the issuing of bonds to cover the cost of public works. It is proposed that \$10,251,470 shall be applied to this work, the amount being part of a bond issue of \$29,722,000. The remaining part of the proceeds will be used for continuing the National Sanitary Works and for other purposes. The Executive is to be authorized to obtain loans for short periods on account of the future proceeds of the bonds.

The preamble accompanying the budget compares it with those of previous years, showing that a reduction from the figures for 1914 is made, both in administration and in public works, while cuts are made in salaries of Government employees of 5 or 10 per cent, according to the amount of the salary received.

The expenditure of the current year was fixed by the budget now in force at \$161,908,788, so that an economy is intended to be effected next year to the amount of about \$17,000,000, of which about \$10,000,000 has resulted from the pruning of all administrative annexes except those of Congress and the public debt.

The public debt has increased by \$941,092.

Ordinary Expenses of Administration.

The estimates of the ordinary expenses of administration are fixed in the budget at \$126,284,065, the amounts according to the several classes of expenditure being: Congress, \$1,915,860; interior, \$19,233,538; foreign affairs and cultio, \$1,734,672; finance, \$6,927,156; public debt, \$37,678,184; justice and education, \$24,568,754; war, \$10,642,444; marine, \$9,004,542; Agriculture, \$4,600,457; public works, \$2,977,434; pensions, \$5,514,924; resguardos, \$959,019; sub-prefectures, \$527,081.

The expenses of public works are fixed at \$13,391,143 in cash in addition to bonds and obligations, distributed among the following departments: Interior, \$596,363; foreign affairs and cultio, \$219,433; finance, \$63,690; justice and education, \$435,215; marine, \$74,305; agriculture, \$473,429; public works, \$11,528,707.

In addition to the amounts mentioned under these classifications, the expenses of subsidies and beneficence are fixed at \$5,201,578. (Previous reports on the Argentine budget were published in **COMMERCE REPORTS** for April 7 and April 14, 1915.)

[A copy in Spanish of the full text of the budget for 1916, as submitted to Congress, will be loaned on application to the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 65946.]

Rock salt is produced by deep shaft mining in eastern United States; the annual output is 1,000,000 tons, valued at \$2 per ton.

ENGLAND'S NEW BUDGET ESTIMATES.

Great Britain's new budget, as drawn up by the Chancellor of the Exchequer, indicates an increased income of £32,904,000 (\$160,127,300) from the new or augmented taxes and duties which the document proposes. The expenditure in the fiscal 12 months ending March 31, 1916, is estimated at £1,590,000,000 (\$7,737,735,000); the year's revenue on the basis of existing taxes is placed at £272,110,000 (\$1,324,223,300). With the additional amounts anticipated from collections during the rest of the year, there remains a deficit of £1,284,986,000 (\$6,253,384,400).

Certain of the new imposts were set forth in **COMMERCE REPORTS** for September 27; others are indicated in the following summary of estimated receipts, in which the values have been converted to American dollars at the rate of \$4.8665 to the pound sterling:

New sources of revenue.	Full year's yield.	Yield this year.
NEW TAXES AND ADDITIONS.		
Income tax (raised 40 per cent per annum).....	\$316,073,000	\$64,864,925
Supertax (new scale).....	12,058,550	10,462,975
War profits (50 per cent).....	145,995,000	29,190,000
Sugar (raised from 44.6 cents to \$2.271 per hundredweight*).....	56,938,050	26,084,435
Tobacco.....	24,819,150	(b)
Tea (50 per cent added, raising the rate from 16.3 cents to 24.3 cents per pound).....	21,899,250	(b)
Cocoa, coffee and chicory (50 per cent added to 2 cents per pound, \$3.407 per hundredweight, and \$3.224 per hundredweight, respectively).....	1,411,275	(b)
Dried fruits (50 per cent added).....	878,975	(b)
Motor spirit (6.1 cents per gallon added to present rates of 6.1 cents and 3 cents).....	5,353,150	2,676,575
Patent medicines (doubled).....	1,216,625	(b)
NEW IMPORT DUTIES.		
Motor cars and cycles (33½ per cent ad valorem).....	5,896,475	(b)
Kinema films (33½ per cent ad valorem).....	1,946,600	(b)
Clocks and watches, musical instruments, plate glass, and hats (23½ per cent ad valorem).....	1,946,600	(b)
Total new taxation.....	497,137,300	160,127,300
Postal, telegraph and telephone charges: Higher rates for heavy letters and for parcels, press and other telegrams, postal orders, and telephones (with a saving of \$997,635 in expenditure).....	24,210,840	9,635,670

* British hundredweight—112 pounds.

† Not stated, but included in the total as \$36,839,400 for all.

Since the presentation of the budget to Parliament on September 21 there has been much discussion of the new levies and certain modifications will doubtless be made before the final passage of the law. Among the changes so far proposed are the exemption of motor trucks and plate glass from the 33½ per cent import duty.

British merchants are already shaping their businesses to the new times. Manchester tobaccoists have decided to increase the retail prices of all cigarettes by 2 cents per packet of 10, by 4 cents per packet of 20, and by 4 cents per ounce when the cigarettes are sold by weight; and to raise the price of all tobaccos by 4 cents per ounce and, in regard to imported cut tobaccos, by 5 cents per ounce. Liquor dealers are not affected, as neither spirits nor beers are subjected to heavier taxation. The proposal to increase the duty on coffee, tea, cocoa, and sugar has had the result in some centers of almost cleaning out the local grocers' supplies of these commodities, as housewives made haste to lay in stocks in anticipation of advanced prices.

Cinematograph managers are facing a general increase in the price of new films, to offset which there may be a slight advance in admission charges. The abolition of the halfpenny (1-cent) post, which is one of the changes proposed under the postal department, will especially affect those large British commercial houses that send out thousands of invoices and statements monthly.

SEEK UNIFORMITY IN SOAP SPECIFICATIONS.

The question of reducing the number of specifications for soaps purchased by the United States Government and adopting a few definite specifications that will cover products in common use throughout the country was considered recently at a conference of representatives from a number of departmental and independent bureaus and offices. The matter had been taken up by the Bureau of Standards, to meet the objection that has been made by certain manufacturers to the effect that some of the Government specifications do not conform to commercial brands, and hence necessitate special preparation, with consequent higher cost.

A full discussion that took place at this conference brought out the fact that the consensus of opinion among those assembled was that it was desirable to secure greater uniformity in the purchases by different departments and offices and to reduce the number of kinds called for to a few simple types. One or two committees were organized to secure and assemble data for use as a basis for future recommendations.

The importance of such recommendations may be realized by observing the figures which represent the magnitude and rapidity of growth of the soap industry in the United States. In 1909 the value of the products of the soap manufactories of the country was \$111,357,777, while in 1904 the value of the products was \$68,274,700. Previous to that year the statistics had been collected for the soap and candle industries combined, the amount in 1899 being \$53,231,017.

SPANISH MONEY BARRED IN CUBA.

[Consul Henry M. Wolcott, detailed as vice consul at Habana; dated Sept. 15.]

On August 12, 1915, the Chief Executive of Cuba issued a decree prohibiting the importation of all foreign moneys of silver or copper, with the exception of that of the United States. On September 12, 1915, this important decree was followed by another prohibiting the circulation in Cuba of Spanish silver and copper money after December 1, next, and also barring the importation and circulation of centenes and louis, Spanish and French gold coins.

The importance of this decree may be more clearly understood when it is explained that, according to the best estimates obtainable, there is at present in circulation in Cuba approximately \$30,000,000 in Spanish and French gold and \$5,000,000 in Spanish silver. In fact, in the country districts of western Cuba this money is at present used almost to the exclusion of the American and Cuban currency. However, in eastern Cuba American money has been used exclusively since the American occupation in 1898-99.

RUBBER GROWING IN ECUADOR.

[Consul General Frederic W. Goding, Guayaquil, Aug. 24.]

The rubber tree, *Castilloa elastica*, has added considerably to Ecuador's wealth. It grows wild in the tropical parts of the Republic, at an altitude of 500 feet above sea level, resembling in general appearance some species of eucalyptus. The fruit usually ripens in February, presenting a flattened appearance, 1 to 2 inches broad. The seeds, about the size of a small pea, contain 18 per cent of oil and a crystallized bitter substance. The pulp is eaten by parrots, monkeys, and other animals. Exposed to the air, the seeds rapidly desiccate, losing 25 per cent of their weight in three days. A longer exposure reduces their weight by one-half, which leaves them without germinating power, as it is very rare for development to occur from seeds thus reduced.

Rubber plantations have been formed in the Balzar and Tenguel districts and in Manabi and Esmeraldas, with more than a million trees. A law was passed in 1904 providing a bounty of 5 cents for each rubber tree that should be planted and pass the age of 5 years. Thus far but one plantation, with more than 300,000 trees, has attempted to profit by this provision, as yet without results.

In Ecuador it has been found profitable that "bleeding" should begin with the seventh year of growth, for at that age the tree is in full vigor, when from four or five cuts a tree will yield 2 pounds of rubber and produce indefinitely.

Better Prices Awaited for Marketing Product.

For many years Ecuador has annually exported rubber, formerly in considerable quantities and at high prices. At one time \$72 for each 100 pounds was realized, while the present prices are \$23.91 and the quantity but 16 tons. Most of this went to the United States. The decrease in price has reacted on the production, so that at present very little effort is made to gather it. With a return of better prices new interest will be awakened, eventuating in more rubber plantations here.

Several other plants growing in Ecuador yield rubber, the names of but few being obtainable, as little attention is devoted to the question of new sources. One, an enormous climbing plant called "matapalo" (*Ficus dendrocidia*), winds around any of the forest trees, and as it develops into a great octopuslike vine, a foot or more thick, the enveloped tree is smothered and dies, leaving the gigantic climber standing in its place. The climbing giant yields rubber, and there is a plentiful supply.

There are also many small shrubs of the genera *Apocynum* and *Brosimum*, yielding a milky juice which coagulates into a gum with the qualities of rubber.

RATE OF EXCHANGE RESTRICTS CHINESE PURCHASES.

[Consul General Fred D. Fisher, Tientsin, Aug. 16.]

The rate of exchange between local currency and gold is so unfavorable that the local import trade is nearly at a standstill. The chief openings for American imports must for the present lie in substitutes for articles which are in large demand and can not now be had from former sources of supply, such articles as dyestuffs, window glass, and needles.

CANADIAN LAND PATENTS AND HOMESTEAD ENTRIES.

[Vice Consul G. C. Woodward, Vancouver, British Columbia, Sept. 4.]

During the first six months of 1915 there were issued in the four Provinces of Manitoba, Saskatchewan, Alberta, and British Columbia, and the Yukon Territory 11,172 land patents, including homesteads, mineral, railway, and other lands, amounting in the aggregate to 1,824,381 acres, as compared with 17,492 patents, amounting to 2,878,811 acres, issued during a similar period of the previous year, a decrease of 6,320 patents and 1,054,431 acres.

During the same period the homestead entries for 1915 amounted to 8,243, as compared with 13,240 for the previous year, a decrease of 4,997. The following table forms a comparative list of the entries by Provinces:

Provinces.	1914	1915
Manitoba	1,695	1,933
Saskatchewan	5,301	2,783
Alberta	5,840	3,255
British Columbia	404	272
Total	13,240	8,243

The following table gives the nationalities of the homesteaders during the first six months of 1915:

Nationality.	Number.	Nationality.	Number.	Nationality.	Number.
Americans	1,092	British—Continued.		Danes (including Icelanders)	101
Arabians	2	Canadians—Con.		French	59
Austro-Hungarians	1,107	From Quebec	233	Germans	99
Belgians	45	From Saskatchewan	147	Greeks	8
Balkan States	21	Returned from United States	9	Hollanders	19
British:		English	1,082	Italians	75
Canadians—		Hindoes	1	Japanese	2
From Alberta	138	Irish	126	Norwegians	173
From British Columbia	32	Newfoundlanders	5	Russians (including Russian Jews)	355
From Manitoba	535	New Zealanders	1	South Americans	4
From New Brunswick	50	Persons who had previous entry	1,451	Spanish	4
From Nova Scotia	■	Scotch	291	Swedes	154
From Ontario	604	South Africans	1	Swiss	34
From Prince Edward Island	24	Chinese	2	Turks	4
				Total	8,243

NEW TELAUTOGRAPH IN SWEDEN.

[Consul General Ernest L. Harris, Stockholm, Aug. 27.]

A new telautograph or telewriter, an instrument for telegraphic transmission of ordinary handwriting, has just been invented by two Swedish engineers. This new apparatus apparently differs entirely from the fundamental principles of other telautographs. The most characteristic feature of the apparatus seems to be that it can be used independently of the electrical resistance of the line. It can be connected alternately to a long or short line without any adjustment of the resistance, and can consequently be used in connection with the public telephone systems. This apparatus has been in practical use for some time for testing purposes, and its manufacture for commercial exploitation has now been started.

MARKET FOR PHONOGRAPHS IN STRAITS SETTLEMENTS.

Vice Consul Caspar L. Dreier, at Singapore, reports that there is an excellent market in that city for the sale of phonographs. These afford one of the most valued forms of amusements during the long tropical evenings, and their popularity is increased by the comparative absence of the more highly organized kinds of entertainment. Mr. Dreier says that the talking machines possess a fascination not only for European residents, but for the Indians and coolies in their tenement quarters and the dwellers in the jungle huts. They are considered as having marked advantages in the way of education and as furnishing an inspiration toward advancement.

In Singapore, with its mixed cosmopolitan population, brought together from many nations and races, it is found necessary to provide a great variety of records, in diverse languages and appealing to the individual tastes of the purchasers. Mr. Dreier states, for example, that the higher class of Chinese, although they yielded to the attraction of the instrument, did so only when music of their own national type was procurable. European music, however, is often heard in districts surprising to the stranger.

According to this report, the importation of phonographs into the Straits Settlements now amounts to many thousands of dollars each year, the machines varying from the highest class to the older kinds and cheaper makes. Many retail firms in Singapore handle them, and music houses regard them as constituting an important part of their trade.

[The names of three of the principal dealers in phonographs in Singapore may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 64629.]

GOLD AND TRAVELERS' CHECKS IN RUSSIA.

[Consul North Winship, Petrograd, July 15.]

Americans intending to visit Russia should be informed not to bring gold or travelers' checks. Persons bringing gold to Russia are unable to negotiate it at a favorable rate and must nevertheless exchange it, since no gold is permitted to be taken out of the country or to be sent from Russia, except with a special permit from the Minister of Finance.

Travelers' checks show on their face the amount to be received in rubles, which is at the rate of 1.93 for the dollar. The banking institutions in this city refuse to give more than this face value, except in a few instances, notwithstanding the fact that, to-day for instance, the rate of exchange is about 2.72 to 2.75.

It sometimes happens that parties holding these checks can negotiate them at a higher rate, but this depends on the success of the holder in finding a bank or individual in great need of dollars in America. Even so the rate paid is arbitrary.

This difficulty may be evaded through certified checks on New York banks, letters of credit, or the establishment of a credit in a bank here by depositing dollars in America.

It is also well to mention that persons leaving Russia are not allowed to carry more than the value of 500 rubles out of the country without a special permit from the Minister of Finance. This does not include railroad and steamship tickets, which may be purchased here through to New York.

LAND LEASING IN SOUTH MANCHURIA.

[Consul General P. S. Helntzleman, Mukden, China.]

Twenty-two time-expired Japanese soldiers have been accepted by the land department of the South Manchuria Railway Co. as lessees of land for cultivation in the railway area. The lands leased to them are mostly at Tiehling and Kungchuling and are about 1,100 acres in total area, each being allowed 50 acres. The company is pursuing the policy of canceling all leases held by tenants only in name with a view to disposing of them at a profit. The railway company will advance \$150 to each of the above-mentioned lessees.

At the end of July, 1915, the land in the South Manchuria Railway area rented for house lots, cultivation, and other purposes was 12,294 acres to 3,381 tenants. The rents accruing therefrom amounted to \$46,152. In point of the land area under cultivation, Tiehling leads the list, and is followed by Tashihchiao, Wafangtien, Liaoyang, and Kungchuling. The total area of the Japanese railway lands in and out of the Leased Territory is only about 70 square miles, so that these lands do not afford any opportunity for colonization, a very large part being required for strictly railway purposes.

New Treaty Rights—Tax Reforms.

By article 2 of the treaty between Japan and China respecting South Manchuria and Eastern Inner Mongolia, signed May 25, 1915, Japanese have secured the right to lease land in South Manchuria for erecting buildings for trade and manufacture and for conducting agricultural enterprises. By an exchange of notes annexed to the treaty the two Governments agree that the term "lease" in the treaty shall be understood to imply a lease of not more than 30 years, unconditionally renewable. According to article 5 of the same treaty Japanese leasing land in the interior of South Manchuria are amenable to Chinese police laws and ordinances and must pay Chinese taxes. These laws and ordinances, and also the schedule of taxes, must, however, receive the approval of the Japanese consul before they can be enforced.

At Japanese suggestion the Chinese Government proposes to alter the existing system of taxation in South Manchuria and Eastern Mongolia which is held to be ill adapted to the new conditions created by the recent treaty with Japan and conducive to international complications. Accordingly the civil governor here, under instructions from Peking, has deputed a number of officials throughout those districts to make investigations and propose reforms.

USE OF COKE IN SWEDEN.

[Consul General Ernest L. Harris, Stockholm, Aug. 27.]

The Swedish State Railway management has just purchased in Westphalia, Germany, 20,000 tons of coal briquets and 72,000 tons of coke for use as locomotive fuel. A circular has been issued to all the district railroad managers giving instructions in regard to their use. The coal will be used alone, but a mixture of coke and briquets may be undertaken later, as experiments in Denmark tend to show that such a mixture with English coal is a success. It is stated that in mixing about equal proportions of coke and coal briquets will be used.

AUGUST EXPORTS OF BREADSTUFFS, MEAT PRODUCTS, ETC.

The following table shows the exports of domestic breadstuffs, cottonseed oil, food animals, meat and dairy products, cotton, and mineral oils from the principal customs districts of the United States during August and the eight months ended August, 1914 and 1915:

Items.	August--		8 months ended August--	
	1914	1915	1914	1915
EXPORTS BY GROUPS.				
Breadstuffs	dollars .. 29,539,131	29,306,900	120,633,277	372,428,994

EGYPTIAN COTTON RESTRICTIONS REMOVED.

[Reuter dispatch from Cairo.]

It is stated that the Egyptian Council of Ministers has decided to remove the prohibition by which cultivators are not allowed to devote more than one-third of their property to cotton cultivation.

Farmers of Ontario Province, Canada, are now buying automobiles in large numbers.

LARGE BRITISH SHIPPING PROFITS.

[Manchester Guardian, Sept. 13.]

The week's dividend announcements and reports of shipping companies confirm the impression of a good time in the transport industry, both actual and prospective. "Even when peace was again happily with us," said the chairman of Manchester Liners (Ltd.), at the meeting last week, "profitable rates of freight, although not at present levels, would rule for some considerable period to come." This confidence appears to be general. The directors of the King Line, of London, last week declared an interim dividend of 6 per cent, as against $2\frac{1}{2}$ per cent last September. The Cairn Line, a Tyne concern, announce a further dividend of 5 per cent, in addition to the 10 per cent paid in July, which makes 15 per cent already, against a dividend of 10 per cent for the year in previous years. Another Tyne firm, the Sutherland Steamship Co., announce an interim dividend of 20 per cent, as compared with $2\frac{1}{2}$ per cent a year ago, the full dividend for each of the two preceding years having been 15 per cent.

Two annual reports published to-day show a similarly healthy and promising condition of affairs. The accounts of Rowland & Marwood's Steamship Co., of Whitby, showed an available sum on July 31 of \$615,665, as compared with \$503,701 for the previous good year. The dividend of \$6 per \$30 share is maintained, there are substantial appropriations of \$122,000 for depreciation, \$73,000 to reserve (reclassification and upkeep), and \$50,000 to income-tax reserve, and over \$250,000 is carried forward.

Ireland also claims a share of shipping prosperity. The year's profits of the Dublin firm of Thomas Heiton & Co. stand at \$117,884, including a carry-forward of \$28,290; the ordinary shareholders now for the first time (5 per cent having been the previous high-water mark) receive 10 per cent for the year. The company is also able to write \$26,765 off plant, premises, etc., to set aside \$5,000 for depreciation of investments, and to place \$5,000 to insurance reserve account, besides carrying \$27,301 to the new account. These returns are interesting as showing that the buoyancy in shipping is not confined to the larger concerns, of the prosperity of which the active bidding for their shares has been sufficient indication recently.

THIRD-CLASS PULLMANS IN ENGLAND.

English railway travelers were provided with an innovation on September 12, when Pullman cars for third-class passengers were inaugurated between London and Brighton and Eastbourne. Externally the cars resemble first-class Pullmans on the Brighton line, but are less luxuriously finished. Each car is 60 feet long over buffers, holds 56 persons, and the seats are arranged in pairs on either side of a central passage, each being arranged to tip up. A kitchen enables meals to be served. Each car has a glass-fronted cupboard containing tools for use in emergency, together with hand grenades and first-aid equipment. An extra 18 cents is charged for each seat occupied in addition to the third-class fare. Apparently this new English "Pullman" is similar to a type that has been used on American railways for a number of years.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Hardware, jewelry, etc., No. 18598.—The Bureau is in receipt of a letter stating that a firm in the Netherlands desires trade journals devoted to hardware, knives, corkscrews, enameled articles, cheap jewelry, belts, purses, children's caps, socks, and stationery.

Paper, No. 18599.—A letter to the Bureau states that a firm in France desires quotations on sulphurated, muslin, and grease-proof paper. Samples of the paper desired accompany the letter and may be examined at the Bureau or its branch offices. (Refer to File No. 68.)

Cotton duck, cordage, etc., No. 18600.—An American consular officer in Canada reports that a business man in his district desires to correspond with manufacturers and exporters of cotton duck, cordage, paints, and light hardware, with a view to handling these goods on a commission basis.

Enameled ware, No. 18601.—A report from an American consular officer states that a firm in Africa desires to communicate with manufacturers of enameled ware, including pots, pans, kettles, plates, and cups. Samples are requested, and may be sent care of the American consulate. Prices f. o. b. New York are necessary, and quotations c. i. f. Port Elizabeth are a decided advantage.

Chemical products, patent medicines, etc., No. 18602.—A company in Italy informs an American consular officer that it desires to purchase chemical products, patent medicines, sanitary articles, and household novelties. Payment to be 30 days or c. o. d. American Express Co., Naples or Rome. References given.

Cotton goods, haberdashery, etc., No. 18603.—A firm in Persia informs an American consular officer that it desires to establish commercial relations with American dealers in cotton goods, haberdashery, and shoes. Prices, samples, and catalogues should be sent at once. Correspondence may be in French or German.

Sheet glass, No. 18604.—An American consular officer in India reports that a firm in his district is in the market for sheet glass.

Machinery, No. 18605.—An American consular officer in the United Kingdom reports that a manufacturer's agent is desirous of communicating with manufacturers of machinery for making butter containers.

Enameled bathtubs, No. 18606.—A firm of importers in Spain informs an American consular officer that it desires to establish commercial relations with manufacturers of enameled bathtubs. Catalogues and price lists of cast-iron tubs lined with porcelain, as well as steel tubs enameled both outside and inside, are requested, together with full information. Quotations should be f. o. b. port of shipment or c. i. f. port of destination. Correspondence, if possible, should be in Spanish.

Ferrotypic photographic supplies, No. 18607.—A report from an American consular officer in Australia states that a firm in his district desires to communicate with firms on the Pacific coast willing to export stocks of ferrotypic photographic supplies.

Toys, etc., No. 18608.—A business man in the United Kingdom has written an American consul for names of manufacturers of clockwork toys of any description and sensational joke novelties. Samples and prices, stating the very latest date on which they can receive orders to enable them to have the goods by the end of November, are requested.

Hoists, blocks, and trolleys, No. 18609.—An American consular officer in India reports that a firm in his district desires to receive catalogues, price lists, and full information regarding hoists, blocks, and trolleys, with a view to securing an exclusive agency. Quotations should be c. i. f. Rangoon.

Wearing apparel, No. 18610.—A report from an American consular officer in Spain states that there is a possible market in Egypt for women's hosiery and underwear.

Copper, nickel, etc., No. 18611.—A report from an American consular officer in Portugal states that a firm in his district desires to purchase cupro-nickel copper, brass copper, antimony, artificial leather in sheets, and washed cotton waste. Further information may be obtained from the Bureau or its branch offices.

Tarpaulin, No. 18612.—An American consular officer in Brazil reports that a business man in his district desires to purchase tarpaulin for use in covering lighters carrying merchandise to and from boats, as well as for other purposes. Prices, samples, and full information are requested. Ninety days' credit is desired, but cash will be paid against documents in foreign port, if necessary. A sample of the tarpaulin may be examined at the Bureau or its branch offices. (Refer to File No. 66559.)

Snuff, No. 18613.—A firm in the Far East informs an American consular officer that it desires to be furnished with names of manufacturers of snuff.

Hats, No. 18614.—An American consular officer reports that a business man in France wishes to represent manufacturers or exporters of soft felt hats. He desires an exclusive agency for all of France. Reference furnished.

Cycle-car parts, No. 18615.—A firm in Spain is desirous of manufacturing cycle cars, and it wishes to communicate with American manufacturers of cone clutches, gear cases, live and rear axles, and other parts. Correspondence should be in Spanish.

Gas engines, No. 18616.—An American consul in China reports that a man wishes to receive catalogues, price lists with discounts, and full information in regard to horizontal engines of from 25 to 100 horsepower to use gas from suction gas generators burning anthracite coal. It is important that illustrations of both the engines and gas generators be submitted.

Magnesia rings, No. 18617.—A report from an American consular officer in India states that a firm desires to be placed in touch with manufacturers of magnesia rings for inverted gas mantles.

Advertising novelties, No. 18618.—An American consular officer in Switzerland reports that a firm in his district desires to establish commercial relations with manufacturers of novelties, such as cigar lighters, notebooks, nail clippers, pencils, and penknives, as well as ash trays, paper weights, etc. American terms and conditions accepted. Quotations c. i. f. French ports are desired. Correspondence may be in English.

Christmas cards, No. 18619.—An American consular officer in the United Kingdom reports that a firm in his district desires to correspond with importers who distribute large quantities of Christmas cards and who are in a position to place contracts for not less than 50,000 to 100,000 cards for a single design.

Doctors' and dentists' supplies, etc., No. 18620.—A firm in Italy has requested an American consul to place it in touch with dealers and manufacturers desiring agents in Italy for doctors', dentists', and druggists' supplies. Reference furnished. Correspondence may be in English.

Toilet soap, perfumery, and colors, No. 18621.—A company in India informs an American consul that it desires to be placed in touch with manufacturers of toilet soap, perfumery, and colors.

Stearin, No. 18622.—An American business man in France states that he desires 4-ounce samples of stearin, pure saponification and single pressure. Prices f. o. b. for 2-ton lots, duty prepaid, are requested.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, 752 Oliver Building; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce.

SECURING PUBLICITY AT CANADIAN FAIRS.

[Consul Felix S. S. Johnson, Kingston, Ontario, Aug. 16.]

Foreign manufacturers, through Canadian importers, have adopted many methods to secure publicity for their goods. Newspapers, catalogues, hand bills, sign boards, circulars, personal letters, and window displays are used in the endeavor to promote sales. One of the most popular forms introduced during recent years is that of giving demonstrations. This method is employed in the case of such lines as dustless mops, stoves, vacuum cleaners, painting materials, washing machines, biscuits, cereals, etc. Many importers hold demonstrations in their stores. Show windows are also used to a considerable extent for this purpose.

Some importers, however, have gone a step farther, extending their demonstrations and exhibits to the annual fall fair held in their locality. These fairs attract farmers for many miles around, and the town people also take a great interest in them. The majority of importers who have exhibits at fall fairs report that results have been very satisfactory. In some cases many immediate sales have been made, and in others a good list of "prospects" has been secured, which resulted in sales being made later. Visitors at the fair are usually looking for circulars, booklets, etc., and in many instances are careful to take home any reading matter that may be distributed. This is particularly true with regard to the farmers. Advertising matter of this kind is read by the farmer and his family and often results in inquiries being made for the goods thus brought to their attention.

[A list of the important fall fairs in the Province of Ontario was published in *COMMERCE REPORTS* for July 30, 1915.]

ROOFING EXPERIMENTS IN COSTA RICA.

[Consul C. Donaldson, Port Limon, Sept. 5.]

The importation of galvanized-iron roofing into this district is large, as it has been used not only for practically all the buildings in this city and vicinity but also for fences and sidings instead of lumber. The value of the annual importation is over \$200,000. About 60 per cent comes from the United States, 30 per cent from England, and 10 per cent from Germany. However, the Northern Railway Co., finding that galvanized iron does not long resist the effects of the climate and salt sea air, especially on railway sheds and roofs of wharves, where locomotives are continually obliged to run and their smoke comes in contact with the roof, are now experimenting with other materials manufactured into roofing, and have covered one of the long wharves with a roofing manufactured of cement and asbestos.

All manufacturers of roofing desirous of introducing their products into this district should send their catalogues to the Northern Railway Co., the United Fruit Co., and Maduro & Sons, who are practically the only firms interested in the importation of such materials.

Catalogues are also kept on file at the consulate.

FRENCH ALCOHOL MONOPOLY PROPOSED.

[Commercial Attaché C. W. A. Veditz, American embassy, Paris, Sept. 11.]

The French Minister of Finance has presented to Parliament a bill proposing to suppress the privileges of so-called *bouilleurs du cru*, privileges by which farmers have heretofore been permitted to distill alcohol for their own consumption without paying excise taxes. It is also proposed that there should be a Government monopoly on denatured alcohol from 1917 onward, and that the inland tax on alcohol be raised to 500 francs per hectoliter (\$96.50 per 26.42 gallons).

SPECIFICATIONS PROVIDED FOR TEXTILE GOODS.

The United States Bureau of Standards has provided for the Commissioners' Office of the District of Columbia several complete cloth specifications. Heretofore the fabrics used in the manufacture of uniforms and shirts for policemen and firemen in the District have been selected by simple inspection. The awards for these fabrics this year will be based upon carefully drawn specifications, after analyzing cloth that has proven satisfactory. Furthermore, a careful examination of all deliveries of goods will be made during the year by the bureau.

VESSELS ADMITTED TO AMERICAN REGISTRY.

During the period from September 4 to October 2, 1915, the Bureau of Navigation announces that there were admitted to American registry under the act of August 18, 1914, three vessels of 3,587 gross tons, as follows:

Gas yacht *Yendys*, 7 tons, Irving J. Bissell, owner, Grand Haven, Mich.; formerly British steam yacht *Yendys*.

Steamer *Muskegon*, 3,323 tons, American Transatlantic Co. (Inc.), New York, N. Y.; formerly Danish steamer *Gotland*.

Schooner *Albania*, 257 tons, William Willard Howard, New York, N. Y.; formerly British schooner *G. M. Cochran*.

Total, July 1 to October 2, 1915, 17 vessels, 45,779 gross tons; grand total, 165 vessels, 569,140 gross tons.

AUGUST FIGURES FOR CHILEAN NITRATE.

[Consul Thomas W. Voetter, Antofagasta, Sept. 6.]

The production of nitrate of soda in the northern part of Chile and the shipments thereof from all nitrate ports for the month of August of each of the last four years are shown in the table below. The quantities are in terms of Spanish quintals of 101.4 pounds avoirdupois, net, this being the unit prevalent in the nitrate trade in Chile.

August—	Production.	Exportation.
	Quintals.	Quintals.
1912	4, 870, 821	4, 115, 302
1913	5, 342, 292	4, 302, 476
1914	4, 630, 233	1, 362, 189
1915	3, 443, 409	4, 961, 080

Production is still short of exportation and has been so for several months. Stocks on the coast have been correspondingly reduced and the prices have strengthened in consequence. For prompt shipment 8s. 3d. (\$2 per 101.4 pounds) is being paid for 95 per cent nitrate. Laborers are being brought to the nitrate pampa constantly from other parts of Chile. Some additional oficinas will soon resume operations, so that an increased production may be looked for.

CHICORY PRICES ESTIMATED IN THE NETHERLANDS.

[Commercial Attaché Erwin W. Thompson, American Legation, The Hague, Aug. 30.]

The principal growers and roasters of chicory in the Netherlands recently waited upon the Dutch Secretary of Agriculture to agree upon a proper percentage of the crop that might be exported and to fix the maximum domestic price. A committee was appointed to collect current statistics of crop and consumption.

The preliminary estimates of maximum prices, based on the present favorable crop outlook, are for prepared chicory: Retail, 6½ cents per pound; wholesale, 4½ cents; for dried roots, \$64 to \$68 per metric ton of 2,205 pounds; for fresh roots, \$11 to \$13.

The usual crop is about 10 tons of roots per acre. In 1913, 1,800 acres were planted, yielding 18,000 tons, and in 1914, 1,667 acres, yielding 18,245 tons

NEW SIBERIAN RAILWAY COMPLETED.

[London Times Russian Supplement, Sept. 18.]

The construction of the Altai Railway is now complete and the line will shortly be opened to traffic. The new railway will connect Novonikolaievsk on the trans-Siberian with Semipalatinsk in the Steppes Provinces, passing through Barnaul, in the Tomsk Government of Siberia, which will be the headquarters. This railroad, 500 miles in length, will serve the richest agricultural and mineral regions of Siberia. The Altai region has deposits of gold, silver, lead, zinc, and copper, which were worked in the eighteenth and nineteenth centuries, but afterwards abandoned owing to lack of transportation facilities and other causes. It contains also the exceedingly rich Kuznetz coal basin, 6,000 square miles in extent.

JAPANESE LINES INCREASE NUMBER OF SHIPS.

The Toyo Kisen Kaisha Steamship Co. has obtained from the California Board of State Harbor Commissioners an additional amount of dock space, the application being accompanied by the explanation that as the company has added five vessels to its trans-Pacific fleet operating to San Francisco, its present pier, already congested, would prove entirely inadequate.

In addition to the five steamers mentioned in these proceedings, according to press reports, the company is about to close arrangements for a sixth one, with the result that it will be able to operate a total of 10 vessels on the run between the Golden Gate and the Orient.

This company now has in the service mentioned the steamers *Shinyo*, *Chiyo*, *Tenyo*, and *Nippon Maru*, and, according to its letter to the Harbor Commission, has added the *Panama*, *Seattle*, *Darien*, *Shinyo Maru II*, and the one-time Pacific Mail liner *Persia*.

The Honolulu News-Bulletin hears that the Osaka Shosen Kaisha will open a trans-Pacific service beginning early in October between Japan, Honolulu, and San Francisco. If this is established, the Hawaiian paper says that it will mean three Japanese passenger steamer lines calling at Honolulu. Of 44 ship arrivals September 1 to 22, 10 were Japanese.

VARYING RULES RESTRICT NETHERLANDS EXPORTS.

[Commercial Attaché Erwin W. Thompson, American Legation, The Hague, Aug. 27.]

The Dutch Government keeps constant watch on the foodstuffs of domestic production to insure that the population shall not suffer for lack of food and that they need not pay excessive prices, which might be caused by the scarcity of certain articles in countries that are at war. Thus there is a technical embargo on nearly all articles of Dutch production; but as there are certain things, like butter, cheese, bacon, and eggs, which are produced in excess of domestic requirements, special arrangements are made for restricted exports. New regulations are promulgated from week to week specifying, in connection with the domestic price, the maximum percentage of production that may be exported. These percentages vary in different localities and for different commodities. In some parts of the country at some times 90 per cent of the weekly production of cheese may be exported; at other times and places not more than 60 per cent; sometimes 75 per cent of the weekly butter production may be exported and sometimes only 50 per cent.

CHILE'S CUSTOMS RECEIPTS FOR AUGUST.

[Consul General L. J. Keena, Valparaiso, Sept. 6; all sums stated in U. S. gold.]

The total amount of duty collected by the Chilean customs authorities during August, 1915, was \$3,472,493, as compared with \$2,660,660 collected during the corresponding month of 1914. This increase was mainly due to larger shipments of nitrate, the export duties on which aggregated \$2,551,133, contrasted with \$1,189,396 last year. Customs collections on imports declined to \$713,315 in August, 1915, against \$1,158,026.

For the first eight months of 1915 Chile's customs collections totaled \$21,954,275, as compared with \$33,023,193 for the like period of 1914, a falling off of \$11,068,918.

COST OF DOING BUSINESS IN BUENOS AIRES.

[Commercial Attaché Albert Hale, Buenos Aires, Argentina, Aug. 12.]

There are three principal methods by which foreign firms may maintain direct representation in Buenos Aires.

The first by an ordinary traveling salesman, who has no permanent residence in the country, and solicits orders either directly, in his own name, by visiting customers, or indirectly by agreeing to sell to these customers through some agency already established.

The daily expenses of such traveling salesmen are the only items to be considered. Although it is possible to live at hotels (see article on cost of living in Buenos Aires, published in *COMMERCE REPORTS* of July 6, 1915), which, together with ordinary incidental expenses, amounts to about \$10 gold a day, yet no man should be restricted to this moderate sum. He must estimate his expenses at from \$15 to \$20 gold a day, according to the amount of his baggage, his entertainment account, his postage, and particularly his cable and telegraph tolls, an important item which must always be considered.

The local taxes exacted by the various provincial and municipal governments should not be included in the daily expenses. Each payment of this character must be an item by itself. The official provincial taxes can be supplied by the Bureau of Foreign and Domestic Commerce, Washington, D. C.

Foreign Representative as Resident Salesman.

The representative may, secondly, do business as a resident salesman, who has fixed charges such as office rent and office force, but who does not keep a stock of his goods on hand, his orders being supplied directly by written or cable messages to the main office at home. Such a resident salesman requires a bookkeeper, a stenographer, and an office boy.

For an office he can get a single room in a good building in the center of the city at about \$34 a month. If he requires more room and in a better part of the building, he will have to pay from \$64 to \$127 a month.

Simple bookkeeping is done on contract by men who have half a dozen or more clients. They charge from \$21 to \$42 a month, according to the time given. A bookkeeper who devotes all his working-day to one employer must be paid from \$127 to \$170 a month.

A stenographer can be secured for \$64 a month, but a good English and Spanish stenographer expects from \$85 to \$127 a month.

An office boy at the beginning of his service may be content at \$17 a month, but according to his efficiency and his knowledge of the business he will expect up to \$42 a month.

Each resident agent must pay a municipal tax. If he does not carry stock he pays \$212 annually; if he carries stock in his own room he pays only \$127 annually.

Other charges, such as postage, cable tolls, and the incidentals of running the office, including light, heat, tips, and other items, can not be calculated with any accuracy. It is wisest, however, to estimate them altogether as not less than \$50 gold a month.

May Maintain Larger Offices and Salesroom, With Warehouse.

A man may also act as a resident representative with larger offices and salesroom and a warehouse in which supplies are kept. The

items for bookkeeper, stenographer, and office boy do not vary in this larger business, but if an assistant cashier is required his salary will be from \$85 to \$127 a month; a cashier must be paid from \$106 to \$170 a month; local salesmen must receive from \$64 to \$212, with a certain allowance to them for commission on sales.

In addition to these original fixed charges, the warehouse or storage rental must be considered. This, of course, varies within broad limits, according to location and amount of space occupied. I know of one substantial warehouse in an accessible part of the city, with floor space of 900 square meters (9,685 square feet), the rental for which is \$170 a month. Taking this as a basis, more liberal space must be paid for according to requirements. Then there are cartage charges, brokerage charges, street taxes, and perhaps other incidental items which can not be estimated, but which must nevertheless be taken into calculation.

These fundamentals of doing business in Buenos Aires, added to the cost of living, as given in the article mentioned, makes possible a fair estimate of the expenses necessary for any company sending its representative to Argentina to secure permanent business in this market.

REPORT SHOWS LIGHTNING ROD PROTECTS PROPERTY.

The United States Bureau of Standards is about to issue a report of a survey of statistical data relating to life and property hazards from lightning and also of existing methods of protection against lightning. The field covered does not include electrical power and signal systems, but does include buildings of various kinds, precautions to be observed by persons in thunderstorms, and interesting information in regard to lightning.

The paper is, in the main, designed for the layman, although some parts of it are of necessity rather technical. The literature of the subjects of lightning phenomena and protection against lightning was thoroughly searched for reliable information; reports of fire insurance companies and fire marshals were examined, and lightning-rod manufacturers were asked to submit the results of their experience and observations as to how a system of lightning rods should be installed.

The net result of the investigation is to show by means of reliable statistics that the lightning rod, when properly installed, is a trustworthy means of protecting property against lightning. This report, Technologic Paper No. 56, may be obtained by application to the Bureau of Standards, Washington, D. C.

THE JEFFERSON NATIONAL HIGHWAY.

[Consul General Frederick M. Ryder, Winnipeg, Canada, Sept. 20.]

The city of Winnipeg will send delegates to attend the meeting of the Commerce Association of New Orleans on November 15 and 16 to discuss the project of the "Jefferson National Highway" between New Orleans and Winnipeg in the same sense as the "Lincoln Highway" is the national route from the eastern to the western States. It will follow an entirely different route from the meridian highway between Winnipeg and Kansas City.

MUNICIPAL ABATTOIR AND MEAT PRODUCTS AT PRAGUE.

[Consul Charles L. Hoover, Prague, Bohemia, Austria.]

The 20 buildings that make up the plant of the Prague municipal abattoir, including the stalls and stables, have a floor space of more than 600,000 square feet, or nearly 14 acres. The buildings themselves are of brick, while all the interior parts where meat is handled are lined with white tile. The pens and stalls have cement floors and reinforced-concrete partitions. Rooms are provided in the second stories of all buildings for the operatives. Each employee has a sanitary locker. Lavatories and shower baths with hot and cold water are provided. The refrigerating plant is small, the capacity being only about 150 tons of meat; but as the animals killed are not owned by the municipality, but by the various butchers throughout the city, who take the meat away the same day it is killed, no need exists for large storage capacity at the plant. The cooling rooms are not artificially refrigerated, but are built with very thick walls and roofs, so that the temperature rarely rises above 46° F., even in summer.

The number of animals slaughtered in 1913, the last year for which statistics are available, was as follows: Cattle, large, all kinds, 28,966; calves, 4,267; sheep, 31,497; hogs, over 100 kilos (220.46 pounds), 14,118; hogs, under 100 kilos, 524,614; horses, 3,563; colts, 93.

Meat Products—Sausages and Hams—Machinery Used.

It is estimated that one-fourth of all the meat consumed in Prague is in the form of sausages, of which an almost infinite variety of kinds is made, and that another fourth is in the form of cured meats, such as ham and various forms of "Selchfleisch." The Prague hams, called "Pragerschinken," are highly esteemed for their delicate flavor and are exported in normal times in considerable quantities to other European countries and to South America. So far as the writer has been able to discover, the excellent flavor of these hams is due not so much to the process of curing as to the care used in the selection of the hogs. For the best quality, young, not overfat hogs, weighing not over 100 kilos (220.46 pounds), are selected. The hams are pickled in a mild brine for about six months, when they are taken out and lightly smoked. Owing to the weakness of the brine, the hams can not be kept long after they are taken out, three weeks being about the limit. The export hams are canned. Very little bacon is produced, although breakfast bacon is coming into more general favor.

All manufacture of sausages and curing and smoking of meats is carried on outside the municipal plant by a number of comparatively small firms. A considerable amount of machinery is used in preparing the sausage meat and in filling the casings, but as the equipment now in use is fully sufficient to meet the needs of the manufacturers, the demand for new machinery is rather limited. However, any machines possessing special advantages as to speed or thoroughness should be offered to the dealers here, as it is said that the packers are always eager to improve their machinery.

Lard and tallow are rendered either by butchers or in the households in ordinary open kettles, and apparently nothing is known of improved methods of lard refining and evaporating.

Utilization of Offal—Value of the Vermiform Appendix.

Practically every part of the butchered animal is utilized. The blood is carefully collected and sold to an albumen factory on the premises, the manufactured product being used in the color industry. The bones are sold to glue factories. The manure is collected in tank wagons and at once taken outside the city limits. Great care is now exercised in saving and dressing the vermiform appendix of the ox. This organ is manufactured into goldbeaters' skin, which formerly had practically no use outside the industry suggested by its name, but which is now employed in the manufacture of airships. Its value is consequently immensely increased.

Functions of Cooperative Societies.

Four "Genossenschaften," or cooperative societies, care for the preparation and sale of the sausage casings and hides. Through these societies, which procure their funds from the banks at a favorable rate of interest, the individual butchers dispose of their small lots of casings and hides by pooling with all the other butchers in their society, so that the latter is enabled to offer the sausage maker casings of different sizes in quantities to meet his needs. For his fresh hides the butcher receives about 75 per cent of their value from the society, which, in turn, borrows the money from the bank. When a sufficient number of hides is accumulated the society sells them at auction.

[The names of dealers in slaughterhouse and packers' machinery and accessories were transmitted with this report, and Consul Hoover suggests that illustrated catalogues be sent them. Names of the leading meat packers and sausage makers are also given. These lists may be obtained upon application to the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 65222.]

SCRAP-METAL EXPORTS FROM BRAZIL.

[Consul General Alfred L. Moreau Gottschalk, Rio de Janeiro, Aug. 9.]

Numerous inquiries from American firms desiring to be placed in touch with local dealers in and exporters of scrap metal and other scrap material would indicate that there is a demand for these in the United States. The following statistics show the exports of scrap metal as classified by the Brazilian Statistical Bureau:

Exported to—	1913		1914	
	Pounds.	Value.	Pounds.	Value.
Belgium	624,051	\$4,744	652,535	\$9,604
Germany	1,426,051	125,833	851,205	78,087
Great Britain	699,674	66,270	871,397	59,769
Holland	153,001	1,042	175,950	2,950
Italy	8,618,489	22,652	2,755,778	12,700
Portugal	15,238	1,060	5,331	392
Sweden			1,065,659	7,328
United States	23,567	2,725	66	15
Total	11,700,071	225,226	6,377,951	170,845

[A list of dealers in and exporters of scrap metal at Rio de Janeiro may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. C5429.]

PROPOSED BAG-MAKING INDUSTRY IN ARGENTINA.

[Commercial Attaché Albert Hale, Buenos Aires, July 28.]

The President of Argentina, in a decree dated October 22, 1914, nominated a commission to study the possibilities of promoting an Argentine fiber industry and to advise on the most practical and proper means to be adopted for utilizing the various fiber plants growing naturally within the county.

This commission was to give attention also to any experiments that might already have been made in this direction, to furnish stimulating data, or even to establish factories for the local manufacture of the product of these fibers, in order to meet the great consumption of such materials as bags and burlaps, which the country is constantly introducing from abroad. This commission has just made its report, an analysis of which follows, to the Minister of Agriculture.

Bag Material from Linen Straw—Data Presented by the Commission.

The commission has made a careful study of all factors relating to the fiber industry and has sought the advice of importers as well as that of manufacturers who dealt particularly in fiber products. The conclusion they have reached is that the encouragement of one industry—that is, of the preparation of bags for cereals—ought to be especially undertaken by the national Government, since it would establish a new industry and utilize the great natural wealth in this field of agriculture. The commission has no doubt that the material for bags obtainable from the linen straw that is at present a residue from thrashing flax can be turned to profit. This material is now of little value, but it is very abundant and the yield is close to the commercial centers.

The methods of developing the fiber are well known, and no great difficulty should be encountered in obtaining the results required. Argentina has under cultivation 1,800,000 hectares (4,447,800 acres) in flax, the greatest area of any one country in the world. India has 1,200,000 hectares (2,965,200 acres) and the United States 1,156,000 hectares (2,856,476 acres), with other countries in very diminished ratio. The area in Argentina is in the Provinces of Cordoba, Entre Rios, Santa Fe, and Buenos Aires, but flax is, or can be, grown in many other parts of the Republic.

In general terms, the commission presents the following data:

- (1) The area cultivated with flax is 1,800,000 hectares (4,447,800 acres).
- (2) Two thousand five hundred kilos (5,510 pounds) of straw are given for each hectare, of which 75 per cent of fiber can be utilized.
- (3) Of this amount 15 to 24 per cent is serviceable, but the estimates of the committee have taken the minimum amount, 15 per cent, on which to base calculations, the minimum yield being, therefore, 1,875 kilos (4,135 pounds).
- (4) This fiber is sold abroad at 400 francs (\$77) per ton, and is there utilized.
- (5) The loss of fiber transformed into cloth is about 20 per cent.

Analyzing these results, the committee presents these figures: The total flax straw will be 3,375,000 tons. The fiber will be 506,250 tons. The cloth will be 405,000 tons. From this cloth, estimating each bag to weigh 400 grams (14 ounces), there can be produced 1,012,500,000 bags. Each hectare (2½ acres) will produce 562 bags.

These 562 bags, at the cost of 10 centavos (about \$0.05) each, will represent a value of \$24 per 2½ acres.

A practical factor to be taken into consideration is the cost of transportation of the straw to the factory. The roads in the country are bad, but it is hoped that if the industry is once established it will have a decided influence in improving them.

Cost of Factory—Advantages Derivable from Plan—Government Support Urged.

An estimate is also given of the cost of one factory capable of producing enough cloth for 10,000,000 bags per year. The opinion is expressed that probably 10 such factories would be needed in various parts of the country to complete the scheme for utilizing this now wasted fiber material. With due economy, it would seem that such a factory can be built for 1,000,000 pesos (\$424,550).

A factory of this character would be set to work at first only for the production of bags for cereals, but there are many other uses to which such cloth could be put, and after such establishments were once in operation it is to be supposed that the benefit of producing the cloth within the country would make itself felt in various directions. At present the sum of \$17,000,000 gold is invested abroad in the purchase of such cloth, of which burlap accounts for \$13,000,000, and if this sum can be retained in Argentina to develop national industries, the advantage is evident. The committee concludes with the opinion that the industry can be developed profitably, and that the result will be to reduce the price to the consumers of bags and similar containers. The following conclusions resulting from their studies are thus given:

- (1) Of all fiber plants within the country, linen straw can be most practicably and immediately manufactured into cloth such as burlap.

- (2) Other plants mentioned can also be utilized to advantage as soon as the factories are in working condition.

- (3) It is to the advantage of the nation to adopt such means as are suggested to establish this industry, and the nation would be warranted in giving support to those undertaking its establishment—this support to take the shape of subsidies, guaranties of interest, advancement of capital, and exemption from taxes and customhouse duties until such factories are securely under way.

Effect of Economic Conditions—Possible Openings Afforded.

The crisis produced by the European war has to a great extent disturbed economic conditions in Argentina and has restricted the Government in its desire to accord in this instance the generous treatment which it has hitherto manifested toward such proposals. It would seem, however, that some means of securing the necessary money may be found, and that the investigations of this commission will therefore lead to practical results. This will afford a good opening for the possible investment of capital or for manufacturers of machinery adapted to the spinning of flax and the production of this material for burlaps and bags.

Condensed-milk production in the United States exceeds \$35,000,000 in value annually, only about 4 per cent of which has been exported. However, exports for the year ended June 30, 1915, totaled \$3,066,642, against \$1,341,140 the year previous.

PUBLIC UTILITIES AT ROSARIO, ARGENTINA.

[Consul William Dawson, jr., Rosario, Aug. 14.]

All six of the public-utilities enterprises of this city are foreign—two English (water and sewerage), two Belgian (street railway and electric light and power), and two French (port and gas)—and all have main offices in Europe.

Port Works—Electric Light and Power.

The present port of Rosario was constructed by Jean et Georges Hersent and Schneider et Cie. (Creusot). It is operated for the Argentine Government, under regulations prescribed by the latter, by the Société Anonyme du Port de Rosario, which has a concession expiring in 1942. The port company has about 3 miles of wharf, ample and modern facilities for handling cargo, steam and electric cranes, and about 30 miles of railway. It has its own electric power plant, and a grain elevator with a capacity of approximately 40,000 cubic yards. In 1913, 2,076 steamers, with a total tonnage of 2,523,086, and 977 sailing vessels, with a total tonnage of 171,009, entered the port.

The electric light and power company, the Sociedad de Electricidad de Rosario, has a concession expiring in 1933, the city binding itself to take a certain amount of current for street lighting. The plant, with a capacity of 18,000 kilowatts, is asserted to be the finest in South America. The value of the plants (new and old) is given in the last published report of the company as \$7,373,447. Total receipts for recent years have been: 1911, \$999,938; 1912, \$1,131,782; 1913, \$1,155,899. The number of subscribers increased from 8,051 in 1911 to 11,452 in 1913. Cost of production at plant was reduced from \$0.025 per kilowatt in 1912 to \$0.013 in the spring of 1914.

Street Railway System—Gas Works.

The Rosario street railway system is owned and operated by the Compagnie Générale des Tramways Electriques de Rosario. The franchise runs for 55 years, beginning with 1906. The capital is said to be approximately \$7,720,000. Horse traction was completely eliminated in 1908. The number of passengers carried increased from 18,744,542 in 1909 to 27,014,436 in 1914. Fare within the city is \$0.04246, and to points in the suburbs it is \$0.06339.

The Rosario gas works are owned and operated by the Compagnie du Gas de Rosario, working at present under a 30-year franchise granted October 18, 1910. The following figures for 1914 are from municipal returns: Private lighting—number of consumers, 2,994; consumption, 58,832,113 cubic feet; public lighting—number of lamps, 1,523; consumption, 41,276,509 cubic feet.

Waterworks and Sewerage System.

Rosario is supplied with water by the Consolidated Water Works Co. of Rosario (Ltd.), under a 70-year franchise granted in 1888. Water is taken from the Parana River and passed through a clearing and filtering process. The company had 219 miles of distributing mains in June, 1915. Gross receipts for 1914 were \$610,625 and working expenses \$244,976, leaving net receipts of \$365,649. The dividend on common stock was 8 per cent. The number of services increased from 11,255 in 1905 to 23,333 in 1914.

The sewerage system is in the hands of the Rosario Drainage Co. (Ltd.). While the water and drainage companies have the same secretary in London and the same manager at Rosario, their financial organization, directorates, bookkeeping, offices, and subordinate staffs are distinct. The drainage company operates under a franchise granted in 1888, renewed in 1910, and expiring in 1974. The value of the investment (cost of undertaking) up to June 30, 1914, is placed at \$4,287,729. The number of house connections increased from 3,435 in 1905 to 6,466 in 1914, and the net revenue from \$59,198 to \$211,473 during the same period. A 3 per cent dividend was paid on common stock in 1914. Like those for water, the sewerage rates were fixed some years ago, taking the then existing rental as a basis. Rates for sewerage service are 4 per cent. Those for water were fixed on the basis of approximately 6 per cent. Rents have decreased since the establishment of the rates.

[The entire report on this subject by Consul Dawson, containing the addresses of these companies and many additional details concerning capitalization, rates charged, etc., will be loaned to interested persons by the Bureau of Foreign and Domestic Commerce. Refer to file No. 66042.]

PAPER CONTRACTS IN AUSTRALIA.

[Sydney Herald, Aug. 23.]

The Assistant Treasurer, Mr. Hoyle, stated yesterday that the Government is seeking to have its supplies of paper produced locally. With this object in view, the Government proposes to give a five years' contract, embracing orders for \$2,500,000, on the understanding that in two years the necessary plant is established here to manufacture supplies for three years. It will be open to the contractors to procure the first two years' supplies from any part of Australia.

Mr. Hoyle is watching with great interest the results of the tests being conducted at the Sydney Technical College with various timber grown in the State to see whether any will produce a satisfactory wood pulp for paper making. So far ironbark, contrary to all anticipations, has yielded the most promising results. On present indications, however, it looks, Mr. Hoyle says, as if local paper manufacturers would have to depend, for the present at all events, on imported wood pulp.

HULL OILSEED IMPORTS.

[Consul Charles M. Hathaway, jr., Hull, England, Aug. 30.]

According to the Hull correspondent of the Oil and Color Trades Journal the imports of linseed at Hull during the first seven months of 1915 amounted to 51 per cent of the United Kingdom total; those of rapeseed, 51.7 per cent; cotton seed, 47 per cent; soya beans, 76.6 per cent; and castor beans, 87 per cent. Of palm kernels, peanuts, and copra, Hull imported during the same period only 28,262 tons out of an aggregate of 311,628 tons for the United Kingdom, or about one-eleventh of the whole, but dealing in this last mentioned has developed since the war began, and new installations in progress indicate a rapid increase.

INCREASE IN AMOY TRADE FOR HALF YEAR.

[Consul Lester Maynard, Amoy, China, Aug. 7.]

The estimated values of the trade of the port of Amoy—for the principal articles only and for both foreign and domestic commerce—show an increase of more than \$222,000 in the first six months of 1915, as compared with the corresponding period last year. This increase, however, is partly taken up by reexports of goods other than of local origin. About half of the increase is accounted for in this manner, and the remainder is the result of increased imports from other Chinese ports, notably Shanghai.

The following table shows the imports, exports, and total values of the trade of the port by months:

Months.	1914			1915		
	Imports.	Exports.	Total.	Imports.	Exports.	Total.
January and February	\$65,164	\$88,826	\$893,990	\$996,387	\$113,140	\$1,102,527
March	1,246,245	103,259	1,349,504	1,058,082	155,973	1,214,055
April	815,598	58,001	873,599	710,720	50,447	761,167
May	977,508	86,737	1,064,245	897,124	56,589	953,813
June	787,107	67,788	855,695	1,092,736	128,300	1,221,036
Total	4,632,422	404,671	5,037,093	4,755,049	404,549	5,259,598

The most striking features of the import trade are the considerable increases in goods of Chinese origin, particularly beans and peas, bean cakes, flour, dried shrimps, and tobacco leaf. Rice also shows a great increase, but this is divided between imports from abroad and those from Chinese ports. Piece goods of foreign origin show a falling off under all headings, except T cloths. The increased importation of flour from Shanghai is worthy of note, since the flour trade of this port is to a great extent falling into Chinese hands to the detriment of foreign imports. For a time the importation of matches was impeded, because of the cutting off of the European source of supply. Although the quantity is now below normal, the price has so far advanced that the values have registered a marked increase. Matches are now imported principally from Japan. An important decrease is noted in Malacca tin, chiefly as a result of disturbed conditions in the mining areas and the lack of demand caused by the loss of markets for the products of the local canning plants. The most serious decreases of all occurred in sugar and in cotton yarns.

All exports, except paper, rice vermicelli, and sugar, show a decrease. The latter consists almost wholly of reexports not of local origin. The increase in this item causes the net total estimated values of the exports to show an advance of approximately \$100,000, whereas in reality the figures of exports of local origin remain about stationary or show a slight decrease.

Shipping records show a falling off in vessels of all nationalities except Chinese, the latter registering a slight gain.

The motor ship *Bengkalis*, built for the Koninklyke Paketvaart Maatschappy, has just been launched in Holland. It measures: Length, 230 feet; width, 38 feet; and depth, 20½ feet. It is destined for passenger and cargo service in Dutch East Indies. The Diesel motors develop 650 indicated horsepower.

FEMALE STUDENTS IN BRESLAU UNIVERSITY.

[Consul Harry G. Seltzer, Breslau, Germany, Aug. 10.]

The matriculation period at Breslau University for the winter semester 1915-16 will be from October 15 to November 4, inclusive. In addition to the regular courses of study, the following free lectures will be of general interest: Curacy, Social Care, Islam and the Christian Orient, Industrial Contracts in Their Modern Form, The World's Economic War, Brain and Soul, War Hygiene, Chemical Plant Processes, Art Itinerary in Italy, Structure of the Alps, Forest Protection, Photoplay and its Technique, and Introduction of a Uniform System of German Stenography.

During the summer semester just closing there were 225 female students lawfully matriculated in Breslau University. Of these, 1 studied law; 41 medicine; 7 dentistry; 3 ancient philology; 98 modern philology; 4 history, including history of art; 39 mathematics; 25 physics; 1 art and art history; and 6 political economy. Of the above students, 9 are studying for the purpose of continuing their education in general or in a special sphere, 190 are striving for admission to the academic faculty examinations, 16 are preparing for a doctor's degree, and 1 intends to pass the principal teacher's examination.

Besides these regularly enrolled students, the rector has granted permission to 31 women to visit the lectures as guests. Of these, 12 are studying modern and 4 ancient philology; 4 history; 2 each mathematics, physics, and agriculture; 1 each evangelical theology, law, medicine, and dentistry.

SCARCITY OF WIRE ROPE IN RUSSIA.

[Consul General John H. Snodgrass, Moscow, Aug. 25.]

The petroleum producers of the Baku district are experiencing considerable inconvenience from the scarcity of steel-wire rope. Previous to the war wire rope and wire to be made into rope by Russian manufacturers were imported principally from England. At present, in consequence of the limited exports of steel goods from England, steel-wire rope of British manufacture has almost disappeared from the local markets and its price has risen by 300 to 400 per cent. At a conference held in Baku to discuss this subject it was proposed temporarily to substitute for steel-wire ropes, hemp ropes, which it may be possible to obtain from India. It was stated that Swedish wire rope has been found satisfactory for the local requirements of the petroleum industry.

RESULTS OF FOREIGN TRADE OPPORTUNITIES.

[Vice Consul Carl C. Hansen, Bangkok, Siam, July 22.]

As a result of foreign trade opportunity No. 13879, relating to portable boat motors, published in Daily Consular and Trade Reports for September 30, 1914, trial orders for 14 motors were placed with various American manufacturers who had responded to the request for literature and price lists. These motors were delivered only a short time ago, having been detained in Singapore.

Portable boat motors are sure to become very popular in Bangkok, and under favorable condition of trade a large demand is likely to follow this trial order.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its branch offices. Request for each opportunity should be on a separate sheet and the file number given.

Iron wire, tin plates, and coal, No. 18623.—A report from an American consular officer in Portugal states that a firm wishes to import iron wire for making keys for opening sardine tins, annual consumption about 250 tons; tin plates of usual size; and about 8,000 tons of coal annually. Catalogues and price lists are desired at once. It is stated that the firm will pay half of order by cash in New York and remainder by 90-day draft. Correspondence should be in Portuguese or Spanish. Bank references furnished.

Boot and shoe findings, No. 18624.—A firm in Greece informs an American consul that it is in the market for shoe pegs, nails, laces, blackings, heel irons, and boot protectors, as well as other articles used in the shoe industry. Samples, catalogues, and full details concerning freight rates from New York to Saloniki should be furnished. The firm is willing to accept any terms of payment imposed by American firms. Correspondence may be in English. References are given.

Arc-lamp carbons, ash oars, etc., No. 18625.—An American consul in the United Kingdom reports a good market for arc-lamp carbons, ash oars, beveled glass, chemical supplies, door bells, hair pins, etc. Further information may be obtained from the Bureau or its branch offices.

Suplate of potash, No. 18626.—A letter to the Bureau states that a business man in the Azores desires to communicate with firms in the United States selling sulphate of potash, containing no chlorine or the maximum of 1 per cent of chlorine, for agricultural purposes.

Lamp glasses, No. 18627.—The Bureau is in receipt of a letter from a firm in Canada requesting the names of manufacturers of duplex and bulge lamp glasses.

Live stock, No. 18628.—A doctor in Honduras has informed an American consul that he desires to purchase six or more yearling breed bulls to be imported via Puerto Cortes. He is not seeking an especially fine pedigreed class, but, rather, a larger number of hardy animals of a less select stock. Sellers may dictate their own terms.

Instruments, No. 18629.—A report from an American consular officer states that there is a demand for catalogues and prices of bacteriological instruments and accessories in Brazil. It is stated that there is a possible order now, and prompt attention to this opportunity is suggested.

Machinery, No. 18630.—An American consular officer in the Far East reports that particulars are requested for machinery for manufacturing desiccated, very fine, egg-yolk powder, perfectly soluble in cold water.

Buttons, studs, gloves, etc., No. 18631.—The Bureau is in receipt of a letter from a commission agent in the United Kingdom stating that he desires to represent, on a commission basis, manufacturers of pearl, ivory, and celluloid buttons, metal press studs, women's gloves, and dress shields.

Umbrella fittings, No. 18632.—An umbrella and parasol manufacturer in England informs an American consular officer that he desires to get in touch with makers of umbrella fittings, such as ribs, runners, sticks, horns, etc.

Pearls, No. 18633.—A business man in India desires to communicate with American firms interested in buying pearls.

Electric elevators, etc., No. 18634.—An American consular officer in France reports that an agent desires to enter into commercial relations with manufacturers of electric elevators and supplies, and to obtain, as soon as possible, catalogues and price lists. Correspondence may be in English.

Silverware, cutlery, etc., No. 18635.—A report from an American consular officer in Italy states that a business man in his district desires to secure an agency for all of Italy for silverware, plated silverware, cutlery, and office and household furniture. Full particulars, including terms, discounts, etc., are solicited. Reference furnished. Correspondence may be in English.

- Metal tubes**, No. 18636.—A business man in Canada informs an American consular officer that he desires to be placed in communication with exporters of metal tubes, such as are used for tooth paste. Samples and quotations are requested.
- Scales**, No. 18637.—An American consular officer in India reports that a firm in his district has requested catalogues and price lists of scales.
- Chemicals**, No. 18638.—A report from an American consular officer in Brazil states that a man is in the market for chloride of sulphur, sulphide of carbon, benzine, lithophone, and pentasulphide of antimony.
- Crude drugs**, No. 18639.—A firm in India informs an American consul that it desires to communicate with buyers of Indian crude drugs, especially the ajowan seed, from which the drug thymol is made. Samples will be forwarded to interested firms. Correspondence may be in English.
- Calcium carbide, paper, etc.**, No. 18640.—An American consular officer in Chile reports that a company in his district desires to represent manufacturers of calcium carbide; paper, printing, writing, and packing; cut nails; tools, glassware; and crockery. References furnished.
- Fishing lines**, No. 18641.—A report from an American consul in Spain reports a possible market for fishing lines.
- Cotton goods, cutlery, etc.**, No. 18642.—A company on the east coast of Africa informs an American consular officer that it desires to receive catalogues and price lists devoted to cotton goods, cutlery, enamelware, laundry soap, and watches and clocks of the cheaper variety. Correspondence may be in English.
- Nickel sulphate**, No. 18643.—A report from an American consular officer in the Netherlands states that a firm is in the market for nickel sulphate intended for local use only. At present the company wishes to purchase 3 or 4 tons and requests that prices, c. i. f. Rotterdam, be furnished.
- Unroasted barley and malt**, No. 18644.—A report from an American consular officer in Switzerland states that a firm desires to receive quotations and samples of unroasted barley and malt to be used as a substitute for coffee. Correspondence may be in English.
- Toothpicks**, No. 18645.—A firm in Hungary desires to communicate with American manufacturers of toothpicks. Samples and prices, f. o. b. neutral European port, should be submitted. Correspondence should be in German.
- Paints, oils, etc.**, No. 18646.—An American consular officer in Italy reports that a firm wishes to receive quotations on paints, oils, colors, paintbrushes, and other articles used by painters. If possible samples should be sent and prices quoted c. i. f. Palermo. Correspondence should be in Italian.
- Bottles and pharmaceutical supplies**, No. 18647.—A report from an American consular officer in India states that a business man desires to communicate with firms handling pharmaceutical supplies, and also manufacturers of medicine bottles, large and small.
- Woven goods, etc.**, No. 18648.—A business man in Venezuela desires to receive catalogues of woven goods and machinery for weaving. It is also stated that he is interested in precious stones. Correspondence may be in English.
- Filing cabinets**, No. 18649.—A report from an American consular officer in South America states that there is a request for catalogues of steel filing cabinets and stationery supplies in general. Correspondence may be in English.
- Concentrated lime**, No. 18650.—An American consular officer in South Africa reports that a firm in his district is desirous of getting in touch with manufacturers of concentrated lime. Samples, with lowest quotations, c. i. f. South African ports, are requested; also information as to how long lime will last in the packages without corroding or deteriorating. An analyst's report must be given and must state if the Government has reported on it.
- Sanitary plumbing supplies**, No. 18651.—A company in India has informed an American consular officer that it desires to receive catalogues, price lists, and full information regarding sanitary plumbing supplies. Quotations are desired c. i. f. Rangoon.

PORTUGAL FORBIDS SALE OF TRAWLERS.

[Consul General W. L. Lowrie, Lisbon, Sept. 9.]

A decree has been issued by the Portuguese Government prohibiting the sale of trawlers. Owing to the very high prices offered for these ships the country's fishing fleet was seriously threatened.

The civil government of Lisbon has fixed the retail price of fish, which are sold from house to house by about 2,000 fish girls, as follows: Stickleback, per dozen, large, 80 cents; medium, 60 cents; small, 10 cents; sardines, per dozen, large, 60 cents; medium, 40 cents; small, 20 cents; mackerel, 10 cents each; salted mackerel, 15 cents each. The police have had considerable difficulty in enforcing sales at the scheduled prices.

IMMENSE CAR FERRYBOAT ON ONTARIO.

[Consul Julius D. Dreher, Toronto, Canada, Sept. 17.]

The largest car ferryboat on Lake Ontario, built by the Polson Iron Works at Toronto, has just made its initial trip between Cobourg, Ontario, and Charlotte, the port for Rochester, N. Y. The new boat, *Ontario No. 2*, is a companion vessel to *Ontario No. 1*, though a little larger, *No. 2* being 318 feet long, 54 feet wide, with a tonnage capacity of 5,567 tons. It can carry 30 loaded freight cars and 1,000 passengers. The boat, which has returned to Toronto for some additional work, will go into regular commission in a week or two.

SINO-JAPANESE THROUGH TELEGRAPH SYSTEM.

[Extract from Manchuria Daily News of Aug. 25, by Consul A. A. Williamson, Dairen.]

The stations on the Chinese Government Railways, with which the interlineal through service telegraphic system was opened on August 20 are—

- (1) Peking-Mukden line head office, Tientsin; Tientsin Central; Tientsin-East; Peking; Hsinminfu; Shanhaikwan; and Huangkutun.
- (2) Peking-Hankow line head office, Peking; and Hankow.
- (3) Peking-Kalgan line head office, Peking; Nankow; and Kalgan.
- (4) Tientsin-Pukow line head office, Tientsin; Tsinanfu; and Pukow.
- (5) Shanghai-Nanking line head office, Shanghai; Nanking; and Shanghai.

FOREIGN TRADE OF ITALY.

[Consul General David F. Wilber, Genoa, Sept. 13.]

The combined value of Italy's imports and exports for the first six months of the present calendar year was, according to Italian official statistics, \$571,821,310. Exports reached a total of \$246,026,660, or \$2,128,903 less than in January-June, 1914. Imports amounted to \$325,794,650, a decrease of \$38,622,137.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, 752 Oliver Building; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce.

HIRSCHBERG FRUIT AND NUT CROPS.

[Consul Harry G. Seltzer, Breslau, Germany, Sept. 7.]

There are unusually good prospects of rich fruit and nut crops in the Hirschberg Valley this year. Pears are very good and the markets are well stocked. Apples will follow in a few weeks with a good average yield. Walnut trees are full of nuts. The grapevines are also well laden, and this crop will be especially interesting as it is only a few years since their cultivation was first commenced. Hazel-nuts, as usual, will be very plentiful.

PRUSSIAN RAILWAY NOTES.

[Consul Harry G. Seltzer, Breslau, Sept. 7.]

A recent report in the first number of a publication, "Der Staatsbedarf," just issued, announces that the Prussian-Hessian Government Railway and the Imperial Railroad of Alsace-Lorraine have placed order for 763 locomotives, 935 passenger coaches, 14 baggage cars, and 13,200 freight cars, all to be built in Germany.

The Oberschlesische Eisenbahnbedarfs A. G., in its semiannual report for the first half of 1915, announces a surplus of about 5,750,000 marks (\$1,368,500), as compared with 5,870,000 marks (\$1,379,060) for the whole of 1914. The second half of 1915 is starting very favorably, according to the same report.

COTTON APPARATUS FOR RUSSIA.

[Consul General John H. Snodgrass, Moscow, Sept. 3.]

At the local office of the Russian Department of Agriculture some apparatus has been ordered from the United States for determining the quality of cotton fibers and cotton seeds. A collection of standard specimens is also expected. This apparatus is a great rarity in Russia and is not used even by the biggest firms.

ECONOMIC POSITION OF SUGAR IN THE UNITED STATES.

More than one-fifth of the 40 billion pounds of sugar that represent the world's production last year was consumed in the United States. The consumption of sugar in the United States, exclusive of its sugar-producing islands, during the fiscal year ending June 30, 1915, has been calculated by the Bureau of Foreign and Domestic Commerce, Department of Commerce, as 8,630 million pounds, or 86 pounds per capita.

Of the sugar consumed in this country in 1914-15, 1,941 million pounds were produced on the mainland, 1,281 million pounds in Hawaii, 589 million pounds in Porto Rico, 327 million pounds in the Philippines, and the remainder in foreign countries. Cuba, the leading source of our imported sugar, sent us 4,785 million pounds in the last fiscal year, that quantity being nearly four times as much as that from Hawaii and eight times as much as that from Porto Rico.

Beet sugar now leads cane sugar by nearly 1 billion pounds in the yearly domestic product, having reversed the conditions which obtained 20 years ago. In 1895, for example, according to the Statistical Abstract of the United States, the domestic sugar product totaled approximately 775 million pounds, the share of beet sugar being only 45 million pounds. In 1915 our sugar product had increased to 1,941 million pounds, the share of beet having grown to 1,448 million and that of cane having decreased to 493 million pounds. Meantime beet sugar has practically disappeared from our imports. Eighteen years ago, when the Cuban supply of cane sugar was cut off by war, we imported nearly 2 billion pounds of beet sugar. After the return of peace in Cuba our imports of beet sugar fell off sharply, and in the last fiscal year beet sugar imports amounted to less than 1 million pounds.

The cutting off of the sugar supply of European countries has resulted in a remarkable expansion of our sales of sugar to foreign countries. For the fiscal year 1915 they aggregated 582 million pounds, as against 22½ million pounds in 1900 and 40½ million pounds in 1880.

The following table presents the leading changes in the economic position of sugar in 1914-15, as compared with the preceding year:

	1913-14	1914-15
	<i>Pounds.</i>	<i>Pounds.</i>
World's sugar product.....	42,053,000,000	40,424,000,000
United States cane-sugar product.....	601,000,000	493,000,000
United States beet-sugar product.....	1,467,000,000	1,448,000,000
United States imports:		
Cuban.....	4,927,000,000	4,785,000,000
Hawaiian.....	1,115,000,000	1,281,000,000
Porto Rican.....	641,000,000	589,000,000
Philippine.....	117,000,000	327,000,000
All other.....	18,000,000	309,000,000
United States exports sugar.....	72,000,000	582,000,000
United States consumption of sugar.....	8,794,000,000	8,630,000,000

Ambassador Frederic C. Penfield, of Vienna, advises that governmental permits for the sale of Austrian sea vessels to foreigners must now be obtained in order to render such transactions legal.

EXPERIMENTS WITH NATURAL AND ILLUMINATING GAS.

Experiments made by the United States Bureau of Mines in the analysis of natural and illuminating gas, by fractional distillation at low temperatures and pressures, are described in a publication just issued. By the methods used it is possible to separate and determine the hydrocarbons in gaseous fuels, and a wide field of investigation is opened up, in that a much more exact study of combustion processes can be made, and chemical changes more closely followed and better understood.

This publication is one of a series dealing with the increase of efficiency in the production and utilization of fuels. Fractional distillation in a vacuum at low temperatures is employed in the experiments. The gas is liquefied, the different constituents separated by proper adjustment of temperatures, the various fractions removed with a mercury pump, and these fractions analyzed by ordinary slow-combustion methods. The method was successfully applied to the separation of hydrocarbons in natural gas and in artificial illuminating gas, and is the only known method applicable to the separation of some hydrocarbons.

The first part of this report describes the results of experiments by which the natural gas used in Pittsburgh, Pa., was separated into its individual paraffin hydrocarbons. The second part describes experiments in which the separation of the illuminants in artificial illuminating gas, that used in Pittsburgh, Pa., and that used in New York City, was effected. Some experiments to determine the practicability of separating gases whose boiling points lie close together, such as ethane and ethylene, are included.

Copies of Technical Paper 104, "Analysis of natural gas and illuminating gas by fractional distillation at low temperatures and pressures," may be obtained from the Bureau of Mines, Washington, D. C.

SOUTH RUSSIAN MINING INDUSTRY IN 1915.

[Consul General John H. Snodgrass, Moscow, Sept. 3.]

According to data collected by the Association of the Mining Industry of South Russia, the amount of pig iron produced during the first half of 1915 was 1,514,223 short tons, or 260,231 tons less than during the corresponding period of 1914. In consequence of the difficulties experienced in the transportation of fuel, ore, etc., the supplies at the works had reached a low level at the end of June, 1915. The production of half-products was considerably reduced, and in connection with this, the production of steel and iron goods dropped from 1,371,600 tons in the first half of 1914 to 1,122,400 tons in the first half of 1915.

The shipment of manufactured iron and steel from the works to the markets of consumption experienced a still greater reduction; during the first six months of 1914 these shipments aggregated 1,213,900 tons, while during the corresponding period of 1915 they amounted to about 944,200 tons. The shipments of all products of the southern works, which reached the figure of 1,886,700 tons during the period January-June, 1914, amounted to 1,453,700 tons during the corresponding period in 1915.

MARKET FOR TOMATO SAUCE IN NORWAY.

[Consul Maurice P. Dunlap, Stavanger, Norway, Aug. 20.]

Since Italy entered the war, the price of canned tomato sauce (purée) has gone up in Stavanger. Prices formerly ranged from 35 to 50 shillings (\$8.31 to \$12.17), according to thickness of the purée, per 100 kilos (220 pounds), delivered c. i. f. Stavanger. Now prices range from 50 to 70 shillings (\$12.17 to \$17.03). It is estimated that this district alone uses about 25,000 cases of the purée a year, and that perhaps 10,000 more cases are used in other parts of Norway. Each case contains 50 kilos (110 pounds). The pulp is used as a dressing for canned fish by all the fish factories, of which there are about 50 here.

It would seem that American dealers in tomato sauce might find a market here if certain conditions were met. Very little American sauce has been tried, although a number of years ago certain American samples did not prove satisfactory. The American sauce, when eaten with the fish, seemed to have a gritty taste. This is thought to have been due to the presence of too many seeds. The color was also not the rich red color of the best Italian sauce, which is guaranteed not to be artificial. This is important. Sauce of a brownish color is not wanted. Both thin and thick purée is used, but mostly thick.

The proper preparation of this product seems to be an art in which only Italy has succeeded to date. Spain also supplies a small amount to this market, but Spain's contribution can not compare with Italy's and packers have also noticed a gritty taste in the Spanish purée. Even French sauce has proved unsatisfactory. Some has been imported from England, but this is manufactured by an English factory in Italy.

There is at present no immediate shortage of sauce threatened in Stavanger. However, packers have placed unusually large orders in Italy for fear that some of the contracts may have to be canceled. They have already been informed that the Italian Government has had much tomato land planted to corn since the war began, and they have been warned to place orders long in advance.

Italian purée, such as is used here, is also imported into America. The sauce is received here in 5-kilo (11-pound) tins, 10 tins to a case. The cases must be strong and should be strapped with iron. There is no duty on tomato pulp.

Correspondence may be in English. Prices should be quoted c. i. f. Stavanger.

[A number of small sample cans of the sauce have been received from Consul Dunlap and may be examined at the Bureau of Foreign and Domestic Commerce or its branches. Refer to file No. 65546.]

[Consul B. M. Rasmussen, Bergen, Sept. 1.]

Additional Information from Norway.

According to the latest available statistics, the annual imports of tomato purée amount to 1,898,661 pounds, valued at \$99,240.

It is important that instructions in regard to size of containers be strictly complied with, as the small cans are dutiable. According to the Norwegian tariff of 1914, tomato purée put up in bottles, jars, or sealed cans, the combined weight of which exceeds 5 kilos (exact equivalent, 11.023 pounds), is admitted duty free, whereas if put up in smaller quantities it is dutiable at 25 öre per kilo (3 cents a pound). Tomato sauce is usually bought through local agents representing

the manufacturers, and firms with established credit have the choice between three months' credit or a 3 per cent discount. Names of local agents are Christoffer Dekke, Ernest Olsen, F. C. Schönberg, Georg Schramm.

[A complete description of the tomato-canning industry in Italy is given in a bulletin issued by the Bureau of Foreign and Domestic Commerce entitled "Canned-Tomato Industry in Italy; Special Agents Series No. 93." This bulletin is sold at 5 cents a copy by the Superintendent of Documents, Government Printing Office, Washington.]

AMERICAN TRADE WITH SOUTHERN INDIA.

[Consul Lucien Memmlinger, Madras, Aug. 20.]

The value of the total sea-borne trade of the Madras Presidency with all countries for the quarter ended June 30, 1915, according to official customhouse statistics, was \$28,263,076, of which \$19,301,984 represents exports and \$8,961,092 imports. The total trade with the United States for this period amounted to \$2,063,479, of which \$1,582,943 is the value of exports and \$480,536 that of imports. The general trade, as well as that with the United States, averaged about the same as in corresponding periods.

There was an increase in imports of metals as compared with previous quarters, showing a demand for pipes and tubes, iron and steel sheets and plates, steel of various sorts, and nails, rivets, etc., the total for all metals being \$120,619. In June, 26 motor cars valued at \$21,356 were imported, as compared with 18 cars valued at \$10,907 in April and 11 valued at \$8,005 in May. The imports of playing cards, \$15,198, continue to be an important item, while hardware and cutlery and scientific instruments are also to be reckoned among leading imports.

Values of Principal Articles Exported.

The customhouse statistics of exports to the United States vary somewhat from the exports invoiced at the consulate and on record at that office. The principal articles exported from all ports of the Madras Presidency, according to the customhouse returns, were: Pepper, 6,188,420 pounds, valued at \$568,279; tanned goat and sheep skins, \$400,567; raw skins, \$241,221; coconut oil, \$125,697; castor seeds, \$81,652; coir yarn, \$71,813; ginger, \$23,601; sandalwood, \$15,385; lemon-grass oil, \$15,069.

In the general trade of Madras and subordinate ports with all countries, cotton piece goods and linen are the principal items of importation, while hides and skins, seeds (principally groundnuts and castor seeds), cotton piece goods, and raw cotton are the principal articles of export.

BORING FOR OIL IN AUSTRALIA.

[Brisbane dispatch in Sydney Herald, of Aug. 27.]

It is probable that at an early date the oil produced from the shale deposits in the Gladstone district of Queensland will be available. The particular area on which the operations are being conducted is in the neighborhood of Lowmead, near Baffle Creek, in the Gladstone district. Bores are now being sunk for a company, with its headquarters in Sydney, which has leased the land, and at 173 feet in one bore a thick bed of shale was penetrated. An American company has offered to build a plant for recovering crude oil from shale.

CONDITION OF RUSSIAN COTTON CROP.

[Consul General John H. Snodgrass, Moscow, Aug. 26.]

According to the Statistical Department of the Administration of Agriculture in Turkestan, the condition of the cotton crops in that district is as follows:

In the Syr Daria district the sowing of cotton was rather late on account of the cold, rainy weather that prevailed during the latter part of March and the first half of April. The first cotton was sown on April 1, and there were only a few cases where it had to be resown. The damage done by insects, etc., was insignificant. No scarcity of water has been felt this year, and there was a sufficient number of laborers during the sowing period.

The general condition of the crops may be considered satisfactory. The area sown to cotton this year increased in consequence of reduced cultivation of cereals, principally wheat and barley, and in consequence of newly tilled land. The area under cotton cultivation in 1915 is 251,100 acres, instead of 218,700 acres sown in the preceding year.

Samarkand, Ferghana, and Transcasplan Districts.

In the Samarkand district the rainy period in April caused the sowing of cotton to be rather late. Part was sown in March, but in many cases it was necessary to have it sown over again. There was no scarcity of water for irrigating purposes, and hardly any damage was noted from insects. The condition of the crops is satisfactory. The advances of money on the future crop have not amounted to large sums.

In the Ferghana district the sowing took place at the usual time, beginning in the middle of March and being terminated by the end of April. In a few cases only the sowing had to be done over again. There was a sufficient supply of water for irrigating purposes, and there was no scarcity of labor. The general condition of the crops is very satisfactory and the development normal throughout the district.

The area of cotton plantations has increased almost everywhere, the greatest extension being noted in the Khokan and Skobelev territories, where the area increased by 20 per cent. The total area of cotton plantations in the Ferghana district must amount to 810,000 acres, against 764,100 acres in the preceding year. The advances of money on the future crop are issued at a reduced rate in comparison with last year.

In the Transcasplan district the earliest sowing took place on March 23, while the latest was finished by May 3. There were few cases where the sowing had to be done over. The general condition of the crops is satisfactory. Compared with last year, the area under cotton cultivation has increased by about 12 per cent throughout the district.

In the Khanate of Khiva the area of cotton plantations did not undergo any change. In Bokhara the area prepared for cotton sowing was about 30 per cent greater than that of the preceding year.

Estimating Russian Cotton Crop.

From data presented to the Cotton Committee this year's cotton crop in Central Asia was estimated at 1,228,000 bales of 500 pounds.

The Ministry of Ways of Communication has requested the Cotton Committee to state how many cars will be required to ship cotton for the requirements of the Petrograd and Moscow cotton-manufacturing districts. A list of the number of cars required for each month to April, 1916, has been presented to the ministry.

According to the administration of the Central Asia Railway, the 1914-15 cotton crop of Ferghana has been a record one and amounts to 594,000 bales gross weight of cleaned cotton. Per dessiatine (2.7 acres) it was 90 poods (2.4 bales) per acre of raw cotton, yielding a greater percentage of fiber than in the preceding year. In 1913-14 the average amount of raw cotton from which 1 pood (36.1128 pounds) of fiber was obtained was 3 poods 18 funts (124.6 pounds), while in 1914-15 it was 3 poods 15 funts (121.9 pounds).

In regard to quality, it is estimated that about 70 per cent will be of first and 5 per cent of second and third grades. In regard to the quantity of moisture obtained, the cotton of this crop may be considered normal.

The Ferghana cotton crop of the season 1914-15 is estimated at 18,000 bales more than the crop of the preceding year and 54,000 bales more than the crop of 1912-13. The value of the cotton crop of Ferghana is estimated by the exchange committee at 116,387,500 rubles (\$59,940,000 at the normal exchange rate of \$0.515 to the ruble), which exceeds the value of the preceding crop by more than \$7,200,000.

OUTLOOK FOR SWEDISH COMMERCE WITH RUSSIA.

[Consul General Ernest L. Harris, Stockholm, Sweden, Sept. 2.]

Swedish merchants and manufacturers are turning their attention more and more to prospects of trade with Russia. Trade routes are being studied and it is hoped that a great share of the commerce, which is now finding its way from England and the United States to Russia by the way of Sweden, will continue to be sent through this country. It is proposed to create new lines of transportation as well as to improve those already in existence.

It is thought that a permanent line Immingham-Goteborg-Stockholm-Petrograd would appeal to shippers in both England and Russia. It would place the Russian farmers in direct connection with a great distributing center for dairy products in England, and would enable English business men and tourists to reach Russia by a fairly short and comfortable route. It is the intention of business people in Sweden not only by thorough organization to win and retain former markets in England, but also, by improving steamship connections with Russia, to make an energetic bid for the commerce of that country. This effort will be assisted by the probable tendency in Russia to import direct from Sweden, Great Britain, and the United States.

It is thought by Swedish manufacturers that there will be a future in Russia for farming machinery and chemical manure. It is expected that farming in Russia will be greatly extended and that there will be a large increase in the exports of grain.

BRITISH MARKET FOR WOOD-BLOCK PAVING.

[Weekly Bulletin of Canadian Department of Trade and Commerce.]

Wood-block paving is in general use in nearly all of the several hundred boroughs of the United Kingdom whose population is greater than 60,000. Its growing popularity is due to the fact that it shows a longer life under motor-bus traffic than any other smooth pavement that has yet been produced at equal expense, to the ease with which repairs may be made, and to the absence of dust and noise.

There are a few prominent cities, such as Glasgow, Dublin, Belfast, and Liverpool, where wood-block paving is not used except in front of hospitals and schools. In these cities granite sets are employed and their displacement by wood pavements is delayed because of the practice of shoeing draft horses with sharp calks, which tear up the wood blocks.

Redwood the Chief Material Used.

Many woods have been tried for pavements in the United Kingdom. Jarrah was introduced, but proved unsatisfactory, wearing and breaking off at the corners and edges and producing a very ratty pavement. Red gum from the United States likewise gave poor service. The use of oak was discontinued some 12 years ago on the ground of expense. Pitch pine from the United States was also tried, but it did not wear evenly and produced a rough pavement. Canadian white spruce was laid on the north side of Trafalgar Square in London 12 years ago with an 8-pound treatment of creosote per cubic foot and is still in excellent condition.

Without exception, the wood-block pavement laid in Great Britain now is Swedish and Russian redwood (*Pinus sylvestris*). The specifications issued by the municipal engineers throughout the country admit this wood and no other, the one exception being the specification for the borough of Westminster, London, which admits Canadian spruce, red pine, or Douglas fir.

Swedish redwood has three points in its favor—the price is satisfactory, its life is definitely known, and the paving companies handle it. In normal times Swedish and Russian redwood was delivered in 3 by 8 or 3 by 9 inch, 6 to 20 feet long, averaging 16 feet, dressed one side and one edge, for £10 10s. to £11 10s. per standard (\$51.10 to \$55.95 per 165 cubic feet) c. i. f. The price has risen during the war to £16 10s. (\$80.30). This timber, sawn into 4-inch blocks and given an 8 to 10 pound treatment of creosote, will make a pavement lasting in London 20 years under light traffic and 12 years under heavy traffic.

Important Position Held by Paving Companies.

As already stated, the municipal authorities when contracting for wood-block pavements specify redwood in nearly every case, and the paving companies do not handle any other kind of wood. The influence of the paving companies is all powerful in most of the municipalities when a change of wood is to be considered. Only a few important municipalities purchase blocks or lay pavements. Nearly all the paving is done by companies, which contract with the municipalities to manufacture the blocks, creosote them according to specifications, lay the pavement on the base prepared by the municipality,

and maintain it free of cost for an agreed annual charge per square yard for a stated term of years. The cost of this service ranges from 9s. (\$2.20) per square yard for a 4-inch block with an 8-pound treatment to 14s. (\$3.40) for a 5-inch block with a 12-pound treatment. The cost of laying is 2d. (4 cents) per square yard. The cost of maintenance, where the maintenance is undertaken by the municipality, is 10d. (20 cents) per square yard per year.

The companies engaged in this paving business are few in number and have a monopoly of the field. They have established their reputations on redwood, are acquainted with it, and are interested in its continued use. The city engineers are willing to try new material if it promises them a longer service or a lower initial cost. The four Canadian woods that could be introduced in the United Kingdom for paving purposes are Douglas fir, white spruce, jack pine, and red pine, but they can find a sale only on condition that the normal c. i. f. price to the paving companies is less than £11 (\$53.50) per standard for a well-manufactured sound grade, admitting tight knots not over $1\frac{1}{4}$ inches in diameter, odd and even lengths accepted. The city engineers of Sheffield and Westminster have already signified their willingness to accept these woods if the price is lower than redwood. Other city engineers are willing to have a trial strip of pavement laid in the city at a reduced cost, or at least wish to be convinced that the new wood has already given satisfactory service in some municipality in the United Kingdom. There is no opportunity for the shipment of creosoted blocks. Creosote costs only 6 cents a gallon at the creosoting works in England.

Specifications Not Rigid.

Under the English specifications for blocks hearts are admitted; also knots, unless loose or on the upper end of the block, and are sometimes accepted even then. There is no rigid adherence to any rule regarding the rate of growth. The Russian redwood is preferred to the Swedish because it is slower growing and therefore harder, but blocks are admitted with rings 6 or even 4 to the inch. There is no rigid exclusion of sapwood, some specifications admitting as much as 18 per cent of saps.

The quantity of timber used by Great Britain for paving in 1913 was approximately 60,000,000 feet.

[The use of wood blocks for paving in England was discussed in *Daily Consular and Trade Reports* for May 29, 1908, May 21, 1910, and Dec. 13, 1912.]

SWEDISH BOTTLE INDUSTRY AND PROHIBITION LAW.

[Chargé d'Affaires Jefferson Caffery, American Legation, Stockholm, Sept. 3.]

With reference to the proposal that has been made that the manufacture and sale of brandy and beer be prohibited the United Swedish Bottle Glassworks have sent a petition to the King stating that if this prohibition law is passed it will have very serious effects on the bottle industry.

About 1,000 workmen are employed in this industry. The principal customers of the bottle manufacturers are the brandy companies and breweries. The prohibition law would stop the manufacture of glass bottles in Sweden, and most of these workmen would be left without employment.

PROSPEROUS FOREIGN COMPANIES.

The annual reports of foreign companies are beginning to appear and, as usual, disclose many interesting facts concerning the past year's business. A busy season is indicated in the report of the Steel Company of Scotland for the 12 months ended July 15. The output has been so much in excess of the previous year that the profit is more than doubled, and the amount available is nearly £30,000 (\$145,995) more than in the very good year of 1912-13. The ordinary shareholders benefit to the extent of 7½ per cent, against 5 per cent last year, whilst the reserve is strengthened by the addition of £40,000 (\$194,660), making the account £265,660 (\$1,289,625). The year's working, compared with the two previous years, is shown in the following table [in which the amounts have been converted to American dollars at the rate of \$4.8665 to the pound sterling]:

Items.	1912-13	1913-14	1914-15
Profit.....	\$685,972	\$302,307	\$656,934
Brought forward.....	92,608	99,442	102,391
Available.....	628,740	401,749	759,325
Special expenditure and depreciation.....	154,073	136,272	181,793
To reserve fund.....	145,935	48,065	194,660
Ordinary dividend.....	229,130	114,421	165,169
War allowance.....			16,735
Carried forward.....	99,442	102,391	200,945

A dividend of 10 per cent was paid both for 1912-13 and 1911-12. The higher prices realized the last 12 months, the directors say, were offset by the increased wages and cost of raw materials.

Danish Live Stock and Shipping and Argentine Meat Industries.

A Copenhagen report states that at present Denmark is decidedly prosperous. The great national industry, cattle breeding, has had a remarkably good year, and that big profits have been made is shown clearly by the balance sheets issued by the joint stock companies engaged in this business; and the prices obtained for milk, butter, and cheese have been exceptionally remunerative. The shipping industry has naturally benefited by the shortage of tonnage experienced everywhere, and the high freight charges which have prevailed have resulted in quite abnormal profits being made. One of the smaller companies, the "Torm," has just declared an interim dividend of 40 per cent; and though the balance sheets of the larger companies, such as the Scandinavian-American Line, the East Asiatic Co., and the Danish-Russian Co., have not yet been issued, it is known that large profits have been made. Messages received yesterday indicate fresh enterprise on the part of the strong Asiatic Co., which intends to replace 10 of its 7,500-ton steamers with motor-driven vessels and float a new company to run the steamers.

For the five years to 1911-12 (when the accounts were not, as at present, made up to the end of the calendar year) the Smithfield & Argentine Meat Co. paid dividends, free of income tax, of 10 per cent, with the exception of the year 1910-11, for which there was no distribution at all. Afterwards the company experienced less favorable times, and for 1912 only 5 per cent was paid, and at December 31, 1913, there was a debit balance of £20,566 (\$100,084), after deducting the amount standing at credit of general reserve, £27,258 (\$132,651). The surplus arising from valuation of land called the

land-reserve account, which was held in suspense, amounted to £33,423 (\$162,653), and there was a reserve for depreciation, etc., of £14,473 (\$70,433). Owing, doubtless, to improved business through the increased requirements arising from the war, the company has done better in the current year, for the directors are able to announce an interim distribution of 5 per cent actual, or at the rate of 10 per cent per annum.

WHITE SHOES MUCH WORN IN KARACHI.

[Consul James Oliver Lalag, Karachi, India, Aug. 9.]

Owing to the war, the local stocks of British-made boots and shoes are becoming depleted and little machinery exists here for the manufacture of footwear of that type. I can not speak for other consular districts in India, but the Karachi district has a rather large European population which wears imported boots and shoes, and the district does not make them in quantity.

The chief demand is for boots and shoes suitable for a warm climate and for sport. In most parts of this district white canvas and white leather low shoes are worn not only for tennis and golf but for business. The temperature is high for periods ranging from six to eight or nine months in the year. These white shoes are usually without heels and are laced. Some high white shoes are sold, but one usually sees low shoes.

The white canvas shoes sold here are of English make. They are cheaper than American-made white shoes, but not so good. The soles are almost always of rubber, but some low white canvas shoes with braided sewn jute soles have been introduced recently. It is too soon to get a verdict from wearers or dealers as to whether they will be a success. There are also both low and high canvas and leather shoes here with soles of belting. These shoes are a little more expensive, but the soles outlast the tops.

Rubber Soles—Pumps and Sporting Shoes.

The rubber soles, so far as I have seen, are red. Dealers say that white rubber soles are not in demand here, as they cost more. I have personally tested the low canvas shoes with red rubber soles sold locally and compared them with several pairs of American low canvas shoes with white rubber soles that I brought from the United States. The American shoes cost me about 50 cents more a pair at retail in New York than the British-made shoes in Karachi and lasted more than twice as long under identical conditions of wear. The American shoes were of better shape and held their shape better.

There is also a sale for men's pumps. It is the almost universal custom here to dress for dinner, and these pumps are worn. They are usually of patent leather. In purely sporting shoes the leather football boot has the largest sale. It has the customary cleats of the American football shoe and is usually white, but sometimes tan or of a bluish tinge. American boots and shoes are acknowledged by dealers to be of better quality, and are often copied by small local makers.

The Karachi consulate would like to have American shoe catalogues and price lists to place on file.

[The addresses of five Karachi dealers in boots and shoes may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices by referring to file No. 66164.]

AMERICAN COTTON BAGS FOR CHILEAN NITRATE.

[Commercial Attaché Verne L. Havens, Santiago, Chile, Aug. 13.]

With respect to the possibility of substituting American cotton bags for those made of East India jute or burlap as containers for nitrates, investigation has indicated that much difficulty is experienced by laborers in loading nitrate inclosed in cotton. This is due to the fact that there are no docks where ships might tie up at nitrate ports, and the bags are handled several times before being placed aboard. The weight is about 200 pounds, which is too much for a man to lift, particularly in a rocking boat. He therefore uses a hook, which injures the bag and causes greater damage to one of cotton than to one of burlap. In any effort to facilitate the sale of American cotton bags this circumstance must be taken into consideration.

When the bag is filled and the top sewed up, two ears are left to wrap the string around, and it has been noted that the laborers take hold of these ears with their hands on the top of the bag and their partners use the hook on the bottom. If cotton bags could be made with ears on the bottom, both men could use their hands freely and the hook would not be necessary. It would also be easier for them, since their arms would be spread apart by the width of the bag, which is about equivalent to the width of one's body.

Securing Cooperation of Nitrate Producers.

To accomplish the desired end the cooperation of the nitrate producers is necessary, because they are the purchasers of the bags and could instruct their laborers to load the double-eared bags without hooks. It has occurred to the writer that this idea would be materially furthered if such a concern as the du Pont Nitrate Co. were to have a thousand bags made with the ear on the bag forming a part of the cloth on the bottom and were, as an experiment, to send them to Chile and return nitrate to the United States in them.

It is reported that the Delaware Oficina alone produced 46,000 Spanish quintals (Spanish quintal=101.41 pounds), using 23,000 bags, during the month of July. The total production of the month for the whole country required 1,500,000 bags.

FRENCH COAL OUTPUT IN 1914.

[Commercial Attaché C. W. A. Veditz, Paris, Sept. 10.]

French coal production in 1914 amounted to 29,786,505 metric tons, compared with 40,843,618 tons in 1913. The coal output for the first half of 1914 amounted to more than half of the total production for the year 1913. The detailed figures for the coal-mining regions of France are as follows for 1913 and 1914:

Coal basins.	1913	1914	Coal basins.	1913	1914
	<i>Tons.</i>	<i>Tons.</i>		<i>Tons.</i>	<i>Tons.</i>
Nord and Pas-de-Calais...	27,389,307	17,400,308	Seine-et-Loire	2,210,091	2,048,200
Loire and Haute-Loire...	3,966,618	3,497,644	Bouches-du-Rhône	694,054	619,313
Gard and Herault	2,332,091	2,043,378	All other	1,913,901	1,657,845
Tarn and Aveyron	1,974,404	1,810,466			
Isère	362,662	317,351	Total	40,843,618	29,786,505

In 1914 France imported from Great Britain 10,759,058 tons of coal, 18,883 tons of coke, and 116,549 tons of manufactured fuel (agglomérés).

JUTE BAGS FOR RUSSIA.

[Consul General John H. Snodgrass, Moscow, Aug. 25.]

It is reported that 7,000,000 bags (approximately 5,040 short tons in weight) have accumulated in the port of Vladivostok, great difficulty being experienced in forwarding them to their places of destination, although they are urgently required for this season's harvest and for the packing of sugar, which will begin in September. The Council of Congresses of Representatives of Industry and Trade and the Central War Committee have been discussing this congestion and also the possibility of supplying the required amount of bags by means of the domestic industry. It has been ascertained that the annual production of bags in Russia reaches 100,000,000 pieces. In consequence of the scarcity of raw jute and the increased consumption of hemp and flax fiber for the requirements of the army, a number of manufacturing concerns have limited their production of bags, while others have discontinued operations. Consequently the price of bags has already increased by almost 100 per cent and still shows a tendency to rise, while the quality has become inferior.

It has been estimated that the present requirements reach the figure of 200,000,000 bags. Besides the 7,000,000 bags at the port of Vladivostok there are shipments in Sweden and at Archangel which can not be forwarded for want of transportation facilities. The question of ordering a supply of bags in India has been left open until the quantity of bags that can be produced in the country is definitely ascertained.

BUREAU PLANS POPULAR PUBLICATIONS.

A circular on "Measurements for the household" that has been issued by the United States Bureau of Standards is an advance in the bureau's work in the direction of making results available to the people who have little or no technical training. This book on measurements gives accurate data regarding a great variety of subjects that arise in the daily routine of the home, presenting a simple account of the kinds of measurements and their practical use, under the headings of commodities, heat, light, water, atmospheric humidity, density of liquids, atmospheric pressure, time, etc.

It is proposed to make future circulars of this type popular in character. The bureau states that it believes that this especially useful class of work can be quite largely expanded. Copies of "Measurements for the household" may be obtained free by interested persons upon application to the Bureau of Standards, Washington, D. C.

JAPANESE STATION IMPROVEMENTS IN MANCHURIA.

[Consul General P. S. Heintzleman, Mukden, China, Aug. 25.]

A subterranean passageway leading from the train platform to the station building is being constructed at the South Manchuria Railway Station, Mukden, in order to forestall accidents in the railway yard, where there is a constant movement of rolling stock. The work is expected to require about \$10,000 and will consume about three months. Already the waiting room for passengers to and from the Peking-Mukden (Chinese) line has been removed 80 yards southward preparatory to the new work.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Buoy, No. 2683.—Sealed proposals will be received by the lighthouse inspector, Tompkinsville, N. Y., until October 25, 1915, for furnishing and delivering at tidewater, New York Harbor, one type C Pintsch gas buoy, complete, charged with Pintsch gas. Further information may be had on application to the lighthouse inspector.

Construction work, No. 2684.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until November 8, 1915, for the construction complete (including mechanical equipment and approaches) of a two-story and basement stone and brick-faced building for the United States post office at Sidney, Ohio. Drawings and specifications may be obtained from the custodian at Sidney or at the Washington office.

Medical supplies, No. 2685.—Sealed proposals will be received at the office of the Medical Supply Depot, United States Army, 543 Greenwich Street, New York City, until October 18, 1915, for furnishing and delivering at the depot 24 restraint apparatuses.

Construction work, No. 2686.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until November 12, 1915, for the construction complete (including mechanical equipment and approaches) of the United States post office at Salamanca, N. Y. Drawings and specifications may be obtained from the custodian of the site or at the Washington office.

Construction work, No. 2687.—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until October 30, 1915, for one shell house at the Naval Magazine, Norfolk, Va. Plans and specifications may be obtained on application to the Bureau of Yards and Docks, or to the Commandant of the Navy Yard at Norfolk.

Excavation work, No. 2688.—Sealed proposals will be received at the office of the United States Reclamation Service, Grand Junction, Colo., until November 4, 1915, for about 340,000 yards of canal excavation. The work is situated in the vicinity of Loma and Mack, Colo. Further information may be had on application to the United States Reclamation Service, Grand Junction, Colo.; Denver, Colo.; or Washington, D. C.

Dredging, No. 2689.—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until October 16, 1915, for dredging at the Naval Station, New London, Conn. Plans and specifications may be obtained on application to the Washington office or the naval station named.

Books, etc., No. 2690.—Sealed proposals will be received at the office of the Medical Supply Depot, United States Army, 543 Greenwich Street, New York City, until October 13, 1915, for furnishing and delivering at the depot 129 copies of Howell's (sixth edition) Physiology; 71 copies of John Shaw Billing's "A Memoir," Garrison; 75 order pads; and various grades of printing paper.

Water tank and tower, No. 2691.—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until October 30, 1915, for a 250,000-gallon steel water tank and tower at the Naval Proving Ground, Indianhead, Md. Plans and specifications may be obtained on application to the Washington office.

Construction work, No. 2692.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until November 16, 1915, for the extension, remodeling, etc., of the United States post office and courthouse at Huntington, W. Va. Drawings and specifications may be had on application to the custodian at Huntington or at the Washington office.

Hoists, No. 2693.—Sealed proposals will be received at the office of the United States Reclamation Service, Washington, D. C., until November 1, 1915, for furnishing 10 hoists for radial gates, New Jackson Lake Dam. Further information may be had on application to the Washington office.

Cranes, No. 2694.—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until November 20, 1915, for furnishing two shipbuilding cranes at the navy yard, Charleston, S. C. Plans and specifications may be obtained on application to the Washington office, or to the commandant of the navy yard mentioned.

Hydraulic cylinders, No. 2695.—Sealed proposals will be received at the office of the United States Reclamation Service, Washington, D. C., until November 5, 1915, for furnishing a set of six cast steel hydraulic operating cylinders and appurtenances for slide gates for Keechelus Dam, Yakima Project, Wash., and a duplicate set for Sherburne Lakes Dam, Milk River Project, Mont. Further information may be had on application to the Washington office.

SUCCESS OF AMERICAN WOODS IN GREECE.

[Consul A. B. Cooke, Patras, Sept. 8; supplementing review in **COMMERCE REPORTS** for July 17, 1915.]

American lumber and barrel staves both began to arrive on this market some time since, and both are proving eminently satisfactory to the local trade. Both articles are used thus far chiefly in construction of cases and barrels for export of currants, replacing similar articles formerly brought to the market from Austria.

The American barrel stave proves distinctly superior to the Austrian in that it is at once of lighter wood and better cooperage. By virtue of its lighter weight it pays slightly more than half the duty paid on the Austrian stave, duty on all woods entering Greece being based on weight. By virtue of its better cooperage, it calls for much less work in the local cooper's hands, and when put up makes a distinctly better barrel. Also on account of the barrel's lighter weight it gives an advantage to the exporter when his export currants pass through the local customs.

The lumber which has thus far arrived is a white spruce. It proves on actual test to be more easily and satisfactorily worked into currant cases than the Austrian, and in addition makes a stronger container without any addition to the weight of the case. Both barrels and cases made of American wood present a better appearance than any ever turned out on this market before.

A wire-drag examination of the East River, from Lawrence Point to Execution Rocks, will be made this fall by the United States Coast and Geodetic Survey to determine whether or not the river channel is free from obstructions that have not been disclosed previously and to obtain full information concerning any dangers that may be found.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 406 United States Customhouse; Boston, 752 Oliver Building; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Fibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its branch offices. Request for each opportunity should be on a separate sheet and the file number given.

X-ray machines, No. 18652.—An American consular officer in Italy reports that a doctor in his district desires to receive catalogues and prices of X-ray machines. Prices, if possible, should be given c. i. f. Palermo. Correspondence should be in Italian.

Bristles for brushes, No. 18653.—A firm in the United Kingdom informs an American consular officer that it desires to receive quotations on bristles for brushes.

Matchmaking chemicals, No. 18654.—A report from an American consular officer in India states that a firm is in the market for matchmaking chemicals, and it is particularly anxious to hear from firms handling potash, "beretta," and "estania."

Fly paper, No. 18655.—A letter to the Bureau states that a firm in Canada desires names and addresses of manufacturers of fly paper, sticky reels, fly pads, pyramids, and similar articles for catching flies.

Chemicals, tools, hosiery, etc., No. 18656.—A commercial agent of the Bureau reports that a representative of a firm in India is making a visit to this country to secure an agency from American manufacturers of chemicals, tools, hosiery for women and children, and glass chimney lamps.

Canned goods, No. 18657.—A letter to the Bureau from a commercial agent states that a firm in the Netherlands is interested in communicating with leading packers and canners on the Pacific coast.

Stationery, No. 18658.—A commercial attaché of the department informs the Bureau that a firm in France is desirous of obtaining tubes made of ebonite, celluloid, or vulcanite. The tube is a part of an apparatus for filling fountain pens.

General representation, No. 18659.—The Bureau is in receipt of a letter stating that a man wishes to act as agent in Russia for American manufacturers. No particular line of goods is mentioned. Reference furnished.

Nails, No. 18660.—An American consular officer in Italy reports that a company in his district desires to communicate with firms dealing in iron, with a view to purchasing same for nails. Iron to be in rods $5\frac{1}{2}$ millimeters. Quotations c. i. f. Messina are requested. Cash against documents. References given.

Underwear and hosiery, No. 18661.—A report from an American consul states that a business man in Italy desires to receive catalogues and quotations on silk underwear and hosiery for women. Quotations c. i. f. Palermo, if possible. Correspondence may be in English.

Machinery, No. 18662.—A report from an American consular officer in India states that a company desires to receive full information in regard to machinery for an ice plant, an aerated water factory, and a mill for extracting oil from copra and sim sim (sesame). All the machinery to be driven by electric power generated by means of oil engines, which are also to be purchased. Detailed correspondence is solicited and not catalogues.

Ovens, No. 18663.—A business man in Germany desires to establish commercial relations with American firms manufacturing incubators using coal ovens large enough to hold several thousand eggs. Catalogues and price lists are solicited. Correspondence may be in English.

Paper, cloth, etc., No. 18664.—The Bureau is in receipt of a letter stating that a firm in Greece desires to represent American manufacturers of automobiles and accessories, wool and cotton cloth, nails for shoes and horseshoes, and paper, etc. There is a demand just now for 4,000 kilos of paper, samples of which have been forwarded, and may be examined at the Bureau or its branch offices. Quotations c. i. f. Piræus, including 5 per cent commission, are requested. (Refer to File No. 67.)

SWISS EXPOSITION OF TOYS OPENED.

The Legation of Switzerland in Washington has received a cablegram from the Government at Berne that the Swiss Exposition of Toys has just been opened at Zurich. It is under the auspices of the Swiss Foreign Trade Bureau, Borsenstrasse 10, Zurich, the formation of which was described in *COMMERCE REPORTS* for September 16, 1915. The Legation suggests that American firms interested should promptly delegate representatives to visit the exposition, as orders might thus be executed in time for the Christmas trade.

STEAMER TRANSPORTATION OF DANGEROUS ARTICLES.

The following is a summary of rulings made by the United States Steamboat-Inspection Service during September, 1915, relating to transportation of certain articles on steam vessels carrying passengers:

Nujol, an article manufactured by the Standard Oil Company, does not come within the prohibitions of section 4472, Revised Statutes.

Bush's monibak brilliant and *Bush's monibak metal polish* may be transported on steamers carrying passengers and may be used as stores on passenger or pleasure steamers.

Ruling of August 17, 1915, published in *COMMERCE REPORTS* No. 211, to the effect that *unhydrated* or *quick lime* shall not under any conditions be transported on steamers carrying passengers, supercedes the bureau's ruling of November 2, 1914, in which it was stated that *quick lime* may be transported on steamers carrying passengers provided that due care is taken to protect it from moisture.

Amorphous or *red phosphorus* may be transported in tins in cases carried on deck of steamers carrying passengers.

Parrot metal polish may be transported on steamers carrying passengers under the same conditions as refined petroleum, but it shall not be used as stores on passenger or pleasure steamers.

AUSTRALIA'S INCOME-TAX LAW.

[Commercial Attaché Wm. C. Downs, Melbourne, Aug. 27.]

A study of the proposed Federal income tax bill presented to Parliament August 18 reveals the fact that certain of its provisions may affect the methods of American firms doing business in Australia. I have discussed the subject with American houses located here and with representatives of American houses, all of whom are in doubt as to what bearing these provisions would have upon their business and upon the business of their principals in the United States. Attention is called particularly to section 14 of the act, reading:

(i) In the case of a person selling goods in Australia on account of a person not resident in Australia, or on account of a company not registered in Australia, the principal shall be deemed to have derived from such a sale a taxable income equal to 5 per centum upon the price at which the goods were sold.

Trading Profit Assumed—Agent Responsible for Tax.

It appears to me, and also is the opinion of merchants consulted, that under this clause any manufacturer or merchant consigning goods to Australia or carrying a stock of goods in Australia to be sold for his account would be deemed to have drawn a profit of 5 per cent and would be liable for a tax upon that assumed profit even if the goods were sold at a loss.

For the collection of this tax it is provided in section 48: "Every company which carries on business in Australia shall at all times be represented by a person residing in Australia, duly appointed by the company or by its duly authorized agent or attorney." Section 14, above referred to, provides that: "The person selling the goods shall be assessable on the taxable income as the agent for the principal and shall be personally liable for the payment of the tax." The foregoing provisions, it will be seen, require the registration of a duly authorized representative and hold this representative responsible for the tax.

Classes of Houses Affected by the Act.

Some of the classes of houses which might be affected by the act are the following:

1. American companies doing business in Australia through an Australian company controlled by the American company.

2. American commission houses represented by their own branch houses—(a) when the Australian branches do simply an indent business, the goods being shipped and invoiced by the American house and collections made by the American house; (b) when goods are invoiced to third parties but collections made by the Australian branch; (c) when goods are received on consignment, either from manufacturers or from the American house, and sold by the Australian house for the account of the consignors.

3. Commission houses represented by local agents who are not partners in the home house, but work purely on commission or salary.

4. American manufacturers represented by their own branch houses, not carrying stocks in Australia but invoicing from the home office—(a) when collections are made by the home office or (b) by the branch office.

5. American manufacturers represented by local agents not branches—(a) when these agents simply take indent orders to be executed and financed by the manufacturers direct to third parties; (b) when the agents make collections; or (c) when the agents carry a certain amount of stock to be sold to satisfy prompt requirements.

6. American manufacturers or merchants who consign goods to agents or merchants in Australia to be sold for their account.

7. American manufacturers who are represented by traveling salesmen who are not residents of Australia, the manufacturers executing the orders taken by such salesmen direct to Australian merchants.

American Vessels Come Within Bill's Provisions.

Section 21 of the act also assumes a profit of 5 per cent to have been earned upon freights, passengers, live stock, mails, or goods carried from Australia by ships not owned in Australia, which assumed profit would be taxable under the bill. This will probably affect the many American vessels that are at present arriving in Australia with cargo from the Pacific coast and generally taking return cargo from Australia.

[A copy of the bill may be examined at the Washington office of the Bureau of Foreign and Domestic Commerce; refer to file No. 682.]

JUTE-MARKET CONDITIONS.

The receipt of the final forecast of the Indian jute crop, according to the Glasgow Herald of September 22, had no effect on the Dundee (Scotland) market one way or the other. The final estimate places the current season's acreage in India at 2,377,000, against 3,358,737 acres last year; and the yield at 7,428,733 bales (of 400 pounds), against 10,531,505 bales. The yield is 3.13 bales per acre, which is in keeping with the result last season, showing that the shortage in India's production this year is due to reduction in the area cultivated.

Though the forecast is so very much reduced Dundee does not regard the situation with anxiety, and in the matter of demand there is little or nothing passing in that market at present. The rate for first marks was \$131.40 for September shipment. With the carry-over from last season and larger-than-usual stocks both in Calcutta and in Dundee at the commencement of the season, a plentiful supply of the fiber is anticipated for the world's consumption.

The last week in September yarns were steady but quiet in Dundee at 91 cents for common 8-pound cops prompt, and at 89 cents for November-December. Hessians were quotably steady, but where a little business was being done there were indications of the acceptance of a trifle less, and this was the case in connection with lightweights. Hessians were obtainable at 9 cents for 10½-ounce 40-inch, and at 7.8 cents for 8-ounce.

CHILEAN FIRE COMPANIES WANT MAGAZINES.

[Consul David J. D. Myers, Punta Arenas, Aug. 27.]

El Secretario de Compania No. 1 de Bomberos, Punta Arenas, Magallanes, Chile, asks for the names and addresses of news and trade papers, illustrated magazines, etc., published in the United States, with a view to subscribing for some of them for the reading room and library of the various companies.

Volunteer fire companies in South America are generally social organizations as well as fire companies. They are in the nature of a club equipped with libraries, reading and billiard rooms, bar, etc., the membership consisting of well-known business men of the community. Trade papers filed at the reading rooms of the fire companies would reach a desirable class of business people.

TO ADVISE BUSINESS MEN IN EXPORT CAMPAIGN.

A tour of the United States has been begun by the export-trade adviser of the Bureau of Foreign and Domestic Commerce, in an educational campaign conducted by the Bureau, for the purpose of laying before the manufacturers, business men, and commercial organizations of the country practical and concrete information relative to the export business and extension of foreign trade.

It has been learned that many manufacturers who would like to enter these markets abroad, especially in Central and South America, have found obstacles in the lack of knowledge as to where there are specific opportunities, as to prevailing market conditions, business methods in the various countries, proper methods of making out the consular invoices, foreign customs regulations and trade-mark laws, shipping routes, and sources of credit information. The Bureau desires to place at the command of American manufacturers and exporters the great fund of practical information that has been collected through the medium of commercial attachés, consular officers, and commercial agents resident in foreign countries. These officials report the names and addresses of reliable firms which are in the market for American goods. Their statements on every phase of commercial life and activity in the countries to which they have been sent are made available through the Bureau.

The tour to be made by the export trade adviser, Special Agent Stanley H. Rose, will take him through New York State and the Middle West, reaching Lincoln, Nebr., in the middle of November. Among the places to be visited are New York City, Niagara, Buffalo, Rochester, Fairmont, W. Va., Indianapolis, Chicago, Kalamazoo, Jackson, Grand Rapids, and Detroit, Mich., Toledo, Springfield, and Columbus, Ohio. The Bureau of Foreign and Domestic Commerce has received many letters from business firms, chambers of commerce, and other organizations throughout the United States, asking that their cities be included in the itinerary of Mr. Rose. An effort will be made to have him visit as many cities as possible before the end of the year.

The Bureau's special agent will have with him a traveling library containing the principal publications of value to the beginner in export trade, as well as statistics of imports and exports of the United States and the principal countries of the world. He expects to make his headquarters at the offices of the commercial organizations of the various cities that he visits. He will also assist in creating a wider acquaintance with the commercial clearing houses the Bureau has established in the leading commercial centers of the United States.

BUREAU OF STANDARDS TESTS TRACK SCALES.

The testing of track scales in Tennessee has been completed by the United States Bureau of Standards with the testing of six scales at Knoxville. A scale at Alexandria, Va., was tested during the same tour, while the representatives of the bureau were en route to Washington. The test weights were conveyed to the bureau for calibration and individual reports on the track scales tested in Tennessee were sent to that State.

RULING ON SWEETENER IN WINE HELD IN ABEYANCE.

[California Fruit News, Oct. 2.]

The Internal Revenue Office has reversed a recent ruling inhibiting the use of condensed grape must for purposes other than to sweeten the wines to which it is added. Joseph J. Scott, collector of internal revenue, says in the new order issued:

Until other instructions are issued wine makers, gaugers, etc., should see to it that the wines to which have been added sweetened grape must prior to, or during, fermentation, are especially marked for future identification and kept apart from other wines. The attention of wine makers, gaugers, and others is called to the provision contained on page 17, regulation No. 28, of May 14, 1913, governing the storage and control of condensed must and other sweetening agents. There must be strict adherence to these regulations.

The Lodi Sentinel, of California, reported in a recent issue that Lodi wineries had installed machines to make the sirup, which was destined to cut down the cost of wine making. Grapes testing 22 per cent will produce 11 per cent alcohol, making it necessary to add 9 per cent of alcohol to bring the wine up to the standard of 20 per cent. What the wineries proposed to do was to bring the sugar test up to 30 by the addition of sirup, which would produce 15 per cent alcohol, making it necessary to add but 5 per cent alcohol upon which they would have to pay the 55-cent tax.

Now that the Internal Revenue Office has given a favorable ruling in this connection, there will be a great saving effected.

The action of the Internal Revenue Office in Washington, restoring the right to use condensed grape must in proper quantities to bring the wine up to a commercial standard, has the effect of holding the entire matter in abeyance, and a final decision will be made after full consideration by the Commissioner. It is unlikely that when this decision is made any tax will be imposed on the makers of those wines that have been ordered to be marked for future identification, in relation to the additional spirits that may have been produced by the use of sweetened grape must. Any change that might be ordered would apply to wines produced subsequent to the time the ruling may be made. The local collector's order for the segregation of such wines is to be regarded as a precaution intended to meet any possible action in interpreting the law.

BUSINESS CONVENTIONS AT FORT WORTH.

Announcement comes from the Fort Worth (Tex.) Chamber of Commerce of the following conventions at Fort Worth, in the Chamber of Commerce Auditorium, on dates named:

State Association Transportation and Car Accountant Officers, October 15, 1915.

Local Telephone Owners' Association of Texas, October 27 and 28, 1915.

Texas Ice Cream Manufacturers' Association, November, 1915; days to be fixed.

The Passenger and Ticket Association of Texas, January 15, 1916.

Texas Liquor and Malt Dealers' Association, March 14, 15, and 16, 1916.

Texas Pharmaceutical Association, May 16, 17, and 18, 1916. At same time the State Board of Pharmacy, which is the examining board under the Texas laws to determine the eligibility of pharmacists to practice in Texas, will be in session.

Texas Poster Advertisers' Association, June, 1916; dates to be fixed.

BOOK PRINTED IN GREEK TO ADVERTISE PRODUCT.

A German manufacturer of fertilizers, in advertising his goods in Trebizond, Turkey, has published a translation into Greek of a large pamphlet entitled "Agricultural Studies: Application of Chemical Fertilizers." The book is illustrated with numerous views, some taken at the phosphate works in Hamburg, and others in the country districts, where products of fertilized fields are shown, and it is circulated among the many Greeks in that part of Turkey who are interested in agriculture and in some instances are landholders.

The American consul at Trebizond, Oscar S. Heizer, in making a report on this publication, says that the agent of the phosphate company sent a commercial traveler to Trebizond, to select a local agent and give him an exclusive agency, and advanced the necessary funds to cover expenses of translation and printing of the pamphlet, for the illustrations of which he furnished the plates.

BOSTON GETS NEW STEAMSHIP SERVICE TO LONDON.

[Prepared in Boston office of the Bureau of Foreign and Domestic Commerce.]

The Cunard Line recently announced the inauguration of a new service between Boston and London, with a sailing every three weeks. The first sailing will take place on October 20. The steamer *Headley*, a new vessel of about 5,000 tons, has been chartered by the company for this work. It will be followed in November by the *Tronto*.

The company has maintained a service between Boston and Liverpool for years, with an occasional sailing to London. These London sailings have been so successful that a regular service was decided upon. This will be the second regular line to sail between Boston and London, the Leyland Line having such a service every two weeks.

CHANGES IN AGENTS AT BRANCH OFFICES.

Commercial Agent F. L. Roberts, in charge of the Boston branch office of this Bureau, has resigned, and will direct the foreign-trade work of the Chamber of Commerce of Cleveland, Ohio, being in charge of the cooperative branch office recently established there by the Bureau of Foreign and Domestic Commerce.

Commercial Agent W. A. Graham Clark, at Atlanta, Ga., will take Mr. Roberts's place at Boston and Mr. W. L. Fairbanks, from the office of the Bureau at Washington, D. C., is to be placed in charge of the Atlanta office.

PROPOSED MODIFICATION OF RUSSIAN FUR EMBARGO.

[Consul General John H. Snodgrass, Moscow, Aug. 30, 1915.]

The drop in the prices of karakul threaten many firms with bankruptcy, and as these exporting firms are closely connected with the Moscow commercial market, their insolvency would have a serious effect. The Minister of Trade and Industry desires to introduce new measures as soon as possible in order that they may be in force at the time of the Nizhny Fair, and is negotiating this matter with the Minister of Finance.

NICARAGUAN COFFEE EXPORTS.

[Consul Harold D. Clum, Corinto, Aug. 30.]

The following table, compiled from statistics furnished by the Collector General of Customs at Managua, show the quantities and value of the coffee exported from Nicaragua to various countries during the first six months of this year and the corresponding period in 1914. Quantities are in pounds (net weight) and values in United States currency:

Exported to—	1914		1915	
	Pounds.	Value.	Pounds.	Value.
United States.....	880,339	\$85,888	5,902,819	\$622,656
France.....	10,720,758	1,075,099	5,713,091	553,627
Germany.....	5,076,729	525,493		
United Kingdom.....	1,541,978	155,756	3,713,535	369,406
Italy.....	1,818,406	181,272	2,932,580	260,637
Austria-Hungary.....	1,051,680	103,936		
Holland.....	258,227	26,535	399,313	42,163
Denmark.....			152,423	15,003
Belgium.....	47,284	4,430		
Spain.....	11,865	1,196	132,342	12,407
Sweden.....	25,404	2,678	76,202	7,151
Norway.....	19,143	1,916		
Panama.....	1,673	232	606	
Chile.....	606	61	606	
Total.....	21,264,082	2,144,432	19,043,540	1,873,170

In 1914, 93 per cent of the total amount of coffee exported from Nicaragua left the country before the end of June, and it may be assumed that the shipments of the first six months of 1915 will prove to bear about the same relation to this year's exports. The most striking, though not unexpected, feature of the 1915 figures is the total absence of direct exports to Germany, Austria-Hungary, and Belgium.

The total exports of coffee were 2,210,543 pounds less (representing a decrease of \$271,262 in value) than in the corresponding period in 1914, a loss of 10.4 per cent in quantity and 12.6 per cent in value. The United States took 33.2 per cent of the total in point of value, while France (which is usually the principal market for Nicaraguan coffee) purchased 29.5 per cent, as compared with 50.1 per cent in the first half of 1914; the United Kingdom, 19.7 per cent; Italy, 13.3 per cent; and other European countries, 4.1 per cent. As the figures show, the crop marketed in 1915 was a short one and prices were low. According to present indications, the 1915-16 crop will be considerably larger than those of 1913-14 and 1914-15, being variously estimated at from 23,000,000 to 25,000,000 pounds.

CORRECT ADDRESSES OF CONSULAR OFFICERS.

[Consul M. B. Kirk, Orillia, Canada, Sept. 25.]

It is suggested to those American exporters who send circular letters and catalogues to consular officers that before mailing these they obtain the latest revised consular list. The Orillia consulate is still receiving letters and catalogues from various American exporters addressed to the consular agency at Midland, which office has been discontinued for over one year. A small sum might be saved in postage.

WHITE BREAD FOR TRIESTE.

[Consul Ralph C. Busser, Trieste, Austria, Aug. 27.]

According to a communication of the Provisioning Committee for Trieste, the city is now to be provided with white bread. As the old crop flour with which maize (corn) was mixed in the production of bread, is now exhausted, from Sunday, August 29, 1915, and onward pure wheat flour alone is to be used in the baking of bread. This bread will be produced under the control of the provisioning committee and retailed at 60 hellers (12 cents) per kilo (2½ pounds). In order to save time in the distribution, the bread will be sold by the loaf of 1 kilo and not by measured weight, though the buyers may control the weight of the loaves upon the scales. Overweight of a loaf is not to be charged, but if a buyer purchase a quantity of loaves, then the sale shall be upon the basis of weight.

NEW MONOGRAPHS FROM BUREAU OF MINES.

The following new publications have been issued by the Bureau of Mines, Washington, D. C., which will furnish copies on application:

Bulletin 101: Abstracts of current decisions on mines and mining; October, 1914, to April, 1915; 138 pp.

Technical Paper 97: Saving fuel in heating a house; 35 pp., 3 figs.

Technical Paper 104: Analysis of natural gas and illuminating gas by fractional distillation at low temperatures and pressures; 41 pp., 7 figs.

Technical Paper 111: Safety in stone quarrying; 48 pp., 5 pls., 4 figs.

Technical Paper 115: Inflammability of mixtures of gasoline vapor and air; 18 pp., 2 figs.

Technical Paper 120: A bibliography of the chemistry of gas manufacture; 29 pp.

OIL REFINERY IN DUTCH WEST INDIES.

[Consul H. C. von Struve, Curacao, Sept. 10.]

Referring to the construction in Curacao of an oil refinery (see **COMMERCE REPORTS** for Apr. 6, 1915), the purchase of the property has now been completed, the manager of the company is now here, surveying has begun, and a number of people have been engaged locally and others are on their way from Holland. It seems, therefore, that the construction of the refinery is assured.

The opening of this industry will exercise a considerable influence on the shipping at this port and will doubtless contribute materially to the prosperity of this island.

Italy's Foreign Trade in August.

Italy's foreign trade during August, 1915, had a total value of \$75,820,918, or \$27,044,511 greater than in the corresponding month of 1914; imports amounted to \$44,974,693, a gain of \$12,379,213, and exports \$30,846,225, an increase of \$14,665,298. Consul General David F. Wilber, of Genoa, reports that the chief articles contributing to the gain in imports were raw cotton, raw hides, oats, wool and wool waste, fresh and preserved meat, elastic gum, copper, jute, greases, lead, sodium nitrate, and lumber, the last item amounting to over \$1,000,000. More than two-thirds of the increase in exports occurred in cotton and silk fabrics, silk, and silk waste.

BANKING SITUATION IN SOUTH AFRICA.

[Vice Consul John W. Dye, Cape Town, Aug. 27.]

The outstanding features of the South African banking situation are increased deposits and note circulation, and decreased loans, resulting in a plethora of funds.

The statistics of the five banks operating in South Africa show marked changes during the half year ended June 30, 1915. The following table summarizes the position within the Union as at June and December:

	December, 1914.	June, 1915.
Note circulation.....	\$11,487,928	\$12,613,090
Fixed deposits.....	77,020,448	85,497,913
Floating deposits.....	95,323,478	109,215,671
Coin reserves.....	26,414,647	31,010,268
Advances, etc.....	141,642,913	135,817,246
Paid-up capital.....	25,081,382	26,206,283
Reserve funds.....	14,365,416	13,535,183

A further table showing the position of deposits (fixed and floating), coin, and advances outside of the Union may be conveniently studied in conjunction with the foregoing. Included, of course, are the figures of the oversea offices of the various banks.

	December, 1914.	June, 1915.
Total deposits.....	\$48,578,347	\$40,041,288
Coin.....	9,060,100	15,570,712
Advances.....	61,082,538	61,337,030

MORE MOTOR LINERS FOR DANISH COMPANY.

In 1912 the East Asiatic Co. added the *Selandia* to its fleet. This was the first motor ocean liner to be put into service. Great interest was taken in its initial voyage to Siam, and a description of the vessel appeared in Daily Consular and Trade Reports for March 26 of that year. Since then, so successful have been Diesel-engined craft, that the East Asiatic Co. has decided to use that type of vessel only, and European advices tell of the sale of 10 of the company's present fleet, which will be replaced by motor liners. The dispatch reads:

Scandinavia's largest commercial concern, the East Asiatic Co., of Copenhagen, is entering upon a new shipping policy which makes a complete change in its position on the world's oceans, where its ships are running on six of the principal routes. A sister company will be formed at Copenhagen, with a capital of 10,000,000 crowns (\$2,680,000), of which the East Asiatic Co. is taking 5,000,000 crowns (\$1,340,000). The new company will take over the East Asiatic's 10 steamers—*Natal*, *Rhodesia*, *Transvaal*, *Kina*, *Arabien*, *Indien*, *Transquebar*, *St. Croix*, and two quite new steamers, each of 7,500 tons. The company states that the steamers could have been sold at a considerably higher price to neutral countries, but it was desired to keep them under the Danish flag. The East Asiatic's trial with motor liners, which was started with the *Selandia* three years ago and since followed up with new vessels, has proved so successful that the company will in future run nothing but motor liners. The sale has created extraordinary interest in Scandinavia, where the East Asiatic is looked upon as a commercial pioneer.

NEW SOUTH WALES FISHERIES.

[Commercial Attaché William C. Downs, Melbourne, Australia, Sept. 1.]

The Government deep-sea fisheries inaugurated by the State of New South Wales, as described in **COMMERCE REPORTS** for June 5, 1915, seem to have proved a success in providing cheap fish for the people. In one week the three small trawlers landed 65,000 pounds of fish, one boat alone bringing in 15 tons, which is said to be more than a similar boat would catch in the North Sea.

In pursuance of its plan of selling direct to the people, the Government opened the first State fish shop in Oxford Street, Sydney, on August 17, and although a large stock had been accumulated it was all disposed of. The prices asked were lower than have prevailed in Sydney for years. The following are some of the varieties of fish offered and the prices obtained, per pound: Skate and ray, 6 cents; barracuda, short boarfish, gurnet, perch, cucumber fish, spotted rock cod, and leather jacket, 8 cents; flathead, dannegai, John Dory, silver dory, and morwong, 10 cents; teraglin, red cod, ling, and sergeant-baker, 12 cents; school whiting and giant boarfish, 14 cents; black rock cod, schnapper, and red bream, 16 cents.

More Markets to be Opened—Interest in Victoria.

The Chief Secretary of the State is so well satisfied with the result that a second shop has been rented in Pitt Street, near Circular Quay, and two more will soon be opened, in addition to which it is proposed to provide movable stalls, which will take up position in different parts of the city and suburbs and be supplied with motor cars fitted with a cold chamber. It is also stated that specifications are being prepared for three more wooden trawlers, driven by oil engines, to be constructed at Sydney.

The State of Victoria is watching with interest the success of the New South Wales venture, and it is reported that arrangements have been made to borrow one of the latter State's trawlers when the occasion warrants, in order to test the waters along the Victorian coast for fish.

VALUE OF FINE-SPLIT AMBER MICA.

[Consul Felix S. S. Johnson, Kingston, Ontario, Sept. 18.]

The price of fine-split amber mica, size 1 by 2, at present exported largely from the Ottawa district, and invoiced at from 20 to 35 cents per pound, is very low when the following facts are taken into consideration: Market value per pound of rough amber mica, 1 by 2, 12 cents; price paid for splitting 1 pound of amber mica, 12 cents; waste on 1 pound of fine amber mica, 4 cents; freight and handling from mine to factory, $\frac{1}{2}$ cent; profit, 8 cents; total, 36 $\frac{1}{2}$ cents.

Most of the Ontario mica is mined in this consular district and taken to Ottawa to be trimmed and prepared for the American market. The fine-split amber mica is invoiced at this consulate at from 33 to 38 cents per pound.

Charges were made by a local firm that the Ottawa manufacturers are purposely cutting prices in order to secure the American trade. Mica shipments enter the United States at points in the States of Vermont and New York, where duty is paid, and afterwards forwarded to their destination.

FERTILIZERS FROM RUSSIAN PHOSPHORITE.

[Consul General John H. Snodgrass, Moscow, Aug. 26.]

Previous to the war Russian requirements in fertilizers were covered by foreign products imported to the amount of 612,000 short tons and fertilizers of domestic production to the amount of 252,000 short tons. The Ministry of Agriculture has started a thorough investigation of the deposits of phosphorite in Russia, which will be completed in about two years. There is said to have been investigated so far a supply of 2 tons of phosphorite. The quality of these deposits is far from satisfactory; only 8 per cent of the investigated supply contained more than 24 per cent of phosphoric acid, while the rest represented no industrial value. The deposits on the upper course of the Kama River, containing 27 to 28 per cent of phosphoric acid, are worthy of consideration for both quality and quantity, as well as the fact that they are situated near the deposits of sulphurous iron pyrites in the Ural Mountains.

At the congress of representatives of the zemstvos this summer in Petrograd a great deal of attention was paid to the concern starting the production of fertilizers in Perm. The representatives of the congress were unanimous in their statements that the demand for fertilizers has been rapidly growing during the last few years and that if the price be slightly reduced the consumption will be enormous. The Ministry of Agriculture is placing great hope in the new concern and has requested the zemstvo to expedite its equipment, although the cost of construction will exceed the estimates confirmed by the zemstvo and the ministry. It is expected that work at the new deposits will be started in the spring of 1916 and that the required amount of phosphorite will be obtained.

ARGENTINE SCHOOL FOR FARM MECHANICS.

[Consul William Dawson, Jr., Rosario, Aug. 25.]

On September 5, 1915, a school for farm mechanics will be inaugurated at Rafaela, Province of Santa Fe. The school has been recognized by the provincial government and will issue diplomas.

Entrance requirements are as follows: Students must be at least 16 years old, in good health, of good conduct, speak, write, and read Spanish, and understand arithmetic, mental computation, fractions, decimals, and elementary geometry.

A two years' course will be offered, as follows: First year, theoretical and practical instruction in forge and boiler work; adjustment; simple carpentry; shopwork with agricultural implements; light construction; farming; stock raiser's equipment; motors and boilers; wells; designing; Spanish; mathematics; elements of electricity. Second year: Theoretical and practical instruction in boiler work; adjustment; lathe work; applied mechanics; construction; farming in general; machinery and implements for agriculture and stock raising; motors and boilers; setting up; agricultural hydraulics; designing; mathematics; electricity; general work.

Japanese vessels are carrying coal from Australia and Japan to Hawaii.

MUNICIPAL OWNERSHIP IN EDMONTON.

[Consul Samuel C. Reat, Calgary, Alberta, Canada, Sept. 10.]

Municipal ownership of public utilities has been carried further in Edmonton, the capital of the Province of Alberta, than in any other city in the Dominion of Canada. Since its incorporation in 1901 Edmonton has owned and operated the electric light and power system, waterworks, the power plant, and the street railway (from its inception in 1908). The telephone system, until 1905 privately operated, was acquired in that year, and has since been publicly owned and operated.

Edmonton obtains electric light and power from the municipal power plant, which is operated as a separate utility. This department is the most successful of all the public utilities of Edmonton. According to a statement made at the close of 1914, this department had a surplus for the year amounting to \$55,191 (or 25 per cent higher than the waterworks department, which ranks second), the year's receipts having amounted to \$609,619 and disbursements to \$554,428. The debenture liability of the enterprise on December 31 was \$862,145, the cost of the distribution system was \$764,355, and the sinking fund totaled \$49,321.

Street Railway Department.

On November 8, 1908, Edmonton instituted the street railway trolley system, the largest venture in the municipal ownership program and at present the gravest problem. It seems impossible for this utility to be operated without incurring a big deficit each year. Edmonton has the difficulty to contend with of a large area and a relatively small population. The population of Edmonton is about 40,000, scattered over an area of some 27,000 acres. The establishment of a jitney service has affected somewhat the street railway earnings, but as this service was not established until the spring of 1915 its competition need not be taken into account in this review.

The trackage of the Edmonton street railway system consists of 43 miles of double track (figured on a single-track basis) and 11 miles of single track. The utility had 258 employees and paid \$284,159 in salaries during 1914. Its debenture liability as of December 31 was \$3,004,429. The cost of the system to that date totaled \$3,063,784, the buildings, track, and equipment having cost \$2,887,866, discount on debentures \$115,876, Strathcona franchise \$10,000, and land \$50,042. The sinking fund amounted to \$174,691. The year's expenditures were: Operating, \$535,430; maintenance, \$80,282; other, \$251,958; a total of \$867,670; against which were receipts aggregating \$642,109, leaving a deficit for the year of \$225,561.

In 1914 the Edmonton street railway had 1 fatal accident and 10 suits for damages, all of which were successful, the department paying \$11,182 in damages.

The Water and Telephone Services.

The waterworks department was one of the three municipal trading enterprises to show a surplus in 1914, receipts for the year totaling \$362,535, against expenditures aggregating \$318,657 (operating \$176,080, maintenance \$23,913, other \$118,664). The system has a capac-

ity of 4,750,000 gallons per day, distributed through 156 miles of water mains to 8,500 separate buildings. At the close of 1914 the department's debenture liability amounted to \$1,837,812, the capital expenditure to \$2,243,020, and the sinking fund to \$67,980.

Edmonton's telephone service is of the automatic kind, and has been very satisfactory. The charges for residence phones are \$24 and \$27 per year; for office, \$45 and \$48. There are about 8,000 subscribers to the local exchange, and by cooperation with the provincial government a long-distance service is obtained with practically any point in Alberta. The telephone department has 100 employees, to whom it paid \$121,417 in salaries and wages during 1914. Its financial statement as of December 31 was: Debenture liability, \$1,911,014; cost of the utility—land \$85,668, buildings and equipment, \$1,675,063; sinking fund, \$114,565; results of year's operations—receipts, \$247,103; expenditures, \$284,987; deficit, \$37,884.

Power Plant a Separate Undertaking.

The municipal power plant is situated on the north bank of the Saskatchewan River. Light, power, and water are furnished for the use of the different utilities. It produces its power by steam, using the excellent steam coal found in northern Alberta, which is obtainable at as low a price as \$2.50 per ton, but the average price paid last year was \$3.22. The following are the figures for 1914: Capacity—electric, 12,000 kilowatts; water, 26,000,000 gallons per 24 hours; number of employees, 130; amount of salaries and wages paid, \$64,932; debenture liability, \$2,047,645; cost of the utility—buildings and equipment, \$2,037,033; discount on debentures, \$47,268; sinking fund, \$198,263; receipts—from electric light and power department, \$394,568; from street railways, \$142,392; from waterworks department, \$138,311; from sundry sources, \$1,943; total, \$677,214; expenditures, \$672,214; surplus, \$5,000.

YMUIDEN STEAM-TRAWLING BUSINESS FLOURISHING.

Ymuiden, with its big trawler fleet, has been particularly benefited by the present conditions governing North Sea fishing, and with restricted competition, big catches, short trips, and high prices for the time of year, its steam-trawling business is flourishing. The *Gazette de Hollande*, in its issue of September 11, reports that dealers have been sending increasing quantities of fish to Great Britain. They have sought this opportunity for placing their goods because of difficulties encountered in sending fish to Belgium, where previously 30 per cent of their catch was sent.

Recent shipments to Britain have varied between 600 and 1,600 baskets and cases of from 165 to 220 pounds, carried by the British cargo boats on their regular service between Amsterdam and London. Several prominent Ymuiden fish dealers recently inaugurated a private service with Britain, chartering a steamer at Groningen. This step was taken because of various difficulties encountered in the regular service and the high freights.

[Articles on the British market for fish were published in *COMMERCE REPORTS* for Sept. 3, Aug. 20, and Feb. 8, 1915.]

HORSEHAIR TRADE IN RUSSIA.

[Consul General John H. Snodgrass, Moscow, Aug. 27.]

American importers of horsehair have long been interested in the Russian product. Much of the output has been purchased through foreign commission houses, though a fairly satisfactory trade has been built up with Russian agents. While this article does not play an important part in the economic life of Russia, it is of sufficient value to command considerable attention from manufacturers in the United States.

Horsehair is used in Russia for making a great variety of articles. Brushes are made from it, the manes being kept for soft brushes. White horsehair is considered the most valuable for this purpose and black the second best. The long hair of horses' tails is utilized for fishing tackle, violin bows, military headdress, and cloth for pressing oil. Shorter hair is used for stuffing mattresses and furniture, after having been cleaned with soap and water.

The value of horsehair varies greatly, according to grade. On the Petrograd market one pood (36.11 pounds) of unprepared horsehair (gray manes) may be purchased at 6 to 8 rubles (\$8.50 to \$11.40 per 100 pounds), while long horsehair manes fetch a price of \$107 per 100 pounds, and even more. The prices paid for Russian horsehair abroad are much higher.

Russian horsehair is greatly valued for its length, firmness, and hardness, which are unexcelled. As in the case with bristles, Russia is the only country that exports the highest grade of this product. As the requirements of horsehair on the world's market are considerable, the demand for Russian horsehair is great. According to Russian official statistics, the exports of horsehair from European Russia during the last three years have been as follows: 1912—7,800,000 pounds, valued at \$2,210,000; 1913—5,000,000 pounds, valued at \$1,579,000; 1914—2,600,000 pounds, valued at \$695,000. During the first five months of 1915, 300,000 pounds, valued at \$158,000, were exported, as compared with 1,400,000 pounds, valued at \$330,000, in the corresponding period of 1914 and 1,100,000 pounds, valued at \$279,000, in the corresponding period of 1913.

Formerly regulations issued by the Government required that horsehair be sorted before exportation and there existed a number of concerns engaged in cleaning and sorting this product. In 1894 these regulations were abolished, the firms mentioned were gradually closed, and the quality of Russian horsehair deteriorated. It is thought that it would be greatly to the advantage of the business if a standard were again introduced for horsehair for export.

Busy Cotton Mills in India.

Cotton mills in India produced 181,000,000 pounds of yarn during the three months, April to June, 1915, compared with 174,000,000 pounds in the 1914 period and 169,000,000 pounds in the 1913 period. Woven goods manufactured totaled 82,000,000 pounds in April-June, 1915, compared with 69,000,000 pounds and 66,000,000 pounds in the corresponding quarters of 1914 and 1913. Most of the yarn spun runs below 26s.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

- Textiles**, No. 18665.—The Bureau is in receipt of a letter from a business man in South America who desires to represent American manufacturers of textiles, such as woolen, woolen and cotton, for men and women; hosiery in silk, cotton, and mixed qualities, and knitted underwear for women, men, and children. It is requested that the width, net weight, per meter, and full information be given in the correspondence and that samples be sent as soon as possible.
- Paper**, No. 18666.—An American consular officer in Italy reports that a firm desires to purchase a quantity of paper and pasteboard, samples of which have been transmitted with the report and may be examined at the Bureau or its branch offices. (Refer to File No. 66592.) References furnished. Samples, as well as terms and discounts, are requested. Correspondence should be in French or Italian, but English may be used.
- Woven wire**, No. 18667.—An American consular officer in the United Kingdom reports that a company in his district desires to communicate with firms manufacturing tinned steel and galvanized steel woven wire for mattresses.
- Machinery**, No. 18668.—A report from an American consular officer in South America states that plans for a Government printing and engraving plant are being considered, and with this object in view manufacturers of printing and engraving machinery are urgently requested to send complete information and catalogues.
- Plumbing supplies**, No. 18669.—A company in Australia informs an American consular officer that it desires to communicate immediately with manufacturers of engineers' and plumbers' brassware supplies and tube brass.
- Advertising calendars**, No. 18670.—An American consular officer in South Africa reports that a firm in his district desires to communicate directly with manufacturers of advertising calendars. Samples, quotations, and discounts, with cable numbers for each line and code used, are requested.
- Pencils, paper, etc.**, No. 18671.—An American consular officer in India reports that a firm desires to represent manufacturers of pencils, penholders, paper, and stationery of all kinds. Illustrated advertising matter, samples, prices, discounts, and terms are requested. Correspondence may be in English.
- Wire**, No. 18672.—A report from an American consular officer in the United Kingdom states that a firm is desirous of being placed in communication with manufacturers of iron and steel reed wire to be used for making the reeds of weaving looms. It is stated that if prices and material are found suitable large orders will be forthcoming.
- Tin concentrates**, No. 18673.—A firm in South Africa informs an American consul that it desires names of American importers of tin concentrates. Cable replies are solicited.
- Surgical supplies**, No. 18674.—A letter to the Bureau states that a firm in Sweden desires to purchase about 200 pounds of black tubing, 30 pounds of red tubing, air cushions, hot-water bottles, and other surgical supplies.
- Butter containers**, No. 18675.—A report from an American consular officer in the United Kingdom states that a firm is in the market for boxes made of spruce to be used as butter containers. It is stated that the inquirer is prepared to place large orders, and desires to deal directly with manufacturers.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, 752 Oliver Building; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Navy Department supplies, No. 2096.—Sealed proposals will be received at the Bureau of Supplies and Accounts, Navy Department, Washington, D. C., until October 19, 1915, for furnishing the following materials. Firms interested therein should make application to the Bureau of Supplies and Accounts, giving the schedule numbers desired: Schedule 8828, steel balls, copper shell bands, and steel shrapnel case forgings; schedule 8831, pumping outfit for mixing acids; schedule 8832, single boat type electric heater; schedule 8833, lighting and power wires, single stranded rubber covered wire, and lead covered rubber insulated wire; schedule 8834, machinery steel; schedule 8835, brass wire cloth, malleable iron pipe fittings, leaf gold, spur geared chain hoists, brass hand lanterns, 54 inches wide artificial leather, strip solder, and malleable iron unions; schedule 8836, interior communication cable and soft steel single conductor wire; schedule 8837, rough brass service cocks, hard red rubber, oil syringes, and rubber pump valves; schedule 8838, polishing cloths, glass salt and pepper shakers, and glass towels; schedule 8844, outfit for pumping water; schedule 8845, storage battery truck; schedule 8846, automobile ambulance; schedule 8847, electrically illuminated sextants; schedule 8848, boxes for high explosives, head nets, machine twist silk thread, steel rectangular tanks, and sleeping nets for single beds and shelter tents; schedule 8849, calcium carbide and white paper for blue-print coating; schedule 8850, lemon extract and vanilla extract; and schedule 8872, woolen gloves.

Bids will also be received until October 26, 1915, for the following: Schedule 8829, laurel and oak wedges; schedule 8830, disk automatic press; schedule 8839, portable ventilating sets, Turkish toweling, and rough brass globe valves; schedule 8842, boiled and raw linseed oil; schedule 8837, single-conductor cable; schedule 8858, aneroid barometers, parallel rulers, comparing watches, and stop watches; schedule 8850, cupro-nickel shell bands, 600-pound crutchless, and 125-horsepower induction motors; schedule 8860, 36-inch by 22-foot engine lathe; schedule 8861, electric blue-printer machine; schedule 8862, interior communication cable and lighting and power wire; schedule 8863, strip brass, green coffee, and 3-strand white cotton line; schedule 8867, squillge handles, rubber wash-deck hose, light rigging leather, side lights for motor boats, dry yellow ochre, shackles, anchor, thimbles, hooks, etc., white bleached cotton sheeting, and whitening; schedule 8868, white ash, soft Idaho white pine, hewn timber yellow pine, firsts and seconds poplar, and merchantable southern spruce; schedule 8869, interior communication cable, rubber insulated rat-tail wire, and single and twin conductor wire; schedule 8870, gate valves, pressure-reducing valves, and rough brass valves; and schedule 8871, No. 4 pig iron, scoop shovels, and ½-horsepower portable ventilating sets.

Bids will be received until November 2, 1915, for the following: Schedule 8841, mechanical engine telegraphs, transmitters, indicators, etc.; schedule 8851, molded rubber gaskets and sheet and strip gum gaskets; schedule 8852, petroleum spirits; schedule 8853, fives and sixes candles; schedule 8854, dry cells; schedule 8855, illuminating wax; schedule 8856, safety matches; schedule 8864, Portland cement; schedule 8873, Douglas fir; schedule 8874, steel boiler tubes and rough brass angle and gate valves; schedule 8877, sugar pine and 75 K. W. oil-cooled transformers; schedule 8878, electric welding outfit; schedule 8879, 3½-foot coal-burning range sections; and schedule 8880, motor delivery wagon. Bids will also be received until November 9, 1915, for the following: Schedule 8840, bolts, steel-rail clips, and cast-iron washers; schedule 8865, W. T. annunciators, circuit breakers, general alarm boat hour gongs, contact makers, etc., alarms, electric whistle outfit, electric docking telegraphs, and thermostats; and schedule 8875, oxygen compressor. Bids will also be received until November 16, 1915, for the following: Schedule 8843, corn brooms, and schedule 8866, Douglas fir. Bids will be received until November 30, 1915, for the following: Schedule 8876, portable transmitting and receiving radio sets.

GOVERNMENT SALE OF SKINS.

On Thursday and Friday, October 21 and 22, a sale at public auction will be held by Funsten Bros. & Co., corner of Second and Elm Streets, St. Louis, Mo., of blue and white fox skins and beaver skins for account of the United States Government.

The Department of Commerce is advised that the skins will be ready to show at the address named on Monday, October 18, at 9 a. m.

NEW COAL FIELDS IN MANCHURIA.

[Consul C. K. Moser, Harbin, China, Aug. 3.]

New coal fields are reported to have been discovered near Station Manchuli by the local chief of police. The fields are located about 5 miles from the Station Manchuli and 2 miles from the railway line. The discoverer has offered to sell his right in the deposits to the Chinese Eastern Railway which is investigating the amount and quality of the coal.

CIRCULAR TO THE HEMP TRADE.

The Bureau of Insular Affairs, Washington, is in receipt of a cablegram from the Governor General of the Philippine Islands stating the the majority of exporters of hemp in the islands are urging the establishment of a new grade of hemp between "midway" and "good current." The Governor General desires the opinion of all American cordage manufacturers as to whether or not the trade requires the establishment of such a new grade.

It will therefore be appreciated if all cordage manufacturers in the United States will at once advise the Bureau of Insular Affairs, Washington, D. C., as to their opinion on the necessity of establishing the new grade desired by Philippine exporters.

LABOR CONDITIONS IN CANADA.

[Consul Harry A. Conant, Windsor, Ontario, Sept. 27.]

Reports to the Labor Department as to conditions throughout Canada this fall indicate that unemployment has been very considerably relieved as compared with last year. At present there is comparatively little unemployment in urban centers, except in two or three cities of the far West. The outlook for the coming winter is considerably brighter than it was this time last fall.

In this connection it is interesting to note that at the present time there is not a single strike or labor dispute of any magnitude in the whole Dominion and that wages remain steady.

[Vice Consul R. M. Newcomb, Victoria, British Columbia, Sept. 21.]

Present Situation on Vancouver Island.

In and around Victoria labor has been poorly employed for many months. There is at present as much idle skilled and unskilled labor as at anytime for the past half year. More than 1,000 mechanics filed applications for work with the British Mission of Enquiry into Armament Labor Supply; of this number 238 were accepted as suitable for work and have departed for England.

Work has commenced on the Saanich paving and waterworks contracts, which will give employment to at least 100 men for several months. The Dominion Government has let a contract for building an observatory on Little Saanich Mountain, at a cost of \$75,000. Six vessels of the local whaling fleet left for the fishing grounds on the west coast of Vancouver Island.

Business Quiet in Nanaimo and Vicinity.

In Nanaimo labor conditions are about the same as in Victoria with a poor outlook for any improvement. Wholesalers and retailers report business as very quiet, especially in clothing. There has been no general change in rates of wages but casual outside work has in many cases been paid for at a lower rate than before the war. Farmers are busy with their harvest, which is expected to be above the average this year. The fishermen of the district are doing hardly anything except supplying the small local trade.

The sawmills of the district are working steadily but not to their capacity. The logging camps are very quiet, with few men employed. The coal mines of Nanaimo and district are doing better now than for some time but are not working to their full capacity. Railroad construction work in the district is about at a standstill. There is very little work being done by the city other than sufficient, at reduced wages, to partially relieve the unemployment situation.

THIS YEAR'S HARVEST IN ITALY.

[L'Economiste Européen, Sept. 24.]

According to the Italian Ministry of Agriculture, the harvest for 1915 in Italy is as follows: Corn, 2,958,000 metric tons (1 metric ton=2,204.6 pounds); rice, 530,000 tons; potatoes, 1,600,000 tons; beets, 1,500,000 tons; hemp, 160,000 tons; grapes, 3,820,000 tons. All the crops showed an increase except grapes and potatoes, which remained at about the average figure for the last five years.

NOTES FROM THE NETHERLANDS.

[Commercial Attaché Erwin W. Thompson, The Hague, Sept. 13.]

Building Trades Affected by War.

In the Netherlands the building trades and allied industries are very much affected by war conditions. Most raw materials are usually drawn from the countries which are now at war. Building stone can no longer be imported in quantities from Belgium nor can limestone for use in the manufacture of sand-lime brick. One large factory making these bricks has entirely suspended operations.

New Phosphate Plant.

Considerable interest is now being taken in the Netherlands toward the manufacturing of acid phosphates for fertilizer. A factory is being organized in Rotterdam, supported by the Rotterdamsche Bankvereeniging. A farmers' cooperative factory is under consideration in Groningen. The burgomaster of that city will give information about it.

The Netherlands imports annually 250,000 to 300,000 tons of acid phosphates, about one-third of which comes from the United States and one-third from Belgium. [For a report on fertilizers in the Netherlands see COMMERCE REPORTS for Sept. 23, 1915.]

[Glasgow (Scotland) Herald, Sept. 25.]

Dutch Shipyards Active.

The conditions created by the war have placed the shipbuilding industry of Holland in a very favorable situation. Owing to the fact that neither the English nor the German shipbuilding yards are able to deliver new tonnage for foreign account, all the requirements of the Dutch mercantile marine are being supplied by the home yards, which have sufficient contracts in hand to keep them fully employed until at least the end of next year and perhaps well into 1917. At the end of last June the tonnage under construction or contracted for on account of the Dutch merchant fleet comprised 64 steamers of 269,000 tons, of which 20 vessels of 84,000 tons were for Amsterdam, and 37 vessels of 181,000 for Rotterdam. Messrs. Harland and Wolff, of Belfast, had in hand the steamer *Statendam* and three steamers of 32,000 tons each, all for account of the Holland-Amerika Line, but of course none of these can be delivered while the war lasts.

With regard to the prospects for the future, opinion in Dutch ship-ping circles is divided, some people holding that the war will be followed by a very active freight market, while others think that there will be a period of very serious depression. In any case, the numerous contracts for new tonnage and the high prices that are being paid for second-hand ships seem to point to good expectations on the part of shipowners.

New Guinea Will Build pontoons.

The Papuan Government is calling for prices for a quantity of selected Oregon pine and hardwood for pontoon building, also galvanized-iron fastenings and bolts for use in the same work. Papua, or British New Guinea, is under Australian Government control, with central administration at Melbourne.

MUSICAL INSTRUMENTS IN THE EXPORT TRADE.

American manufacturers of musical instruments, with an annual output valued at about \$100,000,000, export only \$3,000,000 worth annually to foreign countries. Their sales abroad reached their highest level in the fiscal year 1913, when the exports totaled \$3,800,000. In 1915, following the outbreak of the European war, the total fell to \$2,048,715.

The foregoing statement illustrates the numerous unseized opportunities for foreign business which the Bureau of Foreign and Domestic Commerce, through its daily **COMMERCE REPORTS** and other publications, is constantly bringing to the notice of American manufacturers. One of its recent booklets, "Foreign Trade in Musical Instruments," issued as Special Consular Reports No. 55, reviews conditions in about 25 countries which alone import about \$20,000,000 worth of pianos, piano players, etc.

Some of the larger markets include Canada, which buys a half million dollars' worth of pianos and piano parts annually; Mexico, which buys musical instruments valued at over a half million dollars per annum; Argentina, which imports a million dollars' worth of pianos each year; Brazil, which imports about a half million dollars' worth per annum; France, which imports apparatus for playing harmoniums and pianos to the value of two-thirds of a million dollars each year; and England, Russia, Australia, and South Africa.

It is only in the comparatively near-by markets of North America that American manufacturers lead in the sales of musical instruments. Elsewhere, save in China, India, and a few other countries, German instruments occupy the predominant position.

The following table shows the exports of musical instruments from the United States in the fiscal years 1875, 1895, and 1915 (12 months ended June 30):

Classes.	1875	1895	1915
Organs	\$363,132	\$640,718	\$190,160
Pianos	261,623	233,043	808,565
Piano players	(a)	(a)	80,427
Player pianos	(a)	(a)	336,532
All other musical instruments	4,232	241,966	613,031
Total	628,987	1,115,727	2,048,715

^a Not separately stated.

American pianos are chiefly exported to Canada, where they constitute about 90 per cent of the total imports of that class; to Great Britain, for reshipment to other parts of the world; and to Central and South America. Our player pianos are sent in about equal numbers to Australia, England, Italy, and Argentina, and in much larger quantities to Canada. Most of the piano players are invoiced to England. Germany in normal years has been our second largest customer. Large numbers of American organs are sold each year in Great Britain and her colonies; also considerable amounts in the Netherlands, Germany, Norway, and China.

Broom handles and wooden cloth rollers are needed in Glasgow, Scotland, which formally obtained its supply from northern Europe.

SUGAR MACHINERY FOR PHILIPPINE ISLANDS.

[J. F. Boomer, correspondent, Manila, Aug. 5.]

The Philippine Islands promise to offer an exceedingly good field for the sale of sugar-making machinery during the next few years. The industry is forging ahead by leaps and bounds, and the interest of agriculturalists in every part of the islands where the soil and other conditions are favorable to the growing of sugar is being turned to it.

The creation by the last legislature of a sugar-central board to establish centrals backed by the Government [see *COMMERCE REPORTS* for Apr. 14, June 2 and 28, July 20, and Sept. 18, 1915] has insured not only the investment of the funds already appropriated by the Government for that purpose but gives promise of future investments of the same kind by the Government. There are very few up-to-date sugar mills in the country at present, but the few that are already established have opened the eyes of the growers to the great advantages to be derived from modern machinery. Most of the mills already installed are of American manufacture, but European manufacturers are now in the field and are offering terms to the planters which are generally regarded as favorable.

The quantity of sugar machinery that might be sold in the islands is limited only by the funds of the planters. If it were possible for machinery sellers to make the terms of payment on a basis that would allow the planters to pay for the centrals out of the product of their fields, taking the fields themselves as security and retaining the ownership of the machinery until it is paid for, the market for machinery here might be developed almost without limit, for the area of good sugar land still open to the introduction of modern machinery has been little more than touched. At the present moment the great need of the sugar industry in the islands is capital; with that the industry and the consequent market for machinery could and would be expanded many fold.

PROPOSED PERUVIAN INTERNAL LOAN.

[Consul General Wm. W. Handley, Callao-Lima, Aug. 25.]

President Pardo has recently held several important conferences with the heads of the Lima banking institutions and some of the principal business men of Peru in connection with the reorganization of the national finances. While no definite announcement has yet been made regarding the steps that the President will take to cope with the existing financial situation, it is understood that an agreement has been reached to float an internal loan of about £500,000 (\$2,438,250), although no details have been made public regarding the manner in which it will be placed. It is stated that the President has suggested that it draw 6 per cent interest and be guaranteed by an export tax on minerals and other exports.

It may be of interest to mention in this connection that, inasmuch as the principal banks of Lima pay 6 per cent interest on yearly deposits, a loan to the Government at the proposed low rate would probably receive little or no support from the local banking institutions.

PORTUGAL EXPECTED TO HAVE FAIR VINTAGE.

[Consul General W. L. Lowrie, Lisbon, Sept. 18.]

With regard to the wine crop of this year in Portugal, on which Consular Agent W. H. Stuve, at Oporto, has prepared a report, nothing certain can be said as yet, because no official or commercial estimates are published on this subject until after the vintage, but it is possible to make predictions on certain points by comparing some features of the coming vintage with those of 1914. The consular agent's report gives these facts:

In the Douro district the crop is estimated in general much larger than last year's and good qualities are expected.

In the south of Portugal the quantity will be much below last year owing to the cryptogamic diseases.

In the district of Traz-os-Montes both quantity and quality are expected to be superior.

In the Minho region the crop promises to be a good deal more abundant and to produce good qualities.

In the Algarve Province the yield will be exceedingly reduced.

Quantities in Last Year's Vintage by Districts.

The vintage begins about October 1. For last year's vintage the quantities in the 17 districts of Continental Portugal, in hectoliters of 26.42 gallons each, were:

Districts.	Hectoliters.	Districts.	Hectoliters.	Districts.	Hectoliters.
Aveiro.	85,120	Evora.	106,640	Porto.	67,720
Beja.	61,740	Faro.	109,200	Santarem.	289,300
Braga.	88,480	Guarda.	39,120	Viana do Castelo.	311,440
Braganca.	14,440	Leiria.	166,400	Vila Real.	45,240
Castello Branco.	9,300	Lisboa.	2,780,400	Viseu.	191,790
Coimbra.	77,720	Portalegre.	15,240	Total.	4,770,090

During the past five years the production of wine registered has been: 1910—4,336,890 hectoliters; 1911—3,657,130; 1912—4,443,850; 1913—3,923,210; 1914—4,770,090. If divided by the four principal classifications given to the wines—vinhos generosos, vinhos verdes, vinhos maduros, and vinhos alcoolicos—the result shows in hectoliters:

Classes of wine.	1910	1911	1912	1913	1914
Generosos.	577,780	504,300	604,110	627,240	290,590
Verdes.	906,800	812,100	981,900	1,179,780	552,760
Maduros.	2,538,990	2,113,430	2,604,490	1,909,010	3,631,920
Alcoolicos.	253,350	227,300	253,350	207,180	204,820

An effort has been made to increase the exportation of light white and red wines to the United States, but the demand has not been large.

REPRESENTATIVES OF AMERICAN FIRMS IN AUSTRALIA.

Commercial Attaché William C. Downs, of Melbourne, Australia, requests that American manufacturers advise him through the Bureau of Foreign and Domestic Commerce if they are represented in Australia, and give the names of their representatives and such other information as may be of service.

NEW INDIGO CROP IN INDIA.

[Consul Lucien Memminger, Madras, India, Aug. 27, 1915.]

The new crop of indigo in Madras Presidency will approach 375,000 pounds, according to estimates usually considered reliable. This is an important part of the entire Indian crop, the other principal sources being Behar and Bengal, for which no estimates are available locally at present, while for Oudh and Benares the crops are estimated at 250,000 to 300,000 pounds.

The demands for Indian dyeing purposes is great, and all new indigo so far manufactured in the Madras district has been taken by the native buyer at rates probably better than shippers would pay.

Considerable interest in the indigo trade is being taken by growers and dealers owing to the increased demand for natural indigo as a result of the cessation of the supplies of synthetic dyes. In some quarters there is a tendency to push forward manufacture and dispose of the produce as soon as possible, but the majority of planters seem to be in favor of working on a cooperative basis, as in former years, and not to be in haste to dispose of their indigo. Whether prices will be maintained remains to be seen, but for the present, at least, the trade has revived.

Plans to Improve the Yield.

Meanwhile experts of the Government of India are giving renewed attention to investigations as to the possibility of improving the yield and quality of the crop. The report of a Government botanist recently published tells of experiments conducted at Pusa, where changes in the former method of cultivating Java indigo in that region have given encouraging results. The principal changes decided upon are: Leaf growing and seed growing of Java indigo should be treated separately; for seed, Java indigo should be sown about the middle of August on high, well-drained fertile lands. The report states that, besides the supply of good seed, there are two other directions in which the yield of indigo can be increased—first, by selection; and, second, by considerable development of the present methods of growing indigo, as, for example, in systematic pollination by means of bees.

Besides progress in cultivation, it is realized also that standardization of the actual dye for the benefit of the dyer is essential in establishing indigo as a commercial success.

Formerly most of the factory-made indigo was exported, but now a good part is used locally. There are no exports of indigo from Madras to the United States at present, but the exports to all countries for the fiscal year ended March 31, 1915, were 270 long tons, valued at \$443,500, as compared with 89 tons, valued at \$95,059, in the previous year. Most exports are to the United Kingdom.

[A previous article on the subject of Indigo in India appeared in **COMMERCE REPORTS** for Jan. 8, 1915.]

According to an article published in the Manchuria Daily News for August 19, the Japanese Leased Territory government is to have a separate building erected for Manchurian exhibits at the Imperial Coronation Commemorative Exhibition, to be opened at Kyoto October 1. The exhibits were to be collected before the end of August and shipped to Kyoto.

STATUS OF RUSSIAN COTTON TRADE.

[Commercial Attaché Henry D. Baker, Petrograd, Sept. 12.]

Just after my visit to Archangel, in the latter part of August, to study the situation there in connection with the problem of moving freight, especially American cotton, into the interior of Russia, I visited Moscow, the chief center of Russia's important cotton trade, and also Oryekhovo, about 60 miles from Moscow, on the railway from Moscow to Nizhni Novgorod, where there is an important group of cotton textile mills. As a result of such investigations concerning the present status of the cotton trade in Russia, there seemed conclusive reasons to infer that if American producers of cotton could adopt some feasible scheme of overcoming transportation difficulties in connection with the Archangel route the financial benefits to the cotton-growing States of the South might be very considerable. It was apparent that most of the American cotton which had reached the Moscow industrial district since the war began had been marketed at a considerable profit, notwithstanding excessive costs of transportation, loss of interest due to long delays, extra war duties and insurance, and unusual depreciation in quality during transit. This applied even to the very long and expensive Vladivostok route.

Uncertainties of Cotton Transportation—High Prices of Russian Cotton.

Notwithstanding the possibility of marketing American cotton at good profits if it could only be brought to the industrial districts where wanted, the uncertainty of being able to get the cotton after its purchase in Liverpool, together with uncertainties connected with the fluctuating value of the ruble, had greatly limited Russian orders. Not only had a great deal of American cotton been held up at Archangel and Vladivostok, owing to deficient transportation facilities, but also, on account of the Swedish embargo against the exportation of cotton, enormous quantities appear to be lying in the open on the frontier of Sweden, exposed to serious deterioration, the Russian owners meanwhile having their money tied up.

The losses to American export cotton interests through not being able to take advantage of the active market for cotton in Russia represented enormous profits to a small group of dealers in Russian-Asiatic cotton, chiefly on the Moscow exchange. One dealer alone, with comparatively small capital, is said to have made a profit amounting to about \$1,500,000 during the past six months. The growers of the Russian-Asiatic cotton have apparently had no increased prosperity at all commensurate with the enormous fortunes that have been made by this small group of Moscow dealers and banks financing the shipments from Central Asia. The cotton growers of Russian Asia always get approximately the same prices for the cotton they produce, no matter what may occur in the Moscow market.

Analysis of Cost of Russian Cotton and Conditions of Production.

The present price of Russian-Asiatic cotton in Moscow (white American seed, coming up to about "good middling" American cotton of 28 to 29 millimeters (1.10 to 1.14 inches) staple) is 27 rubles per pood (\$192.52 per 500-pound bale at the normal exchange rate of \$0.515 to the ruble) and has been as high as 32 (\$228.16 per bale). Such cotton was selling in July, 1914, at about 16 rubles per

pood (\$114.08 per bale): The actual present cost of such cotton in central Asia before ginning is 5.75 rubles per pood (\$8.20 per bale). As 1 pood (36.11 pounds) of ginned cotton is produced from an average $3\frac{1}{4}$ poods (117.36 pounds) of unginned cotton, and the cost of production amounts to approximately 19 rubles per pood less the price received from the sale of the 2 poods of seed thus obtained, which is 2.20 rubles. Thus the total cost of the cotton less the seed is 16.80 rubles. Adding the cost of ginning, packing, etc., which is about 1.90 rubles per pood, and the transport by camel, railroad to Moscow, etc., which may approximate 0.90 rubles per pood, the total cost in central Russia is 19.60 rubles per pood, or, with the war tax of 2.5 rubles per pood, 22.10 rubles per pood (\$157.57 per bale).

The actual cost of producing the Russian-Asiatic cotton has not, it is stated, advanced materially except through the decreased purchasing power of the ruble, and extra cost of bagging, steel rims, etc. Transportation of the cotton to Moscow costs about 30 per cent more than before the war, and the cotton now also pays a war tax as mentioned. The field work is done chiefly by the farmers and their families, especially by women. As the inhabitants of this cotton-producing section of central Asia are chiefly Mohammedans, and as the women are not allowed to work outside their family farms, there is some difficulty in arranging for a mobile supply of hired labor.

Analysis of Cost in Moscow of American Cotton.

The elements entering into the Moscow price of cotton shipments that have arrived from the United States via Vladivostok are as follows: The cost of such cotton delivered at Vladivostok, including all charges such as freight, insurance, etc., as established by the terms of sale at Liverpool, which amounts to about 10.50 rubles per pood (\$74.87 per bale); import duty, 6 rubles per pood (\$42.80 per bale); freight charges from Vladivostok, 1.60 rubles per pood (\$11.41 per bale); forwarding charges, 0.50 ruble per pood (\$3.57 per bale). The cost in Moscow is therefore 18.60 rubles per pood (\$132.62 per bale). The cost of exchanging rubles into pounds sterling on the Liverpool transaction, which may fluctuate considerably, but which at present may be taken as about 20 per cent of the Russian equivalent of the Liverpool price, would add about 2.10 rubles per pood (\$14.97 per bale) to the cost at Moscow, making it 20.70 rubles per pood (\$147.59 per bale). This American cotton is equivalent in quality to the Russian-Asiatic cotton, whose cost factors are already explained. The American cotton, when it finally gets to Moscow, should sell on a basis that would easily compete with the Russian-Asiatic cotton.

American cotton has been quoted at 27 rubles per pood (\$192.52 per bale), the same price as the white American seed Russian-Asiatic cotton. However, supplies of such American cotton at Moscow have been so meager that quotations have been to some extent fictitiously high, and there is no doubt that with any important increase in the local supply prices would drop and carry down with them the inflated values for Russian-Asiatic cotton. The Cotton Committee of the Moscow Exchange has just established a price of 24.75 rubles (\$176.47 per bale) for the first quality of the new American crop, which would appear to allow a profit of about 4 rubles per pood (\$28.52 per bale) to dealers who can bring the American cotton via

Vladivostok into the Moscow district. If American cotton were brought in via Archangel, the profit should be larger, since the transportation from Archangel to Moscow costs less than one-third of the rate from Vladivostok to Moscow. It is understood, however, that the Liverpool price for the cotton is somewhat higher delivered at Archangel than delivered at Vladivostok via the Panama Canal, owing to greater cost of ships across the Atlantic, war insurance, etc. The Archangel route is not available during the winter season of closed navigation, but it is expected that about May 1 a great deal of American cotton might come by this route.

Much Asiatic Cotton of Low Grade—Need of American Cotton.

In connection with the great demand and booming market for Russian-Asiatic cotton, it may be explained that a great deal of this cotton, which is of very inferior quality, is now purchased for manufacturing various cotton goods that normally require much better grades of raw cotton. If American cotton were available for the Russian textile mills, it would supplant for all the better grades of goods the inferior grades of Russian-Asiatic cotton that the mill owners are compelled to use at present. A mere comparison of estimated cotton output for the year in Asiatic Russia, the Caucasus, etc., with the estimated requirements of the local mills, which would show the need of probably 5,000,000 poods (361,000 bales) of foreign cotton, does not reveal the full opportunity for the successful importation of American cotton if shipping difficulties were overcome, for the reason that the Russian textile mills would readily give first choice to American cotton over a large proportion of the Russian-Asiatic cotton, if the American cotton were available. For instance, the manager of a leading group of cotton mills in Russia states that from the time the war started until about August 1 of this year his mills could get no American cotton at all. They have now secured a small amount and are using about 5 per cent of American cotton in the piece goods they turn out. He mentioned that if they could secure all the American cotton they wanted, the proportion would be 35 per cent.

Out of the entire Russian-Asiatic crop of cotton (not including cotton from Persia) about 83 per cent is American-seed cotton and about 17 per cent is local seed, usually known as "district" cotton. Most of the Asiatic cotton contains considerable dust and other impurities. The gross weight of the Asiatic cotton bale of the same cubic capacity as the American bale is only 9 poods (325 pounds), as compared with 14 poods (505 pounds). The American tare is approximately 5½ per cent and the Russian-Asiatic about 12½ per cent. The smaller percentage of tare, the greater cleanness, and the greater weight per cubic capacity are, of course, very favorable factors for American cotton in competition with Russian-Asiatic. As yet a large part of the cotton-growing area in Central Asia is removed from railway facilities, so that the cotton has to be carried on the backs of camels. The maximum a camel can carry is about 800 pounds, or 400 pounds on each side of the back, and it is customary to split the weight up into several packages, thereby increasing the percentage of tare.

About 60 per cent of the Russian-Asiatic cotton reaches Moscow by way of Tashkent and Orenburg, and about 40 per cent by boats

via the Caspian Sea. The routes whereby this Russian-Asiatic cotton can get to Moscow are comparatively free from the congestion which has characterized the railway line across Siberia from Vladivostok to Moscow and from Archangel to Moscow, there being no great amount of goods required by the Government for military purposes over these routes from Central Asia. It is, of course, this advantage of easy transportation that is giving Russian-Asiatic cotton a practical monopoly for the Russian mills' consumption, in exclusion of the formerly competing American and Egyptian cotton.

Large Cotton Mills at Oryekhovo.

When the writer visited one of the largest and most important mills in Russia, at Oryekhovo, about 60 miles from Moscow, the manager apologized for the dust in the atmosphere, which arose from the large percentage of impurities in the low-grade Russian-Asiatic cotton that they were obliged to use. He explained the great difficulty and special ingenuity required to try to make high-class goods from a low grade of cotton. In view of the fact that there was scarcely any American or Egyptian cotton to work with, and not enough good Asiatic cotton, the results obtained seemed surprisingly satisfactory. A large amount of American cotton that had been purchased for these mills was still lying at Archangel, Vladivostok, and on the Swedish frontier.

These mills at Oryekhovo are under English management and employ about 16,000 people. They have about 200,000 spinning spindles and 3,000 looms in operation, considerable weaving of the yarn spun here being done by outside firms. Among the lines of cotton goods turned out at these mills may be mentioned all kinds of dress materials, sheetings, towels, print goods, cotton velveteens, vicuña cloths (mostly cotton, but partly wool), sateens and imitation silk, flannelettes, shirtings, blouse material, black and white checked cloth (very popular for skirts), all kinds of cotton goods suitable for the peasant trade, yellow moleskins for the use of mandarins, etc., in China, khaki shirtings and drills, bandages, antiseptic wadings, and aeroplane cloth.

An interesting feature of this great plant is the recent substitution of American winding machinery for machinery previously made in Europe. This American machinery takes up less room in the factory, has a greater production, makes more compact bobbins, and is operated with less difficulty than the machinery formerly in use. The power for operating this plant is economically obtained from combustion of peat found in the vicinity and brought to a large central boiler house and power plant, where it is converted into electrical energy. American motors are used and also considerable Swedish electrical machinery.

Measures to Promote Welfare of Employees.

The management of these textile mills at Oryekhovo has oversight over a number of matters, like education, amusements for employees, and even church worship, which in the United States would be considered outside the scope of a manufacturing plant but which in Russia have a highly important influence on the value of labor and profitable output of goods. A large school is maintained for the children of employees up to 15 years of age, 2,000 children are being edu-

cated at the expense of the mills. There are 50 scholarships for those who show special ability in order to enable them to obtain technical education at leading colleges. The mills also maintain at their own expense a church, a theater, a large park, athletic field, etc., and a large hospital. A big cooperative store is maintained where employees can purchase all necessary articles at practically cost prices. Sanitary dwellings are also provided for employees and general measures are taken to promote the health and morality of the large factory population. All aged employees are pensioned.

At the time of the revolutionary troubles in Russia about 10 years ago, this Oryekhovo mill district was a special center of anarchistic disturbance. The management came to the conclusion that the trouble with their employees was mainly lack of wholesome and proper amusement, and by supplying amusements, especially by encouraging sports, they have made the employees much more loyal and law-abiding. The old strike spirit seems to have disappeared. These mills are now noted for their athletic teams, and have caused athletic organizations to be formed all over Russia. About 60 football teams, for instance, have been formed throughout Russia, the one at Oryekhovo, the first to be organized, being the model, with English Association football rules in force.

Cotton Mills Busy—Consumption—American Cotton in 1916—Direct Trade.

The Russian cotton-textile mills are being very profitably operated to full capacity, the increased cost of raw cotton and difficulty in manufacture being more than compensated by the higher prices obtained for finished goods. In addition to special demands due to war conditions, the normal demand for cotton piece goods has fully kept up and even increased, owing chiefly to the largely increased savings of the peasantry because of their inability to buy vodka. In this connection it may be mentioned that the Government Savings-Bank deposits in the Oryekhovo mill district have multiplied 30 times since the sale of vodka was suppressed.

As stated in the recent cable from this office [published in *COMMERCE REPORTS* for Sept. 1, 1915], the consumption of cotton by the mills of Russia, excluding Finland and the zone of military operations, is estimated at 22,500,000 poods (1,625,000 bales) annually, this estimate being based on 7,500,000 spindles working at full speed on two 9-hour shifts, giving an average of about 3 poods (108 pounds) per spindle per year, as against about 2 poods (72 pounds) per spindle previous to the war.

The particular demand for American cotton is likely to develop early in 1916, in time to have cotton from the new American crop shipped to Archangel at the beginning of spring navigation in May. Doubtless the special purchase or renting of barges on the Dwina River and proper attention to forwarding on arrival at Archangel would greatly assist the movement, and if the Moscow importers felt sure that they could import the cotton without undue delays, they would give much more liberal orders.

Unless absolute dependence is to be placed on Liverpool, which is to a great extent taking the place of Bremen in transshipping cotton to Russia, the cotton growers and exporters in the United States should seriously study all feasible plans for cultivating direct trade with Russia.

CREDIT REQUIRED BY RUSSIAN COTTON MANUFACTURERS.

[Consul General John H. Snodgrass, Moscow Aug. 30.]

The Russian Association of Cotton Manufacturers authorized a representative to apply to the Ministry of Finance for the granting of sufficient funds in foreign currency to the cotton manufacturing firms to enable them to purchase their supply of foreign cotton for the coming season. The cotton industry is insufficiently provided with raw material and is obliged to purchase supplies abroad. In view of the fact that the superior grades of foreign cotton and the Egyptian cotton of early crops are sold on the market during the autumn months, the attention of the Minister of Finance was drawn to the urgency of purchases of foreign cotton.

Taking these facts into consideration, the Minister of Finance gave his consent in principle. At the same time he proposed that the definite amount of the required currency be ascertained, promising that foreign currency would be supplied at the rate of 120 rubles for £10 sterling, or about 47 cents per ruble.

CATALOGUES OF SURGICAL INSTRUMENTS WANTED.

[Consul General Alfred L. Moreau Gottschalk, Rio de Janeiro, Brazil, Sept. 8.]

The American consulate general at Rio de Janeiro, Brazil, has been asked by certain local physicians and surgeons to furnish the following catalogues and price lists, which are lacking in its files at present. Manufacturers of the articles noted below are respectfully requested, therefore, to mail to the consulate general their catalogues, accompanied by price lists in which export discounts are clearly stated:

Anatomical charts and models and other graphic presentments used in the teaching of medicine in its various branches.

It is also desired to have the catalogues of makers of surgical instruments and instrument cases, or first-aid cases, who could produce from the model a new article of this sort in quantities.

It is also desired to have catalogues showing outfits of prophylactic or preventive medicines or mechanical appliances against the spread of syphilis.

NEW STEAMER SERVICE WITH DUTCH EAST INDIES.

The activities of the foreign trade department of the San Francisco Chamber of Commerce to extend the trade of the Pacific coast into new areas and to afford better transportation facilities for carrying American wares to markets now reached with difficulty have met with success, so far as the Dutch East Indies are concerned. The chamber has just informed the Bureau of Foreign and Domestic Commerce that, as the result of nearly a year of endeavor on its part, the Java-China-Japan Lijn, of Amsterdam, Netherlands, is to establish a monthly service of first-class cargo steamers between Batavia, Java, and San Francisco, the new service to start with a sailing from Batavia on December 15. Steamers will load at Abatavia, Cheribon, Samarang, Soerabaya, and Makassar, thence proceed to Manila, Hongkong, and San Francisco. The first vessel of the new service will reach San Francisco in February.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Tanning machinery, No. 18676.—A man in South America desires to purchase the following tanning machinery: One leather hammer, one splitting machine, one putting-out machine, one bark mill, one glazing machine, and two tanning drums. Correspondence should be in Spanish or French. The first letter or catalogue should contain all necessary information, such as prices, terms, discounts, etc., in order to avoid unnecessary correspondence.

Drugs, No. 18677.—An American consular officer in the United Kingdom reports that a pharmaceutical dealer is in the market for drugs of all kinds to be used for pharmaceutical and technical work.

Briar pipes, No. 18678.—A report from an American consular officer in the United Kingdom states that a firm of cigarette and cigar manufacturers in his district desires to purchase briar pipes. References furnished.

Novelties, photo and optical goods, etc., No. 18679.—A firm of commission agents in India has requested an American consul to place it in communication with dealers in novelties, photo and optical goods, fountain pens, and stationery, motion-picture machines, etc., with a view to possible purchases. It desires to import directly on its own account or on a commission basis. Correspondence may be in English.

Hemp thread and yarn, No. 18680.—An American consular officer in France reports that a firm in his district desires to communicate with manufacturers of hemp thread and yarn. It is especially interested in fishing lines.

Flax tapes, No. 18681.—The Bureau is in receipt of a letter stating that a firm in this country desires to purchase endless flax tapes about a yard long, 1 inch wide, and 0.016 inch thick.

Copper and brass tubes, No. 18682.—A letter to the Bureau from a business man in Argentina states that he desires to purchase copper and brass tubes direct from manufacturers. Three lists, two in German and one in Spanish, as well as descriptions of the tubes wanted accompany the letter and may be examined at the Bureau or its branch offices. (Refer to File No. 69.)

Heelplate nails, No. 18683.—An American consular officer in Canada reports that a firm in his district desires to communicate with manufacturers of heelplate nails. Further information may be obtained from the Bureau or its branch offices.

Chemical products, No. 18684.—A report from an American consular officer in Spain states that a company is in the market for a quantity of chemical products for industrial use. Further information may be obtained from the Bureau or its branch offices. Correspondence should be in Spanish or French.

Machinery, No. 18685.—A business man in India informs an American consul that he desires to correspond with manufacturers of machines for drying fruit of all kinds, and also hand-power machines for cutting and purling fruits, such as apples, pears, etc. Practical and inexpensive machines are desired.

Educational catalogues, No. 18686.—An American consular officer in India reports that he has been requested to furnish students catalogues of American schools and colleges, especially those having engineering courses.

Whiskies, No. 18687.—A business man in Brazil is desirous of establishing commercial relations with American exporters of whiskies. Samples are requested. Terms, cash against documents. It is stated that as soon as prices and samples are received a cable order will be forthcoming, and it is suggested that a code be arranged.

Iron bars, No. 18688.—A report from an American consul in Italy states that a firm in his district wishes to communicate with manufacturers of iron bars to be used in concrete construction. If the price is satisfactory it is probable that 1,000 tons of this product will be imported annually. Discounts and terms of payment should be given. Correspondence may be in French but Italian is preferred.

- Mining machinery, No. 18689.**—An American consular officer in Burma reports that a firm has requested to be supplied with prices and full information on concentrating mining machinery. A sole agency is desired. Quotations c. i. f. Rangoon.
- Needles, No. 18690.**—A report from an American consular officer in France states that two firms in his district desire to represent firms dealing in needles.
- Rubber articles, No. 18691.**—A man in Italy has informed an American consular officer that he desires to represent a firm manufacturing hard-rubber articles, such as syringes, thermometers, atomizers, and rubber bulbs. If necessary, purchases will be made on his own account. References given. Correspondence should be in French or Italian and prices stated in lire or francs.
- General representation, No. 18692.**—A company of provision dealers in India desires to receive catalogues and price lists of groceries, provisions, and liquors.
- Machinery, No. 18693.**—An American consular officer in Canada reports that a man in his district desires to be placed in communication with manufacturers of machinery for grinding and mixing paints. Catalogues, price list, and full information are solicited.
- Steel window sashes, No. 18694.**—Catalogues and literature, together with terms of business on steel window sashes are requested by a firm in Burma. It is stated that it desires a sole agency for same. Prices c. i. f. Rangoon are solicited.
- Buttons, perfumery, typewriters, etc., No. 18695.**—The Department of Commerce is in receipt of a letter from a business man in Russia stating that he desires to communicate with American manufacturers and exporters of all kinds of buttons, laces, needles and pins, sewing cotton, embroideries, haberdashery, toilet articles, advertising novelties, typewriters, stationery, etc.
- Machinery, No. 18696.**—One of the commercial agents of the Bureau of Foreign and Domestic Commerce reports a possible opportunity in Bolivia for installing a factory for making cotton thread and refining cottonseed oil. A pamphlet giving detailed information relative to this project may be examined at the Bureau or its branch offices. (Refer to file No. 70.)
- Leather, No. 18697.**—A firm in Denmark writes the Department of Commerce that it is prepared to do a cash business in all kinds of leather to be used as belting, etc.
- Hardware, No. 18698.**—An American consular officer in Brazil reports that a business man in his district desires to represent American manufacturers and exporters of hardware. He desires to act on a commission basis. He wishes credit terms of 90 days. Bank references given.
- Shoe laces, etc., No. 18699.**—The Bureau is in receipt of a letter from a firm in England stating that it desires to purchase quantities of shoe laces and iron and brass shoe rivets, etc. References given.
- Rolled gold, etc., No. 18700.**—An American consular officer in India transmits the name and address of a business man who desires to communicate with American manufacturers and dealers in articles made of rolled gold and Canadian gold. Correspondence may be in English.
- Copying presses, suit cases, etc., No. 18701.**—A wholesale and retail dealer in East Africa has informed an American consular officer that he wishes to receive catalogues and full information relative to copying presses, fezzes, suit cases, twine, and wrapping paper. Correspondence may be in English.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, 752 Oliver Building; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 308 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

PROSPEROUS DUTCH NORTH SEA FISHERY.

[Consul Frank W. Mahin, Amsterdam, Netherlands, Sept. 2.]

The fishing industry centered at Ymuiden, at the entrance of the North Sea Canal, is very prosperous this year, at least so far as the catch is concerned. During August 366 steam and 882 sail trawlers brought to Ymuiden \$330,000 worth of fish, against \$196,000 worth brought there in August, 1914, by 477 steam and 674 sail trawlers.

During the first eight months of this year the total value of the catch was \$2,302,000, brought in 2,568 steam and 3,627 sail trawlers. During the corresponding period of 1914 the value was \$1,525,000, brought in 2,917 steam and 3,565 sail trawlers.

As will be noticed, the number of steam trawlers has decreased and the number of sail trawlers has increased this year. Of course these figures mean the arrivals of trawlers at Ymuiden, not the number of different ones.

The increased value of the fish caught this year is partly due to an advance in price in comparison with last year. There is great variation in the price advance of different fish, but the average is put at about 20 per cent.

FOREIGN MARKETS FOR HARNESS AND SADDLERY.

In view of the marked interest manifested by American manufacturers of harness and saddlery, an investigation of the markets of the world has recently been conducted by American consular officers, and reports covering the peculiar conditions prevailing in their respective districts, including the types of harness, etc., in use, the extent of the trade and the possibilities for American participation therein, have been received by the Bureau of Foreign and Domestic Commerce.

It is intended to exhibit these reports in manuscript form at the various branch offices of the Bureau and at the headquarters of different commercial organizations, American firms interested in these reports should immediately address the Bureau so that an itinerary may be prepared.

ROCK OBSTRUCTS NAVIGATION IN BOSTON APPROACH.

The United States Coast and Geodetic Survey, which has been using a wire drag in searching for obstructions to navigation at various points, reports that a rock with 24 feet over it lies nearly $1\frac{1}{4}$ miles 92° true (ESE. $\frac{1}{2}$ E. mag.) from Minots Ledge Lighthouse, and three-eighths mile northeastward of a rock with 25 feet over it previously reported on the track recommended for vessels bound from Boston to Plymouth and the Cape Cod Canal.

The survey says that it is advisable for vessels of a greater draft than about 18 feet, and also for all vessels in a heavy sea, to avoid these spots by passing eastward of the black can buoy which marks the charted $3\frac{1}{2}$ fathom spot lying $2\frac{3}{4}$ miles eastward of Minots Ledge Lighthouse.

LIGHTHOUSE TENDERS WILL HAVE CHARTS FOR SALE.

Arrangements have been made recently by the Lighthouse Service, Department of Commerce, at the request of the United States Coast and Geodetic Survey, to have a supply of charts made available on one or more lighthouse tenders in each lighthouse district on the Atlantic, Gulf, and Pacific coasts of the United States for sale to mariners and others who are desirous of purchasing charts within the waters in which the tenders are operated. The Coast and Geodetic Survey will furnish the charts and will renew all charts requiring correction at such intervals as may be considered proper.

BETTER SHOWING IN COUNTRY'S BUILDING OPERATIONS.

The September reports of building permits issued throughout the country make a good showing, and when taken in connection with the August improvement, compared with the corresponding months in the preceding year, greatly improve the record for the year to date. The total of 65 cities reporting for September, 1915, was \$54,965,052, compared with \$41,530,254 in September, 1914, and the total for the first nine months of 1915 was \$458,464,756, compared with \$481,009,021 for the corresponding period last year. The gain for September was 32 per cent, and the loss for the nine months only 5 per cent.

FRENCH INDUSTRIES SHOW INCREASING ACTIVITY.

[From Office of Commercial Attaché, American Embassy, Paris, France, Sept. 24.]

The French Minister of Labor has made an inquiry among 37,000 industrial and commercial concerns, employing over a million persons in normal times, and states that at the end of July, 1915, 79 per cent of these establishments were in operation, as against only 49 per cent at the end of August, 1914.

Among these establishments the number of employees fell to 35 per cent in August, 1914, but increased to 46 per cent in October, 1914; to 58 per cent in January, 1915; to 64 per cent in April, 1915; and to 69 per cent, or 885,314, in July, 1915.

SAN FRANCISCO PIER CONSTRUCTION DESCRIBED.

[Commercial Agent E. G. Babbitt, San Francisco, Sept. 29.]

A paper read by Jerome Newman, chief engineer of the California Board of State Harbor Commissioners, at the annual meeting of the Pacific Coast Association of Port Authorities, describes the variety of construction represented in the piers on San Francisco's water front, and suggests that the problem of the type of pier best adapted to satisfy conditions will be solved, in time, in connection with this variety in design, by an accurate system of maintenance and repair accounts.

The city's water front has a length of 9.75 miles, of which 3.60 miles is at present used for piers and wharves under the control of the board. In this stretch there are 32 piers in service, 2 under construction, and 1 for which a contract is about to be let. Of the piers now in use 2 are supported on untreated wooden piles, 8 on creosoted piles, 2 on wooden piles incased in concrete shells, 11 on cylinders of plain concrete of obsolete type, and 9 on reinforced concrete cylinders of modern type of construction. Of those under construction one is of creosoted the other of concrete piling.

The untreated wooden pile piers and those on cylinders of plain concrete deposited under water are eliminated from consideration on account of their short life, but each of the other types possesses certain theoretical advantages, and Mr. Newman states that more experience will be necessary before it can be stated positively that any one of them should be adopted as the best.

The board's engineer holds that until more is known about the durability of concrete and until conditions with regard to changes in ocean carriers and in freight-handling methods become settled it would be economically unwise to invest large sums in structures which may become obsolete long before they are worn out.

CONTENT OF GASOLINE VAPOR IN AIR DETERMINED.

Two methods for determining the content of gasoline vapor in air have been the subject of experiments and a report by the United States Bureau of Mines. In one the mixture is introduced into an exhausted glass vessel, is cooled at the temperature of liquid air, the air is removed, and finally the partial pressure of the gasoline vapor is measured by means of a manometer attached to the liquefaction bulb. The second method consists in burning the gasoline vapor in oxygen and from the contraction and carbon dioxide produced calculating the percentage of gasoline vapor. Copies of Technical Paper 115, "The inflammability of mixtures of gasoline vapor and air," which has just been issued, may be obtained by applying to the Bureau of Mines, Washington, D. C.

CONSULAR TRADE CONFERENCES.

Vice Consul Albert G. Ebert, of Montevideo, whose presence in the United States was announced in *COMMERCE REPORTS* for October 2, 1915, will be at the New York office of the Bureau of Foreign and Domestic Commerce on October 15. He will be pleased to meet there business men who wish to know about Uruguay and the River Plate region.

JUTE-CROP FORECAST AND WORLD CONSUMPTION

[Consul E. Haldeman Dennison, Dundee, Scotland, Sept. 24; see also **COMMERCE REPORTS** for Aug. 23 and Oct. 9, 1915.]

The final official forecast of the current Indian jute crop places the area under cultivation at 2,377,316 acres, with an estimated output of 7,428,733 bales of 400 pounds each. The forecast shows a decrease in area of 972,121 acres, or nearly 30 per cent, as compared with the preceding year, while the estimated output is over 3,000,000 bales short of the previous crop.

The preceding year's acreage had been the second largest in the history of the jute crop, while that for the current year is the smallest since 1903. The crop would be insufficient for the world's requirements were it not for the fact that there is a large carry over from the closing season, practically none of last year's jute having reached the Continent, and there will be no demand for supplies from Belgium, Germany, and Austria.

World's Raw-Jute Consumption.

Estimates differ as to the amount of jute that will be consumed during the present season. Some are of the opinion that the tendency has always been to overestimate the world's consuming power. A local trade paper estimates that the total consumption for the season of 1915-16 will amount to only 8,580,000 bales, made up of: United Kingdom—Scotland, 1,000,000; England, 25,000; Ireland, 20,000; total, 1,045,000; Continent, 1,150,000; America, 650,000; other countries, 35,000; Indian mills, 5,200,000; and Indian up country, 500,000. Another firm is of the opinion that the total should be some 300,000 bales greater. In any event, it will require the carry over from the last crop to meet even the lowest estimates. It is estimated—and generally admitted to be correct—that there are about 1,500,000 bales of the old crop remaining.

The "marwarries," or native dealers, were successful last year in forcing up prices in spite of the huge crop, and it is feared that they will be even more successful this year in keeping up prices by regulating the much shorter supply to Calcutta. There is a tremendous demand for the manufactured article, and the jute mills of Dundee are all working at high pressure. Prices for all jute fabrics have risen markedly, and manufacturers are reaping a rich harvest.

MOTOR MACHINERY FOR FRENCH FARMS.

[Consul General A. Gaulin, Marseille, Sept. 20.]

The French Government has issued an order, dated September 7, 1915, under which subventions may be granted to agricultural syndicates and cooperative associations, also to municipalities, purchasing agricultural motor machinery. The maximum amount the subvention provides for is one-third of the purchase price, except in the districts which have suffered from the war. In the latter case the limit is fixed at one-half of the purchase price. This appears to be an excellent opportunity to increase the sale of American machinery of this description, and the names of the associations through which prospective purchasers can be reached most easily are accordingly submitted herewith.

[This list and the addresses of Marseille dealers in agricultural machinery may be had from the Bureau of Foreign and Domestic Commerce and its branches; refer to file 67,109.]

OFFICIAL NUMBERS FOR MERCHANT VESSELS.

The following is a statement of official numbers and signal letters designated to steam screws by the Bureau of Navigation, Department of Commerce, during the two weeks ended October 2, 1915:

Name of vessel.	Official number.	Signal letter.	Tonnage.		Year built.	Where built.	Home port.
			Gross.	Net.			
Ethel S.....	213655	-----	19	13	1915	Buffalo, N. Y.....	Buffalo.
Fort Lee.....	213656	-----	1,080	726	1915	Wilmington, Del.....	New York.
Genesee ^b	213659	LFNJ	2,892	1,782	1900	Sunderland, England...	Do.
Geo. H. Johnson.	213637	-----	172	106	1915	Millford, Del.....	Perth Amboy.
Maumee ^c	213660	LFNK	2,556	1,616	1887	W. Hartlepool, England.	New York.
Muskegon ^d	213636	LFPQ	3,323	2,127	1887	South Shields, England.	Do.
Winneconne ^e	213661	LFNM	1,369	1,151	1907	Sunderland, England...	Do.

^a Foreign-built vessel admitted to American registry under the act of Aug. 18, 1914.

^b Formerly Danish st. s. Finland.

^d Formerly Danish st. s. Gotland.

^c Formerly Danish st. s. Djursland.

^e Formerly Danish st. s. Høglund.

IMPORTS AND EXPORTS OF COPPER.

The total imports and exports of copper at the customs districts of New York, Massachusetts, Philadelphia, Maryland, Virginia, Galveston, New Orleans, San Francisco, Washington, and Michigan during the week ended October 2, 1915, were as follows. Ore, matte, and regulus (copper contents), 3,600,571 pounds, valued at \$417,994; pigs, ingots, and old, etc., 9,858,736 pounds, valued at \$1,713,345. Of the ore, matte, and regulus imported, 1,982,400 pounds came from Cuba and 1,240,017 pounds from Chile. Of the imports of ingots, etc., 2,998,675 pounds came from Chile, 1,978,280 pounds from Canada, 1,490,517 pounds from Japan, and 1,317,678 pounds from Spain.

Of the total domestic exports of copper in pigs, bars, etc., amounting to 16,489,622 pounds, valued at \$2,965,857, 7,628,452 pounds went to Russia, 4,686,763 pounds to England, 2,576,804 pounds to Italy, and 1,402,623 pounds to France.

IDEAL HOME COMPETITION IN AUSTRALIA.

[Sydney Morning Herald, Aug. 31.]

The Institute of Architects has arranged a novel competition in connection with the "Ideal Home Exhibition," shortly to be held at Sydney, and of which 25 per cent of the takings are to be handed over to the Red Cross Society. One of the objects of the exhibition is to stimulate interest in the making of the "ideal home."

In the competition every visitor will be asked to compete (without an entrance fee) in the building, decorating, furnishing, and equipment, as far as possible, of an ideal home from material exhibited at the exhibition. The visitors themselves will judge the competition in the following manner: The winner will be the one whose list of homes and furnishings approximates most closely to that most frequently selected by the whole of the competitors.

CONSTRUCTION WORK ABROAD.**CHINA.**

[Consul General Edwin S. Cunningham, Hankow, Sept. 8.]

New Building for the Bank of China.

The Hankow branch of the Bank of China has signed a contract for the erection of a new bank building in Hankow, at the cost of \$40,000 to \$50,000 gold. The architects are Atkinson & Dallas (Ltd.), Hankow, and the material is to be brick and reinforced concrete. However, there does not seem to be any opportunity for the extension of American trade for this building.

[Consul C. K. Moser, Harbin, Manchuria, Aug. 8.]

Electric Tramway.

It is reported but not confirmed that the board of directors of the Chinese Eastern Railway have awarded the concession to the Russian firm of Barski & Co., at Harbin, to construct an electric tramway between the Pristan and Old Harbin, via New Harbin, and with a branch line to Fuchiatien, the Chinese city. The total length of the line will be about 7 miles and the fare between Old Harbin and the new town is to be fixed at 15 kopecks (equivalent to $7\frac{1}{2}$ cents gold at normal rates of exchange) as compared with the 40 kopecks now charged by the public carriage drivers.

It has been said that the firm of Barski & Co. has some connection with the officials of the Chinese Eastern Railway but this has not been confirmed. A local newspaper of June 24 stated that the construction of the tramway was to begin immediately in order that the laying of the rails might be during the present summer, but no signs of the beginning of work are yet apparent.

HAWAII.

[A. P. Taylor, correspondent, Honolulu, Sept. 20.]

Extensive Public Works on Four Islands.

In a statement just issued by Charles R. Forbes, superintendent of public works of the Territory of Hawaii, at Honolulu, public works on four islands of the Territory, which will soon be under way, will call for the expenditure of approximately \$1,150,000, apportioned practically as follows: Oahu (including Honolulu), \$680,000; Hawaii, \$295,000; Maui, \$120,000; and Kauai, \$55,000.

In Honolulu the old royal palace, which was built for King Kalakaua and is now used as the Government Building, is to have its first remodeling. An electric elevator, to run from the basement to the attic, has just been installed at a cost of \$40,000, and extensive alterations have been made to the interior to give better office space. The new Territorial penitentiary in the suburbs of Honolulu will be finished by the first of the year at a cost of \$150,000. The reconstruction of three piers on the Honolulu water front will entail an expenditure of \$15,000, while the construction of new reinforced concrete piers at the foot of Fort Street (to be known as Piers 8, 9, and 10) will account for a further \$350,000.

New Wharves and Reservoir.

On the island of Hawaii reconstruction work on the Kuhio wharf at Hilo Bay is being done at a cost of \$15,000, while \$47,000 will be

expended on a wharf shed, \$16,000 on wharf paving, \$12,000 for electrical machinery for conveying sugar and general cargo, and \$43,000 on the road approach from Hilo. On the west coast of this island, at the port of Kailua, a new wharf is to be built at a cost of \$12,500, and a new wharf at Napoopoo will cost \$10,000. About \$87,000 will be expended in completing the round-the-island roads.

On the island of Maui a huge reservoir is being built on the slope of the crater of Haleakala, the largest dead volcano in the world, to cost \$50,000.

On the island of Kauai a new wharf is to be built at the port of Waimea to cost \$30,000.

IRELAND.

[Consul Wesley Frost, Cork (Queenstown), Sept. 28.]

Electrical Power from the Shannon River.

A great hydroelectric power project is on foot in Ireland for the utilization of the tremendous head of water constituted by the western loughs or lakes. The falls of the Shannon, below Lough Derg and Lough Ree, are expected to develop not less than 60,000 horsepower even during summer, and the River Erne, below Lough Erne and Lough Oughter is calculated to be capable of nearly 40,000 horsepower. The idea is to provide electric light and power for all the cities of Ireland, on the general plan of the plants at Niagara and Keokuk in the United States.

While this project has been given some prominence in the Irish press, it appears to be still in the hypothetical stage. Newspaper reports state that a capital of \$5,000,000 has been subscribed and that surveys are actually in progress, but that the necessary authorization will be difficult to secure at this juncture. An engineer whose name has been mentioned in connection with the work has promised to advise this consulate whenever concrete bids or tenders become practicable.

MADEIRA.

[Consul General W. L. Lowrie, Lisbon, Portugal, Sept. 18.]

Road Building—New Hotel—Tourist Cars Needed.

A loan of \$100,000 has been negotiated by the Junta Agricola of Funchal, Madeira, for the completion of a road between the city and Torreiro da Lucta, from 5 to 8 miles. A hotel will be built at the upper terminus. Another work of importance on the island is the construction of a road from the pier at Funchal to the Mount Church, situated at an elevation of 2,000 feet. When the work is completed it is planned to operate 8 or 10 tourist cars. The promoters of the project are Dr. Balthazar Gonçalves and Alfredo Guilherme Rodrigues, to whom automobile firms interested should send catalogues.

PORTUGAL.

[Consul General W. L. Lowrie, Lisbon, Portugal, Sept. 21.]

Water and Drainage System—Cottages for Poor People.

The Portuguese Government has authorized the city council of Chaves (Camara Municipal, Chaves) to contract a loan of 120,000 escudos (about \$84,000) for the improvement of the water and drainage system of the municipality and the construction of low-priced

houses which may be used by poor people. The town is in the north of Portugal and has been famous for its mineral waters for more than 200 years.

RUSSIA.

[Consul F. Willoughby Smith, Batum, Aug. 26.]

Slaughterhouse and Refrigerator Plant for the Caucasus.

According to the Kavkaz of August 20, 1915, the Russian Government has decided to construct a large slaughterhouse and refrigerator plant in the Caucasus at either Stavropol or Armavir. American manufacturers interested should communicate in Russian with the Glavnoe Intendantskoe Upravlenie, Petrograd.

The demand for modern machinery for slaughterhouses, refrigerator plants, and cars in Russia is developing rapidly. American manufacturers of these articles are advised to study the requirements of the Russian market, particularly in regard to language, catalogues, quotation of prices, terms, and agencies.

SPAIN.

[Consul Robertson Honey, Madrid, Sept. 8.]

Railway Construction.

The Gaceta de Madrid (official organ of the Spanish Government) publishes to-day a royal decree inviting competition in the preparation of drawings, working plans, diagrams, blue prints, etc., for constructing a railway between Manacor and Arta, Island of Majorca, Spain. Conditions of the competition are annexed. The successful competitor will receive preference over other bidders on the construction of the road if he cares to bid on the construction, and, in any event, he receives a substantial commission on the expense of the construction. The competition closes on November 12, 1915.

[Vice Consul Jose M. Gay, Madrid, Sept. 8.]

Proposals for Concession of a Railway from Ferrol to Gijon.

By royal order the "Ministerie de Fomento" requests bids for the concession of a strategical railway from Gijon to Ferrol, with a guarantee of 5 per cent of the Government. The details and specifications are on file in the "Ministerie de Fomento, Seccion de Ferrocarriles," where they may be seen and to which proposals should be presented before November 19, 1915.

ROT AFFECTS ONTARIO POTATO CROP.

[Consul Felix S. S. Johnson, Kingston, Canada, Oct. 4.]

Potato rot has occurred in all parts of the Province of Ontario, and it is estimated that the crop yield will be 25 to 40 per cent less than anticipated. The rot was caused by the continued wet weather this summer. Low lands suffered more than the high or sandy tracts, but from various sources comes the information that even in sandy soil rot is quite conspicuous.

Ontario potatoes are selling to the retail trade at 80 cents a bag (90 pounds) and New Brunswick for 85 to 90 cents a bag, with the prospect that prices will advance considerably in the next month or two. It is too early to predict what potato prices will be a month hence, as the crop is just being dug in Ontario. Toward the end of October a year ago potatoes were selling wholesale for 65 to 70 cents.

AMERICAN GLASSWARE IN THE AZORES.

(Consul Walter H. Schulz, St. Michaels, Sept. 9.)

A hail storm which struck the western half of St. Michaels recently, causing much destruction among the pineapple hothouses of that section, has brought to light a shortage in local glass stocks. The damage done is estimated at \$25,000, representing entirely broken glass. Every pinery suffered more or less loss, some losing as much as 10,000 panes. The glass imported for this purpose usually measure 12 inches square, although 10 by 12 inch panes are also used.

Glass and glassware imports by the Azores range from \$15,000 to \$83,000 a year and depend largely upon the prosperity of the pineapple industry. At present little or no activity exists in this industry on account of the war, and import statistics probably show a great decline in 1915 importations, as new pineries are not being built for the present. The storm ravages, however, will have to be repaired, and some glass importations are expected.

At present Portugal is the principal source of supply, but there is a disposition to buy in other markets. Thus orders have been placed in recent years in other markets. In 1913 Portugal sold \$83,373 worth of glass to the Azores, or practically all used by the trade, including glassware. Last year, however, out of a total of \$16,557 in imports that country furnished but \$10,310, Germany \$1,394, United States \$1,242, and Great Britain \$588, showing that inroads are being made upon this item of Portuguese trade. The trade believes that foreign glass and glassware is better and stronger than the Portuguese product and although the tariff gives Portuguese producers a big advantage over their competitors in the matter of prices the fact nevertheless remains that the local trade will buy in foreign markets whenever it can possibly do so. This applies especially to glassware, among which should be mentioned tumblers and bottles. The American imports consisted entirely of such articles, despite a duty of 20 reis per kilo or \$0.64 per 100 pounds on bottles and 100 reis per kilo or \$3.20 per 100 pounds on tumblers. Thus far, however, it has been found impossible to import foreign pressed glassware (such as sold in 5 and 10 cent stores in the United States) on account of the tariff. The same may be said of ordinary window panes, which carry a duty of 300 reis per kilo or \$9.59 per 100 pounds. (1 kilo=2.2046 pounds, 1 milreis=1,000 reis=\$0.705.)

While the glass imports have been greatly affected by the war there is little doubt but that the trade will again assume a more or less important position in the trade of the country, especially in view of the large investments represented by the pineries in the island. It is not believed that these investments will be sacrificed. To the contrary, great efforts probably will be made to restore the pineapple industry to its former high position immediately upon the conclusion of peace in Europe.

The estimated number of stock hogs in the United States on September 1 was about 7.2 per cent more than on the corresponding date last year, according to reports made to the Bureau of Crop Estimates, United States Department of Agriculture. Figures given earlier in the year showed that on January 1, 1915, the total number of swine on farms in the United States was 64,618,000, valued at \$637,479,000.

OPPORTUNITIES IN PARAGUAY.

[Consul Samuel Hamilton Wiley, Asuncion, Aug. 17.]

Many letters are received at the Asuncion consulate containing inquiries regarding opportunities for Americans in Paraguay, generally as to opportunities for employment or the prospects of a man with small capital in agricultural or pastoral pursuits.

The opportunities for employment which would warrant making the long and expensive journey to Paraguay are, even during the most favorable times, very limited. The field of unskilled labor is out of the question, as an American could not live on the wages paid to native laborers, with whom he would be in competition. The greater number of the English-speaking population in Paraguay are employed by the railway or the tramway company. The positions in either of these companies which would warrant coming out to Paraguay are in nearly every case filled by men brought from England or the Argentine Republic under contract. Both of these companies have for some time been reducing their working forces.

The cattle business offers practically no field for employment to foreigners. One large cattle company brought to this country a number of cattlemen from the United States; the experiment, however, was not a success, the methods and conditions of the cattle business here being so different from those in the United States that native labor was found to be cheaper and more satisfactory. A concrete example of the scarcity of employment for foreigners at present in Paraguay is found in the fact that practically every day this consulate is visited by Americans of long experience in the country who are seeking employment of any description to tide them over this period of industrial inactivity.

No Opportunities for a Man With Small Capital.

Paraguay in its present state of development does not offer a favorable field for the man with small capital. In mercantile circles there is already an overabundance of small merchants in practically every line. The present crisis will probably result in the failure of many of these small traders.

Agriculture is as yet in such an undeveloped state that the man with small capital would have a difficult time to make a bare living. There is practically no cleared ground for sale. Implements for clearing and developing are costly and labor is inefficient and uncertain. The lack of transportation facilities from one point to another in the Republic and the costly freight rates to markets without the Republic constitute difficulties that would prove serious to the settler with small capital engaged in either agriculture or cattle raising, for it renders him dependent on the local market for the disposition of his products.

There is no Government land available for settlement, neither is there any open cattle range for grazing purposes. Land must be bought or rented. In the case of cattle raising the land must be fenced. It is estimated by cattlemen here that cattle raising can not be carried on profitably on less than a league of land (the Paraguayan league contains 4,633½ acres). A league of land will furnish pasturage for 500 to 800 head of cattle. Land prices run from \$7,000 to \$16,000 per league. Steers are worth, per head, approximately \$25, oxen \$30, cows \$15, bulls \$25 to \$30.

NEW GOVERNMENT PUBLICATIONS.

The Superintendent of Documents, Washington, D. C., announces that he received in stock during the week ended October 2 the following new United States Government publications of a business character, which he will sell at the nominal prices affixed:

Financial Developments in South American Countries, Special Agents Series 103, Bureau of Foreign and Domestic Commerce.—Covering the financial conditions of Argentina, Brazil, Bolivia, Chile, Peru, and Uruguay, 1914-1915. Price, 5¢.

Soil Reconnaissance in Alaska, with an Estimate of the Agricultural Possibilities.—Comprehensive work on soil and agricultural features of Alaska, covering Cook Inlet-Susitna, the Yukon-Tanana, and the Copper River regions, with many illustrations and maps. Price, 35¢.

Miners' Wash and Change Houses, Mines Bureau Technical Paper 116.—Practical information relative to the construction, location, fitting, etc. Price, 10¢.

Use of Low-Grade Fuel in Europe, Mines Bureau Technical Paper 123.—Embracing the utilization of high-ash coals, wood refuse, powdered fuel, etc. Price, 10¢.

Viscosity of Porcelain Bodies High in Feldspar, Standards Bureau Technologic Paper 50.—Technical work covering tests of viscosity, with comparative tables. Price, 5¢.

Use of Sodium Salts in Purification of Clays and in Casting Process, Standards Bureau Technologic Paper 51.—Technical work covering effect of alkalies, electrical separation, functions of the alkalies, viscosity of clay mixtures, tensile strength, etc. Price, 15¢.

Difference in Weight between Raw and Clean Wools, Standards Bureau Technologic Paper 57.—Covering shrinkage, sampling, weighing, commercial process, etc., with comparative tables. Price, 5¢.

Teaching of Community Civics, Education Bureau Bulletin 23, 1915, reprint.—Interesting work on teaching of civics, prepared by Special Committee of the Commission on Reorganization of Secondary Education. Price, 10¢.

Uses of Commercial Woods of the United States, Part 1, Cedars, Cypressess, and Sequoias, Forest Service Bulletin 95, reprint.—Covering definition of physical properties of wood, and discussions on uses of cedars, cypressess, and sequoias. Price, 10¢.

Enforcement of the Food and Drugs Act, Rules and Regulations for, Agriculture Department Circular 21, new edition.—Covering text of the original law, with all amendments to date and regulations of the department. Price, 5¢.

Nitrogen Processed Fertilizers, Agriculture Department Bulletin 158, reprint.—Covering types of processed fertilizers, chemical examination, with discussion. Price, 5¢.

Production of Sulphuric Acid and the Proposed New Method of Manufacture, Agriculture Department Bulletin 283.—Covering methods of manufacture, factory considerations, etc. Price, 10¢.

Strength Tests of Structural Timbers Treated by Commercial Wood-Preserving Processes, Agriculture Department Bulletin 286.—Summary giving objects of the tests, material tested, methods of treatment, and results. Price, 5¢.

Game Laws for 1915—A Summary of the Provisions Relating to Seasons, Export, Sale, Limits, and Licenses, Farmers' Bulletin 692.—Gives the salient features of the game laws of the various States, with the Federal statute for the protection of migratory birds. Price, 5¢.

Specialists of the United States Department of Agriculture have produced a new and simple device for sampling grain, seeds, and other material. Its purpose is to secure a reliable sample from a larger portion of the material to be examined than would be possible otherwise. The principle is the distribution, by gravity, of the material to be sampled over a cone which is provided with separate ducts in a way to insure thorough mixture of the grain.

C. I. F. QUOTATIONS FOR HONGKONG.

[Consul General George E. Anderson, Hongkong, Aug. 29.]

The unwillingness of American exporters to meet the customs and needs of Hongkong and other Far Eastern ports in the matter of c. i. f. quotations for goods is costing such exporters a very material share of the business now being placed in almost all lines. Such quotations for Hongkong are almost a necessity from the nature of the trade. The great mass of imports of goods of all classes into Hongkong is handled on what amounts practically to a commission basis. A foreign import house places an order abroad on the basis of an order from Chinese buyers here. To secure such order from the Chinese buyers the foreign house usually finds it necessary to name to the Chinese buyer a definite fixed price so that the buyer will know exactly what his purchase will cost him in Hongkong.

Manifestly it is impracticable, if not impossible, for the foreign importer here to estimate accurately freight and other expenses from the American factory to the seaboard, even where ocean freights are known in advance, and usually the actual freight can not be definitely known, since the size and nature of the packages or cases containing the goods can not be known in advance. Quotations f. o. b. at the factory, therefore, mean that the Hongkong importer shall not only allow for the cost of the goods at the factory and for such freight and other expenses as can be ascertained but it means also that a liberal margin shall be added to such cost and ascertained expenses to cover unknown expenses which can not be accurately foreseen or ascertained in advance. Even in the f. o. b. quotations commonly given by American exporters differences have arisen in that some American manufacturers and exporters have held f. o. b. to mean "prices delivered at seaboard," with all transfer and other expenses attending loading to be paid by the importer here instead of meaning delivery on board the steamer.

It is much more practicable from every standpoint that the exporter ascertain and include in his quotations the cost of the goods at their destination; and, aside from its practicability, this method suits the necessities of trade here from other standpoints. A recent large order for glass was placed in Great Britain instead of in the United States by a Hongkong firm solely because the foreign importer here was in a position to quote a final complete and acceptable price on the English glass, while he was not in a position to indicate what the American glass would cost, though, from the f. o. b. quotation had, it would have probably cost less than the English product. After long experience with traders of various nations, Chinese dealers here insist upon a fixed final price for goods they purchase. They can judge of possible trade for them with their clientele among native dealers and consumers here only when they can know the actual cost in local currency, and this is practicable only on the basis of a definite price fixed at the time the order is given.

A tallowwood tree 42 feet in circumference at the base has been left standing near Wingham, New South Wales. The timber resources and sawmilling operations in that part of Australia were described in Daily Consular and Trade Reports for April 22, 1913.

CONCRETE RESULTS OF TRADE-EXTENSION WORK.

[Consul Lester Maynard, Amoy, China.]

The European war has created a situation which has made it possible to introduce new lines of American goods into the Amoy consular district. The most important direct results of the recent efforts of this consulate to extend trade have been in placing a local German firm in touch with American manufacturers and exporters. This firm formerly was the agent of a European condensed-milk company and had created a considerable demand for the European article. Upon the outbreak of hostilities in Europe the agency was taken from it and a branch house established for supplying milk to this district. Through a trade opportunity transmitted by the Amoy consulate the firm has secured the agency for an American brand, and there is every possibility of its being able to hold its old trade and supply its former customers with American milk.

Members of the German firm referred to have also availed themselves of the catalogues and trade directories in this consulate and are in communication with New York houses regarding chemical fertilizers, piece goods, thread, and dyes.

American Tin Plate, Laundry Machinery, and Provisions.

A trade opportunity on tin has resulted in an Amoy tinning company making satisfactory arrangements with the Shanghai office of an American steel-products company and it is now using American tin in the manufacture of cans. As the local plant uses about 5,000 boxes of tin per annum this gain is important.

On April 29, 1914, a trade opportunity was forwarded advising that the Hope and Wilhelmina Hospitals required certain machinery. [This was published as Trade Opportunity 13207, in Daily Consular and Trade Reports for June 13, 1914.] The physician in charge now states that from the catalogues received and as a result of the trade opportunity one boiler, one engine, one washing machine, and one drying machine have been ordered, and that if these articles prove satisfactory further orders will be placed from the catalogues on hand.

As a result of changed conditions due to the European war it has been possible to make considerable headway in the introduction of American provisions of various kinds into the Amoy district. By the distribution of catalogues and price lists and by explaining to retailers the advantages of direct importations several orders have been placed, principally in San Francisco, for goods of this description.

Attracting Merchants to Catalogue Library.

Various methods have been tried at this consulate to attract merchants to its catalogue library. Formerly a detailed index of catalogues on file was printed annually and copies supplied to all who might be interested, but the results did not justify the expense, as the index was either lost by the merchant or not thought of at the time when he desired to purchase goods.

A new method is now being tried. Upon receipt of a new catalogue a circular letter is forwarded to the firms likely to be interested,

in the hope of bringing a representative to the consulate, so that various catalogues may be shown and explained to him. This method has just been introduced, and it is difficult to say whether it will prove successful or not. Whenever possible a member of the staff of this consulate is sent with a new catalogue, to show it to the merchants who might become interested, but as the staff is much overworked there is little time to systematically carry out this method, and, in addition, it is always better to get the merchant to visit the catalogue library, where it is almost certain his requirements can be met.

Cooperating With the Consular Service.

One of the most difficult parts of trade-extension work is the failure of the American manufacturer or exporter or his distributing agent abroad to notify the consul of the placing of agencies or of the sale of goods as a result of a "trade opportunity" emanating from his office. The apparent indifference of the exporter after he has secured one order and his failure to advise the consulate make it difficult for the consul to know whether or not he is approaching the problem in the right manner; and it is usually by chance and in an indirect way that he learns of success, and sometimes long after the transaction is closed. This gives him little or no opportunity to follow up his initial efforts. A little cooperation would not alone greatly encourage the officer but would show him the weakness or strength of his methods and would enable him to follow the successful lines to the gain of American exporters.

NEW DRY DOCK FOR ROTTERDAM.

[Consul General S. Listoe, Rotterdam, Netherlands, Sept. 13.]

An automatic dry dock, built by the Netherlands Shipbuilding Co., of Amsterdam, for the Wilton's Machine Works & Shipbuilding Yard, at Rotterdam, arrived here a few days ago. As the dock was too bulky to pass the locks of the North Sea Canal, it has been built on land at Schellingwoude, outside the Orange Locks, and after completion it was towed to Rotterdam by way of the Zuider Zee, past Helder.

The dock consists of three sections, coupled together and admitting of being uncoupled. Its end sections are pointed. It has eight water-tight cross bulkheads, three water-tight bulkheads lengthwise, and four water-tight coupling bulkheads, constituting the two coupling chambers. The dock will be provided with three main pumps of 90 horsepower each, able to work combined or separately. Besides these there will be three wash pumps, each provided with a motor of 35 horsepower. All pumps are of the centrifugal type with vertical axle.

The pumps are to be worked from a service building on the deck of the air compartment of the middle section of the dock. Here are also the main switchboard, the water indicator, and the air compressor with motor.

The new dock has a lifting capacity of 12,500 to 13,000 tons, and can accommodate ships measuring up to 13,000 registered tons.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Medical supplies, No. 2697.—Sealed proposals will be received at the Field Medical Supply Depot, 21 M Street NE., Washington, D. C., until October 20, 1915, for furnishing and delivering 10,000 spools zinc adhesive plaster, 500 canvas covers, and 200 folding stools.

Shipbuilding ways, No. 2698.—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until November 13, 1915, for shipbuilding ways and roadway to building ways at the navy yard, Charleston, S. C. Plans and specifications may be obtained on application to the Bureau of Yards and Docks or to the commandant of the navy yard named.

Hulls, No. 2699.—Sealed proposals will be received by the lighthouse inspector, Milwaukee, Wis., until October 25, 1915, for furnishing two motor-boat hulls. Blank proposals and particulars may be had on application to the above-named office.

Panama Canal supplies, No. 2700.—Sealed proposals will be received at the office of the general purchasing officer of the Panama Canal, Washington, D. C., until October 20, 1915, for furnishing, by steamer, free of all charges, on dock at either Colon (Atlantic port) or Port of Ancon (Balboa, Canal Zone) (Pacific port), Isthmus of Panama, the following articles: Pneumatic hoists, hydraulic jacks, magnetic chucks, spring steel, pig iron, pig lead, malleable-iron castings, bronze bars, nails, twist drills, reamers, pipe wrenches and parts, gongs, water-closets, building brick, fire brick, fire clay, foundry clay, silica grit, silica sand, thumb tacks, muclage, wrapping paper, blue-print paper, putty, sal soda, coal tar, sal ammoniac, carbon bisulphide, fish oil, alcohol, varnish, linseed oil, japan drier, shellac, white zinc, red lead, white lead, lampblack, and paints. Circular No. 976.

Construction work, No. 2701.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until November 18, 1915, for the extension, remodeling, etc., of the United States post office at Boise, Idaho. Drawings and specifications may be obtained from the custodian at Boise or from the Washington office.

Medical supplies, No. 2702.—Sealed proposals will be received at the Medical Supply Depot, United States Army, 543 Greenwich Street, New York City, until October 18, 1915, for furnishing and delivering at that depot 500 cases of toilet paper and 72 rolling invalid chairs.

Panama Canal supplies, No. 2703.—Sealed proposals will be received at the office of the General Purchasing Officer of the Panama Canal, Washington, D. C., until October 18, 1915, for furnishing, by steamer, free of all charges, on dock at either Colon (Atlantic port) or Port of Ancon, Balboa, Canal Zone (Pacific port), Isthmus of Panama, the following articles: Frames and covers for flooding and sluice valves, circular steel stairways, crane runways, ladders and cutter heads for dredge, switch points, frogs, cast-iron face and floor plates, lathe, upright drill, switchboards, voltmeter, steel cable, barbed wire, steel or iron pipe, copper tubing, bronze-wire cloth, wire staples, rivets and burrs, chisels, blacksmith flatters, files, blacksmith punches, hammers, hatchets, saws, saw blades, scythe blades, tinner's shears, taps, renmers, stocks and dies, drills, bits, vises, carpenter's braces, portable forges, wrenches, snaths, oars, onrlocks, rakes, fusible plugs, marine clocks, steam gauges, water gauges, steam whistles, automobile bells, marine lights, steam-gauge lamps, oil cups, grease cups, window glass, water coolers, china-ware, agate cups and pitchers, glass pitchers, drinking glasses, cake griddles, soup spoons, door mats, towels, cork board, leather fillets, asbestos cement, rubber bands, paper clips, pencils, bond paper, and lumber. Circular No. 974.

Hoisting engine, No. 2704.—Sealed proposals will be received by the Lighthouse Inspector, Tompkinsville, N. Y., until October 23, 1915, for furnishing a four-drum, double-cylinder hoisting engine for United States lighthouse tender *Larkspur*. Further information may be obtained on application to the above-named office.

Panama Canal supplies, No. 2705.—Sealed proposals will be received at the office of the General Purchasing Officer of the Panama Canal, Washington, D. C., until November 4, 1915, for furnishing fuel oil, by steamer, free of all charges, at either Cristobal (Atlantic port) or Port of Ancon (Balboa, Canal Zone) (Pacific port), Isthmus of Panama. Circular No. 977.

Vault, No. 2706.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until November 2, 1915, for the removal of the old and installation of a new vault door and the enlargement of the vault (including the installation of lining plates, metal vault equipment, and electric conduits and wiring) opening into the cashier's room, in the United States post office at Buffalo, N. Y. Copies of drawings, specifications, etc., may be had on application to the Washington office or to the custodian of the building in Buffalo.

PAPUAN OIL WELLS.

Writing from the Vailal oil fields to the Department of External Affairs on July 21, the Australian Commonwealth Government oil expert (Dr. Wade) gives details of a quantity of oil obtained from the Papuan wells, which he had sent to Port Moresby for dispatch to Melbourne.

Dr. Wade states that he has sent 60 gallons, obtained from the Cypher bore, which is equal to the contents of two American barrels. This might be considered as the first actual shipment of oil from the territory of Papua or British New Guinea. The plans for developing the petroleum deposits in Papua were fully described in **COMMERCE REPORTS** for March 4, 1915.

UNEMPLOYMENT IN HOLLAND.

[Consul Frank W. Mahin, Amsterdam, Netherlands, Sept. 17.]

According to local press reports just published on unemployment in this country on August 1, rendered by 32 trade societies, the number of workless people was 9,893, a reduction from 10,538 July 1. This reduction was almost entirely in the diamond-working trade.

The number of unemployed in all these trades was 19,387 on September 1, 1914. The number has gradually decreased each following month.

The percentage of unemployment ranges from nothing up to 59 in these trades, the average being around 20.

COTTON IN THE CAUCASUS.

[Consul F. Willoughby Smith, Batum, Russia, Sept. 7.]

The Chamber of Commerce of Tiflis reports that from January 1 to June 1, 1915, 144,450 bales (of 500 pounds) of raw cotton were shipped from the Caucasus to central Russia. The raw cotton remaining in the Caucasus is estimated at 7,225 bales (of 500 pounds). Owing to unfavorable climatic conditions the quality is below the average.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, 752 Oliver Building; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 923 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Valves, No. 18702.—A firm in Burma informs an American consular officer that it wishes to correspond with American manufacturers and exporters of valves. Catalogue and full information should be sent at once.

Coloring materials, No. 18703.—A business man in the United States writes the Department of Commerce that one of his correspondents in India desires to communicate with American manufacturers and exporters of materials to be used in coloring yarn.

Rubber goods, electrical supplies, etc., No. 18704.—An American consular officer in India reports that a company in his district desires to be placed in communication with American manufacturers and exporters of rubber surgical and medical goods, electrical supplies, such as lamps, globes, shades, brackets, fixtures, fans, etc. It is explained that cheap goods are generally popular in that district. The firm will arrange to pay cash against shipping documents forwarded through the foreign banks. Correspondence may be in English.

Lamps, patent medicines, etc., No. 18705.—A wholesale and retail merchant in Africa writes an American consular officer that he desires to receive catalogues and full information relative to lamps, patent medicines, shears and scissors, wire nails, etc. Quotations are desired c. i. f. destination, if possible. Correspondence may be in English.

Wood, No. 18706.—A firm in the United States writes the Bureau that one of its correspondents in the Netherlands desires to represent American exporters of mahogany, walnut, oak, satin walnut, cypress, pitch pine, maple, etc.

Waterproof paper, roofing materials, etc., No. 18707.—An American consular officer in Burma transmits the name and address of a firm in his district which desires to receive full information relative to a sole agency for the sale of waterproof paper, roofing materials, etc. Prices should be made c. i. f. destination.

Enamel powder, No. 18708.—An American consular officer in Siberia transmits a letter from a business man in his district who desires to communicate with American manufacturers and exporters of enamel (powder and ground) for making iron-enameled signs. Samples of the material desired may be examined at the Bureau or its branch offices. (Refer to file 66086.) The man requests that a sample lot of 100 kilos each of powder and ground enamel be sent at once. He is willing to make the necessary deposit to cover the cost of such samples.

Cigarette paper, No. 18709.—An American consular officer in India reports that a firm in his district desires to be placed in communication with American manufacturers of cigarette paper.

Sulphate of barium, No. 18710.—The commercial attaché of the Department of Commerce in France reports that a professional man in Spain desires to communicate with American firms which are interested in the development of deposits of sulphate of barium.

Glue, No. 18711.—The Bureau is in receipt of a letter from a business man in Cuba who desires to communicate with American manufacturers of glue made from collected refuse.

Galvanized-iron pipe and cement, No. 18712.—An American consular officer in Brazil reports that a firm in his district desires to obtain catalogues and full information relative to galvanized-iron pipe and cement.

Chemicals and dyes, No. 18713.—A firm in India informs an American consular officer that it desires to be placed in communication with American manufacturers and exporters of chemicals and dyes.

Pork, No. 18714.—The Bureau has received a letter from a firm in British Guiana expressing its desire to establish connections with American packers of fatback pork.

SPECIAL GOODS NEEDED IN SPAIN.

[Cablegram from the American Consulate, Seville, Oct. 8.]

There is a shortage here of knitted and cotton gloves, metal dress fasteners, and rubber overshoes.

AMERICAN CANNED TOMATOES IN ENGLAND.

[Consul Homer M. Byington, Leeds, Sept. 15.]

Owing to war conditions, difficulties have arisen in securing the supplies of canned tomatoes and purée usually obtained from Italy, and of late large quantities of these American goods have been noticed in the Leeds grocery stores. Inquiries indicate that they have not been imported direct, but have been secured from large importing houses in Liverpool. Good sales are reported, and there is no doubt but that there will be a continued steady market in Leeds for these products.

[A list of Leeds wholesale grocers may be had upon application to the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 06037.]

FRANCE REGULATES SALE OF FROZEN MEAT.

[Commercial Attaché C. W. A. Veditz, American Embassy, Paris, Sept. 11.]

In order to regulate the sale of frozen meat in Paris, the Prefect of Police has decided that imported frozen meat, placed in cold storage under the direction of the Bourse du Commerce, can be sold only after examination by the veterinary inspectors, and when sold must bear a stamp indicating that the meat is imported frozen meat.

Every piece of frozen meat thus imported, weighing more than 3 kilos (6.61 pounds), must bear a ticket with the required inscription; and all invoices for the meat, whether wholesale or retail, must legibly specify the net weight, nature, and price per kilo of the goods sold. All meat must be labeled by retail butchers, indicating the price.

GREEK IMPORTS OF AMERICAN WHEAT AND FLOUR.

[Vice Consul Alfred B. Thomson, Saloniki, Sept. 8.]

The Saloniki wheat market is now being supplied almost entirely by the United States. Comparative statistics showing the importation of this cereal at Saloniki during the first six months of 1914 and 1915 show that of a total of 5,105.7 metric tons (1 ton=2,204.6 pounds) imported during the first half of the present year, 4,781.2 tons were of American origin. Attention is also drawn to the fact that the importation of wheat during the first six months of the current year was less than one-half of the amount imported in the corresponding period of 1914. The amounts for the corresponding periods of the two years are:

Countries of origin.	1914	1915	Countries of origin.	1914	1915
	<i>Metric tons.</i>	<i>Metric tons.</i>		<i>Metric tons.</i>	<i>Metric tons.</i>

Turkey.....	1.1				

Large Importation of American Flour.

There is a large importation of American flour in this market. During the first six months of 1915 the United States supplied 6,390 metric tons of the total of 7,341.3 tons of flour received at this port. (One metric ton=2,204.6 pounds.)

During the corresponding period of 1914 the United States supplied this market with only 712 metric tons of flour, out of a total importation of 8,062.8 tons. The flour was imported chiefly from Germany, Italy, Roumania, and Bulgaria. The amounts for 1915 by months are:

Countries of origin.	Flour imports.	Countries of origin.	Flour imports.	Countries of origin.	Flour imports.

THE RAILWAYS OF PERU.

Consul General William W. Handley, of Callao, has transmitted a 300-page history of the railways of Peru. The book, which is printed in the Spanish language, is replete with maps and photographs and describes in detail the railway development of that Republic up to 1908. The volume may be seen on application to the Bureau of Foreign and Domestic Commerce or its branch offices; refer to file No. 66711.

WELSH COAL MINERS GET INCREASED WAGES.

[Vice Consul William L. Jenkins, Swansea, Sept. 15.]

The independent chairman of the South Wales coal conciliation board, on September 14, 1915, gave his decision on the application of the South Wales Miners' Federation for an increase in the wage rate. The miners applied for a 12.5 per cent advance, and the mine owners made a counteroffer of 5 per cent. As the parties were unable to agree, the independent chairman was called in for a deciding vote. He granted the workmen their full demands.

The existing percentages were 18½ above the new 1915 standard (see *COMMERCE REPORTS* of Aug. 19, 1915, p. 886), or 72.5 per cent above the old 1879 standard. The recent award will make the existing wages 30½ per cent above the new, or 96½ per cent above the old standard. This means that the workmen will be paid at the rate of 36½ per cent in excess of the maximum limit specified in the recently expired agreement. This new advance will be made retroactive to August 21, in accordance with the Government award.

In money terms the minimum wage of the coal miner prior to the new award was \$11.88 a week. With the present 12.5 per cent addition, this minimum will be raised to \$13.36 a week. A local newspaper makes the following comment: "Miners in the coal field are at present in a prosperous state, especially when it is borne in mind that not more than 2 per cent of the coal hewers are down to the minimum limit. The money earned by the lowest paid laborer in the coal field, as apart from the various other more highly paid classes, will now be \$8.89 per week."

[A report on coal-mining profits in the South Wales field was published in *COMMERCE REPORTS* for Sept. 28, 1915, giving financial statements as presented to shareholders at the annual meetings of the companies.]

BIBLIOGRAPHY OF CHEMISTRY OF GAS MANUFACTURE.

A bibliography of the chemistry of gas manufacture has just been issued by the United States Bureau of Mines. The references in this bibliography are selected from a much larger list, gathered by the Bureau during several years of research work on problems dealing with the chemical behavior of hydrocarbons. No attempt is made to cover every phase of gas manufacture, including the construction and operation of plants, the object being to present a bibliography of carefully chosen references dealing with the chemistry of gas making and the chemical changes involved in the production of combustible gases.

In view of the fact that there is no such published bibliography, the list, together with its cross references, is published by the Bureau of Mines in the hope that it will serve as an efficient guide for investigators, chemists, and engineers, and for operators of gas plants.

Copies of this document, Technical Paper 120, may be obtained by addressing the Bureau of Mines, Washington, D. C.

The low price of silver has not noticeably lessened mining and development in the Cobalt camp, says the Canadian Government Labor Gazette. The price of silver, which it mentioned as 47 cents per ounce, has since gone up, and is now about 50.6 cents.

RECENT AMERICAN TRADE STATISTICS.

The imports, duties collected, and exports for the week ending October 9, 1915, at thirteen principal customs districts of the United States were as follows:

Districts.	Imports.	Duties collected.	Exports.
Georgia (Savannah)	\$6,639	\$445	\$402,131
Massachusetts (Boston).....	3,285,584	139,173	1,363,777
New York	20,335,747	2,833,149	38,964,063
Philadelphia	939,781	262,864	2,998,703
Maryland (Baltimore).....	490,562	55,877	2,077,080
Virginia (Norfolk)	14,036	41,817	1,569,348
New Orleans	1,287,627	70,959	2,036,806
Galveston	224,058	2,933	8,161,906
San Francisco	1,604,431	62,551	1,649,433
Washington (Seattle).....	2,216,422	24,715	2,238,434
Buffalo	740,134	10,955	1,835,354
Chicago	532,798	114,659
Michigan (Detroit)	580,811	41,025	3,987,846
Total	32,864,630	3,691,113	67,744,927

The above figures show a favorable balance on merchandise transactions for the week ending October 9 in the 13 customs districts of \$35,880,297. The 13 districts cited handled about 91 per cent of the import and export business of the country, based on the transactions in July, 1915.

Cotton exported during the week ending October 9 amounted to 156,365 bales, making the total since August 1, 1915, approximately 811,484 bales.

GUATEMALA DESIRES UNITED STATES EXHIBITS.

The Government of Guatemala has indicated, through its consular service, that it believes there would be mutual advantages if American manufacturers and exporters were to avail themselves of the opportunity to send exhibits to the National Exposition of Guatemala and Fiesta of Minerva, which will be held in Guatemala City, capital of the Republic, for two weeks, beginning October 31. A special invitation has been extended for exhibits from the Gulf Coast.

There will be no customs fees for any articles that may be submitted for this exposition, and space in the pavilions will be free to exhibitors. The only cost to be met will be that of transportation between the United States and Guatemala City. Each individual exhibit, however, is limited to 800 pounds, and where the weight exceeds 800 extra transportation will be charged at the exposition city.

Special facilities, it is stated, will be afforded to make the results as beneficial as possible to those who may participate in the enterprise. Competent Spanish demonstrators will be in charge, and literature in Spanish and English will be distributed in regard to the goods shown.

A special agent of the United States Bureau of Foreign and Domestic Commerce, who is now in the Gulf States, has taken up the matter of sending exhibits from those States, particularly with makers of cotton sacks. Goods should be addressed to El Señor Director de Exposición, Guatemala City, Guatemala.

PORT STATISTICS FOR PIRÆUS, JANUARY-JUNE.

[Vice Consul George P. Waller, jr., Athens, Greece, Sept. 11.]

Statistics showing the movement of steamships and sailing vessels at Piræus, which is the port of Athens, have been made public by the port commission of Piræus. One of the most interesting features in the shipping situation here is the tremendous increase in the activities of the Greek merchant marine since the cutting off by the war of certain foreign lines which were formidable competitors of the local companies. This has resulted in enormous profits, and the indications are that these native organizations are so firmly intrenching themselves that they will probably retain a large part of the business after the war. The port statistics for the first six months of 1915 are: Number of vessels arrived and cleared, 3,903; gross tonnage, 2,460,816; net tonnage, 1,470,706; arrived from interior ports, 1,385; tonnage (gross), 973,785; arrived from foreign ports, 643; gross tonnage, 1,487,031; net tonnage, 892,256. According to nationality and tonnage, the arrivals and departures were:

Nationalities of ships.	Entered and cleared.	Gross tonnage.	Net tonnage.
Steamers—			
Greek	1,632	1,435,731	785,518
French	(e)	242,733	144,512

e Not given.

SHIPBUILDING ACTIVE IN THE NETHERLANDS.

[Commercial Attaché Erwin W. Thompson, American Legation, The Hague, Aug. 27.]

Shipbuilding in the Netherlands has been active during the first half of 1915. Fourteen new steamships and one motor boat, of a total net tonnage of 31,055, were completed, and 64 steamers, of 269,000 net tons, were in process at the end of June. Besides these, 6 steamers, of 12,432 net tons, were bought from foreign yards. The whole Netherlands merchant marine, on June 30, 1915, included 460 steamers of 890,964 net tons.

[A previous report on active Dutch shipyards was published in *COMMERCE REPORTS* for Mar. 4, 1915.]

The Chinese post office now handles yearly over 4,000,000 parcels, weighing 30,000,000 pounds.

YEAR'S RECORD SHOWS RADIO'S VALUE IN SAVING LIVES.

During the fiscal year 1915 the radio inspectors of the United States Bureau of Navigation reported 26 cases of vessels leaving American ports which met with accident or disaster, requiring the use of wireless to summon assistance. Four of these were from fire; 12 were from running ashore, stranding, or getting into an ice jam; 3 were from the breakage of machinery; 4 resulted from collisions; 1 from shifting of cargo; 1 vessel was storm-battered and water-logged; and 1 was torpedoed. Excepting in the case of the *Lusitania*, which was torpedoed, the assistance thus rendered resulted in but two lives being lost. Since the close of the fiscal year the disasters occurring have been:

On September 13, 1915, the Fabre Line steamship *Sant' Anna*, bound from New York to Naples with 1,700 Italian reservists and crew aboard, caught fire in mid-ocean and all persons on board were saved. The SOS call brought the steamship *Ancona* to the assistance of the disabled vessel and 600 persons were taken off. The *Sant' Anna* then proceeded to port, convoyed by the *Ancona*, and the entire 1,700 passengers and crew were saved.

Six days after the *Sant' Anna* disaster the Greek liner *Athinai*, bound from New York to Piraeus, caught fire in mid-ocean and was abandoned by the passengers and crew, numbering 470. The call for assistance was answered by the steamships *Tuscania* and *Roumanian Prince*; 341 persons were taken on board the *Tuscania*, the remaining 129 being taken off by the *Roumanian Prince*. The vessel was entirely destroyed.

The use of radio apparatus on vessels carrying passengers or with 50 or more in the crew is now accepted as essential to the safety of those on board, and the report of the *Athinai* shows conclusively that many persons might have been lost and perhaps the cause of the disaster never known had not this vessel been equipped with radio apparatus.

IMPORTS OF POTASH SALTS.

The following table shows the quantity and value of the imports of potash salts into the United States during the month of August and the eight months ending August, 1914 and 1915. The items are so grouped as to show the potash salts used chiefly as fertilizers and other potash salts. The ton given is the long ton of 2,240 pounds.

Articles.	August—				Eight months ending August—			
	1914		1915		1914		1915	
Fertilizer salts:	<i>Tons.</i>	<i>Value.</i>	<i>Tons.</i>	<i>Value.</i>	<i>Tons.</i>	<i>Value.</i>	<i>Tons.</i>	<i>Value.</i>
Kainit	25,327	\$119,578	317,205	\$1,484,140	6,646	\$94,818

QUICKSILVER AND VERMILION AT HONGKONG.

[Consul General George E. Anderson, Hongkong, Aug. 25.]

The demand for quicksilver in Hongkong has become quite acute in the past few weeks with the result that present holders are almost able to fix their own prices for their holdings. Several inquiries have been received at this consulate general of late as to the supply in and prices of quicksilver from the United States.

As indicated in previous reports from this consulate general considerable quantities of this metal are imported into Hongkong each year for the manufacture of vermilion. The chief source of the supply of metal, or rather of cinnabar, the chief ore, has been in China in the vicinity of Yochow. This district has furnished the vermilion industry in Hongkong with the mineral for many years. The supply of quicksilver from year to year has varied greatly, the exports of the metal from China, for example, being 107,066 pounds in 1910; 40,933 pounds in 1911; 9,466 pounds in 1912; 4,666 pounds in 1913, with recovery to 131,466 pounds in 1914, with a customs valuation of \$69,869. There are no details as to the export of cinnabar, since this ore is not specified in the customs returns, but the course of the trade recently is indicated by the fact that the export of cinnabar from Yochow in 1914 was placed at 61,600 pounds, as compared with 26,000 pounds in the previous year. Of the exports of quicksilver, Hongkong on an average takes about 80 per cent of the whole. The trade ran a regular course in increasing volume up to 1910, since when, as a result of political and other disturbances in the portion of China, whence the supply has been obtained, it has steadily declined until last year.

While last year's production was a return to the former volume of the trade, the supply of quicksilver and cinnabar from China has not been sufficient for the vermilion industry here and for the export of quicksilver itself, which has been undertaken in considerable volume at times. In the course of the trade, especially in recent years, considerable quantities of quicksilver and cinnabar have been imported from Germany and Japan. These sources of supply have been shut off of late, and this has given rise to the special demand for the metal or ore from the United States at the present time.

The metal is imported in flasks containing about 80 pounds, which are returned for refilling. At present the metal is selling as high as \$300, local currency, or about \$122 gold, per picul of 133½ pounds, as compared with about \$130, local currency, or \$55.90 gold, per picul a year ago. There is a very small stock now on hand, and the vermilion industry is almost at a standstill for the time being. The export of vermilion has fallen off considerably of late as a result of the condition of the quicksilver trade. Vermilion is now quoted in the Hongkong market at from \$140 to \$160, local currency, or from \$58.80 to \$67.20 gold, per case. Formerly the product was packed in small packets containing a Chinese tael or 1½ ounces to a package and 1,000 packages to the case. At present the packets contain about 0.88 of a tael, or 1.17 ounces, to the packet with 900 packets to the case, or about 66 pounds avoirdupois to the case, net.

Five new Japanese consulates in Manchuria and three in eastern Mongolia are proposed in the Government budget at Tokio for 1916.

FOREIGN TARIFFS.

AUSTRALIA.

[Commonwealth of Australia Gazette, No. 80, July 24, 1915.]

Prohibition of Electric and Magnetic Belts.

A proclamation of the Governor General of the Commonwealth of Australia, dated July 21, 1915, prohibits the importation into Australia of electric or magnetic belts, or of any belt which is alleged or intended to produce a therapeutic effect by electric or magnetic influences.

[Commonwealth of Australia Gazette, No. 91, Aug. 14, 1915.]

Prohibition of Silencers for Firearms.

The importation into Australia of Maxim and other similar silencers for use with firearms is prohibited by a proclamation of August 11, 1915.

BRITISH GUIANA.

[Official Gazette (Extraordinary), Aug. 16, 1915.]

Increase in Duties and Taxes.

An ordinance enacted by the Government of British Guiana August 16, 1915, and immediately effective, provides for an export duty of \$0.01 per proof gallon on rum and of \$0.035 per 100 pounds on rice exported from the colony. The import duties on brandy, gin, whisky, and other sweetened and unsweetened spirits are increased \$0.05 per proof gallon, and on spirits, the strength of which is not to be tested, \$0.05 per liquid gallon. Another ordinance of the same date increases the internal tax on rum and compounded and other spirits \$0.05 per proof gallon and on bank checks from \$0.02 to \$0.04 each.

CANADA.

[Customs Memorandum No. 1049B, Sept. 20, 1915.]

Prohibition of Unset Diamonds.

By an order in council of September 20, 1915, the importation into Canada of unset diamonds is prohibited, except when imported direct from the United Kingdom.

COLOMBIA.

[Gaceta de Cundinamarca, Bogota, July 30, 1915.]

Tax on Commercial Travelers.

A decree of the governor of the Department of Cundinamarca of July 22, 1915, transmitted by American Minister T. A. Thomson, Bogota, establishes a tax on commercial travelers representing foreign business concerns or manufacturers in that department. Under penalty of twice the amount of the tax for failure to register within 10 days, all commercial travelers subject to the tax must register at an alcadia (municipal office) and pay the prescribed fee. During the first year of their residence in the Department of Cundinamarca commercial travelers must pay \$25 gold per month for each foreign house which they represent and for the second year the tax is \$20 per month, after which no tax is imposed. Those claiming exemption from this tax must prove that they have resided in the department

and have represented foreign firms for at least two years prior to the enactment of the present decree. [Owing to the absence of European traveling representatives at the present time, the decree will practically apply only to the American trade. The decree is important also in that the city of Bogota, the capital of Colombia, is situated in the Department of Cundinamarca.]

NORWAY.

[Board of Trade Journal, July 22 and Aug. 19, 1915.]

Tariff Changes.

The following are the most important changes in and additions to the Norwegian customs tariff which have recently been enacted and are now in effect:

Tariff No.	Articles.	Rates of duty.	
		New.	Old.
	Alge boiler compounds.....	Crowns per kilo.	
	NOTE.—Other boiler compounds may also be admitted free of duty.	Free.	
60	Cotton goods not specified, printed.....	0.00	1.10
	Plate or sheet glass:		
188	Silvered—		
	1. With ground surfaces or edges.....	.25	.30
189	Not silvered—		
	1. With ground surfaces or edges.....	.25	.30
196	Glassware not specified:		
	a. Ground, etched, sand-blasted, painted, gilt, or decorated otherwise than by pressing or molding.....	.50	.35
	b. Other kinds.....	.15	.35
	NOTE.—Lamp globes and chimneys and glass goods covered with wickerwork are not included under Nos. 196a or 196b.		
302	Cork stoppers, not mounted, more than 31 mm. long.....	1.50	.50
605	Shoemakers' wares:		
	Of skin or leather not specified.....	1.50	2.00
606	Seaboots and other footwear of oiled leather.....	1.00	1.50

The free admission of rye, rye flour, and fresh potatoes, and the reduced tonnage and lighthouse dues of 40 öre per ton have been extended to cover all ports in the Amt of Finmark.

Pneumatic drills for mines and quarries, formerly admitted free of duty as machines and apparatus not manufactured in the country, are now dutiable at 10 per cent ad valorem under No. 393.

AMERICAN MANUFACTURES IN ENGLISH PENNY BAZAARS.

[Consul Homer M. Byington, Leeds, Sept. 13.]

Prior to the declaration of war a large percentage of the articles sold in the Leeds 1d. (2 cents), 3d. (6 cents), and 6d. (12 cents) bazaars were of Continental manufacture. When these supplies were cut off British, French, Japanese, and American manufacturers immediately stepped into the breach, with the result that the trade has not suffered; in fact, 1915 is proving a record year. The numbers of articles now on sale from Japan and the United States are particularly noticeable. In one large store, which is run by a company having a chain of stores throughout the United Kingdom, the quantities of American goods lately displayed on the counters have caused considerable comment.

[A list of the Leeds bazaars will be furnished upon application to the Bureau of Foreign and Domestic Commerce or its branches. Refer to file No. 66935.]

FOREIGN TRADE OF BRAZIL FOR HALF YEAR.

[Consul General Alfred L. M. Gottschalk, Rio de Janeiro, Brazil, Sept. 4.]

Brazilian exports do not seem to have suffered greatly from the European war, for the principal purchasers, the United States and Great Britain, have continued to take more than 50 per cent of the total. There have been no exports to Germany, Austria-Hungary, and Belgium, direct, during 1915, but those to Denmark, Norway, and Sweden have increased nearly tenfold as compared with those of 1914, and those to Holland nearly twofold. (An indication as to this indirect trade was furnished in a dispatch from this office, published in COMMERCE REPORTS for Aug. 25, 1915.)

Values of Exports and Imports for Corresponding Periods.

The values of imports and exports, classified by the principal countries of origin and destination, for the first six months of 1913, 1914, and 1915, in terms of United States currency, were:

Countries.	Imported from.			Exported to.		
	1913	1914	1915	1913	1914	1915
United States	\$27,721,000	\$15,294,000	\$17,799,000	\$45,018,000	\$49,950,000	\$43,451,000

Total	170,191,000	114,738,000	66,034,000	134,247,000	133,955,000	116,609,000

Coffee has been by far the most important export product, constituting more than 50 per cent of the total value in each year since 1912. A striking illustration of the greatly reduced prices of this important article is afforded in the fact that in 1912, 4,109,000 sacks brought \$76,652,000, or an average of about \$19 per sack; whereas in 1915, nearly twice as much coffee, or 7,550,000 sacks, brought but \$70,277,000, or less than \$9 per sack, a decrease of more than 50 per cent in price.

Great Increase in Exports of Sugar.

The high prices for sugar throughout the world have increased sevenfold the quantities of sugar exported, as compared with last year, and have increased the values nearly tenfold. The State of Pernambuco, where the financial situation continues promising in spite of the general depression, has profited most by this condition.

In quantities actually exported, rubber exports have fluctuated but little. Here, too, low prices abroad have caused a decrease in export values.

Cotton shows a tremendous decrease both in quantity and value. This may, perhaps, be due to the shutting down of English mills and the large cotton crop in the United States.

AMERICAN TESTS OF HAWAIIAN KUKUI OIL.

According to the Honolulu Star Bulletin of September 1, a thorough test is to be made in the United States of various raw materials from the Hawaiian Islands, including kiawe beans, honey and wax, kukui nuts, and tamarinds, with a view to ascertaining to what extent they may be developed into products of commercial value. Samples are being prepared for transmission to eastern laboratories, where exhaustive experiments will be carried out. The kiawe beans will be tested for their alcohol-producing qualities, the kukui nuts for oil. In this connection the following extracts from a report of the agricultural experiment station at Honolulu on the extraction and use of kukui oil should be of interest:

Kukui (*Aleurites triloba* or *A. moluccana*) is distributed throughout Polynesia, Malaysia, Philippines, Society Islands, India, Java, Australia, Ceylon, Bengal, Assam, China, Tahiti, and Hawaii. It has been introduced into the West Indies, Brazil, Florida, and elsewhere. In Hawaii kukui is common to all the islands, being the dominant native tree of the lower mountain zone.

The tree has wide-spreading branches, attains a height of 40 to 60 feet, and is characterized by large, irregularly lobed leaves of a pale-green color and nuts about 2 inches in diameter containing one or two seeds. The Hawaiians string the nuts together on sticks and use them for lighting their houses; the natural candles thus produced gave rise to the name candlenut.

Similar to Linseed Oil—Extraction Methods.

The oil expressed from the kernel of the nut is known in different countries as kukui oil, country walnut oil, kekune oil, artists' oil, Bankul oil, Eboc oil, candlenut oil, Spanish walnut oil, Belgaum oil, etc. It belongs to the class of driers typified by linseed oil, and would be suitable for the manufacture of soft soap and in the preparation of oil varnishes, paints, linoleum, and for other similar purposes. It is used as an article of food as olive oil is used and medicinally as a cathartic. Kukui oil has been used in China for oiling paper, as China wood oil is used.

Kukui oil may be obtained by grinding the kernels and applying pressure, with or without previous roasting of the nuts. The color of the oil is lighter if no heat is used, but the oil is more easily expressed after heating. Apparently the oil can not be obtained by boiling the ground nuts in water, for the oil is thereby completely emulsified and can not be set free by the use of a centrifuge. The oil has been successfully extracted, however, by boiling the nuts in oil. When extracted from the crushed kernel by ether or petroleum the oil is light yellow in color, with a specific gravity of 0.92. When expressed the oil may be dark colored, due to impurities. It dries in thin films on standing several days.

The cake left after the extraction of the oil is rich in nitrogen, phosphoric acid, and potash. It therefore has a high value as a fertilizer.

Possible Hawaiian Production.

With regard to the total area of kukui in Hawaii we have obtained the estimates of various individuals who are personally familiar with forest conditions in the islands. Their estimates range from 10,000 to 40,000 acres. We may probably assume 15,000 acres as a safe estimate. At 80 trees per acre and 200 pounds of nuts per tree, there would be a yield of 8 tons of nuts per acre; a conservative estimate would be 5 tons of nuts. On 15,000 acres the annual crop of nuts would be 75,000 tons. If we assume that not more than 10,000 acres of this area are readily accessible the yield would be 50,000 tons, which would produce 2,375,000 gallons of oil.

Kukui oil has been shipped from various islands of the Pacific to the United States for the past 75 years. The market price is the same or slightly higher than that of linseed oil and varies with the price of the latter.

[Mention of kukui oil was made in Daily Consular and Trade Reports as far back as 1913, an item appearing in the issue for Feb. 28 of that year.]

COMMERCIAL TRAVELERS IN CENTRAL AMERICA.

In reply to a circular sent out by the Department of State at the request of the Bureau of Foreign and Domestic Commerce, of the Department of Commerce, a number of consular reports dealing with the treatment of commercial travelers in Central American countries have been received from the American consular officers stationed in those countries. These reports are to be published in the **COMMERCE REPORTS** and later reprinted as **Tariff Series No. 19B**, as a second supplement to **Tariff Series No. 19 (Commercial Travelers)**, issued by the bureau in 1908. The first supplement, **Tariff Series No. 19A**, which treats of commercial travelers in South American countries, was published in 1914.

COSTA RICA.

[Consul Samuel T. Lee, San Jose, July 11.]

The customs treatment of samples imported by commercial travelers is provided for in section 133 of the customs tariff of December 23, 1911, which reads as follows:

Samples of value imported by commercial travelers for exhibition and intended to be reexported are dutiable at 0.05 colon per kilo gross (\$1.05 per 100 pounds), subject to compliance with the following provisions:

The traveling salesman or his agent shall enter the samples in exactly the same manner as would be followed in the case of any other merchandise, and shall make a deposit to cover the full amount of duty. The customs official designated to make the customs inspection shall make a very careful examination of the packages. The collector of customs shall give the salesman or his agent a certified copy of the entry (*póliza*), which must accompany the application for a permit to reexport the samples (*pedimento de reembarque*). Samples may be reexported through the customhouses of San Jose, Limon, or Puntarenas, and in case of application made at the central customhouse, San Jose (*aduana central*) the packages will be sealed, marked, and shipped with bill of lading to the collector of customs at port of departure. If on comparing the samples with the entry at the customhouses it is found that there is a discrepancy or that any of the samples are missing, the interested party shall forfeit the entire amount of duty paid. The commercial traveler, however, can dispose of all or part of his samples with permission of the collector of customs concerned and upon the previous payment of the corresponding duties. A period of 90 days is allowed to traveling salesmen to avail themselves of the privilege of reexportation, and if at the end of this period the samples have not been reexported the duties paid will not be refunded. When the commercial traveler applies for the permit to reexport his samples, the amount deposited by him on entry will be refunded, less a charge of 0.05 colon per kilo gross weight (\$1.05 per 100 pounds), provided that the contents of the packages are the same as shown at the time of making entry.

Samples of Jewelry.

The foregoing provisions have been modified by the decree of March 23, 1913, so as not to apply to samples of jewelry or articles manufactured of gold and silver. These samples pay full duty on entry, and there is no provision for a refund of duties when they are shipped out of the country. This modification of the general provisions does not apply to samples of gilded or plated articles, or to common metal goods known as "imitation jewelry." Samples of this sort of merchandise are subject to a refund of duties when exported from the country.

Traveling salesmen availing themselves of this provision for refund of duties should, on their departure from Costa Rica, endeavor to pack their samples in the same trunks and in the same order that they were packed when the entry was made. This precaution will

expedite materially the clearance through customs at the time of reexportation.

The customhouse brokers and forwarding agents at the ports of Limon and Puntarenas, and at the commercial center, San Jose, are perfectly familiar with the procedure regarding the entry of samples, and their charges are moderate.

Municipal License Fees.

The municipality of San Jose collects a tax of 50 colones (\$23.26) from commercial travelers, and the license issued is good for six months. In actual practice the collectors of customs advise the municipality of all travelers arriving with samples, and the municipal collector calls on them for the fee. Travelers operating without samples are also subject to the tax, but as their arrival is not heralded they are seldom called upon by the municipal collector. Probably not more than 10 per cent of the commercial travelers arriving at San Jose pay this tax.

At Port Limon there is a municipal tax of 2 colones (\$0.93) per day, or 8 colones (\$3.72) per week.

The following towns also require travelers' licenses, the rate for each visit being: Puntarenas, \$6; San Ramon, Puriscal, and Grecia, \$2; and Turrialba, \$3.

NOTES FROM VENEZUELA.

[Consul G. K. Donald, Maracaibo, Sept. 20.]

New Bank for Maracaibo.

A new bank, to be called Banco Comercial, has been established at Maracaibo. Although it will have a capital of only 400,000 bolivars (\$77,200), it will probably be of great local importance, owing to the fact that it will introduce new banking methods and that its operations will tend to relieve the small borrower from the high rates of interest charged by local capitalists, i. e., 2 to 4 per cent per month. The shares, 2,000 in number, are now being sold.

Policy of Banco Comercial.

According to the prospectus, the Banco Comercial will (1) accept deposits of money, corporation stock, precious stones, etc., draw drafts or letters of credit, and remit funds; (2) make loans as small as 50 bolivars (\$9.65) on personal guaranties or property security at a rate not to exceed 1 per cent per month; (3) discount various kinds of commercial paper; and (4) open a savings department, receiving deposits of 10 bolivars (\$1.93) and up and paying interest on amounts of 100 bolivars (\$19.30). Bank notes to the amount of 800,000 bolivars (\$154,400) will be issued, some of which will be of the denomination of 10 bolivars—another innovation. The promoters are Eduardo Leseur and Soto Rivera & Co., of Maracaibo.

Textile Mill and Soap Factory—Lighting Plant.

La Compañia "Hispano-Venezolano," of Barcelona, has now resumed work on the erection of its thread and textile mill at Alta Gracia. This work was reported stopped in supplement 48a to COMMERCE REPORTS for July 2, 1915. The company will also manufacture soap. The machinery is expected in December.

The town of Colon, in the State of Tachira, has installed a municipally owned gasoline lighting plant.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its branch offices. Request for each opportunity should be on a separate sheet and the file number given.

- Leather goods, furniture, novelties, etc., No. 18715.**—A firm in New York City informs the Bureau that one of its customers in Argentina desires to receive catalogues, samples, etc., of American leather goods, pocketbooks for waiters, celluloid goods, paper goods, metal advertisements, pencils, knives, umbrellas for wagons, general advertising goods for offices, hardware, soap, furniture, cloth for raincoats, bathing suits and caps, and rubber tubes. Quotations should be made c. l. f. destination.
- Zinc, No. 18716.**—The Bureau is in receipt of a letter from a business man in Norway who states that he desires to receive quotations on corrugated zinc suitable for use in the manufacture of washboards.
- Glassware, No. 18717.**—The commercial attaché of the Department of Commerce in England reports that a business man desires to receive catalogues and price lists of glassware, especially glass tumblers.
- Rosin, meat products, beer, etc., No. 18718.**—The Bureau is in receipt of a communication from a commercial organization in this country stating that one of its correspondents in Costa Rica desires to obtain the exclusive representation of American manufacturers or exporters of rosin, lye, or soda, meat and meat products, foodstuffs, matches, blacking (for shoes), oils, beer, and whisky. References are given.
- Chemicals, No. 18719.**—A branch office of the Bureau is in receipt of a letter from a business firm in the United States stating that its correspondent in Spain desires to obtain prices of chemical products used in manufacturing incandescent mantles. Correspondence should be in French or Spanish.
- Wearing apparel, No. 18720.**—A commercial agent of the Bureau reports that a business firm in Ceylon desires to secure the exclusive agency for American manufacturers of morning dresses, afternoon dresses, morning blouses, vests, and silk stockings.
- General agency, No. 18721.**—The commercial agent in charge of the branch office of the Bureau in New York reports that a firm in India desires to represent American firms interested in extending their trade in British India. No particular line is mentioned.
- Stoves, wearing apparel, cameras, etc., No. 18722.**—The commercial agent in charge of the branch office of the Bureau in Chicago transmits a letter received from a business firm in that city stating that its correspondent in India desires to receive catalogues, price lists, etc., of engraving machines, cameras, small cooking stoves, rubber tires for horse carriages, wearing apparel, machines for making quinine capsules, letter copying machines, and printing presses. Correspondence may be in English.
- Soda water machines, perfumery, etc., No. 18723.**—The commercial agent in charge of the branch office of the Bureau in Chicago has received a letter from a business firm in Wisconsin stating that one of its customers in India desires to receive catalogues, price lists, etc., of a plant for the manufacture of gas for use in preparing soda water, soda water machines, fancy goods, perfumery, carbonic acid gas cylinders, and soda water bottles.
- Corn-grinding machinery, No. 18724.**—An official of a railway in Brazil has informed an American consular officer that he desires to receive catalogues and full information relative to corn-grinding machinery.
- Chemical and physical apparatus, No. 18725.**—An American consular officer in Brazil reports that a firm in his district desires to receive catalogues, price lists, etc., of American chemical and physical apparatus. Correspondence may be in English.
- White metal for making watchcases, No. 18726.**—An American consular officer in Switzerland has been informed by a manufacturer of watches in that country that he desires to communicate with American manufacturers of white-metal sheets for use in making watchcases. Thickness of sheets should be from 0.6 to 1.6 millimeters. References are given. Correspondence may be in English.

Flour, chemicals, drugs, etc., No. 18727.—A firm in Brazil informs an American consular officer that it desires to establish business relations with American manufacturers or exporters of wheat flour, lubricating and cottonseed oil, chemicals and drugs, and essences. Reference is given.

Women's and children's boots and shoes, No. 18728.—An American consular officer in South Africa reports that a business man in his district desires to establish business connections with American manufacturers or exporters of women's and children's boots and shoes.

Machinery for making nails, No. 18729.—An American consular officer in Brazil reports that a firm in his district desires to receive catalogues, price lists, etc., of machinery and supplies for the manufacture of nails.

Machinery, No. 18730.—One of the commercial agents of the Bureau of Foreign and Domestic Commerce reports that a business man has requested names of manufacturers of match-making machinery and firms which are in position to furnish material for making matches. The man desires to receive quotations, catalogues, and full information relative to this material to be shipped to a firm in South America. He states that this is the only factory of its kind in the particular country, and that it is protected by the Government.

Motion picture film, toilet articles, No. 18731.—A business man in Greece writes the Bureau of Foreign and Domestic Commerce that he desires to represent American manufacturers and exporters of motion picture films, with inscriptions in French language; carpets; coal; condensed milk; cotton yarn; household goods and specialties; soaps; and toilet preparations. The man also desires to receive addresses of the various commercial reviews published by commercial museums and chambers of commerce, etc., in the United States.

Cottonseed oil, food products, leather, etc., No. 18732.—An American consular officer in Brazil reports that a firm in his district desires to represent American manufacturers and exporters of cottonseed oil, preserves, canned fish, drugs, fruits, and shoe leather. Bank references are given.

Iron and steel products, No. 18733.—A business man in Greece informs an American consular officer that he desires to represent American manufacturers and exporters of steel plates, galvanized iron sheets, iron bars, and steel hoops, glazed kid upper leather, etc. Correspondence may be in English. The man is a Government contractor and manufacturer's agent.

Construction work, machinery, etc., No. 18734.—An American consular officer in Brazil has transmitted a report relative to a proposition for the improvement of port facilities, etc., in that country which will involve the expenditure of a large amount of money. This will offer an opportunity for the sale of dredging machinery, material for bridges, tramways, etc. A copy of the complete report may be examined at the Bureau or its branch offices. (Refer to file No. 66263.)

Food products, leather, etc., No. 18735.—A firm in Norway informs an American consular officer that it desires to represent American manufacturers and exporters of fresh and dried apples; leather for furniture and shoe manufacturing, similar to the samples which may be examined at the Bureau or its branch offices (refer to file No. 66712); automobilists' apparel, such as caps, hoods, hats, goggles, gloves, etc.

Glassware, agricultural implements, hardware, etc., No. 18736.—An American consular officer in South Africa transmits the name and address of a firm in his district which desires to represent American manufacturers and exporters of glass and glassware, wire netting, dairy and agricultural implements, hardware, and enamelled ware. The firm intends acting simply as agent of manufacturers, but is willing to pay for all orders filled by cash against shipping documents in New York until such time as thorough business relations have been established. Detailed information should be supplied, including prices f. o. b. New York City, and c. i. f. South African ports, if possible.

Potato starch, No. 18737.—A firm in an Eastern Mediterranean country has informed an American consular officer that it desires to receive addresses of American manufacturers and exporters of potato starch.

WAR'S EFFECT ON SCOTTISH HERRING FISHERY.

[Consul E. Haldeman Dennison, Dundee, Scotland, Sept. 13.]

Few industries in Scotland have suffered more from the war than the fishing industry, upon which such a large portion of the population depends for its livelihood. In normal times nearly 90,000 persons are engaged in Scotland in occupations directly connected with the fisheries, of which the herring fishery is much the most important branch. Upon the success or failure of the herring catch the prosperity of the fishing population almost wholly depends, and it is this branch of the industry which has been most unfavorably affected by the war.

In normal times over 5,000,000 hundredweight (1 hundredweight=112 pounds) of herrings are landed at the various Scottish ports, valued at from \$7,500,000 to \$10,000,000. A large proportion of this is exported in a cured state to eastern Europe, mainly Germany and Russia. Since the outbreak of the war the great Continental markets have been closed to this trade, and the loss of these markets has been severely felt by the Scottish fishing industry.

An official report just issued shows that in the 12 months, 1913-1914, the aggregate quantity of herrings landed in the United Kingdom was 12,830,000 hundredweights, valued at \$20,911,350; in the year of the war—that is, from July 1, 1914, to August 1, 1915—it was 2,650,000 hundredweights, valued at \$5,216,888, a decrease of 10,180,000 hundredweights, or 79 per cent, and \$15,694,462, or 75 per cent. In Scotland the decrease amounted to 4,719,000 hundredweights and \$7,833,200, or 87 per cent and 82 per cent, respectively.

In the 12 months of war the total quantity of fish landed on the coasts of the United Kingdom amounted to 10,288,000 hundredweights, valued at \$44,912,928, as compared with 24,852,000 hundredweights, valued at \$67,347,493, in the previous 12 months. Of the total decrease in the value of the fish landed in the year of the war the herrings represent 70 per cent and all other fishes only 30 per cent.

AMERICAN WOOLEN RAGS IN ENGLAND.

[Consul Homer M. Byington, Leeds, Sept. 14.]

Dewsbury and Batley, in the Leeds consular district, are recognized as the center of the woolen-rag trade of the world, and practically all the woolen rags imported into England come to these towns. The British Government Board of Trade returns show that for the first eight months of 1915 the imports of woolen rags, not pulled, have fallen from 26,969 tons in the like period of 1914 to 15,988 tons, a decrease of about 1,370 tons per month—not much more than 25 per cent of the normal supplies from abroad. This decrease is accounted for by the cessation of imports from Germany (7,084 tons in 1914), Belgium (1,700 tons in 1914), and unclassified countries (3,500 tons in 1914), which indicates that increased imports are coming from the countries with which business is being continued. For the eight months of 1915 the imports from the United States amounted to 5,339 tons, compared with 4,892 tons for the similar period of 1914.

[A list of woolen-rag importers of Dewsbury and Batley will be loaned upon application to the Bureau of Foreign and Domestic Commerce or its branch offices.]

PANAMA CANAL ANNOUNCEMENT.

Maj. F. C. Boggs, Corps of Engineers, chief of the Washington office of the Panama Canal, makes the following announcement:

A cablegram dated October 12 has been received from the governor of the Panama Canal, advising that continued movements of sliding material make it impossible to predict any approximate date of reopening the canal. The governor states he does not advise sailing via the Panama route until further notice, which will be given as soon as material is removed sufficiently to insure stable conditions.

A second cablegram, dated October 12, has been received from the Governor of the Panama Canal, as follows:

Referring to your cable of the 11th instant, mass of material involved in the break of October 14, 1914, which had been sliding gradually into prism, moved precipitately. This, combined with a similar movement from the break which occurred just opposite, on the west bank, in August, causes present conditions. Length of channel involved 1,300 feet, of which 200 feet has present width of only 25 feet and depth of 3 to 15 feet. For week ending October 9, 209,000 cubic yards of material were dredged, but, as the movement continued, the result has been to maintain only what slides left in first instance. Canal is therefore physically closed temporarily. On the east side bank is upward of 300 feet above canal level and on the west side varies from 300 to 400 feet above. Material in settling and moving creates earth waves, with deep depressions behind these being some five to six hundred feet from the canal prism, with elevations of 60 to 80 feet above water surface. These waves undoubtedly counterbalance weight of broken mass on either side, and when removed may cause another similar movement; hence impossibility of making any prediction as to date of reopening until after waves which now block the channel have been removed and action of remaining material determined. Heavy rains materially affect movement. Whether light-draft ships can pass in advance of 30-foot-draft ships must depend on conditions when reasonably secure channel is attained.

EXPORT TAXES IN PERU.

[Telegram from Consul General William W. Handley, Callao, received Oct. 7, 1915.]

A law was enacted October 6, 1915, levying an export duty on sugar, wool, cotton, and hides shipped from Peru, as previously proposed.

[A law providing for export duties on minerals as well as on the products above mentioned, has been under consideration in Peru, and a detailed report giving the proposed rates will be published in COMMERCE REPORTS in a few days.]

SUCCESSFUL GROWING OF HEMP IN GERMANY.

[Consul Talbot J. Albert, Brunswick, Sept. 14.]

It is said that the results of this year's harvest will assure the future growing of hemp (*Cannabis sativa*) in Germany.

Hemp stood the dryness of the past summer better than most other crops. The production of a large number of hemp fields was splendid, and moor land was especially productive. By careful preparation and fertilization the returns were from 50 to 60 hundredweight of dry hemp stalks, and the planters are so satisfied with the result of their labors that next year they intend to increase considerably the area planted. If the recently appointed committee of the League of German Hemp Industrials succeed in obtaining the necessary seed, the area under hemp will be increased from about 900 acres to over 8,000 acres next year.

The question of rust has not yet been satisfactorily settled. The investigation of the conditions in Hungary leads to the belief that the rusting can be successfully prevented in Germany. In addition to the testing station at Wilhelminenhof, there will probably be established a warm-water rust institute at Havelland, and such institutes will follow at other places.

ARRIVAL OF COAL-TAR DYES.

The Secretary of Commerce announced on October 13 that 50 tons of coal-tar dyes consigned to him for the account of William A. Mitchell, of Lowell, Mass, representing the National Association of Cotton Manufacturers, were arriving on the steamship *St. Louis*, due this date.

Several months ago the Secretary consented to act as consignee of two cargoes of dyes from Germany, for which safe passage was assured by permits granted by the British Government upon the express condition that the Secretary of Commerce would be the consignee. Arrangements were made by American manufacturers with the British Government whereby that Government has permitted the exportation to the United States of the dyes coming on the *St. Louis*. It is hoped that this is the first of a series of similar shipments. The Secretary of Commerce has expressed his willingness to act as official consignee of merchandise coming from any foreign country whose authorities may deem such a course necessary.

INSURANCE IN SPAIN.

[Consul Robertson Honey, Madrid, Sept. 13.]

During 1914 Spain expended 73,447,509 pesetas on insurance premiums of all kinds; in 1913 the expenditure was 70,976,756 pesetas. (The Spanish peseta is equivalent to about 19.5 cents United States currency.) More than 24,988,500 pesetas was expended on straight life insurance premiums in 1914, as against 25,061,576 pesetas in 1913. Premiums on tontine policies increased from 7,964,723 pesetas in 1913 to 9,456,387 pesetas in 1914; premiums on fire insurance policies, from 19,623,900 pesetas to 19,851,508 pesetas. Of the premiums on life insurance policies about two-thirds (in value) went to foreign companies doing business in Spain; of the premiums on fire insurance policies, about two-thirds went to Spanish companies.

TO ISSUE ANNUAL EDITION OF LIST OF RADIO STATIONS.

The United States Bureau of Navigation has in the hands of the Public Printer its annual edition of the "List of radio stations of the United States," containing a list of 5,073 stations. The table here given shows the number of land, ship, special land, and amateur stations in this publication, as compared with that of 1914:

Classes of stations.	1914	1915	Increase.
Government and commercial land stations.....	189	224	35
Government and commercial ship stations.....	895	895	0
Special land stations.....	54	118	64
General and restricted amateur stations.....	2,796	3,835	1,040
Total	3,934	5,073	1,139

The appendix to this list contains several articles of interest to radio operators. The books, which will be available by November 1, may be procured from the Superintendent of Documents, Washington, D. C., at 15 cents per copy. Copies of the "Radio-communication laws and regulations" may be procured from the Superintendent of Documents at 15 cents per copy.

COOPERATIVE SOCIETY'S PROFITS IN ENGLAND.

[Consul Homer M. Byington, Leeds, Sept. 15.]

The Leeds Industrial Cooperative Society reports \$5,166,909 total sales for the half year ended June 30, 1915, or an increase of \$1,225,696 over the like period of 1914 and a record for the society. The share capital stood at \$4,703,277, an increase of \$226,462, and members increased by 1,818 to 49,785. After allowing \$80,973 for interest on capital and \$53,453 for depreciation, the amount available for distribution was \$662,353, which was disposed of as follows: Dividend on members' purchases aggregating \$4,763,866, at 2s. 9d. in the pound (about 13½ cents on each dollar's worth purchased), \$655,080; for educational purposes, \$4,858; balance to next half year, \$2,465.

INCREASED DIVIDEND OF GERMAN SUGAR COMPANY.

[Consul Harry G. Seltzer, Breslau, Sept. 15.]

The Zuckerfabrik Altjauer A. G. in the Breslau consular district will propose a 7½ per cent dividend at its annual meeting, against 4 per cent in 1914. This is especially noteworthy since the reserve fund of the corporation suffered considerably by the failure of a banking house in Jauer, and this loss had to be restored before profits could be considered.

RUSSIAN EMBARGO ON CALFSKINS.

According to a telegram received from the American Consular General at Moscow October 9, 1915, the exportation of calfskins from Russia has been prohibited.

CROP PROSPECTS IN SPAIN.

[Consul General Carl Bailey Hurst, Barcelona, Sept. 18.]

The chief of the agricultural bureau in Barcelona has recently reported on the condition of crops at the end of August of this year in the four Provinces of Catalonia in northeastern Spain. Cereals in general are doing well, though the Lerida wheat crop has suffered some damage from the unusual rainfall that has been general throughout the whole region. Tomatoes did well in those sections where the plants were not attacked by peronospora. There is every indication that the yield of olives in Lerida will be plentiful. In Tarragona abundant crops of beans, rice, and carobs are promised. In none of the Provinces, however, is the state of the vineyards satisfactory, all reporting the presence of mildew or black rot.

It is of interest to note that in July 64,000 metric tons (of 2,204.6 pounds) of wheat were imported into Spain, all of which is stated to have come from Argentina and the United States. More than half of it was unloaded at Barcelona. During the same month Spain imported 24,000 metric tons of corn, 7,000 of which were unloaded at the port of Barcelona, all purchased in Argentina.

[Consul Paul H. Foster, Jerez de la Frontera, Sept. 7.]

Vintage of the Jerez de la Frontera District.

Reports received from various portions of the Jerez wine districts indicate an average shortage of 25 per cent as compared with the crop of a year ago. This is attributed, jointly, to the appearance of mildew and unusually high temperatures. Against this must be placed an increase in acreage of bearing vines, from replantings on American stock, estimated at 5 per cent.

Prices show an apparently paradoxical trend. Grapes from which the high-grade wines are made have declined in price 25 per cent as against last year, while those from which the low-grade wines are pressed have increased. There has been a corresponding fall and rise in high-grade and low-grade wines. This is due to the fact that the low grades can be made immediately available, either through distillation into wine spirits or for common table use, whereas the higher grades must be held for several years to develop the bouquet that constitutes their value as a fine wine, so the financial problem of a slow or quick turnover of capital is the basis of this apparently anomalous condition.

[Consular Agent Bartley F. Yost, Almeria, Sept. 11.]

Fewer but Better Grapes in Almeria Province.

The consensus of opinion among the fruit-exporting firms of Almeria Province is that the 1915 grape crop will not exceed 60 per cent of last year's production, which was nearly 1,780,000 barrels of approximately 50 pounds each. The quality of the fruit, however, promises to be unusually good, with better keeping qualities than in normal years, when more fertilizers are used to force its growth, often at the expense of the keeping qualities of the fruit. This year many farmers were financially unable to purchase the quantities of fertilizers desired, and it is claimed by some that this is partly responsible for the crop shortage. Harvesting is about a fortnight late this year.

Thus far the English markets have taken nearly all the fruit exported, although Dutch dealers are showing much activity. The prices realized for both red and white grapes in Liverpool have been very satisfactory, and from present indications an unusually large proportion of the crop will be shipped to England, in which event, it is believed here, shipments to the United States will be considerably curtailed. Contrary to the impression prevailing earlier in the year, there will be no dearth of steamers either for the European or the American trade, but the freight rates have been increased this year to 60 shillings (\$14.60) per ton of 25 barrels. The first shipments of Almeria grapes were started on September 11.

[Consul Percival Gassett, Malaga, Sept. 10.]

Raisin Crop of Malaga District.

This season's crop of muscatels is somewhat short of average production and is decidedly backward. In normal years supplies begin to reach Malaga about the middle of September; but nothing excepting low grades, and these in relatively limited quantities, are now expected until the latter part of the month.

The demand for Malaga fruit, particularly loose muscatels, is reported to be much more active than usual. London stocks are lower than they have been for several years past, and because of serious damage, through vine diseases, to the Denia crop and the uncertainty prevailing with respect to exports from Turkey, unexpected orders have been diverted here.

Considerable competition exists among exporters to secure supplies. Prices are commencing to stiffen and will undoubtedly rule high this year.

Jordan and Valencia Almonds.

Jordan almonds usually begin to reach this market at the end of July, and August receipts are generally heavy. This season, however, the crop is fully three weeks late, and at the beginning of September the major portion of the crop was reported to be still in the shell. Valencia almonds usually begin a month later than Jordans; that is to say, about the end of August; but this year, owing to the lateness of the crop, not 10 per cent of the usual September receipts are expected to reach Malaga.

In certain districts it is reported that a very short crop of Jordans will be gathered, due to early frost and high winds, but the abundant yield in other places more than compensates for the loss, and the total crop will be a large one. On the whole, there seems to be an unusually good yield of Valentias.

[Consul Wilbur T. Gracey, Seville, Sept. 7.]

Heat Affects Seville Olives.

Excessive heat during the first week of August (the temperature rising to 120° in the shade) caused some damage to the olive trees in the Seville district. Local optimists believe that the trees had sufficient storage of sap to counteract the effects of the heat, and that as the end of the month gave cooler weather the actual crop may not have been seriously affected. Undoubtedly some damage has resulted, but it is not believed that this is enough to cause alarm. The manzanilla olives are the ones that have suffered most.

THE NEW BRITISH BUDGET.

The London Times for September 23 gives the following summary of the proposed British budget:

The reception given to the budget is, on the whole, favorable. It is generally recognized that Mr. McKenna has endeavored to distribute the new taxes fairly between all classes and that little opposition will be offered in Parliament to his proposals.

The only loud complaint that has so far been raised comes from the manufacturers of picture post cards, who believe that the abolition of the half-penny (1-cent) post will seriously reduce their business. A meeting of the leading men in the trade will be called early next week to consider the question of sending a deputation representing the whole of the trades interested to the Chancellor of the Exchequer. Meetings of people engaged in other industries and businesses affected by the budget have also been arranged, but with the object of considering how the taxes shall be passed to the consumer rather than of organizing criticism or opposition.

Operation of New Income Tax.

No one is disposed to quarrel with the 40 per cent addition to the income tax. The reduction of the abatement level from £160 to £120 (from \$780 to \$585) has caused a little surprise, however, not so much over the actual lowering of the abatement as because of the absence of any new graduation of the charges.

It is interesting to compare the position of a man earning £300 (\$1,460) a year under the new taxation with his position before the war. For the purposes of the illustration it may be assumed that he has two children under 16 years of age, and that he pays in insurance premiums £20 (\$97) a year. Under the old system he paid a tax of 9d. in the pound on £80 a year (18 cents on each \$4.8665 of a total of \$390). When he comes to pay the full taxation now imposed he must find 2s. 1d. (50 cents) in the pound on £120 (\$585). The increase is from £3 to £12 10s. (from \$14.60 to \$60.85).

The rise is still more marked in the case of the man with £250 (\$1,215) a year. Assuming that he, too, has two children and his insurance premiums absorb £10 (\$48.65) a year, his income tax is raised from £1 10s. (\$7.30) to £8 3s. 8d. (\$40.55). In addition, he is faced with a rise in the breakfast table expenses.

On a moderate calculation the middle-class father of a family has to grapple with a 20 per cent depreciation of his income. It should be added that the introduction of the system of payment of income tax by installments is warmly welcomed.

Comparative Table of Income-Tax Rates.

The following table shows how the new income-tax proposals affect various incomes:

Incomes wholly earned.	Old tax for 1915-16.	New tax for 1915-16.	Proposed tax for 1916-17.	Incomes wholly earned.	Old tax for 1915-16.	New tax for 1915-16.	Proposed tax for 1916-17.
\$038.....		\$4.80	\$5.60	\$2,675.....	\$156.95	\$197.10	\$229.95
\$040.....		8.75	10.20	\$2,920.....	175.20	219.00	255.50
\$730.....		13.15	15.30	\$3,160.....	211.80	263.75	298.35
\$780.....		17.50	20.45	\$3,400.....	229.85	175.95	321.00
\$875.....	\$7.30	26.30	30.65	\$3,800.....	292.00	330.40	408.80
\$975.....	14.60	35.06	40.90	\$4,300.....	328.50	394.20	459.90
\$1,215.....	32.85	56.95	66.45	\$4,870.....	365.00	434.00	511.00
\$1,460.....	51.10	18.85	92.00	\$7,300.....	639.75	766.50	894.20
\$1,700.....	69.35	100.75	117.55	\$9,735.....	973.30	1,167.95	1,362.60
\$1,945.....	87.60	122.65	143.10	\$12,170.....	1,419.40	1,703.30	1,987.15
\$2,190.....	109.50	153.30	178.85	\$14,600.....	1,824.95	2,189.95	2,554.90
\$2,435.....	127.75	175.20	204.40				

These are the figures for incomes wholly earned. Slightly higher rates apply to incomes half earned and half unearned, and still higher rates to those incomes that are wholly unearned.

Proposed Rates on Large Incomes.

The following table* shows the effect of the new proposals on incomes over £3,000 (\$14,600), the amounts given being the total of the income tax and the supertax combined:

Income.	Old tax for 1915-16.	New tax for 1915-16.	Proposed tax for 1916-17.	Income.	Old tax for 1915-16.	New tax for 1915-16.	Proposed tax for 1915-16.
\$14,605.....	\$1,927	\$2,292	\$2,657	\$194,700.....	\$47,428	\$58,540	\$63,406
\$24,300.....	3,792	4,400	4,008	\$243,300.....	60,000	74,356	80,439
\$48,700.....	9,713	11,092	12,308	\$365,000.....	91,429	113,896	123,021
\$97,300.....	22,285	26,908	29,341	\$486,700.....	122,859	153,437	165,603
\$146,000.....	34,856	42,724	46,347				

No account is taken in the foregoing tables of allowances in respect of life insurance premiums and children, which, in many cases, would substantially reduce the tax payable and the virtual rate.

The Breakfast Table.

The immediate effect of the increased taxes on "the breakfast table" is shown by the following list of prices of typical commodities as they stood before the budget and as they stand now:

Commodities.	Old price.	New price.
	<i>Per pound.</i>	<i>Per pound.</i>
Tea, Ceylon.....	80.55	\$0.57
Coffee, fine blends.....	.45	.47
Cocoa, Bournville.....	.59	.60
Chicory, best.....	.20	.22
Dates.....	.06	.07
Sugar:		
Granulated.....	.07	.08
Loaf.....	.09	.12

It is evident from these prices, which were quoted at one of the leading provision stores in London yesterday, that the whole of the additional charges on food will, for the present at any rate, be passed on by the retailer to the consumer. Restaurant prices will also be raised.

The rise in food prices will not be confined to the articles directly subject to the new duties. The cost of sugar, for example, affects the cost of jam, sweets, biscuits, and other foodstuffs. It is anticipated that the price of jam will be raised by halfpenny (1 cent) per pound and the price of sweets by a halfpenny for 4 ounces. Condensed milk will probably also be dearer. Tate & Sons, the well-known refiners, made the following quotations yesterday: No. 1 cubes, 50s. 6d. per hundredweight [\$12.20 per 112 pounds], as against 31s. [\$7.54] on Tuesday; H. T. S. cubes, 50s. [\$12.17] per hundredweight, as against 30s. 6d. [\$7.42] on Tuesday; standard granulated, 33s. and 32s. 3d. [\$8.03 and \$7.85], as against 28s. and 27s. 6d. [\$6.81 and \$6.69] on Tuesday.

New Tobacco Prices—Postal Changes.

Further taxes on tobacco were fully expected, and, while the 50 per cent advance may unsettle the trade for a while, it is believed that the disturbance will be temporary and that business will soon right itself. At a meeting of the Wholesale Tobacconists' Protection Association (Ltd.), held in London last night, the following list of suggested prices for retail tobacconists, to come into operation immediately, was agreed upon [values converted to American currency]: Tobacco and snuff—Up to 9 cents per ounce, 3 cents advance; over 9 cents per ounce, 4 cents advance; imported tobaccos and tobacco manufactured in bond, 5 cents advance. Cigarettes—Two-cent packets advanced to 3 cents or two for 5 cents; 4-cent packets, to 5 cents; 5-cent packets, to 7 cents; 6-cent

* The figures presented in this and in the preceding table are not exact equivalents of those given by the Times, but have been rounded off after converting the Times' figures to American currency at the rate of \$4.8665 to the pound sterling.

packets, to 8 cents; 8-cent packets, to 10 cents; 9-cent packets, to 12 cents; and 18-cent packets, to 24 cents; other brands, 25 to 33 per cent increase. Cigars—Advances varying from 60 cents to \$1.85 per 100, according to quality.

While some tobacconists yesterday were selling their present stocks at the old prices, there was a general tendency to ask customers to pay the extra tax at once. This, it is explained, was done to prevent a rush on their supplies.

It was stated at the General Post Office yesterday that the new post-office rates will probably not become operative until November 1, the estimates being based on that date. Printers foresee a loss of work by the abolition of half-penny postage, and, as stated, manufacturers of post cards are greatly concerned about the situation. Sir Adolph Tuck, managing director of Raphael Tuck & Sons, said that early in the war many printers spent large sums of money in laying down new machinery for printing colored post cards of a kind previously obtained from the Continent, and that the abolition of half-penny postage would mean a heavy loss to these firms.

Patent Medicines and Gasoline—Import Duties.

So far the doubling of the duty on patent medicines has not produced an increase of prices; but we are informed by the secretary of the Proprietary Articles Trade Association that the manufacturers concerned will meet this week to discuss the matter, and that prices will inevitably be raised.

The effect of the budget on motor spirit (gasoline) has been quite unexpected. The additional tax is 3d. (6 cents) per gallon, but to the surprise of consumers the price of spirit has been advanced not 3d. but 5d. per gallon. The proposed duty on imported motor cars, while welcomed by British manufacturers, is regarded with anxiety by agents for cars of American and French makes. One point upon which great uncertainty prevailed in the motor trade was as to whether imported tires were subject to the duty. We are informed that, in a telegram to the Goodrich Tire Co., the Chancellor of the Exchequer has stated that tires are included in the term "motor cars and parts."

The new duty on cinema films is cordially approved by British film producers. Experts in the cinema-film business are puzzled to know how the revenue authorities will interpret "ad valorem." The value of a film, one expert pointed out, does not lie in the negative itself—most films are imported as negatives—but in the money the owners can get for the copies made here from that negative. Will the revenue authorities accept the intrinsic value—say 1½d. (3 cents) per foot—or the real value? "Some negatives of 3,000 feet," the expert said, "might be reasonably valued at £200 (\$975). On the other hand, there is the film of 'The Eternal City,' produced by an American company. At least £20,000 (\$97,500) will be made out of the hire of this negative. As a valuer I should say that the value of that negative is £10,000 (\$48,665), and therefore the duty on it should be £3,333 (\$16,220)."

LIMITED MARKET FOR YEAST CAKES.

[Special Agent Garrard Harris.]

Several American housewives living in Central America mentioned the difficulty of getting good yeast for baking purposes and expressed the opinion that if yeast cakes were put up in air-tight tins and prepared to keep a considerable length of time there should be a fairly good demand for them. Undoubtedly there would be a market of some extent among the Americans, English, French, and Germans resident there, but it is doubtful if this element is sufficiently numerous to make the venture a paying one. In few of the native houses is yeast-risen bread baked. The crusty rolls to go with the early morning coffee and fruit usually come from the panaderia (bakery). Luncheon is, as a rule, served with the tasty corn tortillas, and this latter form of bread is preferred by most natives for the evening meal also. Yeast is not used in its preparation.

CHINESE CATTLE FOR THE PHILIPPINES.

[Consul General George E. Anderson, Hongkong, British China, Aug. 18; see also COMMERCE REPORTS for Oct. 2.]

After a break in the trade of nearly five years, the shipment of live cattle from Hongkong to the Philippines has again been undertaken as a result of the action of the Philippine authorities in letting down the bars against such traffic raised for the purpose of keeping the cattle diseases now prevalent in south Asia out of the islands. The renewal of the import of cattle from Hongkong is the revamping of an old and at one time very important trade. The declared exports of cattle from Hongkong to the Philippines in 1910 were valued at \$510,626, while as a result of restrictions on the trade growing out of the animal quarantine the trade fell to a value of \$209,097 in 1911 and became inconsequential in subsequent years.

From time to time, as a result of pressure from consumers in the Philippines against high prices of meat, due to the shortage of native animals in the islands and the high prices of frozen meats from Australia, efforts have been made to resume the shipment of South China cattle by arranging for immunizing the animals in Hongkong. There have also been attempts to import live stock from Hongkong into the Philippines by establishing stations to which the cattle could be taken for slaughter. The chief obstacle to trading under such restrictions was the increased cost of the animals. Under the regulations now effective cattle may be imported from Hongkong to Pandacan, near Manila, where they are to be slaughtered. It is believed that with proper care dealers will experience no difficulty in carrying on the trade for a time at least.

In anticipation of the present course of things arrangements were made about a month ago for the exportation of frozen meat from Hongkong to the Philippines, the arrangement at that time contemplating the shipment of about 500 carcasses per month. The arrangement is being carried out successfully and the volume of shipments is likely to be increased materially in the immediate future.

CABLE CONNECTION FOR HONDURAS.

[Consul E. M. Lawton, Tegucigalpa, Aug. 2.]

Recently this office took up with the Government authorities the question of a cable connection, and was informed that only a short time ago they had approached the Central and South American Telegraph Co. with that end in view, but apparently that company did not consider the proposition favorably. The nearest cable station to the Pacific side of Honduras is that at Libertad, Salvador.

The Honduras Government has expressed a desire to have a direct cable connection and would be interested in any proposition to that end. More than 3,000 cablegrams are sent annually, at an average annual cost of 60,000 pesos (\$20,000 at present rate of exchange). The rate to the United States is 2.35 pesos (\$0.78) per word. A copy (in Spanish) of the cable rates to the various countries is transmitted with this report [and will be loaned by the Bureau of Foreign and Domestic Commerce. Refer to file No. 65999].

COMMERCIAL RELATIONS WITH LATIN AMERICA.

In discussing the plans of the United States Government for the promotion of closer commercial relations with Latin American countries, both in regard to tariff arrangements and the improvement of transportation facilities, the Buenos Aires newspaper *La Prensa* comments as follows in its issue of August 31, 1915:

This Government initiative is necessitated by the fact that private initiative, always deliberate, would not accomplish the purpose with the dispatch and broadness that the circumstances warrant and demand, the United States being at present the only country that is in a condition to replace the nations at war which have suspended or considerably restricted their commercial relations.

This propitious situation for the North Americans will be continued, even after the restoration of peace, since the warring nations will not be able to resume their full industrial and commercial activity until they have recuperated from the serious losses and shocks to their financial and economic forces.

The foresight with which the American Government regards its exceptional opportunity promises well for the success of its plans.

But Government initiative is not enough, since its value is limited to giving scope and facilities to commercial relations, and it can not by itself promote transactions which depend essentially on the commercial methods that the interested parties adopt to win a market already bound by strong ties to competing nations who have won their position without the aid of treaties or fiscal incentives but merely by their force, diligence, and skill.

These countries, which have won such advantageous positions in our market, have gained them by a system of sale, manufacture, and exportation, by easy terms and a regard for the conditions and tastes of the consumers, and by reasonable prices. They also at the same time encouraged reciprocal commercial relations by increasing their consumption of our products.

For the expansion and strengthening of these relations no special treaties have been necessary, and they have been established in spite of the obstacles of our customs barriers.

These convincing examples indicate that while government action and initiative may favor commercial relations, they are not indispensable, and may even prove futile if they are not seconded by the individual efforts of those who are called upon to bring about their realization and to take their places in the lists of international competition.

If the plans and projects of the American Government are to have definite results, merchants and manufacturers, for whose aid they are intended, must assist with their force and intelligence, building up methods that would facilitate business and create a demand for their merchandise.

Without this aid the Government efforts will be in vain and will be defeated by the opposition or slowness of the agents, who, owing to lack of skill or liberality, might be unable to meet the competition of their more diligent and venturesome rivals.

The causes which serve to restrict our commercial development with the United States are to be found to a large extent in this lack of practical sense to operate in a competitive market, dominated by rivals who dispute it on the basis of large sales at moderate prices and on liberal terms, which induce the merchants to buy their goods without compulsion of immediate payment.

If the North Americans adopt the methods which have given such excellent results, the official plan of the American Government will have positive and permanent benefits, and the position they may occupy by reason of the unfortunate circumstances of their competitors will be firm, based on the preference of the market. Otherwise it will be only an ephemeral and spasmodic effort, which will fall to pieces as soon as the relations of the commercial world resume their normal course.

American needles should meet with a ready sale in Central America, reports Special Agent Garrard Harris. The needles now being offered there are said to be unsatisfactory, defective in the eye, and made of poor metal that will not hold a point.

LEATHER-TRADE CONDITIONS IN GERMANY.

[Consul General H. W. Harris, Frankfort-on-the-Main, Sept. 11.]

A recent issue of the Frankfurter Zeitung furnishes a brief review of the leather trade in Germany that may have some interest as bearing upon an industry on which extraordinary demands have been made by the war. Much activity in this trade is sure to follow the making of peace, and the American leather industry—of which Frankfort is an important center—will doubtless have a share in replenishing depleted stocks not only in Germany but in other countries now at war. No other branch of American trade in this locality is better organized than leather, and those manufacturers who would enter this field will do well to reckon on the need of adequate organization, with ample warehouse facilities, etc. The fact that Frankfort is a leather center and that several of the important shoe factories are in this part of Germany make the city, with its railway connections in all directions, a desirable one from which to market this product.

The review referred to says, among other things, that through various actions taken by the Government [for an account of the Government-fixed maximum prices for hides, see *COMMERCE REPORTS* dated Jan. 29, 1915] the conditions of the leather industry in Germany have changed materially of late. While during the first months of the war there was activity in all branches of the industry and in some cases excessive profits were realized, there prevails at present a somewhat restricted activity, and in most cases but little can be said of large profits. It has also now become certain that an actual scarcity of leather, as to which some fears prevailed, has not arisen, nor would such scarcity seem probable. Though not everyone is able to get just that sort of leather he prefers for special purposes, it can not be said there is scarcity of leather as a whole, nor is there danger that the needs of the army will not be met or the civil population not sufficiently provided for. The question of the readjustment of prices for leather must await the return of normal conditions.

SCARCITY OF FEMALE EMPLOYEES IN SILESIA.

[Consul Harry G. Seltzer, Breslau, Germany, Sept. 7, 1915.]

Since the beginning of the year, the Breslau branch of the Merchants' Employment Agency has reported 932 vacancies for women in commercial positions. To fill these positions there were only 655 applicants or 277 less than required. Out of this number 400 secured satisfactory employment. Thus 61.07 per cent of the applicants were accepted and 42.92 per cent of the positions were filled. The information bureau of the agency serves war widows and orphans free of charge, and often assists them in the preparation for these positions. In the teaching profession there are always vacancies for well-qualified young ladies, and the demand far exceeds the supply.

This report of the Merchants' Employment Agency is fully substantiated by the numerous "Help wanted" advertisements in the daily papers of Breslau.

JAPAN'S SUBSIDIES TO NORTH AMERICAN LINES.

[Vice Consul M. D. Kirjassoff, Yokohama, Japan, Aug. 24; supplementing dispatches in COMMERCE REPORTS for Oct. 5, 1915.]

Inquiries made by this office in official quarters in Japan as to what share of the shipping subsidy allowed for the North American lines, each of the three companies—the Toyo Kisen Kaisha, the Osaka Shosen Kaisha, and the Nippon Yusen Kaisha—will receive, have been fruitless of results. Examination of the regulations under which subsidies are granted, however, makes it possible to approximate the sum each company will get.

According to these regulations, 50 sen (\$0.249) is to be granted to a ship, not more than 5 years old, per gross ton for every 1,000 miles at 12 knots per hour, plus a 10 per cent increase for each knot per hour faster than 12, plus a 25 per cent increase for vessels which have been built according to plans approved by the Government. Five per cent is to be deducted for each year of the ship's age in excess of 5.

The Government will grant a subsidy to the Toyo Kisen Kaisha for three vessels, namely the *Tenyo Maru*, the *Chiyo Maru*, and the *Shinyo Maru*, of about 13,000 gross tons each; to the Osaka Shosen Kaisha for four vessels, namely, the *Chicago Maru*, the *Panama Maru*, the *Canada Maru*, each of 6,000 tons, and the *Hawaii Maru* of 7,000 tons; to the Nippon Yusen Kaisha for two vessels, the *Shidzuoka Maru* and the *Yokohama Maru*, each of 6,000 tons.

Amounts to Be Received in Subsidies Estimated.

Under the regulations, then, the Toyo Kisen Kaisha will receive in 1916 for the ships mentioned, approximately 1,635,000 yen (\$815,240), the Osaka Shosen Kaisha 1,004,000 yen (\$499,992), and the Nippon Yusen Kaisha the balance (the total subsidy for North America being 2,949,012 yen—\$1,468,608—for the year 1916) or 310,012 yen (\$154,386).

Examination of the papers of the Pacific Mail steamship *Korea* shows a monthly salary expenditure of about \$5,000, while the average monthly expenditure for salaries on a Toyo Kisen Kaisha steamer does not exceed \$3,000. If anything this is too high an estimate. The *Korea* may be taken as an average vessel, since the Pacific Mail fleet consisted of two vessels of the size of the *Korea*, two larger ships, and only one smaller one. Taking into account the subsidy which the Toyo Kisen Kaisha receives, it costs this company about \$227,860 less per year to run one ship of its fleet of four than it did the Pacific Mail Steamship Co. to run one of its five ships.

Monthly Salaries to Officers and Crew of Pacific Mail Liner.

The table of monthly salaries to officers and crew of the *Korea* is:

Positions.	Monthly pay.	Positions.	Monthly pay.	Positions.	Monthly pay.
Captain	\$275.00	Ref. engineer	\$70.00	Saloon watchman	\$25.00
First officer	135.00	Deck engineer	60.00	Steerage watchman	25.00
Second officer	110.00	Electrician	70.00	Two stewardesses, at	25.00
Third officer	90.00	Three water tenders, at	155.00	Three wireless operators,	75.00
Fourth officer	75.00	\$55	90.00	at \$0.25	
Fifth officer	70.00	Two oilers, at \$45	150.00		
Carpenter	50.00	Purser	150.00		
Four quartermasters, at	180.00	Clerk	75.00	Total for white	3,265.75
\$45	200.00	Surgeon	125.00	employees	
Chief engineer	135.00	Steward	75.00	Musician (Filipino)	15.00
First assistant engineer	110.00	Second steward	60.00	Seven musicians, at	87.50
Second assistant engineer	90.00	Steerage steward	90.00	\$12.50	
Third assistant engineer	70.00	Storekeeper	45.00		
Six junior engineers, at	420.00	Baggage clerk	65.00	Total, exclusive of	3,368.25
\$70		Butcher	35.00	Asiatic crew	
		Deck watchman			

Wages of Asiatic Crew in Hongkong Currency.

The difference in the salaries paid on the Toyo Kisen Kaisha steamships and those on the Pacific Mail Co. vessels lies in the above, as the salaries paid to Japanese and Chinese members of the crew would not differ to any extent. The wages to the Asiatic crew, in Hongkong currency, amount to \$4,092, of which the principal items are:

Positions.	Monthly pay.	Positions.	Monthly pay.	Positions.	Monthly pay.
Carpenter's mate	\$25.00	Two saloon cooks, at \$35	\$70.00	Two mess boys, at \$15..	\$30.00
No. 1 boatswain	30.00	Three saloon cooks, at		Four mess boys, at \$12..	48.00
No. 2 boatswain	25.00	\$15	45.00	Six "learn" boys, at	
Beamman	20.00	Baker	45.00	\$0.25	1.50
33 seamen, at \$15	495.00	Two bakers, at \$15	30.00	Five bath boys, at \$15..	75.00
Sailmaker	12.00	Baker	25.00	Two deck boys, at \$15..	30.00
Two mess boys, at \$0.25..	.50	Butcher	15.00	Steerage cook	35.00
Mess boy	18.00	Porter	20.00	Two steerage cooks, at	
18 oilers, at \$18	324.00	Do	25.00	\$15	30.00
Fireman	20.00	Pantryman	20.00	Five steerage waiters,	
Do	20.00	Five pantrymen, at \$15..	75.00	at \$15	75.00
Do	18.00	Scullery man	15.00	Japanese steerage cook..	25.00
20 firemen, at \$16	624.00	Silver man	15.00	Two Japanese steerage	
45 coal passers, at \$14 ..	630.00	Printer	30.00	cooks, at \$15	20.00
Storekeeper	18.00	Interpreter	40.00	Check clerk	30.00
Two mess boys, at \$12 ..	24.00	Barkkeeper	30.00	Chinese instructor	75.00
Two mess boys, at \$0.25..	.50	No 1 cabin waiter	25.00	Two Chinese instruc-	
Saloon cook	45.00	38 cabin waiters, at \$15.	570.00	tors, at \$55	110.00

The total amount represented in this table is equivalent, at \$0.396, to \$1,620 in United States gold. This rate of \$0.396 is especially low just now because of the war, the usual rate being about \$0.470. The grand total at the lower rate amounts to \$4,988, but at the usual rate this total would exceed \$5,000 as the monthly salary expense of the average Pacific Mail Steamship Co. liner.

[Figures given in this consular report, as representing the amount of subsidy to be received by the Toyo Kisen Kaisha and the Osaka Shosen Kaisha, may be modified through an increased number of ships in the trans-Pacific service of those companies, mentioned in later reports from San Francisco and Honolulu.]

WOMEN TRAM CONDUCTORS AND MAIL CARRIERS.

[Consul C. M. Hitch, Nottingham. England, Sept. 14.]

The people of Nottingham are becoming quite accustomed to seeing women in various branches of the public service performing duties which were hitherto undertaken by men, and it occasioned little surprise when women tram conductors made their appearance a few days ago. At first only two or three were engaged to make the experiment, but they gave such universal satisfaction that the Tramways Committee, on September 10, definitely concluded to engage 15 or 20 more women as tram conductors. If the women perform their duties efficiently, they will be permanently employed on the same salary basis as the men. They will be furnished with suitable coat and skirt uniforms, and the authorities will endeavor to so arrange the shifts that the hours of work will not be too exacting.

Three women are in the Nottingham postal service, delivering letters in areas which do not involve a great amount of walking, and the general satisfaction they have given thus far will doubtless result in others being employed.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its branch offices. Request for each opportunity should be on a separate sheet and the file number given.

Wrapping paper, No. 18738.—An American consular officer in Chile transmits the name and address of a business man in his district who desires to purchase wrapping paper, similar to the samples which may be examined at the Bureau or its branch offices. (Refer to file No. 66757.) The consular officer also transmits names and addresses of other paper dealers in his district.

Machinery, No. 18739.—An American consular officer in Switzerland reports that a firm in his district desires to purchase a simple device for placing and fastening metal bands about wooden boxes. Sizes of boxes: 19½ by 13½ by 8 inches, 18 by 17 by 10 inches, 19½ by 13½ by 9½ inches. Correspondence may be in English.

Printers' supplies, No. 18740.—A firm in Argentina writes an American consular officer that it desires to represent American manufacturers and exporters of printers' supplies, such as machinery, type, inks, paper, office supplies, fancy paper, etc. Correspondence may be in English. References are given.

Photographic supplies, No. 18741.—An American consular officer in Italy reports that a business man in his district wishes to establish commercial relations with American manufacturers and exporters of cameras, photographic supplies, high-grade chemicals, glass and scientific instruments for laboratory use in chemistry, physics, and general experimental work. Correspondence should be in Italian or French. Catalogues, with full information, should be sent at once.

Machinery, No. 18742.—A Portuguese steamship company informs an American consular officer that it wishes to buy the latest and best materials of marine engineering machinery used chiefly for repairing ships; also heavy and light lathes, planers, screw cutters, and drilling machinery. The company desires to pay part cash with the order and balance after three months. Catalogues, price lists, and full information should be sent at once. Correspondence may be in English. Bank reference is given.

Leather, No. 18743.—An American consular officer in Canada writes that a firm of bookmakers in his district desires to be placed in communication with American manufacturers of bookbinding leather. At present prices are desired on 30 dozen red, blue, and black skivers.

Bathtubs, No. 18744.—A firm in Italy informs an American consular officer that it wishes to receive offers for 100 porcelain or majolica bathtubs, 200 wash basins, 100 fixtures for water-closets, for installing in first and second class cabins of ships; also bids for brass beds and fixtures for such cabins. All of this material must be of the finest quality. The firm also desires to receive offers for berths in the ordinary cabins. Quotations should be made c. l. f. Genoa. Correspondence is preferred in the Italian language but may be in English.

Fruits, No. 18745.—An American consular officer in Brazil transmits the name and address of a business man in his district who desires to be placed in communication with exporters of American fresh fruits, such as apples, pears, plums, grapes, and peaches. It is stated that the fruits may be shipped to a local storage warehouse; that the buyer would either pay cash against documents, or pay as the fruit is withdrawn from the warehouse, the latter acting as representative of American shippers. The man is also prepared to quote prices on Brazilian jellies and preserves and tropical fruits. He will send samples if desired.

Fancy leather goods, No. 18746.—The Bureau has received a letter from a business man in England who desires to represent American manufacturers or exporters of fancy leather goods.

Prism-glass windows, No. 18747.—A letter has been received by the Bureau from a man in Chile who desires to communicate with American manufacturers of prism-glass windows.

Silk thread and yarn, No. 18748.—The commercial attaché of the Department of Commerce in France reports that a business man desires to represent an American manufacturer of silk thread and yarn.

Fittings for postal station, No. 18749.—An American consular officer in Canada informs the Bureau that the Department of Public Works at Ottawa has advertised for tenders to be received until October 20, 1915, for fittings for Postal Station "C," Vancouver, B. C. Plans and specifications may be seen on application to the Postmaster, Vancouver; Mr. W. Henderson, resident architect, Victoria, B. C.; and at the Department of Public Works, Ottawa. The Bureau has no further information relative to this opportunity.

Vegetable ivory nuts, No. 18750.—An American consular officer in Italy reports that a business man in his district desires to establish business relations with American exporters of vegetable ivory nuts. Correspondence may be in English.

General representation, No. 18751.—An American consular officer in Brazil reports that a business man in his district desires to represent American manufacturers and exporters desiring to extend their trade in that country. No particular line is specified. References are given. Correspondence may be in English, but Portuguese is preferred.

Gasoline launch, No. 18752.—The Bureau is informed by an American consular officer in the Azores that a business firm in his district desires to purchase a sea-going gasoline launch. Correspondence may be in English.

Chemicals and drugs, No. 18753.—A druggist in Portugal has informed an American consular officer in that country that he desires to receive catalogues and price lists of cacodylate of soda, pharmaceutical specialties, drugs, etc. He is willing to pay cash against documents. Correspondence may be in French or Portuguese. References are given.

Printing presses, No. 18754.—The Bureau is informed by an American consular officer in the Azores that a printing firm in his district desires to receive catalogues and prices of small hand and foot power printing presses. Correspondence may be in English.

Groceries and salted meats, No. 18755.—An American consular officer in the Canary Islands reports the desire of a commission house in his district to purchase and to assume the agency for American manufacturers or exporters of groceries and salted meats. Correspondence should be in Spanish. A complete description of goods, with prices, etc., should be sent at once.

Gas heaters and cookers, No. 18756.—An American consular officer in France has informed the Bureau that a business man in his district desires to receive catalogues and export price lists of gas heaters and cook stoves.

Raw cotton, cotton yarn, safety pins, hosiery, etc., No. 18757.—An American consular officer in the Netherlands reports that a business man in that country desires to represent, as a commission agent, American exporters of raw cotton and manufacturers of cotton yarn, snap buttons, safety pins, hair pins, and hosiery. References are given. Correspondence may be in English.

Enamel ware, sanitary supplies, hardware, etc., No. 18758.—A business man in New Zealand has informed an American consular officer that he desires to represent, on an indent basis, American manufacturers or exporters of enamel ware; sanitary supplies; stationery; builders' hardware; and paper goods, such as postal cards, labels, etc. He desires to receive, as soon as possible, catalogues, price lists, etc., and samples, if possible.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, 752 Oliver Building; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

STEAM SOUNDING MACHINES FOR COAST SURVEY CRAFT.

Steam engines for operating the Cosmos sounding machine have been installed by C. G. Quillian on the steamer *McArthur* and launch *Delta*, of the United States Coast and Geodetic Survey, and are reported a decided success.

The device consists of the ordinary type of Cosmos machine, equipped with a three-cylinder, self-contained, Ingersoll-Rand steam engine of the brotherhood type, mounted on same base. Rope-drive pulleys are attached to the shaft of the wire drum and to the engine shaft. A friction brake acts against the inner rim of the wire drum and a heavy idler wheel on a swinging arm gives necessary tension in the rope drive.

On the ship the machine is mounted abreast the bridge on the port side, and the sounding wire leads from the drum through a sheave on the weighted end of a long arm, then through a registering sheave on the bridge, thence to a fair-lead on pipe davit and to water. The tension of the lead on the arm holds the arm out of vertical. The arm swings to a vertical position when the lead strikes bottom and takes up slack in the wire until the brake is applied.

The machine and registering sheave are advantageously located, as the position adopted on the *McArthur* enables the officer on the bridge to verify the depth on register and check the verticality of the wire. Using a 12-pound lead, soundings of 150 fathoms were obtained in two minutes, and the engine reels in 120 fathoms per minute. The ship goes ahead with 100 fathoms of wire out, except when turning with a port helm. On the *Delta* the machine is mounted on the stern and the wire leads over a registering sheave to the water. The machine has been used in depths up to 130 fathoms, and the lead was up long before the stop for the next sounding.

The machines are serving the purpose intended—viz, to reduce the number of men required and make the force available for another field party. The machine has also increased the speed of sounding with the *Delta*.

GERMANY'S FORTY-FIFTH CREMATORY.

[Consul Harry G. Seltzer, Breslau, Sept. 7.]

On Sunday, August 29, the new municipal crematory at Hirschberg was dedicated with appropriate ceremonies. This is the first crematory in this consular district and the forty-fifth in all Germany. It is built upon an elevation of the community cemetery on the Cavalier Mountains. The plans were made by City Architect Kühnemann, and the total cost was 100,000 marks (\$23,800). The main hall of the chapel has a seating capacity for 300 persons.

RECEIPTS OF SPANISH POST OFFICE DEPARTMENT.

[Consul Robertson Honey, Madrid, Sept. 14.]

According to statistics published to-day, the receipts of the Spanish Post Office Department for 1914 totaled 36,633,522 pesetas—a decline from the figures of the preceding year of 201,634 pesetas. (The peseta is equivalent to about 19.5 cents United States currency.) Sales of postage stamps amounted to 34,257,209 pesetas, special postage on printed matter, to 354,338 pesetas, and the money-order department produced 999,508 pesetas.

SUCCESS OF AUSTRALIA'S INTERNAL LOAN.

[Commercial Attaché William C. Downs, Melbourne, Sept. 10.]

The first installment of Australia's recently authorized £20,000,000 (\$97,330,000) internal loan has met with extraordinary success. Although but £5,000,000 (\$24,332,500) was called for, the returns received by the Commonwealth Bank up to September 1 aggregated £12,932,410 (\$62,935,575). Inquiries at the bank elicited the information that up to this present date all the returns are not in from some of the more distant points of Australia, but that the indications are that the total subscriptions will amount to well over £13,000,000 (\$63,264,500).

The largest individual subscription was that of the Mutual Life & Citizens' Assurance Co. for £1,000,000 (\$4,866,500). Various banks subscribed a total of £1,785,000 (\$8,686,700). It is reported that the banks, on the understanding that the amount was to be placed in four installments, have subscribed only one-fourth of what they were prepared to take of the total amount to be issued. This may be true in some cases, but most of the banks state that present subscriptions were for the amount they were prepared to take now, and they have not committed themselves as to what they can do in regard to further issues.

In view of the success of this first call for subscriptions, there should be no difficulty in placing the remaining £7,000,000 (\$34,065,500) whenever the Government chooses to call for it.

FLOW OF GOLD INTO SWITZERLAND.

[Commercial Attaché C. W. A. Veditz, American Embassy, Paris, Sept. 11.]

The war has brought about important modifications in the importation and exportation of gold in Switzerland. Whereas in 1913 Switzerland exported 24,550,000 francs (\$4,738,150 United States currency) of gold and imported 5,195,000 francs, the trade in gold during 1914 indicated exports amounting to 3,600,000 francs and imports amounting to 16,450,000 francs. The imports during the last four months of 1914 included 12,500,000 francs of gold from Germany and 1,500,000 of gold from England.

CHINESE VISITORS IMPRESSED.

[Extract from Peking Daily News of Aug. 31, by Commercial Attaché Julian H. Arnold, Peking.]

The first of the Chinese Commercial Commissioners to the United States to reach Shanghai on their return trip came in on the *Aki Maru*, and with them came glowing reports of their experiences. The members of the commission, says the China Press, are enthusiastic over their welcome by the Americans and over what they saw and learned. Mr. Yui spoke for the commission, saying:

The one big impression we got throughout our remarkable trip was the sincere friendship of the United States for China. The treatment we received was not surface courtesy. It represented genuine feeling from the heart. The American people are our friends. As to the things we did I can say we had the most glorious time of our lives. To those of the commissioners who had never before been in the United States—10 of the 17—it was the most wonderful experience of their lives, one they can never forget.

Bank and Steamship Line.

The concrete results of the trip it is too early to predict. Both the Sino-American bank and the Shanghai-San Francisco steamship line are still in the indefinite state.

We had conferences with American capitalists on both subjects, but nothing definite has yet been agreed on. The thing we must look to first is the steamship line. The withdrawal of the Pacific Mail will hasten our plans, but I don't think we can do anything definite for a few months.

But both the bank and the steamship service must eventually come. Without those two we can not have a thriving trade between China and the United States. And the one thing we learned on our trip was the enormous possibility of this trade and the small extent to which it has been developed so far.

BALANCE SHEET OF BANK OF AUSTRALIA.

[Commercial Attaché William C. Downs, Melbourne, Sept. 10.]

The balance sheet of the Commonwealth Bank of Australia, recently made public, shows that on June 30 last the bank's assets totaled \$81,371,400, consisting of: Coin, bullion, and cash balances, \$21,503,450; Australian Commonwealth notes, \$2,764,400; money at short call in London, \$13,820,850; British, colonial, and Government securities, \$26,665,900; fixed deposits of other banks, \$4,409,100; bills receivable in London and remittances in transit, \$1,132,000; bills discounted, loans and advances to customers, and other sums due the bank, \$10,450,000; bank premises, \$625,700. If the \$232,340 set aside to cover outstanding liabilities of customers and others on letters of credit be included, the assets total \$81,603,740.

The year's business shows a profit of but \$10,800, which has been equally apportioned to the reserve and redemption funds. In explanation of this small balance it should be stated that the bank started operations with no capital and immediately charged off to profit and loss the cost of equipping the various banking offices, and profits up to this time have been applied to wiping out this charge.

American chemicals and pharmaceutical products are now being purchased in large quantities by a chemist of Barcelona, whose desire was made known by Consul General Carl Bailey Hurst through the Trade Opportunity page of **COMMERCE REPORTS**. The inquirer received a number of replies and has been appointed the representative in Spain for a Philadelphia house.

NEW GOVERNMENT PUBLICATIONS.

The Superintendent of Documents, Washington, D. C., announces that he received in stock during the week ended October 9 the following new United States Government publications of a business character, which he will sell at the nominal prices affixed:

Corporations: Report of Commissioner of Corporations on State Laws concerning Foreign Corporations, including "What is a Foreign Corporation?" "A Right to do Business," etc.—Statutory provisions of the States, Federal constitutional limitations, with table of cases. Price, 25¢.

Taxation of Corporations, Part 6, Southern and Southwestern States—Report of the Commissioner of Corporations on the System of Taxing Manufacturing, Mercantile, Transportation, and Transmission Corporations in the States of Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma, and Texas, March 15, 1913—Embracing purposes and plans, with abstracts by States, and systems by States, table of cases, and indexes. Price, 35¢.

The Shasta Route and Coast Line, Geological Survey Bulletin 614, Part D of Guidebooks of the Western United States—Describing geologic and scenic features of the route, with travel guide and other interesting maps. Price, \$1.

Purification of Public Water Supplies, Geological Survey Water-Supply Paper 315, reprint—Covering pollution of water, sources of water supply, filtration, sterilization, etc. Price, 10¢.

Rules and Regulations for Metal Mines, Mines Bureau Bulletin 75—Covering scope of the committee, digest of State laws, and drafts of proposed laws by the committee. Price, 35¢.

Extension of Public Education.—A study in the wider use of school buildings, Education Bulletin 28, 1915—Work on civic use of schools others than for school purposes, such as playrooms, gymnasiums, community meetings, etc. Price, 20¢.

Golden Seal, Cultivation and Handling of, Plant Industry, Circular 6—Giving habitat, range, collection and preparation of root, cultivation, market, and medicinal uses. Price, 5¢.

Functions and Uses of Food, Experiment Stations Bulletin 46, revised, reprint—Covering uses of food, such as meat, fish, vegetables, etc., with tables of their nutritive values. Price, 5¢.

Dates of Egypt and the Sudan, Agriculture Department Bulletin 271—The Nile Valley dates, climatic environments, description, varieties, etc. Price, 20¢.

Miscellaneous Insecticide Investigations, Agriculture Department Bulletin 278—A series of experiments with the use of insecticides, with methods of tests and results. Price, 10¢.

Apple Market Investigation, 1914-15, Agriculture Department Bulletin 302—Embracing the conditions covering the movement of the crop, studies in the market, grades, packing, cold storage, export, etc. Price, 10¢.

AVIATION SCHOOL IN SPAIN.

[Consul Robertson Honey, Madrid, Sept. 16.]

On October 1, 1915, there will be opened the new Spanish Acro-drome at Getafe (about 5 miles outside the city limits of Madrid). The Spanish Government will assist those receiving instruction. The number of pilots to be instructed is limited to 12, and they will pay 500 pesetas each, to cover cost of fuel, etc. The fee for instruction of mechanics is nominal—2.50 pesetas. (The peseta is equivalent to about 19.5 cents.) The headquarters of the school is in Madrid, at Santa Isabel, 13.

Canadian butter is arriving at Cape Town for the first time in several years; fair quality is retailing at 50 to 54 cents per pound.

NETHERLANDS TRADE AND INDUSTRIAL NOTES.

[Consul Frank W. Mahin, Amsterdam, Sept. 22.]

Business Failures—Sumatra Rubber Yield.

According to a local commercial bureau, there were 979 business failures in the Netherlands from January 1 to September 18, 1915, against 1,182 during the corresponding period of 1914.

A Sumatra rubber company, with office in Amsterdam, reports an output of 137,913 pounds during the first eight months of this year, against a total production of 145,073 pounds and 92,603 pounds during the whole of 1914 and 1913, respectively.

Prosperous Dutch Fisheries—Crop Outlook.

As a further indication of apparent prosperity in the Dutch fishing industry, referred to in a previous report from this consulate [See COMMERCE REPORTS for Oct. 11, 1915, p. 160; also the issue for Oct. 9, p. 141], it is now stated that on a recent day the sales in the great fish market at Ymuiden, at the entrance to the North Sea Canal, amounted to the equivalent of \$58,000—the largest single day's business since it was established.

Too much rain in August impaired growing field crops more or less. All grain suffered, wheat and oats the most. Practically all vegetables were affected to some extent. The September weather, so far, has been sunny and fairly warm, tending to repair the August damage where not too late. On the whole, fair crops of all field products are now assured, without extraordinary yields of any particular varieties.

Dyestuff Shortage.

The textile factories in this consular district recently suffered from a shortage of yarn. That difficulty having been removed, a new trouble has arisen in a deficiency of dyestuffs. Germany has been the source of supply, but as only 50 to 75 per cent of the former supply has been received of late the situation is becoming serious. An appeal for help has been made to the Netherlands Minister of Foreign Affairs.

[Commercial Attaché Erwin W. Thompson, The Hague, Sept. 17.]

New Waxed-Paper Industry.

One of the results of the war is to direct attention to the home production of articles which have heretofore been so easily and cheaply imported that it was not considered worth while to manufacture them. In the Netherlands many small industries are growing up for supplying domestic wants; for example, the preparation of waxed or paraffined paper, which is used to a large extent for wrapping butter and cheese. Catz Bros., importers, of Rotterdam, have recently installed machinery for coating this paper.

Scarcity of Rubber Tires.

Tires for automobiles and motorcycles are now almost unobtainable in the Netherlands. Importations are not one-fourth of the requirements. Whenever any are imported at all, they must be consigned to the Netherlands Oversea Trust, which distributes them sparingly direct to consumers, who must bring up and deliver an old tire for each new one received, and who must give a bank guaranty that the tires will not be exported, and in any case no more than six tires will be delivered to one applicant.

COTTON CONSUMPTION AND SUPPLIES.

The following table, prepared by the United States Bureau of Census, shows the cotton consumed, cotton on hand, and active cotton spindles in the United States for the month of September, 1915 and 1914, with statistics of cotton consumed for the two months ending with September. (The statistics of cotton in this report are given in running bales, counting round as half bales, except foreign cotton, which is in equivalent 500-pound bales.)

Locality.	Year.	Cotton consumed (bales) during—		Cotton on hand Sept. 30.		Cotton spindles active during September (number).
		Septem-ber.	2 months ending Sept. 30.	In consum-ing estab-lishments (bales).	In public storage and at com-presses (bales).	
United States	1915	495,219	962,705	1,089,614	2,796,500	31,285,104
	1914	414,864	796,544	656,892	1,663,626	30,307,154
Cotton-growing States.....	1915	275,223	523,679	499,933	2,493,002	12,772,863
	1914	229,163	427,732	162,224	1,552,367	12,249,286
All other States	1915	222,996	439,026	589,681	303,498	18,522,241
	1914	185,701	370,812	304,668	111,328	18,057,868

* Includes of foreign cotton 23,985 bales consumed, 97,176 bales on hand in consuming establishments, and 29,259 bales in public storage.

Linters, which are not included above, were 61,431 bales consumed during September in 1915 and 27,764 bales in 1914, 128,059 bales on hand in consuming establishments on September 30, 1915, and 63,386 bales in 1914, and 57,106 bales in public storage and at compresses in 1915 and 26,078 bales in 1914. Linters consumed during two months ending September 30 amounted to 117,330 bales in 1915 and 53,044 bales in 1914.

Imports and Exports of Cotton and Linters.

The imports and exports of cotton into and from the United States for September and for the two months ending with September, 1915 and 1914, follow:

Country of production.	Imports of foreign cotton (500-pound bales) during—				Country to which exported.	Exports of domestic cotton and linters (running bales) during—			
	September—		2 months ending Sept. 30—			September—		2 months ending Sept. 30—	
	1915	1914	1915	1914		1915	1914	1915	1914
Total...	26,197	15,315	45,187	42,402	Total...	502,031	125,778	664,090	146,988
Egypt.....	16,505	8,912	29,681	13,241	United Kingdom.....	230,497	50,980	284,245	57,350
Peru.....	9	516	343	1,075	Germany...	None.	None.	None.	52
China.....	5,074	1,201	5,901	3,187	France.....	92,217	None.	101,746	6
All other countries...	4,609	4,686	9,172	24,899	Italy.....	121,043	16,678	169,068	18,224
					All other countries..	58,274	58,120	129,031	71,857

* Figures include 10,624 bales of linters exported during September in 1915 and 1,808 bales in 1914, and 22,108 bales for two months ending September 30 in 1915 and 2,093 bales in 1914. The distribution for September, 1915, is as follows: United Kingdom, none; Germany, none; France, 7,372; Italy, 1,641; and all other countries, 1,611.

GERMAN TRADE WITH RUSSIA.

In view of the general interest in the Russian market and the importance attached to German methods in promoting foreign trade the following article from the "Neue Zürcher Zeitung" is called to the attention of American exporters as it throws additional light on the special requirements of the Russian market, which should be carefully considered in connection with any forecasts in regard to the commercial relations of Russia after the restoration of peace. The article, which is entitled "The Prospects for German Exports to Russia," reads as follows:

As far as a boycott of all German goods in Russia is concerned there is no danger of that. Neither is Germany in danger of being compelled to yield the Russian market to neutral or the allied countries. The Russian merchant is in certain respects still a very conservative buyer who does not take readily to innovations. He is also more apt to take chances with his money than with the goods he handles and generally orders the goods he is used to buying, even after improved articles have been placed on the market. Many German factories have great difficulties in supplying some of the obsolete articles ordered. Thus, the carpets that were bought 20 years ago are still in demand; the style of electrical apparatus has not changed for 10 years, while the same kind of shawls have been supplied for the last 30 years.

It is hard to believe that a neutral country could sell in Russia any considerable quantity of scythes or manure forks, since the former must come from Styria and the latter from Westphalia, and it would be very difficult, if not impossible, to explain to the Russian peasant that another make may be just as good.

The result of intensive cultivation of a market for a long period of years, as has been done by Germany in the case of Russia, can not disappear all of a sudden. Then the question of credit plays an essential part in the Russian market, as very long terms are granted, a practice unfortunately introduced by the Germans as a result of keen competition. Credits of 6, 9, 12, and, in the case of textiles, even 14 months are very common and are usually granted without indorsement and frequently extended. In the majority of cases the manufacturer's agent provides for the payment, and the Russian merchants settle their accounts, not in cash, but mostly by means of coupons from securities, which do not fall due for a year, and on which a loss of 1½ per cent is incurred when they are converted into cash. Such are the customs of the Russians, which seem to suit their convenience and from which it would be difficult to get them away. In my own experience, extending for a period of years, I have not been able to obtain such terms from an English house for the very good reason that long-term paper is not discounted by English banks.

These, however, are not the principal requirements for doing business in Russia. The Russian buyer is still paying more attention to price than to quality, and he who quotes the lowest price has the best chance for getting the business. In this respect, however, other countries will find it very difficult to compete with Germany. This is due partly to the fact that their factories are not adapted to large-scale production and partly because they can not produce so cheaply, since they have to import their raw materials. Take, for example, an article of extensive manufacture like enamel ware. What country can produce enamel ware as cheaply as Germany does? In the case of electrical supplies, Germany has practically no competition in the Russian market; in the fancy goods trade Germany has a very large share, the few French houses being negligible. I could name many more articles. Who, for instance, could compete with Germany in coal-tar dyes, pharmaceutical products, etc.?

In visiting the business houses or industrial establishments in Russia whom do we find as managers, foremen, or superintendents? Almost invariably Germans. One hardly finds an English or a French boss-dyer, fitter, or manager of a wholesale or retail establishment. Practically all buyers in the large business houses are Germans or Russians, but not French or English.

As a result of long years of cooperation there has developed a sense of mutual confidence, and why should it disappear all of a sudden? This confidence is felt not only in the German but also in their products, and the Russians will probably remain conservative. A boycott of German goods is altogether out of the question, for the mere reason that the ties resulting from a community

of interests extending for a long period of years will blind the two countries again after the conclusion of the war.

In conclusion it may be noted that there is hardly a German commercial house of any size that is not represented in Russia, and that there is a whole staff of German agents and other people who have for years been making their living through German houses, and it is hardly likely that they will suddenly take up with new ventures for the mere purpose of persuading the Russian peasant that French and English goods are better than German. After the war is over the Russian peasant will know no more about France or England than he did before the war, for while he probably never heard English or French he knows something about German, and the Germans saw to it that in every small town there should be some German representative of their business.

NORTH AMERICAN SEED POTATOES FOR BERMDA.

[Consul Carl R. Loop, Hamilton, Bermuda, Aug. 18.]

The Government of Bermuda is directing a great deal of attention to the improvement of its stock of potatoes and has recently so amended the regulations under the potato importation act of 1914 that field inspection is now obligatory. Early in the year Bermuda merchants were notified of the Government's intention to amend the regulations, and those who contracted for seed potatoes did so subject to their passing an official inspection while growing.

In carrying out the new regulations, the Director of Agriculture paid a personal visit in July to the farms of Long Island and Maine where potatoes were being grown under contract for the Bermuda market, and upon his return submitted a detailed report which was published in full as a supplement to the Royal Gazette. A copy of this supplement is transmitted herewith [and is filed (as No. 65774) in the Bureau of Foreign and Domestic Commerce at Washington].

[Consul General Evan B. Young, Halifax, Sept. 27.]

Expert Advice for Nova Scotia Growers.

As a result of the efforts of the Secretary of Agriculture for the Province of Nova Scotia and the Director of Agriculture for Bermuda, one of the Dominion plant pathologists will visit Nova Scotia to give expert advice to the farmers who are growing potato seed for the Bermuda export trade. A large quantity of the best seed will be selected, with the assistance of the pathologist, during the digging season this fall, and it is confidently believed that as a result of this method of procedure the exportation of seed potatoes from Nova Scotia to Bermuda will very materially increase.

IRON COINS IN GERMANY.

[Consul Harry G. Seltzer, Breslau, Sept. 7.]

According to a recent ordinance of the Bundesrat, the Imperial Chancellor is empowered to authorize the coining of 5-pfennig pieces out of iron to the value of 5,000,000 marks. These coins are to have a milled edge and will contain the words "Deutsches Reich" over the figure "5" and the word "pfennig" under it, followed by the date. The obverse will have the usual stamp of the Imperial coat of arms. The new coins are to replace those now made of nickel and copper, and they shall be withdrawn from circulation not later than two years after the conclusion of the present war.

FOREIGN COMMERCE OF UNITED STATES FOR AUGUST.

The following table, prepared by the Bureau of Foreign and Domestic Commerce, Department of Commerce, gives the imports and exports of the United States by great groups during August, 1914 and 1915, and the eight months ended August, 1914 and 1915:

Groups.	Month of August—		8 months ended August—	
	1914	1915	1914	1915
IMPORTS.				
Crude materials for use in manufacturing.....	\$40,751,223	\$53,404,950	\$436,234,340	\$435,468,749
Foodstuffs in crude condition and food animals.....	15,813,363	18,192,354	159,110,360	147,181,187
Foodstuffs partly or wholly manufactured.....	23,121,406	21,755,114	181,199,630	205,467,437
Manufactures for further use in manufacturing.....	19,030,326	23,069,889	198,584,411	163,517,164
Manufactures ready for consumption.....	28,633,306	24,668,236	264,495,559	191,086,527
Miscellaneous.....	1,416,267	679,659	10,735,973	7,863,306
Total imports.....	129,767,890	141,630,202	1,270,361,263	1,150,684,760
EXPORTS.				
Crude materials for use in manufacturing.....	12,237,686	23,880,904	340,514,771	375,085,937
Foodstuffs in crude condition and food animals.....	28,610,358	25,878,273	108,805,767	289,317,657
Foodstuffs partly or wholly manufactured.....	18,596,504	42,181,916	170,685,495	405,012,262
Manufactures for further use in manufacturing.....	16,208,545	40,712,783	240,692,256	265,737,732
Manufactures ready for consumption.....	32,337,363	113,189,014	421,912,525	753,352,281
Miscellaneous.....	187,797	11,213,031	4,263,733	86,060,599
Total domestic exports.....	168,198,262	257,065,921	1,286,874,547	2,194,566,788
Foreign merchandise exported.....	2,169,232	3,905,694	24,475,109	37,187,952
Total exports.....	110,367,494	260,971,615	1,311,349,656	2,231,754,730

The increase in the exports for August, 1915, in the item miscellaneous to a total of \$11,213,031 arises from the exportation of horses in that month to the value of \$3,592,855, of mules to the value of \$2,528,765, and of seeds valued at \$74,791.

INDUSTRIAL EXHIBITION OF PEKING.

[Extract from Peking Daily News of Sept. 2, by Commercial Attaché Julian H. Arnold, Peking.]

The opening ceremony of the local industrial exhibition took place in the Temple of Agriculture on September 1. Before a fair-sized audience the president called the meeting to order, and with a few brief remarks introduced several speakers, consisting of important local officials, industrial representatives, and distinguished visitors. After the meeting a group picture was taken, and the president conducted the guests for a review of the exhibits.

This exhibition is a sort of preliminary to the national exhibition to be held later on during the month in the Industrial Museum of the Ministry of Agriculture and Commerce. It is the general rule to have the materials so collected exhibited locally first before they are made a part of the national or international affair. Elaborate preparations have already been made at the Museum for the accommodation of exhibits from all over the country and it is expected that the event will be quite on the same scale as the one held at Nanking in 1911, in spite of the rather limited space in Peking.

MOTION-PICTURE ADVERTISING IN GERMANY.

[Consul Harry G. Seltzer, Breslau, Aug. 21.]

A report from the Breslau consulate on the motion-picture situation in this district, which was published in *COMMERCE REPORTS* for April 3, 1915, has called forth so many letters of inquiry from the United States that further particulars as to the advertising slides used—that being one of the points on which interest centered—would seem to be desirable. Most of these slides are plain, steady advertisements in print and picture, similar to program or high-class magazine advertising. They may be in black and white or in colors. It is not at all uncommon, however, to see such advertising on regular motion-picture films, and a few examples will perhaps be in order.

The Dorndorf Shoe Stores recently used a kind of puzzle picture in which the letters D-o-r-n-d-o-r-f were made to appear in irregular order, but each letter, after more or less confusion, finally arranged itself in place. This was followed by a display of shoes, which were made to walk out upon the screen, arrange themselves in military style, and then parade around the picture doing the famous "goose step." In another instance a customer was made to appear in one of their six stores in Breslau, the shoe boxes came from their places on the shelves, opened themselves, the shoes came forth, placed themselves upon the customer's foot one after another until the customer showed by his happy smile that he was satisfied. Clerks were not in attendance at all. The motto was "Dorndorf shoes sell themselves."

Another very clever reel shows a Turk in the harem with his favorite, surrounded by luxuries of all descriptions. After a very interesting love scene, which lasts a few minutes, the favorite brings a small tabouret into the room. Upon it is a package of "Salem Alikuman cigarettes," which she presents to her lord and which are the "Favorite," of course. This reel is used by a number of theaters as an "extra."

Perhaps the boldest and most elaborate advertising film which has been going the rounds of the Breslau theaters is entitled "Who is she?" This is a two-reel play, in which the attention centers upon a pretty girl temporarily, but the mask is so skillfully withdrawn that the audience is rather pleased after all to know that the two reels have been advertising an automobile.

USE OF WORD "INCHES" IN MADRID DISTRICT.

[Consul Robertson Honey, Madrid, Spain, Sept. 15.]

The consulate at Madrid notes the increasing number of catalogues printed in the Spanish language which are being sent for the consulate files. American exporters, however, should be notified that the "inch" is a linear dimension which varies in this district. Dictionaries correctly translate the word into Spanish as "pulgada," but the pulgada as used in the Madrid district is only about nine-tenths of the American inch. Where small dimensions are quoted by American exporters—as, for instance, copper wire, string, etc.—it is preferable to use the metric system in catalogues and correspondence. This system is the standard in the district, and no confusion will result from its employment.

FOREIGN TARIFFS.

ARGENTINA.

[Boletín Oficial, July 28 and Aug. 13, 1915.]

Classification of Petroleum and Petroleum Products.

A decree of the President of Argentina, dated July 17, 1915, in effect October 1, 1915, revokes article 20 of the customs regulations on the subject of testing and classification of petroleum and petroleum products and prescribes new standards, while leaving the rates of duty unchanged. The change was made with a view to eliminating certain ambiguities and obsolete terms, pointed out in a report by the director of the National Chemical Laboratories. The National Chemical Laboratories will conduct tests to determine density, point of distillation, flash point, viscosity, and other data necessary to the proper classification of each consignment.

Under the new regulations the only classes of oils entitled to free admission under tariff No. 45 are the following: Crude petroleum, i. e., that subjected to no process except separating the water and solid impurities; mixtures of hydrocarbons having a density of not over 0.73 at 15° C. and distilling not less than 90 per cent of their volume at 120° C. (Engler process); and gas and shale oils of a density of 0.83 to 0.90 at 15° C., having a flash point less than 150° C. in a Pensky-Martens instrument and a viscosity less than 6° at 20° C., and distilling not more than 20 per cent of their volume up to 300° C. (Engler process), when imported exclusively by gas companies for carbureting purposes. Beginning October 1, 1915, there will be required legalized certificates of origin for crude petroleum, specifying the region or district from which it has been obtained, such certificate to accompany the samples submitted for analysis.

The following table shows the new tariff classification of petroleum products not entitled to free admission, the rate of duty being in each case 27 per cent (including surtax), based on the official valuation:

[Peso, \$0.965; kilo, 2.2046 pounds.]

Tariff No.	Products.	Official valuation.
194	Kerosene and all petroleum products of density of 0.78 to 0.83 and distilling at least 80 per cent of their volume between 150° and 300° C. (Engler process), with a minimum flash point of 40° C. (Abel process).....	Peso per kilo. 0.03
2779	Impure paraffin oil, including oils specified in No. 3326 when not entirely clarified and purified, the distillation of which begins at 300° C.20
2791	Mineral oils not specified, including all clarified or refined oils of a density greater than 0.83 and viscosity greater than 3° at 20° C. (Engler process), having a flash point above 150° (Pensky-Martens instrument), and distilling not over 10 per cent up to 300° C.10
3183	Ligroin and similar products, including hydrocarbons of a density of 0.73 to 0.78 and distilling between 120° and 180° (Engler process); unrefined benzines of density greater than 0.78, in which benzenic hydrocarbons predominate.....	.10
3326	Liquid vaseline or paraffin oils, including all mineral oils which are entirely pure, clear, colorless, odorless, and without fluorescence, of density of 0.84 to 0.89, whose distillation begins at 350° C.60
3270	Residues of crude petroleum, including gas and shale oils (not imported as above described) and residues of unrefined petroleum, of density greater than 0.90 at 45° C., and viscosity greater than 6° (Engler process), distilling less than 20 per cent up to 300° C., gross weight.....	1.00
.....	Petroleum products not specified in the tariff, ad valorem.....	26%

* Unless otherwise stated, density is determined at a temperature of 15° C.

CANADA.

[Consul Felix S. S. Johnson, Kingston, Ontario, Sept. 13, 1915.]

Use of Canadian Marks on Imported Articles.

Canadian importers and dealers have frequently imported for sale articles stamped with their names or marks, without indicating the name of the manufacturer or the country of origin. Under the provisions of the customs law prohibiting the importation of goods manufactured in a foreign country which bear the name or trademark of a dealer in Canada or the United Kingdom or a British country, unless the country of origin is definitely indicated, the customs officials of Canada have recently been detaining all shipments of such articles until the labels were removed or statements as to origin in a foreign country were added. In cases where the nature of the articles imported made it impossible to add the required statement in regard to origin, such articles have been confiscated. A distinction has been drawn between the cases or receptacles intended as containers for certain articles and the articles themselves, and small empty cases or boxes of metal have been allowed to be imported even if marked only with the name of the Canadian dealer.

EGYPT.

[Journal Officiel, Aug. 30, 1915.]

Increase in Duties.

By a decree of August 30, 1915, the duties on alcoholic liquors, building lumber, and tobacco imported into Egypt are increased as follows:

[Egyptian pound, \$4.943.]

Articles.	Rates of duty in Egyptian pounds.	
	New.	Old.
Alcoholic liquors and beverages, ad valorem.....	10%	8%
Building lumber, ad valorem.....	8%	4%
Leaf tobacco.....	Per kilo.	Per kilo.
Stripped, pressed, cut, and ground tobacco and cigarettes.....	£ 0.300	£ 0.250
Cigars of all kinds.....	£ .400	£ .300

* Conventional rates applicable to products of the United States and other countries entitled to most-favored-nation treatment, when accompanied by certificates of origin.

ITALY.

[Gazzetta Ufficiale, Sept. 17, 1915.]

Temporary Export Duties.

A royal decree of September 15, 1915, in effect September 18, imposes an export duty of 1 per cent ad valorem (based on valuations for statistical purposes) on all articles shipped from Italy, with the exception of a few products on which the following specific export duties are to be levied, all duties to remain in effect until the end of the war [lira, \$0.193; hectoliter, 26.417 gallons]: Sulphuric acid, sodium nitrate, carbon sulphide, tanning materials (including sumac), beans, chestnuts, potatoes, bran, and oilcake, 0.50 lira per 100 kilos; nitric

acid, 0.80 lira per 100 kilos; tannic acid and extracts, copper sulphate, sugar, cereals (not specified), flour, semolina, and alimentary pastes, 1 lira per 100 kilos; rice and raw hemp, 2 lire per 100 kilos; combed hemp, 3 lire per 100 kilos; drugs and medicines, 10 lire per 100 kilos; iron ore and iron pyrites, 1 lira per metric ton; copper ore and copper pyrites, 2 lire per metric ton; automobiles, 50 lire each, and in addition 5 lire per horsepower; motor trucks, 100 lire each, and in addition 5 lire per horsepower.

The decree also provides for the following increases in the internal taxes imposed on certain products: Spirits, 20 lire per hectoliter of anhydrous alcohol; beer, 0.60 lira per hectoliter for each degree of alcohol; sugar, 5 lire per 100 kilos. In addition, the internal tax on the sale of mineral oils has been increased by 8 lire per 100 kilos.

VENEZUELA.

[Minister Preston McGoodwin, Caracas, Sept. 6, 1915.]

Charge on Catalogues Sent by Parcel Post.

Although catalogues are included in the free list of the Venezuelan customs tariff, there is a regulation in effect in that country which imposes a minimum charge of 6 reales (\$0.58) on all packages imported by parcel post. Catalogues as well as other advertising matter should therefore be forwarded by regular letter or book post and packages should be so wrapped as to permit of easy examination of the contents. [This matter was previously referred to in Foreign Tariff Notes No. 4, p. 26.]

SHORTAGE OF MOLASSES IN CANADA.

[Consul Felix S. S. Johnson, Kingston, Ontario, Sept. 25.]

Canada is facing a shortage of molasses that will be especially felt in the Maritime Provinces and Quebec, these being the largest buyers. The market is depleted; stocks in the hands of traders are light and are not expected to meet the demand until the new crop arrives next March. In Prince Edward Island not a single puncheon is left.

The present price is the highest for many years, being 57 cents per gallon for puncheons of fancy and 48 cents for choice. In March the price for fancy was 45 cents; a year ago it was 38 cents. At this writing there is being sold in the Province of Quebec what is called "fancy blend," which, although not up to the standard, is stated to be of fair quality. It is reported that if it should happen that fancy molasses were unprocurable, fancy blend would be placed on the market as a substitute.

This year there has been a fairly good demand for choice molasses in view of the fact that it sells 10 to 12 cents below fancy. It is said that the trade in choice in the Province of Quebec has doubled this year for this reason.

An important Buenos Aires trading company writes that, through assistance rendered its representative while in the United States by the New York branch of the Bureau of Foreign and Domestic Commerce, it has established connections with some of the leading North American manufacturers.

A \$300 OVERSIGHT.

[Special Agent Garrard Harris.]

Just a bit of bad judgment or a lack of information may turn a bargain in New York or New Orleans into a disastrous loss in one of the Central American Republics. For instance, some time ago a dealer in one of these countries received from the United States a shipment of leaf tobacco packed in zinc-lined wooden cases, instead of the customary bales. The difference in freight and duties amounted to \$300. This was a total and unnecessary loss, and the Central American was much concerned over it, as it was his first order to the house and he did not know what would be done about the matter.

The American consul was consulted, and he took the subject up in a friendly and unofficial way, with the result that the firm shipping the tobacco acknowledged its fault in not ascertaining that the duty on tobacco was on the gross weight instead of ad valorem and that the packing cases had to be paid for at the same rate as the tobacco. The American firm stood the loss. The outcome has been that many repeat orders have been obtained from the exercise of this sense of justice. The Central American is convinced of the entire "squareness" of his dealer; and the latter has found out how to do business profitably and eliminate all causes for complaint.

A Knowledge of Tariff Regulations Essential.

Doubtless the firm shipping the tobacco was trying to do the right thing in the first instance and protect the tobacco from climatic changes or the like, but it was at fault in not ascertaining the tariff requirements of the country to which the shipment was destined. These could easily have been learned had application been made to the consul general of the country or to the Bureau of Foreign and Domestic Commerce at Washington; the information could have been had for the asking. The above instance is merely one of the small points of export business likely to prove expensive if overlooked.

It is essential to have an understanding of the tariff laws of each Republic as they bear upon the particular class of goods proposed to be exported there. Central America consists of the six sovereign Republics of Guatemala, Salvador, Honduras, Nicaragua, Costa Rica, Panama, and the British Crown colony of British Honduras. Each country has a separate tariff, a different money, and customs regulations varying in greater or less degree, and each country presents a separate problem for the American exporter, which should be solved before experience has imposed a penalty for the lack of foreknowledge.

INCREASE OF IMPORTS INTO FRANCE.

[Commercial Attaché C. W. A. Veditz, American Embassy, Paris, Sept. 11.]

The French customs authorities announce that the imports of food products for the first seven months of 1915 show an increase of \$18,528,000 over the corresponding period of last year; and the imports of manufactured articles show an increase of \$76,428,000. Raw materials, however, show a decrease of \$233,916,000. The exports compared for the same period show a decrease of \$18,335,000 for food products, \$143,592,000 for raw materials, \$218,283,000 for manufactured goods, and \$35,126,000 for post parcels.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

- Textiles, elastic goods, etc., No. 18759.**—An American consular officer in the Netherlands reports that a general agent in that country desires to secure the sole agency for American manufacturers of textiles, such as hosiery, piece goods, and elastic goods. He prefers to act on a commission basis, but is willing to purchase certain articles on his own account.
- Potash fertilizers, No. 18760.**—The Bureau has been informed by an American consular officer in India that a man in his district desires to communicate with American manufacturers or exporters of potash fertilizers. Quotations should be c. i. f. port of entry, India. Correspondence may be in English.
- Smokers' articles, No. 18761.**—An American consular officer in England reports that a firm of cigarette and cigar manufacturers in his district desires to purchase smokers' articles of various kinds. Catalogues, price lists, etc., should be sent at once.
- Caustic lime, No. 18762.**—An American consular officer in Peru reports that an importer in his district desires to purchase immediately, as a sample order, about 18 tons of pure caustic lime to be used on sugar plantations for the defecation of cane juice. Full particulars as to quality, price, shipping facilities, etc., should be sent at once. C. i. f. quotations are preferred. References are given. Correspondence may be in English.
- Iron hoops, brass sheets, etc., No. 18763.**—A merchant in India has informed an American consular officer that he desires to purchase iron hoops of the following sizes: 1½ inches, 2 inches, 2¼ inches, and 2½ inches; iron and steel rods, round and square, iron nails of different sizes, brass and iron screws, bolts, nuts, rings, lamps, and chimneys, and brass sheets. Correspondence may be in English.
- Wrist watches, No. 18764.**—An American consular officer in France reports that a business man in his district desires to receive catalogues and prices of nickel watches with leather strap bracelets. Correspondence may be in English.
- Pasteboard boxes, No. 18765.**—The Bureau has been informed by an American consular officer in Canada that a man in his district desires to communicate with American exporters of pasteboard boxes with partitions suitable for use in packing tubes of paste solder. Reference is given.
- Machinery, No. 18766.**—A report has been received from an American consular officer in Madagascar stating that a business man desires to purchase machinery suitable for cleaning and spinning ureno-lobata fiber and for weaving this product into bags. Correspondence, catalogues, etc., should be in French, if possible, and prices quoted c. i. f. nearest port.
- Fireproof paint, No. 18767.**—An American consular officer in Canada reports that a manufacturer of shingles in his district desires to communicate with American manufacturers or exporters of fireproof paint for use in treating cedar shingles. Reference is given.
- Automobile accessories, No. 18768.**—A business firm in Argentina has informed an American consular officer that he desires to secure the agency, on a commission basis, of American manufacturers of automobile tires and accessories and mineral oils. References are given. Correspondence should be in Spanish.
- Knitting and sewing needles, No. 18769.**—An American consular officer in France has been informed by a business firm in his district of its desire to communicate with American manufacturers of knitting and sewing needles. Correspondence should be in French.
- Stationery, artificial limbs, surgical apparatus, etc., No. 18770.**—An American consular officer in France reports that a commission agent in that country desires to represent American manufacturers of pencils, erasers, steel pens, paper novelties, hardware, and small machines, artificial limbs, surgical hand-sets and apparatus. Reference is given.

- Haberdashery, No. 18771.**—A business firm in Greece informs an American consular officer that they desire to establish business relations with American manufacturers or exporters of general haberdashery, such as collars, cuffs, hoslery, gloves, handkerchiefs, and purses. Catalogues, price lists, etc., are requested, and samples if possible. Correspondence may be in English.
- Arsenic, No. 18772.**—The Bureau is in receipt of a report from an American consular officer in Canada to the effect that a business man in his district desires to communicate with American manufacturers or exporters of arsenic. Reference is given.
- Tobacco, No. 18773.**—An American consular officer in Norway reports that an importer in his district desires to receive samples, prices, etc., of brown Virginia tobacco. Kentucky tobacco is not desired. The importer does not care to deal with any trust. Correspondence may be in English. In order to meet conditions of previous trade it is desirable that tobacco be packed in barrels of about 1,500 pounds capacity. Reference is given.
- Umbrella parts, No. 18774.**—A manufacturer of umbrellas in France has informed an American consular officer that he desires to establish business relations with American manufacturers of umbrella parts. He states that he is in a position to purchase about \$60,000 worth of goods annually. Reference is given.
- Black pepper, No. 18775.**—An American consular officer in Greece reports that a business firm in that country desires to purchase crude black pepper. The firm indicates a desire to order about 100 bags of pepper at a time. If possible, prices should be quoted either per 100 kilos or per 100 pounds c. i. f. Greek port. Correspondence should be in French.
- Printing machinery, No. 18776.**—A State official in Brazil has informed an American consular officer that his Government desires to receive catalogues, prices, etc., of printing and engraving machines and such other materials as may be necessary in the establishment of a modern printing office. Quotations should be made c. i. f. Brazilian port.
- Alcohol, No. 18777.**—An American consular officer in France reports that a business firm in his district desires to establish relations with American manufacturers or exporters of 90 per cent alcohol. Full information should be sent at once. If possible, prices should be quoted c. i. f. French ports. Correspondence may be in English.
- Dry paint, No. 18778.**—A business man in Canada has informed an American consular officer that he desires to communicate with American manufacturers or exporters of dry paint. Reference is given.
- Cotton twist, No. 18779.**—A firm in Scotland has informed an American consular officer that it desires to purchase supplies of cotton twist, such as 8 lea 4 ply, suitable for sewing bags. The firm desires to receive samples with quotations; goods to be delivered c. i. f. British port. Terms cash. Prompt delivery essential.
- Paper, No. 18780.**—An American consular officer in France reports that a firm in his district desires to purchase paper, samples of which may be examined at the Bureau or its branch offices. (Refer to file No. 66847.) Quotations must be made "free delivery Paris."
- Rubber bands, No. 18781.**—A firm in Switzerland informs an American consular officer that it desires to establish business relations with American manufacturers of rubber bands for use in making tin cans air-tight. The rubber must be of purest quality and free from acids. Samples of the bands desired may be examined at the Bureau or its branch offices. (Refer to file No. 66821.) Prices may be either f. o. b. New York or c. i. f. French port. Customary American terms and conditions are accepted. Correspondence may be in English.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, 752 Oliver Building; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 308 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Navy Department supplies, No. 2707.—Sealed proposals will be received at the Bureau of Supplies and Accounts, Navy Department, Washington, D. C., until October 26, 1915, for furnishing the following material. Firms interested therein should make application to the Bureau of Supplies and Accounts, giving the schedule numbers desired: Schedule 8885, 1-gallon paint cans, 5-pound petrolatum cans, and whitening in boxes and barrels. Bids will also be received until November 2, 1915, for the following: Schedule 8881, railroad tank car; schedule 8882, electric hoists; schedule 8889, building sand; schedule 8890, bar steel; schedule 8891, portable blacksmiths' forges, hasps and staples, chest hasps, ball-tipped fast-pin butt hinges, ball-tipped loose-pin butt hinges, and hammock rings; schedule 8892, sheet lead in rolls, soft wiping solder, cast-iron pipe fitting, and wrought pipe; schedule 8893, paint brushes, white table felt, 54 inches wide, American double-dressed hemp, rawhide leather lacing, rubber wash deck hose, and steel safes for mail clerks; schedule 8894, single-conductor wire; schedule 8895, casting brushes, ammonium battery chloride, silver-lead facings, gravel, heavy iron core sand, brass nuts, brass angles, and ferromanganese; schedule 8896, composition pipe fittings and composition unions; schedule 8897, bath brick and silver-plated ware; and schedule 8899, white lead in oil, and white-leaded zinc in oil. Bids will be received until November 9, 1915, for the following: Schedule 8886, 40-inch wide burlap, 1-gallon paint cans, emery cloth, ball-tipped loose-pin butt hinges, light rigging leather, padlocks, wrought pipe, and paint and varnish remover; schedule 8887, rubber fire hose and suction hose; schedule 8888, composition bolts and nuts, loofah-fiber sponges, and composition unions; and schedule 8898, cap ribbons. Bids will be received until November 16, 1915, for the following: Schedule 8883, stockless anchors; and schedule 8900, American pea beans, raisins, and sirup in half barrels. Bids will also be received until November 23, 1915, for the following: Schedule 8884, steel rods for reinforcing concrete; and schedule 8901, evaporated apples, evaporated peaches, and rice.

Concrete roads, No. 2708.—Sealed proposals will be received at the Bureau of Standards, Room 300, Southern Building, Washington, D. C., until October 18, 1915, for the construction of concrete roads. Drawings and specifications may be had on application to the Superintendent, Mechanical Plant.

Medical supplies, No. 2709.—Sealed proposals will be received at the Medical Supply Depot, U. S. A., Fort Mason, San Francisco, Cal., until October 19, 1915, for furnishing and delivering at Warehouse "D," foot of Laguna Street, Fort Mason, one gas-oxygen apparatus and attachments.

Medical supplies, No. 2710.—Sealed proposals will be received at the Medical Supply Depot, U. S. A., 543 Greenwich Street, New York, N. Y., until October 20, 1915, for furnishing and delivering at the depot folding saddle bags, hypodermic syringes, small pocket cases, aluminum saddle-bag trays, and Farrier's instrument pocket cases.

Medical supplies, No. 2711.—Sealed proposals will be received at the Medical Supply Depot, U. S. A., Fort Mason, San Francisco, Cal., until October 21, 1915, for furnishing and delivering at warehouse "D," foot of Laguna Street, Fort Mason, forceps, keratome, wire saw, stethoscope, dilator, handle for dilator, electric cautery set, electric current controller, water filter, filiform guides, needles, metal sounds with filiform guides, syringe, specialist's chair, nasal speculum, and needles for hypodermic syringe.

Water tanks, No. 2712.—Sealed proposals will be received by the Lighthouse Inspector, Boston, Mass., until October 22, 1915, for rearranging water tanks of light vessel No. 86. Further information may be had on application to the above office.

STEAMER SPACE FOR CARGOES FROM FRANCE.

The New York branch of the Bureau of Foreign and Domestic Commerce reports that a French concern which is delivering large quantities of American goods in Europe has chartered its own steamer and is anxious to open up negotiations with firms in the United States which are importing goods from France. This is a favorable opportunity for American importers, as the French company expects to have a large amount of cargo space available on the return voyages and it will rent this space at a reasonable figure.

LATIN-AMERICAN AGENT SEEKS NEW CONNECTIONS.

[Commercial Agent E. E. Judd, New Orleans, Oct. 7.]

One of the commercial agents of the Bureau of Foreign and Domestic Commerce has introduced to the New Orleans branch a representative of a large commission agent, who operates throughout Central America and the west coast of South America. This agent has hitherto represented only European firms and has handled some of the best-known European lines. He is reported as having a complete organization, with main offices in Lima and Valparaiso. His European connections are unable to keep up their business at present, and he has turned to the United States to form permanent connections with American firms. He is willing to make long contracts to insure the maintenance of this business after the close of the war.

The name of his representative in the United States may be obtained upon application to the Bureau or its branch offices.

The acreage for clover seed in the United States this year is estimated by the Bureau of Crop Estimates of the United States Department of Agriculture at 114.5 per cent of last year's acreage. The condition of the crop on September 1 was estimated at 80.3 per cent of normal, which compares with 77.3 per cent a year ago, and 79.7 per cent, average for the past 10 years on September 1. These figures forecast a moderately larger crop this year than last year.

PACIFIC OCEAN SHIPPING ADJUSTMENT.

(Consul General George E. Anderson, Hongkong, Sept. 4.)

The readjustment of shipping on the Pacific Ocean made necessary by the withdrawal of the Pacific Mail Steamship Co.'s services has been further developed by the sale of the steamship *Persia*, one of its vessels sailing under the British flag, to the Toyo Kisen Kaisha, the competing Japanese line, which is to take the vessel over at the end of its current voyage to Hongkong. The service of the Pacific Mail to the Far East therefore ends abruptly with the arrival of the *Persia* in Hongkong on October 11. This sale gives the Toyo Kisen Kaisha five ships for the trans-Pacific service. Efforts to secure further tonnage for such service so far have been unsuccessful.

The effect of the change in service on passenger traffic already is apparent in some respects, for, in spite of the dull season, passenger accommodations already are difficult to secure. The effect of the contraction of the service is likely to be felt more acutely during the autumn in sailings from America rather than sailings from Hongkong, though vessels from Hongkong already are practically fully engaged.

New Freight Rates.

What the ultimate level of freight rates on the Pacific as a result of the recent changes and the general contraction of available tonnage will be is a matter of considerable uncertainty, though all shipping experts in this part of the world declare that a marked advance in rates is inevitable and imperative, and the only question is as to how marked the advance will be and what ultimate level will be reached.

The latest actual announcement in this connection is that of the Osaka Shosen Kaisha as to an advance in freights on American products shipped from Tacoma and Puget Sound ports to the Orient. This advance on American produce in some respects is significant. The rate announced is one of \$5.50 gold on flour and wheat to Japan and \$6 gold on the same commodities to Manila and Hongkong. The rate on lumber is to be \$9 to Japan and \$11 to Hongkong and Manila per 1,000 board feet. The rate on dried fish is to be \$6.50 to Japan and \$7.50 to Hongkong and Manila per measured ton. These rates are well toward twice the rates obtaining on the same commodities before the opening of the war in Europe.

The chief significance of the rates, however, lies in the fact that it is on American freight outward rather than on Japanese freight homeward that the advance is made. The fact of the matter is that advances on Japanese freight homeward are probably to be comparatively few and of slight moment. Heretofore in all advances of rates by the Conference lines the Japanese Government, controlling the Japanese lines by the subsidy paid them for their services, has prevented marked advance in homeward rates on freight in which Japan was interested. This policy is undoubtedly to be followed in the coming readjustment. In other words, the Japanese interests, through the subsidies paid their lines, are to control rates for the benefit of Japanese trade.

Disappearance of Competition.

The control of rates to the advantage of Japanese trade is to be practically absolute, for Japanese lines dominate the situation in the

Pacific absolutely. Of the 490,000 tons or so of available tonnage in all trans-Pacific service available after the withdrawal of the American line probably 430,000 tons are Japanese, all controlled wholly, through subsidies, by the Japanese Government. It is becoming quite evident, therefore, that all other trade in and with the Far East is to be under Japanese control. With the full pinch of the shortage of tonnage experienced it is becoming more and more evident that no Chinese cargo or through cargo transshipped at Hongkong for the United States by way of the Pacific can be expected from Hongkong until all cargo has been carried from Japanese ports. Naturally the rate of freight to be charged on all such cargo will be all that the traffic will bear, while at the same time freight from Japan will be carried at present rates or at comparatively slight advance.

One result of this situation is the general understanding among shipping men that the service of Japanese ships between Japan and the United States will be accelerated and strengthened so as to fill gaps caused by the disappearance of the Pacific Mail steamers from the route, the result being that steamer service between Hongkong and Japan and Hongkong and the United States by way of Japan will be weakened and become more of a local service for the time being. Announcement to this end is anticipated shortly.

A factor in the situation which is likely to be of great importance in that it will prevent the transfer of Japanese or other ships to the Pacific trade is the increasing demand for tonnage from the Far East to Europe. So far, as present indications lie, no relief for the trans-Pacific situation is in sight in the transfer of vessels from other parts of the world.

CORRECTION: The consul general desires that his article on "Crisis in Shipping on the Pacific," in COMMERCE REPORTS for September 30, 1915, on page 1524, in the middle of page, should read: "The Osaka Shosen Kaisha, two sailings per month," etc.

CONDEMNED SURVEY VESSELS TO BE SOLD.

Secretary of Commerce Redfield has approved the recommendation of Dr. E. Lester Jones, Superintendent of the Coast and Geodetic Survey, that the survey vessels *Gedney* and *McArthur* be condemned and sold.

On November 10, 1914, the local inspectors of the Steamboat-Inspection Service at Seattle, Wash., made an extensive examination of the *Gedney* and reported that, on account of her age, general weakened condition, and lack of power, it would be imprudent to begin operations with her until late enough in the season to be reasonably sure of calm weather, in view of which Secretary Redfield limited the use of this vessel to surveying inside waters.

A similar detailed examination of the *McArthur* was made by the local inspectors at Seattle on November 27, 1914, and their report showed that she was in even worse condition than the *Gedney*, and unfit for use except on inland or protected waters.

Since their inspection these vessels have been in commission another season, and the cost of maintenance has not only become excessive, but the bad condition of both vessels has increased. The further use of these old vessels would jeopardize human life and repairs would be uneconomical and a waste of money.

PUBLIC AUCTION OF GOVERNMENT FURS.

[From St. Louis Office of Bureau of Foreign and Domestic Commerce.]

Dealers in all parts of the world are invited to attend the public auction of the United States Government's Alaska blue and white fox skins in St. Louis on October 21 and 22, 1915. It will be conducted by Funsten Bros. & Co. The Alaska sealskins will not be offered at this sale.

Until two years ago the United States Government's fur skins were sold in London. In 1913 the Government contracted with Funsten Bros. & Co. to hold the sales in St. Louis. The first sale of Alaska fur seal and blue and white fox skins, which was held on December 16, 1913, netted the Government 5 per cent more on the sealskins and 10 to 15 per cent more on the fox skins than had the previous sale in London.

St. Louis is the largest primary market for furs in the world. London is the largest auction market, and it handles furs from all countries, while the St. Louis market is confined largely to North American (including Canadian) furs. By "primary market" is meant that the goods coming to this market are consigned direct from trappers and traders in the trapping sections of North America to receiving houses in St. Louis, which sell to dealers.

Of the 8 or 10 of these receiving houses, 2 operate "exchanges," holding public sales on Tuesdays, Thursdays, and Saturdays during the season, which begins in October. In normal seasons these houses receive a daily average of 2,000 shipments by freight, express, and parcel post. These shipments come from trappers in every State in the United States and every Province in Canada and from Alaska, and include muskrat, mink, beaver, skunk, opossum, raccoon, fox, ermine, etc. The receiving houses remit to the trappers on a basis of price lists which they send out. Some houses send out from 500,000 to 1,000,000 price lists at a time to as many trappers located in North America.

As the shipments are received they are sent to a special room, where different shipments from the same sections are assembled, sorted, and graded. Sorting and grading being intricate and responsible, requires men with great skill and long experience. From the sorting and grading rooms the furs are sent to the "exchange" floor and are bid in by dealers who have headquarters or branches in St. Louis. There are about 25 of these dealers, representing other dealers and manufacturers all over the world, especially London and Leipzig.

All the surplus not used in this country is sold abroad, and in normal times there has been a good demand for American furs all over the world.¹ Of course, fashion regulates from time to time the

¹ Exports of furs from the United States have been remarkably affected by the European war, raw furs greatly declining, while some increase is recorded in manufactured furs, as will be seen by the following statistics for fiscal years ended June 30:

Furs and fur skins.	1913	1914	1915
Raw and unmanufactured:			
Sealskins	\$188,700	\$37,199	\$405
All other	17,276,283	14,061,348	2,540,519
Dressed, and manufactures of	924,483	870,824	1,253,588
Total	18,389,466	14,969,371	3,794,480

demand for any particular kind of fur, and prices fluctuate according to fashion and supply and demand. London being the leading fur market has naturally been purchasing more American furs than any other foreign market, but the demand for American furs in Leipzig in recent years was increasing, and many of the Leipzig dealers purchased direct from St. Louis receiving houses instead of going to the London sales. It is probable that the demand for American furs in Germany will increase still further after the close of hostilities. Russia has already commenced to ship furs to St. Louis.

The war had a depressing effect on the fur trade all over the world, but business has reacted in America considerably because of certain kinds of furs coming more into fashion, and also due to the fact that the low prices prevailing last winter caused a very light catch and a depleted supply. When the demand came there was hardly enough of certain kinds of fashionable furs to supply it. The prospects for the coming season are much better than they were last year.

Owing to the specialized character of the fur trade in St. Louis, it is not possible to obtain statistics showing the volume of business, but it is estimated that the value of raw furs received in this market in normal years approximates \$10,000,000 to \$12,000,000.

COAL DISCOVERY ON ISLAND OF BORNHOLM.

[Consul General Ernest L. Harria, Stockholm, Sweden, Sept. 8.]

It has just been reported that coal in some quantities has been discovered on the island of Bornholm, which is not far from the coast of southern Sweden, but which is a possession of Denmark. It is probable that the presence of coal on this island has been known for some time, but its commercial exploitation has been retarded by the competition of other European fields. Because of the war this competition has for the time being lost its force, and two Danish geologists and a Swedish mineral surveyor have proceeded to Bornholm to look into the possibilities of the new field, with special reference to marketing the fuel should it prove suitable for railway and industrial use. The deposits are said to be a short distance from Ronne, the chief town of the island.

OIL PROSPECTS IN BRITISH COLUMBIA.

[Consul Thomas D. Bowman, Fernie, British Columbia, Canada, Oct. 5.]

The outlook for an abundant supply of oil in the Flathead Valley, just over the Montana State line in the extreme southeastern corner of the Fernie consular district, is said to be bright. While the company that is working this field does not claim to have struck pay oil as yet, it is announced that oil sands have been struck at 800 feet. Drilling was begun July 20 and the first signs of oil were encountered September 20. Two standard drilling plants are in operation.

Little interest is manifested locally in this oil prospect. It has been explained that this district was widely exploited by "wildcat" speculation schemes within very recent memory, and that confidence in oil investments was rudely shaken.

NEW DATA ON JAPANESE COTTON INDUSTRY.

A 13 per cent increase in the production and one of 22 per cent in the exports of cotton yarn marked the activities of the Japanese cotton spinning and weaving mills in 1914, according to reports from an American consul, despite the unsettled conditions in the world markets that affected industry and trade everywhere during the last six months of the year. Piece goods, however, remained practically stationary as to the total value of exports, although radical changes occurred in the shipments to China and Kwangtung—to China, 27,042,188 yen worth against 19,874,882 yen in 1913; to Kwangtung, 3,408,548 yen against 9,260,554 yen. At the close of 1914 the industry boasted 369,910 more spinning spindles, 19,094 more twisting spindles, and 1,660 more looms than it had a year and a half previous.

These are among the interesting facts disclosed by the additional statistical data on the Japanese cotton industry that has recently been obtained by the Bureau of Foreign and Domestic Commerce and embodied in a 12-page booklet, "Japanese Cotton Goods Industry and Trade," Special Consular Reports No. 74. While primarily issued as a supplement to an earlier publication of the Bureau ("Cotton Goods in Japan," Special Agents Series No. 86—a 282-page monograph that reviews the history of the Japanese cotton industry from the establishment of the first spinning mill), the tables presented in the new booklet are worthy of study in themselves. Copies may be obtained from the Superintendent of Documents, Washington, D. C., or from the various branch offices of the Bureau of Foreign and Domestic Commerce; price, 5 cents.

POSITIONS FILLED BY BUREAU OF IMMIGRATION.

Applications for employment received by the Bureau of Immigration of the Department of Labor at the various branches and sub-branches throughout the country numbered 17,827 during the month of August. Of these applicants 7,321 were referred to employment and 6,757 were actually employed. During the same month the number of applications for help received was 1,279, and the number of positions offered to be filled was 7,931. The subbranch at Moscow, Idaho, makes the unusual record of having had 32 applications for help, with 32 positions offered, 32 applications for employment, 32 referred to employment, and 32 actually employed. Among the larger offices Chicago had the distinction of having 2,860 persons accepted out of 2,868 who were referred for employment, while 157 in Baltimore, 55 in Minneapolis, 40 in Kansas City, Mo., and 11 in St. Louis, who were referred to employment, were all actually employed.

AUTOMOBILES IN SPAIN.

[Consul Robertson Honey. Madrid, Sept. 18.]

The *Eco de Aduanas*, published in Madrid, states this day that the total number of private automobiles registered in Spain on January 1, 1915, was 10,548. The Province of Madrid led with 2,405 registrations. The population of Spain is about 20,000,000.

ESTABLISHING A PACIFIC SALMON ON ATLANTIC COAST.

Numerous reports have been received by the United States Bureau of Fisheries, confirming early indications that a run of humpback salmon has been established on the coast of Maine. The fish that have been observed are the first results of plants made in February, 1914. The humpback salmon is a rapid grower, and attains full maturity in two years. For this reason and because of its high value as a food fish when taken in salt water or when fresh run from the sea the bureau selected this species for introduction into selected New England streams.

Many fish weighing 5 to 7½ pounds have been taken or seen in Penobscot River, Me., and 20 were captured alive by agents of the bureau near Bangor and held in an effort to obtain ripe eggs. From two of these fish 3,000 eggs were taken on September 6 and, after fertilization, sent to the Craig Brook hatchery for incubation.

Accounts of the appearance of this new fish in various minor rivers have come in, and in the Dennys River there was a noteworthy run, which began as early as August 15 and was continuing as late as September 24. The local fishermen caught and ate large numbers, and during the week of September 20 an employee of the Green Lake hatchery took 15 fish (8 males and 7 females) which had passed through the fishways in dams in Dennys River and were dropping downstream in a spent condition; at the same time both live and dead fish were observed below the dams.

[An account of the steps taken and plans made by the Bureau of Fisheries, with the object of introducing humpback salmon on the coast of Maine, was given in *COMMERCE REPORTS* for Sept. 25, 1915.]

MARKET FOR COAL IN PORTUGAL.

[Consul General W. L. Lowrie, Lisbon, Sept. 16.]

Prices of coal in Portugal, already double what they were before the war, are gradually increasing, and the supply of fuel on hand is very small. The latest quotations for Welsh coal are \$10.20 to \$10.70 and \$11.90 to \$12.90 c. i. f. Lisbon. Lower qualities bring \$9.25 to \$9.50. The English freight rate is also advancing and is now \$4.15 to \$4.85 a ton.

Local dealers generally admit that America could supply this market if freights from the United States were around \$4.85 to \$6.10 per ton. Some cargoes of Pocahontas coal have arrived here recently and are giving satisfaction, but on account of the high freight it is difficult for this fuel to compete in price with the Cardiff coal generally used in Portugal.

INDUSTRIAL COLLEGES FOR CHINA.

[National Review of China, Sept. 4]

At a recent conference in the State Department at Peking, the Minister of Agriculture and Commerce proposed that in order to develop native industry, four industrial colleges should be established. The minister suggested that of these four colleges, a mining college in Manchuria, an agricultural and a forestry college in Peking be established, and the other two colleges should be for fishery and engineering in Hupeh and Shanghai, respectively.

WAR'S EFFECT ON SOUTH CHINA TRADE.

[Consul General George E. Anderson, Hongkong, Aug. 24.]

All things considered, it is doubtful if the effect of the first year of the war in Europe upon the trade of the Far East has been as marked as has been anticipated. The effect upon the trade of South China has been considerable, but it has been along general lines and as a result of general conditions rather than a marked change from one line of purchase and supply to another.

Buying Power Restricted.

As stated in previous reports from this consulate general, the chief effect of the war upon the business of China (aside from the results of the liquidation of German firms in Hongkong and the prohibition of "trading with the enemy," which has broken up the combination of British manufacturers and German selling agencies) has been shutting off European markets for Chinese products, with the result that prices for such products fell to a point where production was not profitable, even where the goods could be sold at all. Without the sale of its products abroad China can not buy for import. The effect of the war upon silver exchange, moreover, has made all foreign goods very expensive in terms of silver. The value of silver most of the time since the beginning of the war has been such as to stimulate exports under normal conditions while holding back imports. With exports impossible because of the war, imports were held back for both financial and economical reasons. Under the circumstances it is rather remarkable that Chinese trade has held up as strongly under adverse conditions as it has, and whatever tendency to revival is all the more important.

Liquidation of Stocks.

Nevertheless, the consumption of foreign goods in South China, though much below normal in volume, has proceeded much along usual lines, so far as the nationality of supplies is concerned, and changes in the course of trade have been coming slowly, though steadily and surely in a number of lines. While trade from central Europe was shut off by the war, there were large stocks of goods therefrom in Eastern ports, which have been on the market ever since, and the consumption of all such goods has been supplied more or less freely since the beginning of the war by drafts upon these stocks, even where trade was entirely controlled by other nationals, as in Hongkong. It was necessary that the sale of these stocks of goods should proceed along normal lines, so far as was possible, both to protect British and allied banking interests against loss from advances on such goods, and also to prevent the demoralization of the market for the sale of similar British goods. In most lines of staple trade, therefore, the year's business has been largely one of liquidation of current stocks.

This has been the case particularly of cotton piece goods. Stocks of all such goods in South China and most other Chinese ports have been large for several years. The outbreak of war, and especially the forced liquidation of German firms in Hongkong, made it necessary to dispose of these stocks instead of buying new goods. Nevertheless, stocks have been so far depleted during the year that the

buying of new goods in fair volume is now in sight, and with this comes a realization that in many lines American manufacturers are in a position to compete.

Prices Sought on American Textiles.

A careful study of the cotton piece goods situation in Hongkong by experts has convinced a good many buyers that the United States offers the best first-hand market for them at present, and inquiries for American prices are becoming more numerous and much more earnest. This is especially the case in plain gray shirtings and sheetings, in which central Europe had a good share of trade before the war. There is a marked demand for cotton blankets, cotton flannels, and other goods which formerly came largely from the continent of Europe, but demand for American goods also is coming to include a number of fabrics which heretofore have been obtained almost exclusively from Europe but in which experts believe American manufacturers can now successfully compete.

Metal Goods.

The trade in metals has shown as much of a change as any other line. In structural steel it has been found that conditions in Great Britain are such as to make prices high and deliveries very uncertain, while the trade from Belgium has entirely disappeared. Orders for American steel have been given as freely as general trade conditions have warranted. Indeed, this has been the case in all lines of iron and steel, including sheets and plates (galvanized and otherwise), wire and wire shorts, cobbles, nail rod, bars, hoops, and all standard forms. Prices in the United States have been firm and prices to consumers here have been particularly high because of the high freight rates prevailing on goods from America, but with all that prices have usually been below European prices and deliveries could safely be promised, which has not been the case with European goods.

Demand on American manufacturers for all lines of iron and steel will doubtless be much heavier in the near future, for not only is it increasingly difficult to secure supplies from Europe but stocks in the Far East are now very low and on the other hand connections in the United States for the purchase of all such goods have been established and the trade machinery now exists for satisfactory business.

In nearly all lines of machinery, especially in electrical goods and similar products, conditions have followed those obtaining in the iron and steel trade. As a result of general business depression in South China there has been less demand for electrical and similar machinery than normally would have been the case, but what demand has existed has reached to the United States in an unusual degree for its supplies.

Trade in this line is likely to go more and more to the United States in the immediate future not only because, as above indicated, American connections have now been established and prices in Europe are high, but also because under present conditions of international finance American financing of such trade is more favorable than usual. In electrical lines there has been a falling off in trade due to an end to special German financing of electrical power and light projects; however, of the normal trade in Hongkong the de-

mand for American goods has very greatly increased. European competition with American machines in sewing and knitting machinery has been cut off with very favorable results on American trade.

Machinery, Dyestuffs, Glass, Hardware, Etc.

What business there has been in the purchase of boilers, turbines, and similar machinery supplies abroad has been going to the United States with every indication that this will continue to be the case.

American manufacturers have secured a hold on trade in Hongkong and South China in many lines of goods which have never before been obtained from the United States. The sale of artificial dyes of American make has successfully been inaugurated in Hongkong. In nearly all lines of chemical products the United States is now being called upon for supplies, in many instances as the sole source of supply at the present time. American window glass and American glassware are now sold in Hongkong in increasing quantities. American hardware is increasing in popularity, supplanting the cheaper grade of European goods almost entirely and competing successfully with the more solid English manufactures. In nearly all lines of department-store goods American manufacturers are now enjoying an increasing trade. American soap, various toilet supplies, perfumeries, and the like are used in increasing quantities; in some lines constituting practically the whole of the trade. In many of these lines of trade American manufacturers had a share before the outbreak of the war. Since the war they have had practically all the trade there was to be had. In nearly all these lines of trade consumption is below normal both by reason of general trade conditions, the low value of silver, the reduction in foreign population, and the general business uncertainty; but American trade has increased, and with the return of normal times American manufacturers will have increasing opportunities of trade.

Constant Applications for American Connections.

With the consumption of current stocks of many lines of notions, such as needles and pins, buttons, tape, ribbons, hairpins, and similar goods, and of all such goods as lamps, stoves, enameled ware, electroplate, watches and clocks, scientific instruments, paper and stationery, in short, in nearly all lines of normal trade, will come an increased demand for American goods. In nearly all such lines of trade Hongkong and South China dealers have been seeking and establishing American connections as preparation for trade soon to be realized. Constant applications for American connections in new lines are made to or through this consulate general all the time. The number of such connections established in South China since the outbreak of the war is very large and embraces practically all lines of trade. It may probably be considered the most important development in the South China trade situation since the beginning of the war.

The great question in all this change is as to what portion of this new and somewhat special trade can be held after the end of the war in Europe and the establishment of normal trade conditions generally. Much may be said and written on this phase of present-day business, but little can be actually established. Most American manufacturers have gone after the trade here with a view of holding it

after the end of the war. They are careful to cultivate satisfactory relations in every way, they hold to normal prices so far as may be possible, they are meeting customs of the trade here as to credits and deliveries so far as may be possible, and in short they are showing that they want the business on a permanent basis and mean to try and keep it.

Getting Acquainted—American Buying Opportunity.

The chief result of the war, so far as permanent business is concerned, will be to give consumers here an opportunity to become acquainted with and to test American goods in comparison with those they have been accustomed to use and to give American manufacturers an insight into the special needs of trade in the Far East, the kind of goods required for the Far Eastern market, customs and peculiarities of the trade, and the general establishing of direct trade connections and agencies. These are advantages they have never had before and are all but controlling in their nature. With such advantages trade after the war will largely be a matter of quality and price. In some lines of goods now coming to the East, American manufacturers doubtless can and will compete with European manufacturers who have heretofore been able to hold the trade for themselves. Beyond that the results of changes so far effected by the war in Europe remain to be seen.

On the whole, it is doubtful if American manufacturers have taken advantage of special opportunities they have had for the purchase of cheap raw materials in China during the past year to the extent they might profitably have done. Declared exports from Hongkong and Chinese ports show decreased trade on the whole, which doubtless reflects depression in certain lines of trade in the United States rather than the course of the market for raw materials here. American imports of silk have held up well, all things considered. Imports of vegetable oils have been small, considering prices here and in the United States. The shipments of hides and skins from China to the United States have been much less than were anticipated with the change of the American tariff law and changed conditions here. In most lines of Chinese exports to the United States inadequate freight facilities and high freight rates have had a deterrent influence.

The Competitive Factor.

Of competing nations concerned in Chinese trade, Japan unquestionably has been the most successful in its efforts to secure trade formerly supplied by the belligerent nations of Europe. The Japanese Government, all Japanese trade organizations, Japanese manufacturers individually and by organizations in their respective lines of business have systematically and persistently struggled for this trade and are continuing their campaign. They have been especially successful in some lines of the cotton trade, such as heavy piece goods, towels, cotton blankets, and ladies' hosiery; in some branches of electrical machinery and supplies; in soap, toys, paper, glass, and glassware; enameled ware; and many miscellaneous goods. Great Britain has held its own in most cotton piece goods in South China and has gained some trade in electrical machinery and supplies and in general heavy machinery.

German trade has been almost entirely destroyed, but not much of it comparatively is being supplied from other sources. This is

merely an illustration of a fact to which attention has been called heretofore in these reports, namely, that trade in China is not as competitive as it often has been made to appear, and that each nation has its own particular trade in certain lines which it is difficult for other nations to serve because of the special advantages held by the original nation in that particular line of manufacture.

Nevertheless of nations hurt most in its oriental trade by the war Germany easily leads; of nations helped in their trade with China by the war Japan easily leads. Gains made by the United States have been due much more to the position of the country as the only great trading nation remaining neutral than to any special activity on the part of American business men.

PARAGUAYAN WOODS CONTAINING TANNIN.

[Consul Samuel Hamilton Wiley, Asuncion, Aug. 25.]

In view of the present high price of tannin extracts, it is probable that there will be an exploitation of woods containing high percentages of tannin fluids. At the present time there is considerable activity in the quebracho-extract industry in Paraguay. Quebracho is well known, and the forests containing the quebracho wood are being developed with considerable thoroughness. There are, however, other woods in Paraguay, practically unknown to the outside world, containing high percentages of tannin, which are found in abundance.

The following are the names, native and scientific, of the most important woods, from the standpoint of tannin contents, which are found here in abundance, with a short description of each variety:

Yhvá-porostih (*Eugenia brasiliensis*). This wood contains about 35.4 per cent of tannin in the adult bark, also about 12 per cent in the dried leaves, and about 7.6 per cent in the wood of the trunk of the tree. This is the only tree found here so far containing tannin in the leaves and trunk. It contains little resinous or coloring material. It grows to a height of 15 to 30 feet, with a diameter of 1 to 1½ feet, and has abundant foliage. Is found in abundance and in various places is found in groves.

Pakuri (*Rheedia brasiliensis*). Contains in the bark about 18 per cent of tannin, with a small percentage of resinous and coloring substances. Grows to a height of 35 to 45 feet, but is of small diameter. Bark easy of extraction; color pale red. Is found in quantity in the forests.

Yhivihrá-Puihtá (*Peltophorum dubium*). Contains about 24 per cent of tannin and considerable coloring material. The tree is commonly exploited for its wood, as it often grows to very considerable size. Is very abundant.

Nangapirih-Guazú (*Eugenia Michellii*). Contains about 20 per cent of tannin. Tree grows to height of about 15 to 20 feet, and is small in diameter. Found in quantity in lowlands, on river banks, etc. The bark is smooth and easy to extract.

Kurupalh-Rá Moróto (*Piptadenia* Sp.). Contains about 20 per cent of tannin. Is found in abundance and is at present exploited for its wood only.

Kurupalh-Rá Puihtá (*Piptadenia rigida*). Contains about 20 per cent of tannin. The tree grows to considerable size; bark is woody. Found in considerable quantity and is at present worked for its wood.

Ingu Guazú (*Inga affinis*). Contains about 17 per cent of tannin in bark. Bark smooth and easily extracted. Is found in quantity along the rivers and smaller streams and grows to considerable size.

Kaatigüá Moróti (*Trichilia hieronimi*). Contains about 15 per cent of tannin in the bark. Tree does not grow to large size. The bark is used by natives to some extent in tanning, and is easily stripped from the logs.

Timbó (*Enterolobium timbaúva*). Contains about 14 per cent of tannin. The bark is thick and the tree grows to a very large size. This bark is used to some extent by the natives in tanning fine hides. Is found fairly abundantly.

DEVELOPMENT OF RUSSIAN AGRICULTURE.

[Consul General John H. Snodgrass, Moscow, Aug. 30.]

The Russian Ministry of Agriculture has just issued a publication entitled *Agriculture in Russia* which describes the development of agricultural concerns during the period 1895-1913. The rapid progress of agricultural concerns during recent years, the general revival of agricultural work, and the increased interest in agriculture on the part of all classes make this publication of special interest.

During the period 1895-1915 the annual sums expended by the Ministry of Agriculture for the promotion of agriculture increased from \$1,000,000 to \$15,000,000 per annum. The expenses for the decade 1903-1912 amounted to about \$40,000,000 and considerably exceeded the aggregate for the previous 60 years. The sum expended during the last three years exceeded that spent during the decade 1903-1912.

The expenses of the zemstvo organizations for the requirements of agriculture during the period 1895-1913 increased from \$500,000 to \$8,000,000. In 1913 the Ministry of Agriculture and the zemstvo together disposed of \$23,000,000 for the development of agriculture. The number of agricultural educational institutions increased from 82 in 1895 to 360 in 1913 and the number of students from 4,000 in 1895 to 18,000 in 1913. The zemstvo, which employed 134 agents in 1895, now has a staff of 3,216 persons. In 1895 there were established 27 testing stations; in 1914 the number had reached 250. There is noted a particularly rapid growth of agricultural cooperation all over the Empire of Russia which, together with the zemstvo, is active in promoting the development of agriculture. The number of agricultural associations has increased from 175 in 1895 to 4,134 in 1913 and to 4,685 in 1914.

VESSELS BUILT IN UNITED STATES.

The Bureau of Navigation, Department of Commerce, reports 316 sailing, steam, and unrigged vessels of 46,276 gross tons built in the United States and officially numbered during the three months ended September 30, 1915, and 283 sailing, steam, and unrigged vessels of 56,510 gross tons for the corresponding period of 1914. Those built during the 1915 period were as follows:

Kind.	Atlantic and gulf.		Porto Rico.		Pacific.		Hawaii.		Great Lakes.		Western rivers.		Total.	
	No.	Gross.	No.	Gross.	No.	Gross.	No.	Gross.	No.	Gross.	No.	Gross.	No.	Gross.

FOREIGN TRADE OPPORTUNITIES.

Reserved addresses may be obtained from the Bureau and its branch offices. Request for each opportunity should be on a separate sheet and the file number given.

Tinned steel wire, No. 18782.—A dealer in Northern Africa informs an American consular officer that he desires to purchase about 8,000 pounds of tinned steel wire suitable for use in the manufacture of mattresses. Quotations should be made c. i. f. destination or f. o. b. New York. Correspondence in French is preferred, but it may be in English. A sample of the wire desired may be examined at the Bureau or at its branch offices. (Refer to file No. 60800.)

Steel screws, No. 18783.—An American consular officer in Ireland reports that a business man in his district desires to communicate with American manufacturers or exporters of steel screws. Reference is given.

Women's wearing apparel, No. 18784.—A manufacturer's agent in Ireland has informed an American consular officer that he desires to establish business relations with American manufacturers or exporters of women's fleeced underwear. The names of other buyers of fleeced goods are also given.

Rasps and files, No. 18785.—An American consular officer in Canada reports the desire of a firm in his district to establish business relations with American manufacturers or exporters of rasps and files.

Cotton mill, gin stores, chemicals, etc., No. 18786.—A firm in India has informed an American consular officer that it desires to communicate with American manufacturers or exporters of cotton mill and gin stores, chemicals, and sizing materials.

Wire, No. 18787.—The Bureau has received a report from an American consular officer in Canada stating that a firm in his district desires to communicate with American manufacturers of annunciator wire such as is used in connection with electric bells. The size required is No. 18. It is stated that orders of 500 pounds would be placed.

Cement, No. 18788.—An American consular officer in Brazil reports that a business man in his district desires to receive full information relative to Portland cement.

Electrical household appliances, No. 18789.—The commercial attaché of the Department of Commerce in England reports that a business man desires to represent American manufacturers or exporters of electrical household appliances, such as electrical irons.

Medicines and medical supplies, No. 18790.—A druggist in Russia has informed an American consular officer that he desires to receive catalogues and price lists from American manufacturers or exporters of medicines and medical supplies. Correspondence should be in Russian or French.

Parchment paper, No. 18791.—A manufacturers' agent in Ireland has informed an American consular officer that he desires to communicate with American manufacturers or exporters of parchment paper. Quotations should be on trial sized lots, including freight to port in the United Kingdom.

Construction and operation of railway, No. 18792.—An American consular officer in England, quoting an announcement published in European journals, reports that tenders will be opened at the "Direccion-General de Obras Publicas," Madrid, on November 10, for the construction and working for a period of 99 years of a strategic railway from Ferrol to Gijon. The cost of construction is estimated at about \$17,164,145, on which interest, not exceeding 5 per cent per annum, will be guaranteed by the State. The minimum rolling stock required to work the line will be 30 locomotives, 102 passenger coaches, 15 brake vans, 300 goods wagons, and 13 trucks. An option on the concession is held by the "Sociedad Iberia." Construction work must be begun within three months from the date of the award of the concession, and completed within a period of eight years. It is stated that although the foregoing contract may be awarded to a Spanish firm, the carrying out of the work may involve the purchase of material outside of Spain. The Bureau has no further information relative to this opportunity.

Leather sewing machines, No. 18793.—An American consular officer in Switzerland reports that a manufacturer and dealer in shoe machinery and supplies desires to learn the names of American manufacturers of three-needle leather sewing machines. Correspondence should be in German or French.

Hides and skins, No. 18794.—A firm of importers and exporters in Brazil has informed an American consular officer that it desires to communicate with American importers of wet salted hides and skins.

Celluloid, No. 18795.—An American consular officer in Switzerland reports that a manufacturer in his district desires to establish commercial relations with American manufacturers of celluloid in sheets. The shades desired are light dark and mottled tortoise shell, imitation ivory, and mother-of-pearl. Thicknesses per sheet in millimeters, 2, 2.4, 2.5, 2.8, 3, 3.3, 3.5, 3.8, 4, 4.5, and 5. About 40,000 are needed annually. Samples, with quotations c. i. f. French port, are desired. Customary American terms and conditions will be accepted. Reference is given. Correspondence should be in German or French.

Power vessel, No. 18796.—An American consular officer in Peru states that a firm in his district desires to purchase immediately a vessel, new or second-hand, meeting the following requirements: Steam or motor; two masts; capable of carrying 150 tons of freight; draft not more than 8 feet; wide beam; engine in stern; deck houses either in stern or bow; must possess full equipment of bonts, etc., and should not make less than 8 miles per hour. Correspondence should be in Spanish or Italian, and weights and measures in metric system. Full description and photograph of vessel should be sent immediately.

Harmonium reeds, No. 18797.—A firm in England has informed an American consular officer that it desires to establish connections with American manufacturers of brass harmonium reeds. The firm states that it requires 1,200 sets, each set containing 37 notes, C to C, and 10,000 sets of 8 octaves, C to C toned.

Wax, nails, etc., No. 18798.—A firm in New Zealand has informed an American consular officer that it desires to establish connections with American manufacturers of sulphide of sodium (pieces of about one-fourth inch in diameter); plain and corrugated galvanized sheet iron; ceresin wax, carnauba wax, and other waxes used by makers of polishes; vegetable parchment paper, cut to 20 inches by 30 inches; dyes; nails; diamond, rose, and flat-head wire nails; plain and barbed fencing wire, all gauges and staples; sheet glass and glassware, especially tumblers and beer bottles; basic slag, packed in bags not to exceed 200 pounds in weight; enamel and aluminum kitchen utensils; and sawn and bulk pine and redwood timber. The firm states that it will do business on the basis of cash against documents in New Zealand, but prefers 30 days' acceptance. Catalogues, prices, samples, etc., should be sent immediately.

Plant for utilization of waste material, No. 18799.—The Bureau is in receipt of a report from an American consular officer in Costa Rica stating that a man in his district desires to communicate with American manufacturers of apparatuses as used in plants for the manufacture of animal charcoal and oil.

Destructor plant, No. 18800.—An American consular officer in England, quoting from an English journal, states that the British Trade Commissioner for Australia reports that tenders are invited by the Hawthorn, Malvern, Camberwell, and Kew Destructor Trust for the supply, delivery, and erection in Hawthorn, Victoria, of a complete destructor plant. Copies of the specifications, conditions of contract, and form of tender, together with plans of the site, may be obtained from the offices of the trust, Town Hall, Hawthorn, Victoria, at which address also sealed tenders, on the proper forms, will be received up to November 30. A cash deposit equal to 1 per cent of the value of the offer, or a marked check, must accompany each tender. Local representation is necessary. The Bureau has no further information relative to this opportunity.

SUCCESS OF GERMAN ELECTRIC COMPANY IN SPAIN.

[Consul Wilbur T. Gracey, Seville, Sept. 11.]

Information has just been published of the successful year's work of the Compañía Sevillana de Electricidad, of Seville, the receipts during 1914 having been 2,267,436 pesetas (peseta=\$0.193) against 2,077,110 in the preceding year. The net profits for 1914 were 980,336 pesetas against 886,660 pesetas in 1913, and of the former amount 47,968 pesetas was added to the reserve, 384,000 pesetas paid in dividends, and 350,000 pesetas set aside for amortization of bonds.

Since 1911 the company has paid dividends of 8 per cent annually, established a reserve of 405,480 pesetas, paid 3,348,020 pesetas for amortization of bonds, and now has a capital of 12,800,000 pesetas. The company manufactures its own electricity in Seville, and has also made arrangements with the hydroelectric company which takes its power from the Guadiaro to have the exclusive right to sell its power in this city.

A competing electric company, called Catalana de Gas y Electricidad, S. A., started business during 1914, and is also having some considerable success, but this does not appear to have materially affected the receipts of the older German company. The new company is financed by Spanish and British interests.

INCREASED OIL PRODUCTION IN ROUMANIA.

[Commercial Attaché C. W. A. Veditz, American Embassy, Paris, Sept. 12.]

It is reported from Bucharest that the total production of petroleum in Roumania during the first half of 1915 amounted to 906,472 tons, as compared with 878,516 tons for the first half of 1914. Of the total for the first half of 1915, the district of Prahova contributed 87.79 per cent, Dombrova 5.77 per cent, and Buzare 4.83 per cent.

[Statements regarding Roumanian oil production were published in COMMERCE REPORTS for May 28 and July 7, 1915.]

BANANAS GIVE WAY TO SUGAR.

[Vice Consul Edward L. Lowe, Puerto Plata, Dominican Republic, Sept. 25.]

During the early part of the present month the plantation company operating a banana plantation at Sosua, Puerto Plata, suspended business entirely and discharged all employees. Resumption of operations does not appear probable. The last shipment of bananas was made on July 31, 1915. It is said that machinery for making sugar will soon be erected on the same plantation. The closing down of this plantation has been very much felt, as several hundred laborers are now without work.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, 752 Oliver Building; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

SPANISH VESSEL LAUNCHED.

[Consul Wilbur T. Gracey, Seville, Sept. 7.]

The *Santa Isabel*, the first of the 10 steamers that are being built for the Compania Transatlantica by the Sociedad Espanola de Construcciones Navales de Cadiz [see Daily Consular and Trade Reports for Dec. 8, 1914], was launched at Cadiz a few days ago and will soon be put in service on the run from Spain to Fernando Po. It is constructed of steel, with twin screws and turbine engines, and will make 12 to 14 knots an hour. Accommodations for first and second class passengers are provided, as well as space for emigrants. The vessel's equipment is thoroughly modern throughout.

Immediately the *Santa Isabel* was launched the keel for the succeeding vessel (which is to be called the *San Carlos*) was laid down.

GOVERNMENT EXHIBIT AT MAINE FISH FAIR.

In connection with the fish fair to be held at Eastport, Me., on October 22 and 23, arrangements have been made for a display of some characteristic charts and other publications of the Coast and Geodetic Survey, and also a selection of publications of the Bureau of Foreign and Domestic Commerce, the Steamboat-Inspection Service, the Bureau of Lighthouses, the Bureau of Navigation, and the Division of Publications. Mr. E. B. Latham, of the Coast and Geodetic Survey, will have charge of this exhibit.

CONTRACT FOR MATERIAL AT NAVASSA LIGHT STATION.

A contract for furnishing the metal work and lantern glass for Navassa Island Light Station, West Indies, in the sum of \$12,078, has been awarded by the Secretary of Commerce to the Champion Iron Co., Kenton, Ohio. The contract calls for the completion of the work within eight months from October 14, 1915.

COMMERCE OF TSINGTAU DURING FIRST HALF YEAR.

[Consul Willys R. Peck, Tsingtau, China, Sept. 6.]

The normal trade passing through Tsingtau may be said to have stopped on August 1, 1914. On November 7, 1914, the port was captured by the Japanese forces, and on December 28, 1914, it was again opened to trade. Japanese steamship connection with Japanese, Chinese, and Korean ports was resumed at once, and with greater tonnage than before the war. While only 264 Japanese vessels entered and cleared from Tsingtau during the first half of 1914, during the first quarter of 1915 alone there were 284 and during the second quarter 237. Ships of other nationalities were not permitted to enter the port, except those of Great Britain, and the latter were limited to one vessel per week, 41 arrivals and clearances being recorded by the harbor authorities during the half year, in place of 246 during the first half of 1914. The tonnage of all nationalities for the half year was 48 per cent of that for the corresponding period of 1914.

The Shantung Railway—Shipping.

The necessary complement of steamships in the commerce of the port, the Shantung Railway, was in bad shape when the Japanese took it over, having been seriously damaged by floods and other causes. During the first three months it was run by the army, although undertaking freight and passenger traffic after a fashion. On April 1 a civilian staff took charge, and during the second quarter it can not be considered to have interposed any considerable obstacle to trade with the interior.

The ordinary facilities of commerce were therefore available during the period in question. The activities of German firms ceased by reason of the war, and European competition was limited, practically speaking, to three British firms.

In comparisons with preceding years 1914 has had to be disregarded owing to incomplete customs returns. By "preceding average" and similar terms, therefore, reference is herein made to the years 1910-1913.

With shipping registering a tonnage not quite one-half that recorded during the corresponding period of last year, it is easy to believe that steamship companies suffered loss in operation, imports being only 17 per cent and 34 per cent of previous averages in the first and second quarters, respectively, and exports 12 per cent and 15 per cent. The loss was partially made up by passenger traffic—an influx of 12,000 Japanese in the first three months being estimated, with consequent comings and goings—and by Government patronage and subsidy. Because of the abundance of tonnage for requirements, there was, so far as known, no strenuous objection on the part of shipowners to the shipping restrictions already referred to.

Exports and Imports.

The following table indicates what percentages of previous averages were attained in the exportation of various articles in the first and second quarters of 1915:

Articles.	First quarter.	Second quarter.	Articles.	First quarter.	Second quarter.
	Percentage.	Percentage.		Percentage.	Percentage.
Salt	11	222	Straw braid	5	11
Bean oil	3	11	Bean cake		13
Cattle	41	96	Beef		4
Cotton (raw)	61	40	Bristles		33
Hides		33	Cereals		121,671
Eggs (fresh)			Bones		155
Peanuts:			Coal		3
Shelled	3	51	Tallow		35
Unshelled	3	58	Wool		984
Peanut oil	3	28	Walnuts		
Pongee	3				

NOTE.—The lack of certain statistics during the first quarter is partly due to the fact that the customs did not keep separate records of some articles during that quarter.

Several of the items listed above attract special attention. The increased exportation of salt was due to the dumping on the market of large accumulations that had come into the custody of the Japanese military authorities and were sold by auction as perishable cargo. The increase in the exportation of cereals appears fabulous, but is readily explained by the fact that the exportation of "rice and other grain" is prohibited by Chinese laws and foreign treaties.

The majority of the articles enumerated made up the bulk of the declared exports to the United States from this port in past years, the total of such declared exports in 1913 amounting to \$996,126 and in 1914 to \$761,799. In the present year there have been less than half a dozen invoices presented to the consulate.

The following table indicates what percentages of previous averages were attained in the importation of various articles in the first and second quarters of 1915:

Articles.	First quarter.	Second quarter.	Articles.	First quarter.	Second quarter.
	Percentage.	Percentage.		Percentage.	Percentage.
Cotton cloth		84	Kerosene	16	2
Cotton yarn	34	89	Dyes, paints, etc.		50
Cotton thread		67	Matches	28	67
Flour:			Paper	71	42
Foreign	19	174	Sugar	23	11
Native		33	Timber	41	
Coal		538	Tobacco (cigarettes, etc.)	161	

It is not to be understood that the two tables given above include all the exported and imported articles. On the other hand, one-quarter of the imports in the first quarter are grouped in the customs returns under the heading "unclassified" or similarly, which fact, combined with inaccuracy in the returns, makes accurate deductions impossible.

The Trade of Japan.

It is interesting to note, however, that in 1913 the average quarterly direct import from Japan was valued at \$1,515,845, or only 14 per cent less than the total import trade, native and foreign, during the second quarter of the present year. With only three European firms operating in Tsingtau and all but an insignificant portion of the steamship lines Japanese, the great bulk of the imports have likewise been Japanese, and it will be seen that this trade has almost reached

its former proportions. That Japanese imports have not expanded so as to absorb the portions formerly American and European is due to a variety of causes—partly to the unsettled conditions in Tsingtau arising from the war last autumn, and partly to the short length of time most of the Japanese firms have been located here, but more especially to the political negotiations carried on between China and Japan in the spring. According to a statement made by the Peking correspondent of the London Times, Japan's export trade to the whole of China decreased 33 per cent, or about \$15,000,000, in the first six months of 1915.

The customs administration under the military administration has paid special attention to articles of Japanese origin, and the articles enumerated in the two tables given come for the most part under that category. In the first quarter a large importation of tobacco, cigarettes, etc., is to be seen. The rivalry that has existed for some years with special strength in Manchuria has now begun in Shantung between the goods of the British-American Tobacco Co. and those of the Toa Co., and the streets of Tsingtau are enlivened by numbers of small boys clad in the rival uniforms crying their respective wares.

Opportunity for Americans.

It will be noticed that no one article of those listed among the imports fell to so low a percentage in either quarter as did the total import trade—that is, 17 per cent and 34 per cent of previous averages in the respective quarters. There are only two exceptions to this statement: Kerosene, in which Japan does not play an important part, and sugar, in which, likewise, she has hitherto played a subordinate rôle. It is evident that the great decrease has occurred in those articles customarily imported from Europe and America, and these fields are open to American exporters. These would include such articles as varieties of cotton goods, metals (especially old iron, for which there is a demand at present), dyes, colors and paints, electrical materials and appliances, flour, window glass, lamps, etc.

Among the three European firms mentioned above there were not included three firms engaged in marketing kerosene, sewing machines, and cigarettes. As there is no American concern in Tsingtau doing a general business, American goods must be marketed by merchants of other nationalities. This is unfortunate, since it leaves untouched something that might be turned into a commercial asset, inconsiderable though it might be—namely, the friendliness and confidence with which Chinese merchants seem predisposed to regard Americans. In China sentiment has been known to transmute itself into a commercial factor of considerable importance. In a recent conversation a prominent Chinese merchant inquired of the writer why no American concern doing a general import and export business was located in Tsingtau, and expressed the hope that one might come. In this connection it is pertinent to remark that in 1913 Tsingtau ranked sixth among the 48 ports of China in respect to total volume of trade, its entire trade in that year amounting to \$43,193,282.

Six merchant ships, aggregating 20,000 tons, were launched on the Clyde during September, the nine months' total reaching 190,000 tons.

ORDERS TO SHIPMASTERS TO COVER HATCHES.

The executive committee of the Board of Supervising Inspectors, Steamboat-Inspection Service, at a meeting held on October 9, 1915, amended the general rules and regulations, ocean and coastwise, and for lakes, bays, and sounds, relative to the covering of hatches. The amendments were approved by the Secretary of Commerce on October 12, 1915, and now have the force of law. The rule for ocean and coastwise vessels has been amended so as to read as follows:

It shall be the duty of the master of any vessel under the jurisdiction of the Steamboat-Inspection Service to assure himself, before proceeding to sea, that all the cargo hatches of his vessel are properly covered and the covers secured. The covers of all exposed hatches shall be made water-tight by the use of pliable gaskets or by heavy canvas tarpaulins, thoroughly covering the hatch cover and firmly secured by iron or steel bars extending from side to side or end to end of the hatchway, which bars shall be securely fastened by toggles or wedges made of hardwood or by the use of efficient screw fastenings. Failure by the master of any vessel to observe this regulation shall be sufficient cause for suspension or revocation of his license on a charge of inattention to his duty.

The rule for vessels navigating lakes, bays, and sounds has been amended so as to read as follows:

It shall be the duty of the master of any vessel under the jurisdiction of the Steamboat-Inspection Service, and which is carrying cargo, to assure himself before leaving port that all the cargo hatches of his vessel are properly covered and the covers secured. The covers of all exposed cargo hatches shall be made water-tight by the use of pliable gaskets, or by heavy canvas tarpaulins, thoroughly covering the hatch cover and firmly secured by iron or steel bars extending from side to side or end to end of hatchway, which bars shall be fastened by toggles or wedges of hardwood or by the use of efficient screw fastenings. Failure by the master of any vessel to observe this regulation shall be sufficient cause for the suspension or revocation of his license on a charge of inattention to his duty.

CANARY ONIONS AND ONION SEED.

[Consul George E. Stiles, Teneriffe, Canary Islands, Sept. 4.]

The 1915 export season for Canary Island onions and onion seed closed, so far as shipments to the United States are concerned, on August 28, showing a small reduction from last year's figures in the quantities of seed exported. However, a slight increase in prices has made the values approximately the same, so that shippers and growers are well satisfied with the general results. Onions for Porto Rico made a decided gain.

As declared at the Teneriffe consulate, the value of the onion seed exported to the United States in 1915 was \$40,828, against \$43,293 in 1914; to Porto Rico \$973, against \$2,548; or a total of \$41,801, against \$45,841. Onion shipments to Porto Rico (there being none to the United States) were valued at \$13,435, as compared with \$7,963 last year, this gain being sufficient to offset the loss on the seed exports and leave a favorable balance of \$1,432 for the present year.

The question of securing the necessary bottoms for shipments to the United States turned out to be (as was forecast in *COMMERCE REPORTS* for July 26) the most serious problem of the 1915 crop.

TARIFF INVESTIGATIONS IN AUSTRALIA.

The results of the tariff investigation carried on by the Interstate Commission of Australia in accordance with the request addressed to the commission by the Executive Government under date of September 8, 1913, are embodied in a number of reports covering the various industries investigated. In view of the importance of the Australian market to the American export trade the documents deserve the careful consideration of American manufacturers and exporters interested in the Australian market, as they represent a more or less detailed study of the industrial conditions of the country and reflect the attitude of the Australian manufacturers and labor organizations on the tariff question.

The large number of applications received by the Commission made it necessary to extend the investigation so as to cover practically the entire tariff, although the request from the Government referred only to industries "in urgent need of tariff assistance" and "anomalies in the existing tariff acts." No attempt was made to investigate means for the lessening of the cost of living, another subject included by the Government in its request to the Commission. The investigation of the sugar industry was considered unnecessary on account of the effect of the war on the European sugar industry and the expected shortage of sugar in Australia. The investigation was conducted on the basis of the normal industrial conditions preceding the outbreak of the war.

In the course of its investigation the Commission visited altogether 120 industrial establishments. It is pointed out by the Commission in its general report that while there are found in Australia many industrial establishments managed with a view to efficiency and the comfort of the employees, insufficient attention is given to cost accounting and the methods of foreign competitors. It was also found that in many cases the tariff failed to "stimulate progressive methods and economical management."

Progress of Manufacturing Industries.

The following table, from the chapter in the general report of the Interstate Commission dealing with the industrial progress of Australia during the quinquennial period of 1908-1913, is of interest in connection with the tariff situation in that country. It is pointed out in the report that, in considering the comparative figures for the value of the output, it is necessary to bear in mind the world-wide rise in prices which has taken place during the period under consideration.

	1913	1908	Actual increase 1908-1913.	Percent- age in- crease.
Number of factories.....	15,536	12,853	2,683	20.87
Value of output.....	\$786,235,453	\$484,360,960	\$301,874,493	62.32
Raw materials, wages, fuel, and light.....	\$648,482,854	\$404,011,083	\$244,471,771	60.51
Value of raw material used.....	\$469,166,987	\$296,650,287	\$172,516,700	58.15
Value added by manufacture.....	\$317,078,467	\$187,710,559	\$129,357,906	68.91
Total salaries and wages.....	\$163,544,022	\$96,767,272	\$66,776,750	68.91
Fuel and light.....	\$15,771,845	\$10,498,767	\$5,273,078	49.80
Average wages per employee.....	\$108.80	\$384.13	\$112.67	28.50
Value of land and buildings.....	\$179,441,092	\$129,731,113	\$49,709,979	38.32
Value of plant and machinery.....	\$181,310,486	\$126,177,459	\$55,133,027	43.69
Number of male employees.....	274,107	190,555	83,552	43.85
Number of female employees.....	82,904	66,939	15,965	24.00

Comparison Between Imports and Domestic Production.

In comparing the figures for imports and domestic output for the period of 1908-1913, it is found that the value of the dutiable imports with the duty added has increased 51.2 per cent, the free imports 70.8 per cent, and the output of Australian factories 62.3 per cent. The proportion of duty-paid imports to the value of domestic products has decreased during the same period from 38.2 per cent to 35.6 per cent. It is interesting to note that, in spite of the increase in the tariff in 1911, the average ad valorem rate on dutiable imports shows a decrease from 31.4 per cent in 1908 to 28.9 per cent in 1913, which may be accounted for by an increase in the proportion of imported products dutiable at low rates of duty in the form of raw materials for local industries.

Conflict of Interests and Duties on Raw Materials.

One of the problems confronting the commission is the conflict between the producers of manufactured products, who are primarily interested in a supply of raw materials for their industries, and the domestic producers of such raw materials, who are seeking protection for their products. It is pointed out that "when the finished article of one industry is the necessary raw material of another, the tariff encouragement to both industries may fail to stimulate development in either case," and that "it may at times be found a distinct economic advantage to withdraw tariff encouragement from certain subordinate industries when the effect of such encouragement is proved to be a hindrance rather than an aid to the total of industrial development." It is realized by the commission that the progress of the manufacturing industries of Australia is more or less retarded by the protection extended to raw and partially manufactured materials and machinery not produced and not likely to be produced in Australia on a commercial scale.

Applications for Prohibitive Duties.

In discussing the applications which have been made by some manufacturers for prohibitive import duties, in order to assure to Australian manufacturers complete control of the local market, the commission states as follows:

Witnesses have frequently admitted during the course of examination that, in order to get the local market, they sought the absolute prohibition of importation of all goods likely to compete with the industries in which they were interested. With nearly all Australian industries the local market is the only market the manufacturers have to depend upon.

In many such cases witnesses professed to be willing to enter into a bond not to increase prices except on account of a rise in wages and raw material, and offered to agree that such increase of prices be entirely within the control and supervision of the commission. They contended that to secure the local market would mean in many instances a considerable reduction of overhead charges and general expenses pro rata with the increased output, and would thus tend to reduce prices and turn what is in some cases now a loss or a poor working result into a profitable concern.

Tariff legislation furnishes no example of a duty being conditioned by such guaranties as those suggested, and, apart from the constitutional difficulty, the scheme proposed may lead to difficulties in operation.

On the other hand, to grant prohibitive duties, especially to industries in which only a few large firms operate, without some form of control of prices, would lead to certain combinations and a probable increase of cost in price to the consumer. Moreover, to give unrestricted power to advance prices in the absence of the stimulating influence of competition or some form of control

would also tend to lower the standards of efficiency, while the total exclusion of new ideas and improvements, to which the whole industrial world is contributing, could not possibly act otherwise than to our substantial detriment.

Prohibitive duties encourage monopolies and other combinations which destroy competition and unduly increase the cost of living to the advantage of the factory proprietors, but to the detriment of the workers and the community generally.

There is already in Australia, as we have seen during the present investigation, a growth of monopoly in various branches of industry which, if not subject to supervision and control, will be attended with mischief to the general welfare.

It is worthy of attention whether some means may not be devised by which, when the security conferred by the policy of protection is improperly used to create restrictions on internal competition and acquire excessive profits for manufacturers, there may be a check which will insure a prompt and effective remedy.

Future of Australian Industries.

Of considerable interest is the following passage from the report of the commission in regard to the future of Australian industries:

The remarkable progress of our manufacturing industries during the past five years has absorbed, to a large and, indeed, remarkable extent, the industrial population. It is, however, quite impossible to anticipate that this progress may long continue in the same ratio, and, if a substantial impetus is not given to other industries, there is danger of a diminution of remuneration by reason of the competition which would follow a surplus of available labor.

We have in Australia a comparatively small and not rapidly increasing population, the requirements of which, in manufactured articles, we are likely to successfully meet within a reasonably brief period of time. The population of Australia during the five years 1906-1913 increased by 15 per cent. During that period the number of persons employed in our factories increased by 30 per cent, and the value of the output of those factories increased by 62.32 per cent. Whilst some allowance must be made in regard to the last-mentioned increase for the rise in the price of commodities, there is nevertheless a very wide discrepancy, satisfactory from an industrial point of view in many respects but suggestive of the necessity for serious consideration in looking to the future welfare of the workers.

We can not well anticipate that in the open markets of the world Australia may successfully compete with the manufactured products of cheap labor or with the manufactured products of those countries whose larger populations enable them to manufacture in quantities much larger and consequently at a cost much less than is possible here under our present conditions. We need have no anxiety in regard to our export trade in those natural products for which there is an increasing world-wide demand; but there are numerous articles of manufacture the market for which is now and in all probability in the future will be limited to the confines of Australia.

Improvements in machinery and labor-saving appliances are slowly but surely lessening the proportionate demand for workers in manufacturing industries. This, with a less rapid industrial expansion in the future than that which has marked recent years, makes it imperatively necessary to provide for the time when our manufacturing industries may no longer be relied upon to absorb the ordinary natural increase in the ranks of the workers. Fortunately Australia offers the possibility of unlimited expansion in agriculture, mining, and pastoral industries, for the products of which the world's demand is practically unlimited.

An analysis of the figures of the population of Australia for 1901 and 1911 shows that while the total increase in the population for the decade was 18.05 per cent, the increase in the number of persons employed in factory industries was 58.44 per cent, as compared with increase of only 9.95 in persons employed in primary industries, such as agriculture, pastoral industries, mining, fisheries, etc.

Reports on Specific Industries.

In addition to the general reports the commission is publishing reports on specific industries, made up of the hearings and the con-

clusions and recommendations of the commission. The reports so far received by the Bureau deal with the following products: Fresh fruits; Portland cement; pickles; sauces and spices; socks and stockings; ale and beer; spirits for manufacturing purposes—sulphuric ether, perfumes, medicines, etc.; potable spirits; leather; boots and shoes; tobacco, cigars, and cigarettes; corsets; wool tops, woolen yarn, and machinery for the manufacture of tops and textiles generally; soap and soap-making materials; olive oil; hats and caps; glucose; women's and men's garments, piece goods, and curtains; hides and skins; wattle bark; matches and vestas; shale oil; cotton growing; printing inks and printers' roller composition; furniture; brasswork; stoves, fuel and gas, and register grates, etc.; slate slabs, roofing slates, and roofing and other tiles; type-printers' metal; horseshoe nails; electrotypes, stereotypes, and matrices; dried fruits; gas meters; inks, stains and dressings for leather; electroplated ware; locks and lock furniture; wire nails and barbed wire; paints and colors, varnishes, and paint oils; vehicles and parts, including motor vehicles; writing inks and ink powders; copper; enameled ware and hollow ware; brush ware, brush makers' drafts, and brush makers' woodware; rubber goods; electrical machinery and electrical and gas appliances; manures, native sulphur and pyrites; cordage; motor cycles and cycle parts; iron and steel; tin ores and unrefined tin; leatherware—harness, traveling and sporting goods, belting, etc., also similar goods in canvas and fiber; miscellaneous—butter, margarine, and edible oils; grain and pulse; corks and cork manufactures; weighing and testing machinery; arrowroot; dog biscuits; coffee; preserved fish; infants' and invalids' foods; game and eggs; isinglass; jelly crystals; lemon syrup crystals; edible nuts; onions and potatoes; metal polish; salt; canary seed; seeds of plants for green manures; tamarinds, yeast; badges, regalias, and gold embroideries; calico for the manufacture of bags for the export of flour; carpets, floor cloths, and linoleums; sewing cotton—fancy cotton threads, plain and mercerized; feathers; felt, roofing and damp-courses; saddlers' felt; artificial flowers; hessians and brattice cloth, jute piece goods and bookbinders' cloth; parasols; down quilts; saddlebags and divan covers; sails, tents, and tarpaulins; small shirt studs; and woven small ware.

All the reports mentioned above are filed in the Bureau and will be loaned to those interested upon application.

BRAZILIAN COLD STORAGE FOR AMERICAN FRUIT.

As a result of information made public through the medium of COMMERCE REPORTS and special bulletins as to the supplies and cost of fruit on the Brazilian markets, the Empresa de Armazens Frigorificos has erected at Rio de Janeiro a thoroughly modern cold-storage warehouse, and plans to handle, on a commission basis, apples, pears, cherries, plums, grapes, and apricots from the United States. The company has written to the Bureau of Foreign and Domestic Commerce for the addresses of American firms inclined to enter this business. Interested growers and shippers should communicate with the Empresa de Armazens Frigorificos direct. Its New York address is 26 Broad Street.

SAFETY IN TRAFFIC ON GREAT LAKES.

The following correspondence between the Secretary of Commerce and the president of the Lake Carriers' Association is printed for the information of the public. To it is added the circular of the Pittsburgh Steamship Co. which speaks for itself. The attitude of the Lake Carriers' Association and of the Pittsburgh Steamship Co. as expressed herein is so commendable that it is thought the public should be informed concerning it.

OCTOBER 7, 1915.

MY DEAR MR. LIVINGSTONE:

Will you permit me to lay before you certain suggestions on matters of deep mutual concern and to ask that you kindly give them thoughtful consideration.

If I am correctly informed, pressure upon the transportation companies on the Great Lakes is likely to be unusually severe this fall, up to the very close of navigation. This will arise from the need for transporting the largest possible tonnage of ore to supply the active iron and steel industry through the winter, and also from the enormous crops of the Northwest, for the prompt handling of which sufficient railway facilities may not always be available. The situation, therefore, may call for the fullest use of all obtainable vessels as late in the season as practicable.

Under these circumstances risks may be taken which would under ordinary circumstances be avoided. Under the pressure of supposed necessity, cargo capacity may be taxed to the utmost and precautions may be neglected in the rush of work, which may well mean the loss of life and property should a severe storm catch vessels unexpectedly during the coming boisterous weeks. I refer, of course, to freight vessels only.

It is not my wish to criticize in advance or to assume any purpose of neglect. In two important respects, however, the department has no power under the law to control dangerous practices if and when they exist, and it is concerning these in particular that I now appeal to you to warn vessel owners in advance of the danger that may follow if these matters are neglected.

As regards the overloading of vessels, the power of the department would end when the inspector called the attention of the captain or other controlling officer to the fact of such overloading. If, however, the captain or owner chooses, the vessel may proceed, and the law can not stop her. The same is true as regards the trimming of cargoes and the stowing of goods. As to both these it may be said that the self-interest of owner and captain would lead to taking proper care. Experience, however, shows this is not always so. Many owners, many captains, doubtless the greater number by far of both, will take care in such matters. Some captains, however, will hesitate to take the care they wish if they feel the owners are pressing them for time and cargoes.

Some owners will take risks for a great stake that their own sober judgment would not approve were the reward for passing the risk less visible. In both cases the responsibility that exists toward the crew of the vessel is overlooked, and I can not too strongly urge on you that this is a grave responsibility which can not be set aside.

I trust, therefore, that you will take such measures as will bring these matters promptly and plainly to the attention of the members of your association, and that your great influence will be thrown strongly in favor of exceptional care in these directions. I beg to remain,

Yours, very truly,

(Signed)

WILLIAM C. REDFIELD, *Secretary.*

WILLIAM LIVINGSTONE, Esq.,

*President Lake Carriers' Association, Detroit, Mich.*LAKE CARRIERS' ASSOCIATION,
Detroit, Mich., October 13, 1915.

MY DEAR MR. REDFIELD:

The views expressed in your letter of 7th correspond exactly to my own ideas, and I heartily reciprocate your views, and I am pleased to say also that I am sure they are reciprocated by the whole of our executive committee.

Perhaps one of the best expressions in that line is to inclose (which I do herewith) a copy of circular which Mr. H. Coulby, president of the Pittsburgh

Steamship Co. (the largest single fleet on the lakes, comprising over 100 steamers), has sent out to his masters, which you will note reflects your views thoroughly as to safety and judgment to be used.

In this connection I desire to call your attention to one fact in connection with our lake navigation which I think will interest you materially, and that is this, that on account of the limited draft of water in channels connecting the Great Lakes, the danger of overloading our modern ships is eliminated, and the side hoppers in the modern ships makes them practically self-trimming.

It is true, however, that we have a minor percentage of our vessels that are not strictly modern and do not have all these advantages, but on the other hand, they do not draw as much water as the larger modern vessels, carry smaller cargoes, and have all the life-saving appliances and aids to safety in navigation. I think I am justified, however, in saying that at least 70 per cent of the vessels in our association are strictly modern vessels.

I will surely be very glad to cooperate with you in anything that pertains to safety of life, property, and ship. As a matter of fact, if we put it on cold-blooded business principles, it is the best course to pursue, and yet we are not unmindful of the fact by any means that there is something more in this world than simply dollars and cents, that safety to life comes first, and that by using every possible aid for the protection of life, we of necessity are using every possible aid for the protection of vessel and property. With kind regards, I remain,

Truly, yours,

(Signed) W. LIVINGSTONE, *President.*

PITTSBURGH STEAMSHIP COMPANY,
OFFICE OF PRESIDENT,
Cleveland, Ohio, October 6, 1915.

To our captains:

Inclosed I hand you a circular letter prepared by the Lake Carriers' Association concerning the new Seamen's Law, which goes into effect November 4, 1915. I do not know that I can add anything to what has been covered in the circular. You must all of you do your utmost to comply with the law, so as to get through the balance of the season. After the close of navigation I expect to call our captains and engineers into conference in an endeavor to standardize our fleet and formulate such rules as will enable us to intelligently carry out the requirements of the law as interpreted by the local inspectors. By that time we shall all of us have had experience which will be of great assistance to us in our meeting.

The fall is now here, bringing with it an abnormal freight condition on the Lakes. Grain rates are very high and there is a very active demand for ships, which is an incentive to everybody in the business to get the best possible dispatch, and it is likely to develop a tendency to take chances to make time, and I want to warn you against doing this. I appreciate you are all continually on the alert and anxious to make a good showing with your ship. I want to again remind you that you must not neglect any of the rules laid down safeguarding the crew and property under your charge. When conditions are favorable there is no economy in trying to save fuel this time of year, but I do recommend that before leaving port and en route at the Sault you get the weather forecast. Have your hatches all properly secured before leaving port, and use your own best judgment in navigating with the intention of getting into port safely, even though by doing so you may be a little longer in accomplishing it.

Yours, very truly,

(Signed) H. COULBY, *President.*

CIRCULAR TO THE HEMP TRADE.

The Bureau of Insular Affairs at Washington is in receipt of a cablegram from the Governor General of the Philippine Islands advising that during September Philippine government fiber inspectors inspected and stamped 89,494 bales abaca and 3,248 bales maguey, as follows: Abaca: A, 607; B, 1,103; C, 2,371; D, 4,112; E, 7,923; S-1, 1,793; S-2, 1,971; S-3, 794; F, 10,354; G, 2,990; H, 2,015; I, 11,860; J, 13,409; K, 4,594; L, 15,743; M, 6,399; strings, etc., 1,501. Maguey: 1, 215; 2, 1,794; 3, 1,132; D, 107.

COMMERCIAL FAILURES IN ARGENTINA.

[Consul General W. Henry Robertson, Buenos Aires, Sept. 6.]

Argentine commercial failures by months for this year, compared with corresponding months of last year, show an encouraging decrease, especially for August, although the 1914 figures for that month included the failure of the French Bank (Banco Frances y Rio de la Plata.) This bank has since been reorganized and is again operating in a normal way, paying off its creditors and depositors in quarterly quotas.

Stated in American currency, the record month by month has been :

Month.	1914		1915	
	Assets.	Liabilities.	Assets.	Liabilities.
January.....	\$7,996,621	\$7,162,871	\$7,689,394	\$6,513,231
February.....	14,871,378	13,117,343	11,701,706	8,576,801
March.....	14,700,940	12,440,106	9,838,625	8,528,850
April.....	12,639,848	10,480,020	5,050,237	4,371,027
May.....	18,943,381	15,275,760	9,244,635	7,053,567
June.....	13,045,839	10,628,739	10,628,739	7,390,299
July.....	16,664,985	12,431,580	8,495,010	6,802,713
August.....	74,833,369	36,814,875	6,306,150	5,008,848

Press Comment on August Returns.

In connection with the foregoing figures, the comments of the Buenos Aires Herald on the August showing are of interest :

There is a natural feeling of satisfaction in commercial circles at the diminution in the return of failures and settlements for August. Compared with this time last year the difference is marked, liabilities then figuring at \$36,814,875 against the \$5,008,848 of the recent returns; but it ought not to be forgotten that part of the \$36,000,000 was made up of the liabilities of the French Bank (some \$29,000,000), together with two or three other big firms totaling at least \$2,000,000. Thus analyzed, the improvement is not so great, but nevertheless the August figures are the second lowest for the current year.

Where the most hopeful signs are to be found are in the classified statements of the various debtors whose affairs are awaiting legal settlement. Trade in general, wholesale and retail, figures much lower down the list than it has done for several months, the chief proportion of the \$5,000,000 aforementioned being chargeable to property owners, builders, and bakers. The last item may at first appear strange, seeing that bread is always in demand, but their presence on the list for over \$400,000 may probably be put down to the adoption of the "cash on delivery" system by the millers instead of the long credits formerly granted to the trade.

CORRECTION IN RUSSIAN DRUG PRICES.

Consul General Snodgrass, at Moscow, states that in the report on pharmaceutical preparations in Russia, published in *COMMERCE REPORTS* for June 21, 1915, the prices given were for 1 kilo (2.2046 pounds) and not for 1 pound. The correct prices are therefore as follows: Salicylic acid, \$9.27 per kilo (\$4.20 per pound); iodine, \$21.12 per kilo (\$9.58 per pound) on the local market and \$19.06 per kilo (\$8.65 per pound) in larger lots from South America; morphine, \$257.50 per kilo (\$116.80 per pound); codeine, \$360.50 per kilo (\$163.52 per pound).

ANALYSIS OF AUGUST EXPORT TRADE:

Practically all important American industries are now enjoying increased exports, according to an analysis of August trade made by the Bureau of Foreign and Domestic Commerce, Department of Commerce. Earlier months of the year showed decreased exports in cotton, lumber, naval stores, electrical goods, and tobacco, but those articles have now entered the list of those showing increasing exports, which includes metal goods, chemicals, fertilizers, fruits, glassware, hides and skins, rubber goods, leather manufactures, musical instruments, oil cake, mineral oil, cottonseed oil, paints and varnishes, paper manufactures, seeds, soap, refined sugar, and foodstuffs generally. Photographic goods, unmanufactured tobacco, coal, and spirits, wines, and liquors are the only important groups in which decreases occurred in value during August.

American exports for the first eight months of 1915 totaled \$2,195,000,000, or 70 per cent more than for a corresponding period of last year. The acceleration in export movement in the latter part of the year, however, was sufficient to carry the August total to \$257,000,000, or 138 per cent more than that for August, 1914.

The following table shows the leading articles and their value exported during August and the eight months ending with August, 1914 and 1915, respectively:

Articles exported.	August—		Eight months ending Aug. 31—	
	1914	1915	1914	1915
Cotton	\$1,306,000	\$7,626,000	\$230,409,000	\$287,779,000
Wheat and flour	27,432,000	25,192,000	168,562,000	272,872,000
Iron and steel manufactures	10,429,000	37,727,000	140,246,000	212,897,000
Meat and dairy products	9,741,000	19,024,000	89,074,000	190,768,000
Breadstuffs, n. e. s.	2,889,000	4,942,000	17,839,000	110,960,000
Leather, and manufactures of	2,047,000	13,632,000	35,191,000	109,543,000
Oils, mineral	7,980,000	14,070,000	95,191,000	83,824,000
Automobiles and parts	702,000	9,617,000	21,412,000	74,945,000
Copper, and manufactures of	5,035,000	7,781,000	87,713,000	74,345,000
Horses	97,000	8,393,000	2,119,000	66,934,000
Explosives	349,000	14,658,000	4,113,000	65,912,000
Cotton manufactures	2,269,000	7,413,000	30,438,000	62,496,000
Chemicals, drugs, etc.	1,862,000	6,834,000	17,792,000	45,784,000
Coal	7,057,000	6,683,000	30,170,000	39,594,000
Wood, and manufactures of	4,398,000	6,098,000	61,279,000	35,020,000
Tobacco, unmanufactured	1,722,000	6,273,000	28,807,000	32,966,000
Brass, and manufactures of	311,000	4,561,000	4,329,000	26,603,000
Wool manufactures	297,000	1,998,000	3,118,000	22,726,000
Paints and varnish	438,000	2,036,000	4,784,000	21,904,000
Sugar, refined	1,630,000	7,118,000	2,569,000	21,177,000
Oil cake and meal	477,000	1,678,000	10,883,000	19,803,000
Fruits	1,872,000	2,723,000	12,793,000	18,892,000
Cottonseed oil	407,000	1,767,000	8,911,000	18,435,000
Zinc manufactures	498,000	3,011,000	609,000	18,270,000
Mules	14,000	2,523,000	390,000	16,756,000
Electrical goods	1,024,000	1,806,000	13,655,000	14,977,000
Rubber goods	602,000	2,359,000	7,679,000	12,956,000
Paper, and manufactures of	1,389,000	1,917,000	13,337,000	13,783,000
Fiber manufactures	462,000	2,014,000	7,725,000	11,595,000
Agricultural implements	79,000	182,000	1,265,000	9,279,000

The most striking increases occurred in commercial automobiles, cotton wearing apparel, boots and shoes, wire, firearms and explosives, refined sugar, harness and saddles, aeroplanes, and woolen goods.

RAPID PROGRESS OF THE PORT OF ARCHANGEL.¹

[Commercial Attaché Henry D. Baker, Petrograd, Sept. 5.]

There has probably never been a more noteworthy expansion in the trade of any particular port in such a short time than has occurred at Archangel during the last year. Previous to the war the trade of this port was confined to comparatively small exports of timber, fish, furs, and other local products of northern Russia, and a relatively small return movement of goods required for local consumption. Now, however, Archangel is the only port of European Russia open for foreign business by direct sea communication, and, except Vladivostok, in eastern Siberia, it has no rival in the Russian Empire. From a comparatively unimportant port about a year ago, dependent chiefly upon its sawmills and fishing fleet for prosperity, it has suddenly become one of the most important ports in the world, rivaling even New York in the number and tonnage of ships arriving and departing between about May 1 and the close of ice-free navigation. At the time of my visit in August about 120 large steamers were in port, and about 300 had arrived since May. An immense number of boats and barges are also engaged in river and canal navigation, many of them carrying as much as 2,000 tons each; these have been diverted largely from the lower Volga River traffic.

The Dwina River at Archangel is 1 to 3 miles wide, with a depth of 20 to 40 feet. The tide from the White Sea amounts to about 3 feet. At the various piers and landing stages the depth of water is usually 22 feet or more at low tide. Archangel is an extremely long but narrow city, extending only a few blocks eastward from the river, but with its suburbs and outlying houses northward it extends about 30 miles, or almost to the White Sea. The main street is about 6 miles long. For a distance of nearly 40 miles south and north of the river almost to the White Sea there is now considerable shipping. In front of the main part of the city there are about 35 large piers, as against only 3 or 4 a year ago. Over 100 large warehouses have been built within a year. There is still an insufficiency of piers and warehouses, and ships arriving sometimes have to lie out in the stream for some weeks before they can unload. One American steamer had to take five weeks to discharge all its cargo.

Transportation to the Interior by Water and Rail.

Larger preparations than ever are being planned to meet the traffic for next spring, and it is hoped that the facilities may then be sufficient to take care, with reasonable promptness, of the enormous business that has developed. If Archangel were free from ice during the winter it would be one of the finest ports in the world, since it has 60 to 70 miles of river frontage available for ships drawing up to 23 feet. Moreover, through the magnificent system of inland waterways with which the Dwina River is connected, it is possible to ship freight from Archangel by water to nearly all the principal towns of Russia. During the spring, especially, when there is high water in the rivers and canals, there would seem to be no reason why nearly all the immense amount of freight arriving could not be distributed through these interior waterways, except that there is an insufficiency

¹A cablegram containing a résumé of conditions at Archangel was published in *COMMERCE REPORTS* for Aug. 23, 1915.

of river boats and barges to handle such traffic. Most of the barges draw about 6 feet of water and carry 500 to 2,000 tons of freight.

The trip between Archangel and Vologda by river steamers via Kotlas involves the navigation of a long roundabout bend of the river and requires about eight days against the current and four or five days with the current. The congestion of cotton at Archangel has been largely relieved by removing the cotton in river boats to Vologda, where there is broad-gauge railway communication with Moscow and Petrograd. At present, the chief difficulty in getting the cotton to the mills in the industrial district around Moscow is connected more with the scarcity of railway cars at Vologda than with obstacles to the shipment of cotton from Archangel. Some of the important cotton-milling interests in the Moscow district are now planning to have the cotton taken all the way by water from Archangel to Nizhni Novgorod on the Volga River, and thence by rail to the mills, the railroad between Nizhni Novgorod and Moscow not being so seriously congested with freight as are the railways forming a junction at Vologda.

The freight rates for the water and canal service between Archangel and Vologda have gone up from 35 to 80 kopecks per pod (\$9.98 to \$22.82 per short ton), every class of freight paying the same rate. Freight to or from Siberia can be transferred at Kotlas, where there is a railway line to Vyatka on the Northern Railway, which connects with the Transsiberian Railway.

Archangel is connected with the west side of the Dwina River by ferry. The freight for the narrow-gauge railway line to Vologda has to be transferred to the west side of the river, as the railroad terminus is on that side. Owing to marshes and low depth of water, the west side of the river has not been developed as has the east side, where large steamers can come right up to the shore.

The Harbor in Winter—Relief of Congestion and Projected Improvements.

The river begins freezing in October, but is expected to be kept open from Archangel out through the White Sea till December. It is the intention this coming winter to maintain the present fortnightly service of steamers by the Russian-American Line from Archangel to New York until the end of January. Two of the largest ice breakers in the world are now at Archangel, the *Canada* and the *Lintrose*, and it is understood that several more large ice breakers are being constructed in England for use here during the coming winter. During the late part of the season, incoming ships may be allowed, as they were last year, to get frozen in, unloading their cargoes on the ice, which is later broken to release the ships.

There was comparatively little serious congestion at Archangel in August. The rapid clearing of the situation there since last spring, in spite of the great fresh accumulation of goods by large steamers arriving all summer, indicated that there had been energetic work in getting freight removed and that the facilities for unloading and moving the goods had much improved. Goods for the Government are moved by the narrow-gauge railway line and to some extent by the river boats or barges. Nearly all goods consigned to private firms are shipped by boats or barges, but when in handy packages they may be accepted as baggage by the railway. The narrow-gauge line is being worked efficiently and is said to be taking about 150 carloads

of freight per day. Construction on the single-track standard Russian gauge line parallel to the present narrow-gauge line from Vologda to Nyandoma (about 170 miles from Vologda, or halfway to Archangel), has not been accomplished as rapidly as was expected, and present indications are that it will not be completed until the end of October, instead of August as was hoped. The completion of this standard-gauge line to Nyandoma is expected to double the carrying capacity of the line, as the cars on the narrow-gauge portion, having to traverse only half the distance to Vologda, could double the present number of trips. As soon as traffic permits it is intended to widen the Vologda-Nyandoma narrow-gauge line and eventually to have a double-track standard-gauge line all the way from Archangel to Vologda. The work of substituting long sleepers, or ties, for the present short ties is now gradually proceeding on the narrow-gauge part, preparatory to the later broadening of the whole line.

Kola as Winter Port.

It is understood that rapid progress is being made with the construction of a railway across the Murman Peninsula to Kola, in Lapland, lying at the head of an estuary (27 miles long) of the Arctic Ocean, and it is hoped that this railway will be completed next January or February, so that Kola may succeed Archangel for winter use. Between the end of January and May 1 it will doubtless be impossible to keep Archangel open even with powerful ice breakers. Around this part of the Arctic Ocean the Gulf Stream finally dissipates itself, creating sufficient warmth to prevent the formation of any formidable ice. The railway across Lapland is stated to be of easy construction, and it is understood that a large part of the rails and other equipment have already arrived, the largest orders having been placed in the United States. Considerable improvements are being made around Kola to facilitate loading and unloading. Some of the shipping agents now at Archangel are planning to make their temporary headquarters there between January and May. For some months the Kola route will probably require transshipment of goods on boats along the west coast of the White Sea to Kem or to Soroka, to which towns an extension of the new Petrograd-Petrozavodsk railway line (now almost completed) will be rapidly pushed and will probably be ready at the same time as the railway across the Murman Peninsula. The use of the White Sea for transfer of freight by boat between the two sections of railway under construction will require the services of ice breakers, which will also be cargo carriers, during the winter months; but as the ice along the west coast is of very light formation, a comparatively small ice breaker will be required. Eventually, but not in time for next winter, there will be continuous railway connection between Petrograd and Kola. Since Archangel also should by that time have excellent railway service with Petrograd and Moscow, and since goods arriving or departing from Archangel would have a considerably shorter railway haul than from Kola, as well as the advantage of easy river and canal communication, the Kola route is not expected to take the place of Archangel, except when the latter port is frozen up. In the summer time Kem and Soroka, as soon as they have railway facilities, may assist in relieving any congestion at Archangel.

Forwarding Agencies—Conditions in Cotton Trade.

The difficulties during the last year in connection with American trade with Russia through Archangel have not been entirely due to lack of sufficient transportation facilities and the overworked condition of the narrow-gauge line to Vologda. One of the chief embarrassments was the result of the small number of competent and trustworthy forwarding and shipping agencies at Archangel and the fact that the best of these agencies have had such an enormous amount of business turned over to them that it was impossible to give to each shipment the time and attention required. A list of the best known forwarding and steamship agents of Archangel is inclosed [and may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices; refer to file No. 697], but it is not intended to vouch for the reliability of any of the firms mentioned. Representatives of certain American firms in Russia, when expecting large and important consignments of goods from the United States via Archangel, have found it worth their while to go personally to Archangel to attend to the details of forwarding. The difficulties with regard to Archangel in most cases can apparently be surmounted by earnest effort, tact, and enterprise in making arrangements to have goods cleared and forwarded.

There is still a large amount of various American goods, especially cotton, lying around Archangel, and the cotton may be more or less seriously damaged by exposure to weather. This cotton, however, does not represent any American loss, as it was all bought and paid for by the Russian importers whose business it is to get it to the local mills as soon as possible by whatever way is most practicable. Since American cotton-producing interests, however, are naturally concerned in finding as large a market as possible in Russia for their cotton, and since Russian importation of American cotton has been greatly discouraged by difficulties in the way of shipping through either Archangel or Vladivostok, it might be worth the while of important American cotton growers and exporters to make a cooperative arrangement with Russian importers for prompt and efficient forwarding of cotton from Archangel to the interior, and for proper storage of the cotton during such time as it may be delayed at Archangel.

Aspects of Archangel and Vladivostok Routes for Cotton.

It has been suggested that if early preparations were made for shipping the new crop of American cotton to reach Archangel about next May and for sufficient barge space, possibly through purchase of barges, for its transfer to the interior, Russian importers, feeling thus assured that they might get the cotton, would import much more liberally than otherwise. It was also mentioned that notwithstanding some unfavorable conditions at Archangel there is more hope for this route than for Vladivostok, owing to the excellent interior waterway communications and the much cheaper freight rate from Archangel. I was shown some samples of American cotton at Moscow that had arrived via Vladivostok and had been seriously damaged in transit to Moscow, owing probably to inexperience in handling cotton over this route. For instance, much of this cotton not only was damaged by wet, but was discolored by being piled up with other kinds of freight, such as coal and bricks. Special en-

couragement has just been given to the Archangel route for importing cotton through the note received by the Cotton Committee of the Moscow Exchange from the Minister of Trade and Industry to the effect that it is now permitted to reload cotton at Archangel direct from ocean steamers to river boats according to the weights mentioned on the bills of lading, with partial checking as to its character. The goods are handled less by the new method, which also saves an immense amount of time and expense over the previous method of requiring that all the cotton be unloaded, measured, etc., before it could be cleared through the customhouse.

Development of the City of Archangel.

Archangel, owing to its sudden "boom," presents some of the aspects of towns in the western part of the United States, where sudden excitement has resulted from the discovery of valuable minerals. A great number of houses, sheds, shops, etc., have suddenly been erected to accommodate the overwhelming rush of business, and especially to cater to the wants of the large number of ships and sailors now in the harbor. A tramway is being constructed along the main street of the town, and the local government is shortly to complete an electric light and power plant, which will not only furnish power for the street railway but also light the city. The present governor of Archangel is said to be extremely progressive and active in bringing about improvements in the city, and it has been due largely to his efforts that the tremendous congestion of freight at Archangel last spring has been so greatly relieved. The city has a healthy, bracing climate all the year, but it is very cold in winter. From the standpoint of tourists, probably the most interesting feature of Archangel is the attractive fur shops, where all kinds of northern furs can be bought and where the great specialty is polar-bear skins from Nova Zembla and other near-by regions of the Arctic Ocean. The city has a population of 35,000 to 40,000. There is hotel accommodation for visitors, but it can not be called excellent. The passenger service on the narrow-gauge railway line from Archangel to Vologda, like the freight service, is very limited and usually overcrowded, so that trips over the line are often delayed because of lack of accommodation. Along the river front are numerous prosperous sawmills, which do a big business in cutting the timber brought down the river for exportation to England and other countries. Just outside of Archangel is an interesting farm for breeding black, white, and blue foxes for their skins.

The cost of common labor at Archangel has gone up to 4 rubles per day, which at the normal rate of exchange would represent about \$2. This is a high rate of wages for common labor in Russia. There is considerable need here of all kinds of labor-saving devices. Four floating cranes, lifting 200 to 300 tons, have lately been imported, but there is room for a great deal of improvement or extension of the facilities for loading and unloading freight.

Large Wheat Exports—Shipping Regulation—Foreign Consulates.

Archangel has become one of the most important wheat-exporting ports of the world; apparently much of the wheat formerly exported from Black Sea or Baltic ports is now shipped from here. In August it was said that about 1,000,000 poods (18,000 short tons) was lying

in port, while 15,000,000 or 20,000,000 poods¹ (270,000 to 360,000 short tons) had been shipped since May. A curious feature in connection with the shipping at Archangel has been that comparatively small and unimportant cargoes have arrived from England, but extremely important and full cargoes, including especially eggs, butter, and flax, go to England, while ships from the United States arrive with full cargoes, but return practically in ballast, because most articles that Russia ordinarily exports to the United States are now embargoed from exportation except to allied nations.

Masters of ships entering port are cautioned that if they bring any goods, even if it is only a book, without a bill of lading, they should declare it as ship's or personal property brought for sale, in order to prevent a fine by the customhouse.

Great Britain, Denmark, Norway, Sweden, Belgium, and France have consulates at Archangel, and Germany had one before the war. The United States has no consular representative here. Matters relating to American business are referred to the American consul at Petrograd.

SCARCITY OF JUTE IN SWEDEN.

[Consul General Ernest L. Harris, Stockholm, Sept. 10.]

Owing to the scarcity of jute in Sweden a number of mills have been forced to close temporarily. The jute used in this country is all imported from East India, and not only is this product entirely owned and controlled by English dealers but the English Government is in position to control the trade routes over which jute must come in order to reach Sweden.

An export prohibition on jute has existed in England practically since the outbreak of the war, and only certain quantities have been shipped to neutral countries under special licenses. Swedish mill owners who use jute in any large quantities are of the opinion, however, that the negotiations now being carried on in Stockholm by an English and Swedish committee will result in the permission for jute to be exported to Sweden in such quantities as are absolutely necessary for the mills. It is, therefore, anticipated that the mills now closed will shortly resume work.

PUFFBALLS AS FOOD.

A correspondent for an English agricultural paper has the following to say regarding puffballs as food:

Just at this time the giant puffball (*Lycoperdon giganteum*) is at its prime and offers many excellent and inexpensive meals to country dwellers, but it is seldom indeed that its merits are appreciated. As I write, the fragments of a splendid puffball that might have provided a free meal for a family lie on the road outside, where some one has trampled it under as "rank p'isen." This fungus, if picked when it is young and white-fleshed, is perfectly wholesome, and, if cut into slices and fried, it makes a delicious and satisfying dish. Care, however, must be taken not to eat it when the flesh shows a yellow tinge.

¹ Owing to an error in transmission, the cabled résumé published in COMMERCE REPORTS Aug. 23, 1915, stated this amount as 20,000,000 pounds.

STEAMSHIP SERVICE FOR HONDURAS.

[Consul E. M. Lawton, Tegucigalpa, Sept. 29.]

It has been reported that the steamer service for the west coast of Central America from San Francisco, heretofore supplied by the Pacific Mail Steamship Co., will soon cease. Such an event will seriously hamper the trade of this consular district, unless the service is supplied by other lines maintaining a regular schedule. Two small steamers belonging to the Salvador Railroad Co. operate between Salina Cruz and Panama, which also touch at Amapala, but these could not possibly handle all the freight for the southern port of Honduras. An occasional steamer of the lines of W. R. Grace & Co. makes irregular connection with these coasts also.

Recent telegrams from Salvador state that the master of the steamship *California*, owner not stated, has signed a contract with the Guatemala Government for an American line of steamers to regularly visit this coast, and hopes to make similar contracts with other Central American countries.

The import trade for the Pacific port of Amapala during the year 1914 was 10,877 tons, an increase of 2,756 tons over the previous year. The export trade is not heavy and is approximately 500 tons. As this commerce is almost exclusively with the United States, it is hoped that such publicity will be given the matter as to secure the interest and favorable action of some responsible steamship company. It is the opinion of this consulate that the Honduras Government would be willing to grant at least a modest subsidy for a regular schedule of service with Panama and San Francisco.

SIX MONTHS' COMMERCE OF SANTOS, BRAZIL.

[Consul Charles L. Latham, Santos, Sept. 6.]

The importations from foreign countries into the port of Santos for the first six months of 1915 amounted to \$17,154,195 United States currency, compared with \$25,907,067 in the corresponding period of 1914, according to statistics compiled by the Agricultural Department of the State of Sao Paulo. The exports for the same period were valued at \$48,725,855 United States currency, compared with \$54,624,348 in the first half of the preceding year.

Exports of coffee constituted a large portion of the whole, the quantities for the period under review being 5,134,896 sacks in 1915 and 3,995,219 sacks in 1914. The principal items of export and import, with their values in United States currency, were:

Articles.	1914	1915	Articles.	1914	1915
EXPORTS.			IMPORTS—continued.		
Coffee.....	\$54,075,567	\$47,991,077	Chemical products.....	\$649,659	\$599,705

THE RUSSIAN FUR MARKET.

[Consul General John H. Snodgrass, Moscow, Aug. 24 and Sept. 9.]

According to the industrial press, business is very slack on the fur market. The payment of outstanding debts, which is usual at this time of year, is not observed at the present time. The demand for karakul for the domestic market has gone down to a minimum. Prices have lost their steadiness, and this fur sells at the Nizhni fair at reduced rates, but if its exportation to the United States is permitted there will be an immediate recovery.

At present the large supplies of last year's karakul that were in the possession of the banks have been somewhat reduced. In the course of the first half of the year there was a steady demand on the part of speculators, particularly for the superior kinds. The speculators, expecting that the exportation of karakul will sooner or later be permitted, tried to purchase good skins at low prices, calculating that even if they remained in stock until next year they would represent a good investment. The fur dealers, on their part, assumed that on the Nizhni fair there would be a demand for the domestic market, and for that reason willingly bought furs of good quality. Thus the supplies of karakul are no longer accumulated in the hands of a few. However, this circumstance does not dispel the apprehensions of the fur dealers. It appears that large purchases of fresh skins have been made in Bokhara, where this year's yield of skins has been more plentiful than last year's, and for this reason was sold at fairly low prices in spite of the increased cost of forage. The prices were 4 to 8 rubles (\$2.06 to \$4.12 at the normal rate of \$0.515 to the ruble) for 10 undyed raw skins. Apprehensions are being felt as to the possibility of marketing so large a quantity of skins at the Nizhni fair. The domestic market is well provided with this sort of fur from last year, and the demand from the speculators has reached its climax, and is not likely to continue even at low prices. The question of exportation of karakul to the United States is still unsettled.

A limited quantity of sable is observed at the Nizhni fair, the supplies having been disposed of during the winter. There is an average demand for red fox, of which the supplies are considerable. As there are no purchasers from abroad, it will be difficult to sell. There is a fair demand for dyed hare, the price of which averages 6 to 7 rubles (\$3.09 to \$3.61) per dozen in Moscow, and is increased by 5 per cent at the fair. Considerable quantities of raw squirrel are seen at the fair in anticipation of a great demand. The prices are the same as those of last year—25 to 80 rubles (\$12.88 to \$41.20) for dressed skins. There is also a considerable supply of ermine; superior Ishim skins are sold for \$1.55 each; Yakutsk skins at \$0.90 to \$1.08; and Petchora skins at \$1.29 each and above.

No business was done in marmot, and there is little business in lynx and other skins, which have sunk in price by 20 to 25 per cent from those of 1914. A fair business is expected in skunks, of which there is but a limited supply on the market owing to the absence of imports from abroad.

The Nizhni-Novgorod Fair.

An American buyer just arrived from Nizhni-Novgorod states that the skin and fur trade is lively and prices in the main active, but that

purchasers are awaiting definite instructions from the United States as to the prospect of selling direct. Calfskins are particularly worthy of consideration; for the first time in Russia's history domestic tanners are endeavoring to utilize them.

Goods sent to the fair, however, are coming in very slowly, owing to detention during transit. At present a very small quantity of furs is on the market, partly because the banks have not sent any karakul to the fair. They did not expect any business of importance with this fur, because its exportation was prohibited before the beginning of the fair. Even if the banks give orders now for the fur to be sent to the fair it will be received too late. Owing to the good demand for light-quality karakul before the fair and the lowering of prices at the beginning of this year, very little karakul suitable for coats has remained in the hands of the merchants. The larger part of the stock in Moscow is composed of heavy qualities, most of which is sold for exportation, principally to America. For this reason no furs from Moscow are expected to arrive at the fair; small quantities of karakul, of a quality suited for the interior market, will be sold according to samples.

Karakul Production and Prices.

According to information on hand at several large firms, the last season's production of karakul was about 1,300,000 furs, against 1,500,000 in normal times. The reason for the diminution is to be found in the fact that the farmers, seeing the falling off of prices, did not want to force the production. However, in spite of this year's production of karakul being somewhat smaller than usual, the aggregate quantity of karakul on the market will not be smaller than formerly, there being large stocks from former seasons, both at the places of production and at the fair.

There have not been important transactions in karakul at the fair as yet, but they are expected to occur if the exportation of karakul to the United States should be permitted. Small transactions have already been concluded at the fair at prices 35 per cent above those in March. Agents for purchasing karakul for the United States have arrived. It is believed, however, that there will not be important speculative purchases for America and that the karakul business at the fair will take place without big changes in prices. The prices for karakul will probably be the same as they were before the beginning of the war.

There are no big stocks of furs dyed abroad, and these goods change hands at raised prices, which are evidently not normal.

COPPER PRODUCTION ON ISLAND OF CYPRUS.

[Consul Arthur Garrels, Alexandria, Egypt, Sept. 10.]

An American copper-mining syndicate at Skouriotissa, Cyprus, has applied for Government permission to lay a railway from its mines to the port of Karavostassi so as to facilitate the shipping of ore. The total quantity extracted from these mines to date aggregates about 4,000,000 tons. It is believed that after the proposed tunnels in the mines are completed the daily output of ore will approximate 1,000 tons. Three more American mining engineers will soon arrive to join the syndicate's staff.

DYEING MATERIALS PRODUCED IN ECUADOR.

[Consul General Frederic W. Goding, Guayaquil, Sept. 1.]

This report has been prepared for the purpose of directing the attention of American manufacturers of dye to the products supplied by Ecuador, some of which have been used by dyers for many years. A description of the principal materials follows:

Orchilla, or Archil.

Orchilla is a lichen (*Rocella tinctoria* and *R. fuciformis*) from which the coloring substances archil and litmus, two coloring substances, are obtained, cudbear being the product of an allied species (*Lecanora tartarea*). Other names by which these parmeliaceous plants are known are canary moss, cape weed, dyer's moss, flat orchil, and Mauritius weed. They are found on the rocks near the sea in the Madeira Islands, Canary and Cape Verde Islands, Kongo, Sardinia, Minorca Islands, the Levant, Sweden, southern coast of England, Malaga coast of India, Magdalena Bay of Lower California, and on the trees on the coast of Ecuador and the Galapagos Islands, the plants from American localities furnishing a more delicate and brilliant color than those from other sources.

The plant as observed in Ecuador is a pale greenish gray, made up of many flat, thin branches 4 to 6 inches long, more than a quarter of an inch broad, and covered with powdery warts (soredia). It grows abundantly on the trunks and branches of all forest trees on a strip of country 2 miles wide extending along the coast from Santa Elena to Playas and to a less extent for some distance up the Guayas River. It grows still more abundantly on several of the Galapagos Islands some 700 miles off the coast, but is never found on rocks in America.

The plants are free to anyone disposed to gather them, and are present in such quantities that Ecuador can furnish 3,000 tons annually. The trees are selected and stripped of the lichens, four years being required to produce another crop. The plants are pulled from the bark by hand from April to December, each man collecting 100 to 200 pounds daily. They are spread out to dry for a day or two; then pressed into bales of 550 to 650 pounds each, when they are ready for export.

The prices vary from year to year. In 1912 orchilla sold f. o. b. Guayaquil for \$41.55 per ton; in 1913, for \$22.50; in 1914, \$48; and on September 2, 1915, the price advanced to \$73 per ton. The exporters of orchilla are F. G. Monroy, of Guayaquil, and R. Bustos and N. Ochoa, both of Chandin, Ecuador.

Achiote, or Annatto.

Achiote, known to the trade as annatto, roucou, and oleana, is the product of the tree *Bixa orellana*, which grows in the humid zones of Ecuador and other tropical countries of America. It is used in Ecuador to form hedges and groves, one of which contains upward of 10,000 trees. The flowers are normal in shape and rose-colored. The fruit is heart-shaped, rather more than an inch long, brownish-red, and covered with stiff thorns, resembling a chestnut burr. They are removed from the trees with a machete and placed in the sun to dry, when they split open yielding the seeds. The seeds have a thin

coating of reddish waxy pulp, which is separated by dissolving in water, and, after settling, is dried into an unctuous paste of a dark orange-red color, called annatto, and rolled in leaves or formed into cakes. As found in the markets, it contains variable quantities of flour, chalk, and other ingredients to give it consistency.

Annatto is used alone to color cottons bright orange and buff, and imparts a flesh color to silks, although the dye is not permanent. It is employed principally for giving deeper shades to plain yellows in silks and woolen and cotton cloth. If allowed to ferment during its manufacture a superior article for dyeing is produced which has a disagreeable odor. Certain varnishes and lacquers receive their orange color from this substance. Annatto, however, is of most importance as a coloring material for butter and cheese, being employed for that purpose in all dairying countries. It also is used by unprincipled persons to impart a red color to cacao beans discolored through want of proper attention.

Owing to the present limited demand, very little achiote is gathered, but in 1900 Ecuador exported 38,120 pounds, valued at \$1,620, and can produce 200,000 pounds annually—even more if the demand warrants. The seeds are the part exported, being shipped in bags containing 150 pounds. The present price f. o. b. Guayaquil is 2½ cents per pound, with no export duty imposed. The only exporter of achiote is Miguel E. Seminario, of Guayaquil, who is the owner of the large grove mentioned.

Other Plants Yielding Dyes.

Cascol (*Parkinsonia aculeata*) is the local name of a tree growing in the coastal districts of Ecuador, the pods of which contain black seeds about the size of a pea. From the seeds is extracted a strong, permanent reddish-brown dye much used by the Indians and in the smaller tanneries for coloring and tanning hides and skins.

A permanent black is obtained from the nut within the alligator pear, called locally aguacate and avocado (*Persea gratissima*), which grows abundantly in Ecuador.

Chanche (*Coriaria thymifolia*) is a shrub whose berries yield a very good black dye.

Anil (*Indigofera anil*) is a very hardy shrub growing luxuriantly in the driest coastal lands; it yields the richest blue dye, much used by Indians, but produces less pulp than *I. tinctoria* of India.

It has been stated that dragon's blood (*Croton sanguifluum*) is very plentiful on both slopes of the Andes.

Tocte is the local name of the nut of the indiginous black-walnut tree, which is here called the nogál. Its dye is similar to that supplied by its American congener.

Mangle (*Rhizophora mangle*) furnishes the bark locally used for coloring and tanning hides.

Colcas is a bush of the Andean plateau producing a yellow dye, and chilca is a similar plant that colors brown. The following are local names of dye-producing plants, further data being unobtainable at present: Romerillo, rubia, rumibarba, yuquilla, and sani.

[The name of an agent supplying South American dyestuff material may be obtained from the Bureau of Foreign and Domestic Commerce or its branches. Refer to File No. 66634.]

GOLD AND OTHER MINING IN SOUTH AFRICA.

[Consul Edwin N. Gunsaulus, Johannesburg, Transvaal, Aug. 20.]

Statistics contained in the annual report of the Government Mining Engineer of the Union of South Africa for 1914 just issued by the Department of Mines and Industries are eloquent in their portrayal of the magnitude of the world's greatest gold industry, found in the Transvaal, of which Johannesburg is the headquarters and dominating center, as it is likewise the largest city and the commercial, industrial, and financial metropolis of the Union of South Africa.

While the discovery of gold in South Africa dates back to the year 1868, the gold fields of the Transvaal as now developed and known were not really brought to light until 1884, since which time, except during the partial suspension of operations in the war period (1900-1902), there has been a steady and substantial increase in the output, until it now constitutes between 38 and 39 per cent of the world's gold production. From a beginning of about 2,375 fine ounces produced from these fields in 1884, valued at \$50,000, the output for the year 1913 amounted to \$181,883,262, while the gold production of the Transvaal from the inception of the industry in 1884 to the close of the year 1914 reached the stupendous total of 102,830,226 ounces, of the value of \$2,125,663,195.

It is a singular fact that in the entire Union of South Africa, embracing the Provinces of the Transvaal, Cape Colony, Orange Free State, and Natal, the Transvaal is the only gold-producing section worthy of mention discovered up to this time. As proof of this it need only be stated that of the total gold production of the Union for 1914, all but 1,746 ounces were produced in the Transvaal.

Gold Output for Last Year—The World's Production.

The output of gold in the Transvaal for 1914, owing to strikes and other disturbances, fell short of that for 1913 by 404,014 fine ounces, the total being 8,394,322 ounces, amounting in value to \$173,559,975. Judged from the returns for the first six months of the present year, however, the gold yield for 1915 will equal, if not surpass, that of 1913. Of the total Transvaal gold production for 1914, the Witwatersrand area was responsible for 8,033,570 fine ounces, amounting to \$166,066,568.

The following table, prepared by the Transvaal Chamber of Mines, shows the approximate gold output of the world during 1914:

Countries.	Value.	Percent- age of total.	Countries.	Value.	Percent- age of total.
Transvaal	\$173,180,002	38.3	Canada	\$16,351,440	3.7
United States	92,463,500	20.4	India	11,387,610	2.5
Australasia	20,168,748	11.1	West Africa	8,404,445	1.9
Russia	26,035,775	5.8	Other countries	38,932,000	8.6
Mexico	17,519,400	3.9			
Rhodesia	17,422,070	3.8	Total	451,874,990	100.0

Features of Transvaal Gold Production.

According to the annual report of the Union Department of Mines and Industries, the ore milled by Transvaal mining concerns for the year 1914 amounted to 26,704,403 tons, of which all but 24,944 tons

was produced by the mines, the small remainder being from reef diggings. A total of 9,901 stamps and 306 tube mills were worked during December, 1914, as compared with 9,579 and 290, respectively, during December, 1913. The average ore value per ton milled, including the estimated fine-gold contents of by-products sold or shipped by mines, was for the year \$6.47. The average percentage of waste sorted from rock hoisted on all the Transvaal producing gold mines was 9.26 per cent in December, 1914. The number of producing gold mines in the Transvaal at the end of December, 1914, was 86, on which were employed 21,743 white and 176,669 colored laborers.

Of the total number of persons in the service of mines and allied concerns of all kinds engaged in mining operations within the Union of South Africa in December, 1914, amounting to 244,261, the gold-mining industry employed 200,342, or 82 per cent, the remainder being divided among the diamond, coal-mining, base-mineral, and miscellaneous mining industries of the Union.

Expenditures for salaries and wages by mines and allied concerns within the Union of South Africa for 1914 amounted to \$80,386,199. Of this amount the gold-mining industry accounts for \$61,296,306, the diamond-mining industry for \$10,017,028, the coal-mining industry for \$4,826,701, base minerals for \$1,796,603, and miscellaneous for \$2,449,547. Of the amount expended in the gold-mining industry the Transvaal is responsible for \$61,260,556.

Stores Consumed by Gold and Other Mines.

During the year under review machinery and stores of the value of \$59,535,934 were consumed by the mining industry of the Union. The distribution of these amounts among the various Provinces and classes of concerns is shown in the following table. Of this amount the gold-mining industry accounts for \$50,013,433; the diamond-mining industry, \$4,717,219; the coal-mining industry, \$3,129,817; base-mineral industry, \$1,630,107:

Provinces.	Gold mines, including reef diggers and alluvial diggers.	Metal-lurgical works and tailings works.	Diamond mines.	Coal mines.	Base-mineral mines, other than coal.	Wires (lime, flint, and gypsum).	Total.
Transvaal	\$40,899,799	\$154,238	\$930,234	\$1,668,588	\$727,747	\$193,647	\$53,583,253
Cape Colony	846	2,597,761	44,231	688,786	802	3,332,426
Orange Free State	2,389	1,178,940	240,347	6,170	1,433,646
Natal	6,058	1,170,841	3,674	6,136	1,186,409
Total	49,900,092	154,238	4,715,935	3,129,707	1,420,207	206,755	59,535,934

Future Gold Prospect.

As already noted, the gold output for the first six months of this year (1915) shows a big increase over the corresponding period of last year. Furthermore, plans are being carried forward for a greatly increased output from the Far East Rand—a section as yet untapped. The Springs property, with an initial capacity of 30,000 tons, is expected to start producing next year, while at the Government Areas a new milling plant, representing an increase of 50,000 tons monthly, will also be in operation before the close of next year.

Other prospective plants include one each at Benoi, New Modderfontein, and Geduld, so that in 1917 it is thought these five companies may be crushing an additional 160,000 tons monthly.

The Diamond Production—Output by Provinces.

The two principal diamond mines of South Africa—the De Beers, at Kimberley, and the Premier, near Pretoria—both closed down very shortly after the outbreak of the war, as did most of the smaller properties, owing to the collapse of the diamond market, and up to the date of this report neither of these companies has resumed operations. As a result, the diamond production for 1914 was only about one-half of the previous year's output, being 2,801,016 carats, valued at \$26,703,429, as compared with 5,163,546 carats and a value of \$54,438,495 for 1913.

The production for the year of the four most important diamond-mining companies was: Premier mine, 1,097,238 carats, valued at \$4,929,190; De Beers (five mines), 1,225,436 carats, valued at \$14,859,993; New Jagersfontein, 177,623 carats, valued at \$2,773,631; Koffyfontein, 53,201 carats, valued at \$562,143. The grand total for these four leading companies was 2,553,497 carats, valued at \$23,206,425.

Following is a table showing the diamond output (mine and alluvial), by Provinces, for 1913 and 1914:

Provinces.	1913			1914		
	Mine stones.	Alluvial stones.	Total.	Mine stones.	Alluvial stones.	Total.
Transvaal.....	\$11,280,609	\$1,998,695	\$13,289,304	\$4,948,704	\$706,318	\$5,655,022
Cape Colony.....	30,589,733	3,453,564	34,043,297	15,161,886	2,085,338	17,247,225
Orange-Free State.....	8,106,567	9,323	8,115,890	3,786,185	14,998	3,801,178
Total.....	49,976,909	5,451,382	55,428,491	23,896,775	2,806,650	26,703,425

Silver Production—The Coal Industry.

There are no silver mines working in the Union, the output of 890,782 fine ounces, valued at \$498,674, representing the silver contained in the gold bullion. No silver was returned from base-metal ores.

The value of the coal production for 1914 for the Union of South Africa showed a slight gain over that of the preceding year, the total value of the sales amounting to \$10,992,914, as compared with \$10,903,186 for 1913. The Transvaal and Natal Provinces are the largest producers of coal, the Transvaal sales for 1914 amounting to \$5,600,000 and those of Natal to \$1,311,324, while the value of the Orange Free State output was a little under \$1,000,000. The sum realized on the coal product of the Cape Colony was only a little in excess of \$150,000.

Base-Mineral Output.

The output of copper in the Union for 1914 amounted to a little under 30,000 tons, of the value of \$3,369,345, as compared with 18,383 tons, valued at \$2,471,481, in 1913. The Transvaal produced 19,957 tons, valued at \$1,558,871, and the Cape Province 14,368 tons,

of the value of \$1,810,474. The Messina (Transvaal) Development Co. was the only producer shipping copper from the Transvaal during the year. The concentrating plant on this mine treated 76,286 tons of ore during the year, the marketable product obtained being 14,258 tons, assaying 38.46 per cent of pure metal, and 5,111 tons of smelted ore, giving 863,750 tons of matte, assaying 58.06 per cent of copper. The mine also produced 120 tons of middlings, assaying 13 per cent, and 25,050 tons of blister, assaying 96 per cent of copper. In the Cape Province the mining of copper ore is carried out in Namaqualand by the Cape Copper Co. and the Namaqua Copper Co.

Practically all the tin produced in the Union of South Africa is the product of the Transvaal, nine tin mines having contributed to the production for the year. An average of 62 stamps were at work over the year and 129,377 tons of ore were crushed by these and other milling appliances. The output of tin concentrates amounted to 3,521 tons, assaying on an average 66.25 per cent of tin. The total output of tin in the Union for 1914 was 3,429 tons, valued at \$1,515,383. Of this total the Transvaal produced 3,386 tons, valued at \$1,495,606; the remainder of 43 tons, valued at \$19,996, was the product of the Cape Province.

THEORY OF LEAST SQUARES IN TRIANGULATION.

The United States Coast and Geodetic Survey issued a publication dealing with the application of the theory of least squares to the adjustment of triangulation. It has not been prepared with the idea of displacing the textbooks in dealing with the subject of least squares, but of supplementing these in the special field of triangulation. It will be of much use to one who is beginning work of this kind. Concrete examples of adjustments are given, ranging from some of the easiest to those that are more difficult. The book deals principally with office computations, but it will also be found useful to those in charge of field work.

A development is given, expressed in the symbolism employed in the office of the Survey at the present time, for the condition equations necessary to effect the closure in geographic positions of a loop. A need for this has been felt for some time past. A method of adjustment by the variation of the geographic coordinates (latitude and longitude) of the various points has been developed and applied to the adjustment of several figures. This is a method which has not before been used in the United States, although something similar is regularly employed in Canada.

At the end of the publication there is given a new development of the formulas for the computation of differences of elevation from the observations of zenith distances. These formulas take into account some of the effects due to the lengths and heights of the lines that were not taken into consideration in the development previously in use in the Coast and Geodetic Survey.

The volume is published in octavo size and is illustrated. It is Serial No. 9, Special Publication No. 28, and may be obtained free of charge by application to the Division of Publications, Department of Commerce, Washington, D. C.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Woolen blankets, No. 2713.—Sealed proposals will be received at the office of the Superintendent of Prisons, Department of Justice, Washington, D. C., until November 1, 1915, for furnishing and delivering at the United States Penitentiary, Leavenworth, Kans., 1,000 woolen blankets. Specifications together with further information may be had on application to the Washington office.

Construction work, No. 2714.—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until November 6, 1915, for the construction of a magazine building at the Naval Proving Ground, Indian Head, Md. Plans and specifications may be had on application to the above office.

Dredging and rock removing work, No. 2715.—Sealed proposals will be received at the office of the United States Engineer, P. O. Drawer 45, Jacksonville, Fla., until November 8, 1915, for dredging and rock removal at Miami Harbor and St. Lucie Inlet, Fla. Further information may be had on application to the above office.

Construction work, No. 2716.—Sealed proposals will be received at the Supervising Architect's Office, Treasury Department, Washington, D. C., until November 19, 1915, for the construction complete (including mechanical equipment and approaches), of a one-story and basement stone-faced building of 7,478 square feet ground area, fireproof construction, composition roof, for the United States post office at Elyria, Ohio. Drawings and specifications may be had on application to the custodian at Elyria, Ohio, or at the Washington office.

Installation of mail chutes, No. 2717.—Sealed proposals will be received at the Supervising Architect's Office, Treasury Department, Washington, D. C., until November 8, 1915, for installing two mail chutes in the United States post office and courthouse at Denver, Colo. Drawings and specifications may be had on application to the Superintendent of Construction at Denver, Colo., or at the Washington office.

Medical supplies, No. 2718.—Sealed proposals will be received at the Field Medical Supply Depot, U. S. Army, 21 M Street NE., Washington, D. C., until October 22, 1915, for furnishing and delivering at the depot amyl nitris, argenti nitras in crystals, ipecacuanha, chlorinated lime, magnesii sulphas, morphinae sulphas, potassii iodidum, and sodii salicylas.

Construction work, No. 2719.—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until November 13, 1915, for constructing two officers' quarters, at Naval Station, Key West, Fla. Plans and specifications may be had on application to the above office, or to the commandant of the naval station named.

Bacon, No. 2720.—Sealed proposals will be received at the office of the Depot Quartermaster, U. S. Army, 115-123 East Ontario Street, Chicago, Ill., until October 20, 1915, for furnishing and delivering on or before December 20, 1915, about 140,304 pounds of bacon.

Medical supplies, No. 2721.—Sealed proposals will be received at the Field Medical Supply Depot, U. S. Army, 21 M Street NE., Washington, D. C., until October 27, 1915, for furnishing and delivering at the depot empty boxes, funnels, lantern globes, glass salt and pepper shakers, 3-pint tins, and 2-quart round tins.

Construction work, No. 2722.—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until November 27, 1915, for constructing a marine railway at the Naval Station, Pearl Harbor, Hawaii. Proposals are invited on separate component parts of the complete railway. Plans and specifications may be had on application to the above office or to the commandant of the naval station named.

Repair work, No. 2723.—Sealed proposals will be received at the office of the Lighthouse Inspector, Baltimore, Md., until October 28, 1915, for furnishing all labor and materials and docking, cleaning, painting, and repairing light vessel No. 80. Further information may be had on application to the above office.

Landscape gardening, No. 2724.—Sealed proposals will be received at the Supervising Architect's Office, Treasury Department, Washington, D. C., until November 3, 1915, for sodding and seeding, planting trees, shrubs, etc., on the grounds of the Federal building at Plymouth, Mass. Drawings and specifications may be had upon application to the custodian of the building or at the Washington office.

ENGLAND TO BUY JAPANESE COTTON GOODS.

[London Times for Sept. 28.]

An interesting experiment is about to be made by obtaining from Japan certain dress goods of the kind formerly imported from the Continent. John Howell & Son were the first wholesalers to consider the question on a large scale, and sent out a member of their firm to Japan some months ago to visit the great manufacturing centers. The result has been that fabric gloves and cotton wear have been purchased, and a consignment may be expected in a short time. The centers from which these goods are coming are Osaka (the Manchester of Japan), Kobe, Tokyo, Kyoto, and Yokohama.

The small Japanese fabric gloves were not at first a commercial success, but they were quickly adapted to the larger hands of Europe, and now compete very favorably with those of European make. The cotton underwear is not of very high grade and is not trimmed, but is said to be good of its kind. It is made in both plain and fleecy qualities.

So far the Japanese have done nothing in the woolen industry, nor are their hose or skin gloves a success. Their manufactures will be priced much lower, in spite of the American machinery they have installed everywhere, owing to the great cheapness of labor. Their factories, to the more exclusive of which very few Europeans have ever penetrated, are lighted with electric light and well served by railways.

COFFEE SHIPMENTS FROM SANTOS, BRAZIL.

[Consul Charles L. Latham, Santos, Sept. 14.]

A comparative statement has been prepared showing the exportations of coffee through the port of Santos for the past 10 years. The figures are given in bags of 132 pounds each. The amounts are:

Year.	July to December.	January to June.	Total for crop year.
1914-15	4,500,986	5,140,714	9,641,699
1913-14	7,374,329	4,004,016	11,308,345
1912-13	5,886,120	2,934,279	8,820,399
1911-12	6,068,284	3,057,401	9,143,685
1910-11	6,803,177	2,637,318	9,440,495
1909-10	10,242,258	35,957	10,278,215
1908-9	6,064,239	3,327,628	9,381,867
1907-8	5,572,395	2,942,847	8,515,244
1906-7	7,884,637	5,989,476	13,874,113
1905-6	4,901,995	2,288,237	7,280,162

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Chemicals, No. 18801.—A manufacturer of pharmaceutical preparations in Italy has informed an American consular officer that he desires to receive price lists and samples of chemicals for use as basic elements of their preparations and hypodermic solutions in ampullas. Prices should be quoted c. i. f. Italian port, if possible; otherwise f. o. b. New York.

Novelties, No. 18802.—An American consular officer in France reports that a man in his district desires to secure the representation of American manufacturers and exporters of novelties of all kinds.

Textiles, No. 18803.—A firm in Italy has informed an American consular officer that it desires to purchase textiles of various kinds, samples of which may be examined at the Bureau or its branch offices. If possible, quotations should be made c. i. f. port in Italy. Correspondence should be in Italian.

Office supplies, No. 18804.—An American consular officer in France transmits the names of business men in his district who desire to represent American manufacturers or exporters of office supplies.

Cotton goods, etc., No. 18805.—The Bureau has received a report from an American consular officer in France stating that a firm of manufacturers' agents in Tunis desires to establish business relations with American manufacturers of cotton goods, similar to the samples which may be examined at the Bureau or its branch offices. The firm in question also desires to communicate with American importers of Tunisian products, such as sheep and goat skins, olive oil, alfa, cork, wool, sponges, and dates. Correspondence in French is preferred.

Pencils, pens, etc., No. 18806.—The Bureau has received from an American consular officer in France the names of various dealers in his district who desire to represent American manufacturers or exporters of pencils, pens, etc.

Insulated cable and wire, No. 18807.—The Bureau has been informed by a business man in this country that a correspondent in Greece desires quotations on insulated switchboard cable for telephone apparatus and single insulated wire, specifications of which may be examined upon application to the Bureau's informant.

Acid phosphates, No. 18808.—A letter has been received by the Bureau from a business man in Canada who desires the names and addresses of firms which manufacture acid phosphates containing less than 10 per cent of calcium, to be used in foods.

General representation, No. 18809.—The commercial agent in charge of the branch office of the Bureau in Chicago transmits a letter from a man in Norway who desires to represent American manufacturers and exporters of all kinds of merchandise. The man states that he will act as commission agent or buy for his own account.

Asphalt, No. 18810.—The Bureau has received a letter from a man in Cuba who desires to learn the prices of Cuban asphalt in this country and to what interests he could make proposals relative to an asphalt mine.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 403 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

COAL FOR THE NETHERLANDS.

[Cablegram from Minister Henry van Dyke, The Hague, Netherlands, Oct. 15.]

Coal, selling prices Rotterdam, steam \$7, gas \$10; ocean freight, \$9.50 per metric ton; imports materially reduced from previous years. Netherlands Oversea Trust will receive shipments for strictly Dutch firms. There is a so-called coal bureau which is designed to distribute to small consumers.

CONSULAR TRADE CONFERENCE.

Consul Maddin Summers, of São Paulo, Brazil, reports that he is leaving his post for the United States on leave of absence about the last of October. He will be in the United States until the latter part of December; his address will be care of Consular Bureau, Department of State, Washington, D. C.

BANK OF CHINA TO INCREASE CAPITAL.

It is officially announced in Peking, says the National Review of China, that the Bank of China is to increase its capital by \$20,000,000 (or about \$10,000,000 in U. S. currency), half of this coming from the sales of Government property, the other half to be obtained by public subscription. This increase will make the bank one of the most important and largest in capital in the Far East.

BOUNTIFUL AMERICAN CROPS.

The estimates of the Department of Agriculture show record crops in the United States of wheat, oats, barley, and hay, and a corn crop closely approaching the record. The returns indicate a production of approximately three billion bushels of corn, one and a half billion bushels of oats, one billion bushels of wheat, almost a quarter billion bushels of barley, and a hundred million tons of hay, if the twenty million estimated tons of wild hay, a crop not heretofore reported upon, be included.

EXPORTS OF CHEESE, BUTTER, AND BUTTER FAT REVIVE.

Cheese, butter, and other butter fats are again becoming important factors in our export trade after a long period of comparative inactivity. Fifteen or 20 years ago the United States was selling abroad between 20,000,000 and 30,000,000 pounds of butter, from 50,000,000 to 80,000,000 pounds of cheese, and from 5,000,000 to 10,000,000 pounds of imitation butter annually. In later years, however, exports of this class decreased in a marked degree, and in the fiscal year 1914 had fallen far below the quantities named. In the year just ended there was a distinct revival in all these lines, with totals closely approximating the high levels touched in the decade from 1890 to 1900.

The large gains made by domestic dairy products and butter substitutes are well illustrated by figures published by the Bureau of Foreign and Domestic Commerce, in the June "Summary of foreign commerce." Butter, usually averaging about 3,500,000 pounds annually in our export trade, in 1915 went to nearly 10,000,000 pounds. During this period imports of butter were reduced by more than one-half, falling from a little less than 8,000,000 pounds in 1914 to less than 4,000,000 pounds last year.

American cheese, running at about 2,500,000 pounds a year, went to 54,000,000 pounds in the fiscal year 1915. Here also, as in the case of butter, the trade balance was transferred to the export side, for the year's imports of cheese last year totaled only 50,000,000 pounds, a decrease of 13,750,000 pounds from the total for 1914.

Exports of condensed milk, usually exported in sums valued at between \$1,000,000 and \$2,000,000 annually, in 1915 rose to \$3,000,000 in value, the quantity (37,000,000 pounds) being double that of 1914.

Imitation butter contains, in addition to oleomargarine oil, some butter fat. The exports of this article also doubled, rising from 2,500,000 pounds in 1914 to 5,125,000 pounds last year.

England has become our largest foreign market for butter, cheese, and condensed milk, having taken 3,333,000 pounds of butter, out of a total export of 10,000,000 pounds; 48,500,000 pounds of cheese, out of a total export of 54,000,000 pounds; and 4,000,000 pounds of condensed milk, out of a total export of 37,000,000 pounds. Canada, Cuba, Panama, Australia, and Venezuela also take considerable quantities of American butter; Panama and the West Indies are important markets for our cheese; while Cuba, Belgium, the Netherlands, China, Japan, Hongkong, Russia, Chosen, Panama, and Brazil take large amounts of American condensed milk.

These exports, while important, represent a very small proportion of the annual products of the 60,000,000 cattle on American farms, valued at more than \$2,334,000,000. As long ago as 1909, the latest period covered by the national census, we produced 1,619,000,000 pounds of butter, 321,000,000 pounds of cheese, and 5,814,000,000 gallons of milk, while the quantity of oleomargarine on which internal-revenue tax was paid in 1914 aggregated 142,000,000 pounds.

The Eighth National Apple Show will be held in Spokane, Wash., the week of November 15.

SOUTH WALES TRADE NOTES.

[Consul W. L. Jenkins, detailed as vice consul at Swansea, Wales, Sept. 30.]

Lace-Making Classes.

The director of the Swansea Arts & Crafts Committee reported September 28 that 24 students had joined the lace-making class which had a Belgian refugee as a teacher. The chairman stated that he thought "the Belgians were going to leave an enduring mark on Swansea in that direction, and the more the interest could be encouraged the better."

New Port Talbot Industry.

The Port Talbot district has acquired still another industry, that of converting the mountain of old iron slag at Cwmavon into tarred slag macadam, which is now recognized as good material for road surfaces, both for economical wear and the prevention of dust. A large new plant with two breakers, capacious bunkers with drying and mixing machinery, has been erected at the slag tips and work has already commenced. The Cwmavon Slag Co., Cardiff, are the proprietors.

Steel Workers' Advance in Wages.

A joint meeting of the South Wales and Monmouthshire Iron and Steel Makers, Mechanics, and Others' Sliding Scale Committee was held September 25 to receive the auditor's award for the three months ended August 31, 1915, the result being that wages payable to the workmen at the Associated Works will be advanced by 10.5 per cent from October 1, 1915.

Coal-Export Licenses.

It has been stated by the Coal Exports Committee that the names of steamers need not appear in applications for licenses to export coal to France and French possessions, or be subsequently sent to the Board of Trade department, and will not be inserted in licenses for such shipments. All licenses, except general ones, are valid for one shipment only. The shippers must in all cases submit to the local customs the names of vessels by which they propose to make a shipment as soon as they are known to them.

Increase in Prices.

The Swansea branch of the Dairymen's Association have decided to raise the price of milk to 10 cents per quart from October 3 in consequence of the shortage of supplies, increase in the price of food-stuffs, and increase in manufacture of butter.

An official notice has been placed in the public telephone boxes stating that the call fee will be increased on October 1 by 2 cents.

The Swansea Grocers' Association decided on September 28 to advance immediately the price of all articles affected by the recently proposed budget pro rata to the increased duty.

Catalogues sent by American exporters to the consulate at Karachi, India, are reported to have been received with circular letters folded and placed between the leaves. Consul James Oliver Laing states that the letters often stick between the leaves in the hot, moist climate of the Arabian Sea district, and are sometimes not found when the catalogues are filed.

RUSSIAN JOINT-STOCK COMPANIES.

[Consul General John H. Snodgrass, Aug. 31.]

Of the 29 Russian commercial banks the shares of which are priced at the Petrograd Exchange, 24 paid good dividends in 1914. Only three banks have not declared dividends on account of large sums having been written off. The 10 land banks registered in the bulletin of the Petrograd Stock Exchange gave the same dividends as in the preceding year. Of the 13 gas companies and electrotechnical concerns, 10 were paying dividends, while 2 concerns had not yet concluded the annual accounts. Only 1 concern passed its dividend.

The profit obtained as well as the dividend paid by the oil companies proved considerable. Of the 21 oil companies, the shares of which are quoted on the Petrograd market, 13 companies paid very high dividends, 7 concerns preferred to place the profit obtained at the disposal of the administration of the companies, while the results of 1 company have not yet been finally ascertained. The average dividend of the Russian oil companies that have published their reports on 1914 is found to be 8.7 per cent, against 17.7 per cent for 1913, and 14.6 per cent for 1912.

The cement industry was placed in a difficult position in consequence of the war, but was able to conclude the year 1914 with more or less favorable results. Of 11 joint-stock companies engaged in this industry, 6 concerns paid dividends. Four companies were not in a position to do this, while the financial results of 1 have not been finally ascertained.

Twenty-one metallurgical and mechanical works were able to pay out satisfactory dividends. The remaining metallurgical companies conclude their business year on July 1, and the profit secured and dividend to be paid in 1914-15 are not yet known. However, according to preliminary information, the majority of these concerns will pay their dividends at the same rate as in the preceding year.

AMERICAN PURCHASES FROM CEYLON.

[Consul Walter A. Leonard, Colombo, Sept. 4.]

Declared exports from Ceylon to the United States for the first half of 1915 totaled \$5,837,265, compared with \$5,818,950 in the 1914 half-year. Nearly every article showed a decrease, while raw rubber increased by \$1,184,606. Desiccated coconut showed the greatest loss, dropping from \$352,388 in value in 1914 to \$51,004 in 1915. The six leading articles of export to the United States from Ceylon, valued at more than \$100,000 in 1915, were:

Articles.	First half year.		Articles.	First half year.	
	1914	1915		1914	1915
Rubber.....	\$2,538,548	\$3,723,154	Cinnamon.....	\$37,214	\$105,145
Tea.....	945,229	739,347	Miscellaneous.....	519,495	153,961
Coconut oil.....	1,145,178	522,578			
Plumbago.....	\$20,643	443,055	Total.....	5,818,950	5,837,265
Citronella oil.....	112,642	127,025			

CHANGES IN FOREIGN TRADE OF SPAIN.

[Consul General Carl Bailey Hurst, Barcelona, Sept. 8.]

The entire volume of Spain's business during the first six months of 1915 amounted in value to \$215,640,208, of which \$102,552,422 represented imports and \$113,087,786 exports. The total value of the exports and imports for these six months was greater than that for the corresponding period in 1914 by nearly \$23,400,000. There was a decrease of about \$13,320,000 in the import of foreign products and an increase in the export of Spanish products of about \$27,900,000. Among the imports in which the falling off was most noticeable were manufactured articles, \$17,280,000 less than during the corresponding period of the year previous; food products and live animals, \$4,140,000 and \$540,000, respectively.

This was offset by an increase in raw materials imported by \$8,820,000 over the corresponding period of the preceding year.

Increase in Exports Chiefly in Manufactured Articles.

The increase in exports was chiefly in manufactured articles, which amounted to nearly \$36,360,000 more than during the 1914 period. The food products exported increased by about \$540,000, while the export of raw materials decreased by more than \$8,100,000. Of the manufactured articles exported, the greatest increases were in the cotton and woolen industry. The amounts were:

Wool Items.	1914	1915	Cotton Items.	1914	1915
Woolen yarn.....	\$33,899	\$457,670	Raw cotton.....	\$89,045	\$636,868
Blankets.....	5,573	6,509,470	Cotton yarn.....	262,137	831,225
Woolen knit goods.....	15,468	2,921,973	White cotton goods.....	254,884	3,174,818
Pure woolen cloth.....	344,624	1,981,030	Colored cotton goods.....	2,115,376	3,681,337
Cotton and woolen cloth.....	96,150	1,948,282	Canton flannel.....	7,313	2,036,421
Fabrics of pure wool.....	58,963	1,614,265	Cotton knit goods.....	926,068	2,976,963
Fabrics of cotton and wool.....	8,811	119,834	All other cotton manufactures.....	231,448	987,234
All other woolen manufactures.....	1,656,933	407,617			
Total.....	2,225,421	13,960,121	Total.....	3,886,271	14,574,693

The export of manufactured iron for the six months' period increased from \$171,704 worth in 1914 to \$2,728,294 worth in 1915. The export of chemical products for industrial, pharmaceutical, and toilet purposes increased from \$3,517,040 to \$3,924,334. There were also notable increases in the values of leather goods, tanned skins, and footwear exported.

FLEECE UNDERWEAR FOR IRELAND.

[Consul Hunter Sharp, Belfast, Sept. 23.]

A Belfast business man, in a letter to this consulate, states that there is at the moment an excellent opportunity for American manufacturers of fleece underwear (such as ladies' knickers, petticoats, and drawers, and men's fleece shirts and pants) to extend their trade in this market. He says that these goods were formerly imported largely from the Continent, and that present local stocks of these garments are 50 to 75 per cent below the average.

[The address of the business man referred to, also a list of the principal buyers of fleece underwear in Belfast, may be had from the Bureau of Foreign and Domestic Commerce; refer to file 67276.]

CONSTRUCTION WORK ABROAD.**AUSTRALIA.**

[Sydney Herald, Sept. 8.]

Railway Construction in New South Wales.

A batch of railway works have been handed over by the State Government of New South Wales to Norton Griffiths & Co. for construction under their contract. These are in addition to the harbor works at Coffs Harbor, which were handed over on July 1.

The following are the railway lines which, the premier announces, will now be proceeded with under the agreement:

North Coast Railway, section 6—Kempsey to Macksville (partly constructed).
North Coast Railway, section 7—Macksville to Coffs Harbor (portion Macksville to Raleigh).

North Coast Railway, section 8—Coffs Harbor to Glenreagh.

Glenreagh to Dorrigo.

Stockinbingal to Forbes, second section Naweenda to Forbes.

Wagga to Tumbarumba, second section Humula to Tumbarumba.

Dubbo to Werris Creek, second section Binnaway to Werris Creek.

Broken Hill to Menindie (partly constructed).

Condobolin to Euabalong (partly constructed).

[Consul W. A. Bickers, Hobart, Tasmania, Aug. 31.]

New Railway Stations.

The Government of Tasmania has appropriated \$146,000 for a new passenger depot at Hobart. It will be a 2-story stone and brick building and work will begin as soon as several old buildings can be removed. Upon completion of the passenger depot here the Government will construct a similar building in Launceston.

CHILE.

[Consul General L. J. Keene, Valparaiso, Sept. 14.]

Bank Finances Building of Workers' Houses.

The Caja de Ahorros (National Savings Bank) of Valparaiso has undertaken to finance the building of a large number of small houses for workingmen in Valparaiso and Viña del Mar. In Valparaiso a site of 20,000 square yards has already been chosen for this purpose on the hill called Las Monjas, at the end of Avenida Francia. The building company will undertake the street paving in the new section, the specifications calling for asphalt streets and sidewalks. Work on the houses should be commenced in the coming month of October (1915).

The houses will be of three different sizes, but all will be two stories high. The interior height of the ground floor of each will be 10 feet 5 inches and of the upper floor 10 feet. The beams, supports, and roof timbers of each house will be of oak. The interior walls will be of adobe, and the exterior of brick, faced with cement. The flooring used will be tongue and grooved poplar or laurel. The type of roofing used will be first grade, of galvanized corrugated iron.

A house classed as "Type A" will cost about \$2,000 in United States currency, to be paid for in installments of \$417 on the signing of the contract, \$333 when the house is roofed, \$250 on its delivery, the balance in 21 years, with payments of \$13.33 monthly for the first six years and five months, and \$5 monthly for the balance of the period.

A house of the "Type B" class will cost about \$2,500, and the purchaser will pay \$500 on the signing of the contract, \$417 when

the house is roofed, \$333 on its delivery, and the balance in 21 years, with payments of \$16.66 per month for the first six years and five months and \$6.33 per month for the balance of the period.

A house of the "Type C" class will cost \$2,834, and the purchaser will pay \$583.33 on the signing of the contract, \$500 when the house is roofed, \$333.33 on its delivery, and the balance in 21 years, with payments of \$18.83 monthly for the first six years and five months and \$7.16 monthly for the balance of the period.

[The name of the contractor who will undertake the construction work on these houses may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 67133.]

ECUADOR.

[Consul General Frederic W. Goding, Guayaquil, Sept. 6.]

United States Supplies Materials for Guayaquil Sanitation Work.

The contract for the sanitation of Guayaquil was signed at Quito on January 5, 1914. Toward the end of the following February J. G. White & Co.'s engineers arrived and commenced preliminary investigations for the domestic water supply. During May, construction engineers arrived and proceeded with the erection of the plant and equipment necessary for the works. By the end of 1914, all surveys connected with the drinking-water supply and a part in connection with the sewerage work had been completed.

The first consignment of pipes arrived in January, 1915, and work was immediately started, the contractor laying pipes for the city distribution system at the same time that work on the 7,000,000-gallon service reservoir, situated on Santa Ana Hill to the north of the city, was begun. At present 60 per cent of the distribution system in the city is finished, and the service reservoir is 30 per cent finished; this system is expected to be in operation in about two years.

Simultaneously with the waterworks, the company is building a new wall along the river front and making a rock-and-earth fill behind it, reclaiming a strip of land averaging about 200 feet wide. Work on the sewerage system, and paving, will not be commenced until the waterworks are nearly completed.

A large part of the material for the works is being purchased in the United States, the remainder in England.

FEDERATED MALAY STATES.

[Consul General John P. Bray, Singapore, Straits Settlements, Aug. 24.]

New Wharf Accommodation at Port Swettenham.

[EDITORIAL NOTE.—As explained in Supplement to COMMERCE REPORTS 56b, for March 4, 1915, Swettenham is the principal port of entry to the Federated Malay States and handles a tonnage exceeding 300,000 tons annually. The railway from Port Swettenham to Kuala Lumpur, the capital city, traverses large rubber estates.]

The new wharf facilities at Port Swettenham include mainly a steel compound screw pile wharf 1,200 feet long and 50 feet wide, giving a depth of water for vessels lying alongside of about 30 feet at low tide. Connection is made to the shore by five gangways at right angle to the wharf, at a distance of about 200 feet apart. The wharf and gangways are laid with a double track, the respective tracks being connected at the head of each gangway by turntables.

The whole of the transport equipment, including turntables, cranes, capstans, etc., will be electrically driven; the power being obtained

from a power station shortly to be constructed at an estimated cost of \$120,000 (United States currency). Six godowns have been built on shore opposite the wharf with 63,840 square feet floor space; these are of steel frame and corrugated iron sheet, constructed on reinforced concrete pile foundations, the length of piles being 40 feet.

New Passenger Station—Double Tracking on Singapore Line.

It is proposed to construct a new passenger station with all conveniences, which will be connected to the wharf by an overhead foot-bridge. Ample siding accommodation is being provided to deal with all possible traffic for some time. The foreshore protection wall, the first length of which is now under construction, will have a total length of 3,840 feet, the height being 20 feet. The whole of the work is in reinforced concrete on the Kahn system, the total approximate cost being \$200,000.

It is proposed to double track the railroad between Bukit Timah and Tank Road, renewing and extending the bridges and culverts. The design for the new bridges has not yet been decided.

New Depot and Hotel.

The reconstruction provides for the entire remodeling of the station yard, a new depot building, and an adjoining hotel. The new depot has five platform lines, two island platforms, and one main platform, each 600 feet long, and off the latter are offices for the officials, waiting rooms, dining room, etc. Access to the inside platforms is made by two subways, one for use of first and second class passengers, and the other for third-class passengers and baggage. Each platform is covered by a steel and corrugated-iron sheet roof supported on steel stanchions.

The hotel adjoins the depot offices and provides for 17 bedrooms, each room having a separate veranda, beneath which is a bathroom, etc., and accommodation for visitors' servants. Spacious lounges are provided in addition to a large veranda running the whole length of the building. An electric elevator conveys visitors from the depot entrance to the hotel. Access from the streets to the depot is by a 30-foot roadway terminating at the building itself in a covered way 300 feet long, thus affording shelter to passengers and baggage. The service also includes a generating station for the supply of electricity for lighting station yard, buildings, and hotel.

The drainage is dealt with through a septic tank situated some distance from the buildings.

INDIA.

[Consul Lucien Memminger, Madras, Sept. 9.]

Waterworks Construction in Southern India.

There is considerable waterworks construction in southern India at present owing to new enterprises and also to the fact that municipalities or the Government have found it necessary to replace existing plants by new works. This will naturally involve the use of a quantity of steel pipe, and in at least one town, if reconstruction is carried out, the municipal council has decided to endeavor to obtain American pipes. This is at Bezwada, a railway junction at the head of the Krishna Delta. The town has expended a considerable amount on waterworks, but the system does not appear to have

given entire satisfaction, and newspapers state that this is because the suction pumps draw too much air, which is alleged to be due to cracks in the steel pipes connecting the wells in the bed of the river and the pump well. It is believed that the defective water supply will necessitate a replacement.

The most important water-supply scheme in contemplation at present in this part of India is that at Ootacamund, summer capital of the Madras Government. The sanitary board of this district has recommended three schemes to insure sufficient water supply for the region, and one of these has been sanctioned by the Government. The scheme will command the whole of the Richings Valley from the Coonoor Road at the Burnfoot Lake to Manjanakorai Village and from the railway bridge at Manjanakorai to the railway bridge at Lovedale. The total area covered will be 930 acres, in no part of which is there now a protected water supply, while on the Grant Duff Road, where there are several European residences, the supply is scanty in the dry season. The scheme comprises three reservoirs, formed by damming three perennial spring channels on the slopes of Elk Hill, which will be connected by pipes. As in the case of the Marlimund and Tiger Hill Reservoirs, the supply will only be for domestic purposes.

In Trichinopoly, an important railway center in Madras Presidency, the existing waterworks are to be replaced by new works. Recent boring in the bed of the Cauvery River shows that the wells for furnishing the city's water supply should be sunk to a much greater depth.

At Madura, a city in this Presidency which is showing much industrial development, plans are being considered for further improvement of the water supply, owing to the discovery of a subterranean spring with inexhaustible supply of water 2 miles up the river from the existing waterworks.

American manufacturers of steel pipes or supplies for waterworks interested in the foregoing could not, it is believed, successfully undertake to compete for these contracts by correspondence alone. An agent or representative who could give the matter personal attention would doubtless stand a good chance of getting the business if prices, etc., were favorable.

There are few firms in this region that make a specialty of handling steel pipes, but a list of those most likely to be interested is forwarded.

[The list may be had from the Bureau of Foreign and Domestic Commerce or its branch offices; refer to file 67476.]

VENEZUELA.

[Consul Homer Brett, La Guaira, Sept. 25.]

Electric Lights for Barcelona.

The municipality of Barcelona has just signed a contract with Mr. R. J. Austin for the electric lighting of the city. The company which Mr. Austin represents is to furnish 200 street lights for which the city is to pay \$193 monthly. Lights will also be supplied to private parties at prices stipulated in the contract with the city. Address Mr. R. J. Austin, Barcelona, Anzoategui, Venezuela.

IMPORTS OF LAMPS INTO LATIN AMERICA.

The following table shows the total value of the imports of incandescent and other lamps into Latin-American countries from 1910 to 1914, inclusive, and the amounts received from Germany, Austria-Hungary, Netherlands, United Kingdom, and United States, according to the official returns of these countries.

[Uruguayan peso—\$1.034; Argentinian, \$0.965; Chilean, \$0.365; Mexican, \$0.498. Paper milreis, 1910-1913—32.44 cents; 1914—30.64 cents. £—10 sucres—\$4.8665. Bolivar—19.3 cents. Colon—46.5 cents.]

The figures for Mexico and Venezuela are for the fiscal year ended June 30, while those for the other countries are by calendar years.

HORTICULTURAL CONDITIONS IN SOUTHERN FRANCE.

[Consul General A. Gaullin, Marseille, Sept. 27.]

Official estimates indicate a general fruit-crop shortage in southern France this year. These estimates are as follows: Olives, 40 per cent normal; almonds, 55 per cent; pears, apples, apricots, and peaches, 50 per cent; lemons, 80 per cent. It is probable, therefore, that there will be a good demand for American dried and evaporated fruit.

Conditions were more favorable for market-garden products, the production being about 70 per cent normal.

The local production of flowers is estimated at 60 per cent of the usual yield, and this represents an enormous loss to this district. Prices have also fallen, owing partly to the closing of several important foreign markets.

WAR PRICES IN STAVANGER, NORWAY.

[Consul Maurice P. Dunlap, Stavanger, Sept. 9.]

A salted herring costs the Stavanger housekeeper five times as much to-day as it did in July, 1914, before the European war began. Flour, salt, and sirup cost twice as much as before; meat a third more. Coal has advanced more than one-half, and coke has doubled in price. Ordinary clothing costs from 10 to 15 per cent more than formerly, while Norwegian wool, which is raised in great quantities in this district, has nearly doubled in price.

Especially has the question of the cost of milk caused discussion here recently. The price, which was already considered high before the war, when it was \$0.038 a quart, is now 5 cents. The regulation of this price is to be taken up by the food commission, which has established maximum prices for many commodities.

This section has undoubtedly the best sheep-raising land in Norway, and produces considerable quantities of both lamb and wool. The price of lamb last year ranged from about \$0.12 to \$0.146 a pound, according to quality. Now it ranges from \$0.17 to \$0.195. Native wool, which was formerly \$0.485, is now \$0.85 to \$0.97 per pound. Attempts have been made by this consulate to find a market for American wool, but prohibitive freight rates have prevented American competition, although Norway has since purchased wool from Argentina.

Increased Prices for Articles in Food Supply.

Rye, which is the most commonly used flour for bread making in Stavanger, was \$0.022 a pound last year, but is now \$0.048. Wheat flour has gone up from \$0.03 to \$0.051, and oatmeal from \$0.029 to \$0.055 a pound. Coffee is practically the only staple article of general consumption which has not changed in price during the war. A pound of chocolate or cacao costs \$0.024 more to-day than it did in July, 1914. Sugar has advanced from \$0.06 to \$0.085 a pound, and would undoubtedly go higher if this had not been set as a maximum price by the food commission. Sirup has gone from \$0.024 to 6 cents a pound, while salt has advanced from 12 to 24 cents per measure of 20 liters (18.16 quarts).

Fresh fruit is always expensive in Stavanger and is not so generally eaten as in America, apples, oranges, bananas, etc., being purchased by weight rather than by number. Prunes and raisins are much more generally eaten. These formerly ranged in price from \$0.085 to \$0.097, but are now \$0.146 a pound.

While apples are bought by weight, coal is bought by measure, the ordinary householder here purchasing it in small quantities. A bushel of coal has, during the past year, advanced from \$0.189 to \$0.292. There is an extra charge for delivery at the house. A bushel of coke, which formerly ranged in price from \$0.112 to \$0.122, now costs from \$0.236 to \$0.246. Petroleum, however, has advanced but little.

Housewives Urged to Practice Greater Economy.

The Stavanger Aftenblad is urging greater economy for housewives of the district. A greater use of potatoes, carrots, and kohlrabi, which are plentiful at this season, is suggested; also a more

general use of "blood foods." Much good, clean blood is wasted at the municipal slaughterhouse which, mixed with meal, might be made into sausages and other palatable dishes. The paper is getting out a cookbook for "blood-food dishes" which, it says, are "cheap and savory."

CANADIAN BANKING FIGURES FOR WAR YEAR.

[Consul Julius D. Dreher, Toronto, Oct. 2.]

To show the effect of a year of war on the banks of Canada, the Monetary Times, Toronto, October 1, publishes the following figures from the August reports of the 22 banks holding Dominion charters:

	August, 1915.	August, 1914.	Year's increase (+) or decrease (-).
Deposits on demand.....	\$334,022,174	\$338,084,418	- 1.1
Deposits after notice.....	692,580,636	659,390,151	+ 5.007
Current loans in Canada.....	788,342,735	811,238,133	- 8.1
Current loans elsewhere.....	44,998,445	47,314,532	- 6.3
Loans to municipalities.....	46,020,730	39,664,534	+17.9
Call loans in Canada.....	71,525,565	60,220,045	+ 2.8
Call loans elsewhere.....	120,607,677	96,495,473	+25.0
Circulation.....	93,610,962	114,551,525	-13.1

Including \$128,109,996 deposited abroad, the deposits of Canada's banks aggregate \$1,154,712,796. Without foreign deposits, the August total of deposits is the largest on record for that month.

CONVENTION ON MINING LAWS.

[Announcement of United States Bureau of Mines.]

A convention that will act on recommendations regarding a general revision of the Federal mining laws will meet in Washington, D. C., on December 16. All the known mining societies in the United States have been invited to send delegates, and it is hoped that the mining industry will be so well represented that the action of the convention will be regarded as expressing the wishes of the industry.

Some of the resolutions that will come before the convention will recommend the fixing of a reasonable term of years beyond which placer claims shall be immune from attack on the ground of fraud, full privilege of appeal in all cases of contests over locations, recording of notices of mining locations so as to insure public notice, the abolishment of the law of the apex, and the appointment of a Government commission, under an act of Congress, to investigate and to make recommendations as a basis for the revision of the mining law.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 403 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Shelter tents, No. 18811.—The Bureau has received a letter from a Government contractor in the Near East who states that he is in a position to handle a large number of shelter tents of standard model complete, with aluminum eyelets, the price of which must not be more than 12.50 francs. A sample, with full particulars as to price, time of delivery, conditions of payment, bonds, etc., should be sent immediately. The price must include commission. A technical description in French should accompany the sample and form part of the contract.

Hardware, No. 18812.—The Bureau has received from a commercial organization in this country a copy of a letter from a business man in Cuba who desires to represent American manufacturers of hardware of all kinds. He is willing to furnish first-class references upon request.

Leather, thread, etc., No. 18813.—A commercial organization in the United States informs the Bureau that a business man in Serbia desires to represent American manufacturers of machinery, sole leathers, chevreaux, wooden nails for shoemakers, prepared skiffs for opanks (a kind of shoe for peasants), cotton thread, etc. Correspondence may be in English. He desires to receive catalogues and price lists at once.

Machinery, No. 18814.—A man in Russia desires to receive catalogues and full particulars relative to automatic machinery for the manufacture of sheet-iron water buckets about 0.5 millimeter in thickness.

Electric-light carbons, No. 18815.—The commercial attaché of the Department of Commerce in France states that an electrical supply firm in that country desires to communicate with American manufacturers or exporters of electric-light carbons for street lighting.

Toys, games, etc., No. 18816.—The commercial attaché of the Department of Commerce in London has referred to the Bureau a letter from a business firm in England expressing its desire to represent American manufacturers or exporters of toys (wood and tin), games, etc.

Fuller's earth, No. 18817.—The Bureau is informed by the commercial attaché of the Department of Commerce in England that a man in that country desires to communicate with American firms who wish to import fuller's earth.

Foodstuffs, No. 18818.—The Bureau is informed by the commercial agent in charge of its branch office in New York that the representative of an export house doing business in Greece is interested in securing agencies from American firms for preserved provisions, sausages, soups, pea, and similar articles of food.

Machinery, No. 18819.—The Bureau has received a letter from a business man in Argentina who desires to receive catalogues and full information regarding machines for loading, weighting, and sewing sacks containing 1 kilo of sugar.

Lumber, beans, No. 18820.—The Bureau has received a letter from a representative of an export firm, doing business in the Levant, expressing his desire to communicate with American dealers or exporters in lumber (chiefly spruce and pine, in boards and square hewn logs), and in edible beans.

Pharmaceutical preparations, No. 18821.—An American consular officer in France has transmitted the names of a number of business men in his district who desire to represent American manufacturers or exporters of pharmaceutical preparations.

Harness and saddlery, No. 18822.—An American consular officer in Switzerland writes that a business firm in his districts desires to represent American manufacturers of saddlery and harness. The firm is in a position to keep a large stock of supplies on hand which it would sell either on a commission basis or on its own account. Catalogues, price lists, etc., should be sent immediately. Correspondence may be in English. Reference is given.

Machinery, No. 18823.—The Bureau is in receipt of a letter from a business man in Argentina who desires to communicate with American manufacturers of machines for pressing and cutting sugar "ingots," 20 by 24 millimeters thick and 188 millimeters long.

Potassium bromide, No. 18824.—An American consular officer in Denmark reports that a firm in his district desires to establish business connections with American manufacturers of potassium bromide. The firm is willing to pay cash against documents in New York. Correspondence may be in English.

Galvanized sheets and nails, No. 18825.—An American consular officer in Chile reports that a municipal officer in his district desires to secure prices per ton, on corrugated galvanized sheets, 24 and 26 gauge, from 6 to 10 feet long; and of nails with lead heads for attaching these sheets.

Toilet articles, No. 18826.—An American consular officer in England reports that a firm in his district desires to receive catalogues and prices of toilet articles, such as hair brushes, combs, toilet soaps, and cotton and paper towels.

Zinc white, No. 18827.—A business man in Denmark informs an American consular officer that he desires to represent an American manufacturer or exporter of zinc white. He states that while he desires to secure the exclusive representation of some firm, he is willing to buy on his own account. Samples should be accompanied by analyses.

Hops, No. 18828.—An American consular officer in Chile transmits the name and address of a man in his district who desires to receive samples and prices of hops similar in quality to the Bavarian hops. They should be packed in 1-pound packages.

Cotton goods, No. 18829.—An American consular officer in Denmark has transmitted the name of a business man in his district who desires to purchase American-made cotton goods of all kinds. Correspondence may be in English.

Gums, No. 18830.—A firm in India has informed an American consular officer that it desires to communicate with American importers of gum arabic, Persian, and other gums.

Cutlery, No. 18831.—An American consular officer in England reports that a firm in his district desires to receive catalogues and prices of razors and scissors for the hairdressers' trade. If possible, prices should be quoted c. i. f. British ports, in English currency.

Motor hose truck, No. 18832.—The Bureau is informed by an American consular officer in Chile that a representative of a fire company in his district desires to receive illustrated catalogues, prices, etc., of motor hose trucks, the reel of which is operated by power other than hand. Correspondence in Spanish is preferred, but English may be used.

Nitrate of silver crystals, No. 18833.—An American consular officer in Denmark reports that a firm in his district desires to purchase large quantities of crystals of nitrate of silver. Correspondence may be in English.

Hair nets, No. 18834.—A firm in China has informed an American consular officer that it is in a position to supply hair nets of the best quality. Correspondence may be in English.

Machinery, cement, etc., No. 18835.—The Bureau is informed by an American consular officer in Chile that a firm of building contractors in his district desires to secure at once catalogues, prices, etc., of cement; concrete machinery; machines for making cement blocks, bricks, tiles, etc.; metal laths; steel beams of various kinds for substantial three and four story buildings; and materials for making concrete floor coverings.

Oilcloth, rubber shoes, etc., No. 18836.—An American consular officer in Denmark reports that a man in his district desires to purchase American-made oilcloth, rubber shoes, and waterproof clothing. He states that he deals entirely on a cash basis and is able to furnish first-class references. Correspondence may be in English.

COMMERCE THROUGH THE SAULT STE. MARIE CANALS.

The following tables show the quantity of each of the principal commodities and the number of passengers carried through the United States and the Canadian Sault Ste. Marie (Soo) Canals during September and for the season, until September 30, 1914, and 1915:

[From a report of the United States engineer in charge of the United States canal at Sault Ste. Marie, Mich.]

Economic conditions in Sweden	293	Condition of the crops in Sweden	303
Market status of South African products	294	Foreign trade opportunities	304
Import and export trade in copper	295		
Ground peat wanted in Canary Islands	296		

MODIFICATION OF ITALIAN EMBARGO ON TOMATO PASTE.

[Consul General David F. Wilber, Sept. 25, 1915.]

According to an announcement of the Italian Minister of Commerce, the exportation of tomato paste from Italy is now permitted to the countries of North and South America, as well as to a limited number of other countries. [As stated in Foreign Tariff Notes No. 17, p. 139, the Italian embargo list was extended to cover all food products, raw or prepared, by a decree of June 13, 1915.]

LACK OF SHIPPING FACILITIES AT ADEN.

[Consul William J. Grace, Aden, British Arabia, Sept. 3.]

The agent of the Union Castle Line informed me the other day that he has orders not to accept cargo for transshipment to the United States. By paying the rate from Calcutta to England merchants at Aden may secure space in ships of the Union Castle Line. It is assumed if the Calcutta merchants will pay more they will get the space.

HARDWARE SHORTAGE IN AUSTRALIA.

[Sydney Herald, Sept. 15.]

Most of the hardware houses are short of general ironmongery, and many lines of hollow ware are almost unobtainable in quantities for immediate delivery. During the past few days Sydney merchants have been obliged to buy in the Melbourne market at advanced rates.

EXPORTATION OF BRITISH WOOL PERMITTED.

[Telegram from American Consul General, London, Oct. 15, 1915.]

Announcement made that consideration will be given to applications for licenses to export tops of crossbred or other wool, except merino, to allied and neutral countries, under satisfactory guaranty.

RECENT AMERICAN TRADE STATISTICS.

The imports, duties collected, and exports for the week ending October 16, 1915, at 13 principal customs districts of the United States were as follows:

Districts.	Imports.	Duties collected.	Exports.
Georgia (Savannah).....	\$1,700	\$43	\$2,462,671
Massachusetts (Boston).....	1,377,863	226,066	1,979,722
New York	10,861,037	2,650,319	44,367,858
Philadelphia	1,388,837	241,107	2,614,745
Maryland (Baltimore).....	435,382	41,751	4,905,150
Virginia (Norfolk).....	39,068	1,460	1,173,833
New Orleans	1,832,472	9,236	3,345,355
Galveston	23,532	1,927	5,122,672
San Francisco	2,089,635	99,376	1,063,700
Washington (Seattle).....	1,000,600	27,922	1,679,338
Buffalo	539,200	39,099	1,575,638
Chicago	550,508	114,630	93,258
Michigan (Detroit).....	644,916	25,459	3,310,990
Total.....	29,782,056	3,478,385	73,694,653

The above figures show a favorable balance on merchandise transactions for the week ending October 16 in the 13 customs districts of \$43,912,598. The 13 districts cited handled about 91 per cent of the import and export business of the country, based on the transactions in July, 1915.

Cotton exported during the week ending October 16 amounted to 146,661 bales, making the total since August 1, 1915, approximately 958,145 bales.

BIG WHEAT CROP OF NEW SOUTH WALES.

[Consul General J. I. Brittain, Sydney, Australia, Sept. 15.]

Recently published Government statistics place the area sown to wheat in New South Wales this year at 5,138,000 acres, which exceeds by 980,423 acres any previous area sown to wheat in New South Wales. In 1914 the area was 4,157,577 acres, but in consequence of the excessive drought the yield was very low.

There has been a special effort made to increase the area of wheat sown this year, particularly on account of a guaranteed price of 4s. (97 cents) per bushel by the Government for all wheat grown on new land this year. It appears that this Government bonus will apply to wheat grown from about 980,423 acres.

Not only is the acreage sown to wheat this year the highest in the history of New South Wales, but from present indications the crop will also be a record one. It is estimated that as much as 1,100,000 acres may be cut for hay, on account of the stocks of last year's hay being depleted by the drought. The estimates for the 1915-16 wheat crop place the yield at 52,000,000 to 60,000,000 bushels, the highest previous yield having been 38,020,381 bushels in 1913-14.

The manufacture of banana powder is to be undertaken by a Cambridge, Mass., firm. This and the production of banana "figs" are important industries of the West Indies, and have frequently been described in *COMMERCE REPORTS*; see the issues for July 12 and October 28, 1911, June 12, 1912, October 1, 1913, and June 8, 1915.

NEW GOVERNMENT PUBLICATIONS.

The Superintendent of Documents, Washington, D. C., announces that he received in stock during the week ended October 16 the following new United States Government publications of a business character, which he will sell at the nominal prices affixed:

The National-Bank Act as Amended—The Federal Reserve Act and Other Laws Relating to National Banks, edition of July 1, 1915.—Bringing the laws covering banking and currency in the United States up to date, including the original national-bank act, the Aldrich-Vreeland Act, the Federal reserve act, and all amendments thereto. Price, paper, 25c; cloth, 50c.

Japanese Cotton Goods Industry and Trade—Special Consular Reports 74, Bureau of Foreign and Domestic Commerce.—Covering present status of companies, output, exports, mill production, markets. Price, 5c.

Directory of American Sawmills—Miscellaneous Series 27, Bureau of Foreign and Domestic Commerce.—List of sawmills in the United States arranged by States, with tables giving quantity turned out by each mill, etc. Price, 25c.

Financial Development in South American Countries—Special Agents Series 103, Bureau of Foreign and Domestic Commerce.—Covering financial conditions in South American countries, embracing Government credits, banking, emergency measures, etc. Price, 5c.

Legal Weights (in pounds) per Bushel of Various Commodities, Standards Bureau Circular 10, reprint.—Giving practical tables showing weights in pounds of commodities commonly used in the household. Price, 5c.

Analyzed Irons and Steels—Methods of Analysis, Standards Bureau Circular 14, reprint.—Covering analysis of irons and steels, descriptions of methods, etc. Price, 5c.

Mathematics in the Lower and Middle Commercial and Industrial Schools of Various Countries Represented in the International Commission on the Teaching of Mathematics, Education Bureau Bulletin 35, 1915.—Articles on the teaching of mathematics in commercial and industrial schools, under countries, arranged alphabetically, covering methods, synopsis of courses, etc. Price, 15c.

Some Foreign Educational Surveys—Education Bureau Bulletin 37, 1915.—Educational Surveys in Switzerland, England, Belgium, Scotland, Ireland, Germany, Austria, France, New South Wales, Sweden, New Zealand, and Canada. Price, 10c.

Oysters: The Food that Has Not "Gone Up," A Little of Their History and How to Cook Them, Bureau of Fisheries Economic Circular 18.—Interesting dissertation on the oyster as a food, covering its history, culture, etc., with many valuable recipes. Price, 5c.

Chemical Composition of American Food Materials, Experiment Station Bulletin 23, reprint.—A practical work on the value of American food materials, covering animal and vegetable foods, giving maximum, minimum, and average composition, etc., of value in teaching domestic science. Price, 10c.

The Southern Cypress, Agriculture Department Bulletin 272.—Embracing geographical and commercial range, present supply and annual cut, properties and use of wood, markets, and prices, life history of the tree, etc. Price, 20c.

Formulae for Calculating Interest on Farm Equipment, Agriculture Department Circular 53.—Practical method of computing interest accruing from use of agricultural implements and equipment. Price, 5c.

UNCHARTED ROCKS IN EAST RIVER.

A United States Coast and Geodetic Survey party making a wire-drag survey of the main channel of East River, N. Y., reports a drag survey of the main channel of East River, New York, reports a number of uncharted rocks dangerous at low water to the deeper-draft vessels now using the channel northeastward and eastward of Rikers Island. One of the most important is a sharp pinnacle rock, with a least depth of 21 feet and surrounding depths of 40 to 62 feet, which lies near the middle of the channel. A detailed description of the rocks is given in Commerce Notice to Mariners, No. 43, of 1915.

THE GERMAN HOP CROP OF 1915.

[Consul C. S. Winans, Nuremberg, Sept. 18.]

As the picking of the German hop crop of 1915 is nearly completed, it is now possible to use the opinions of experts for a comparison with the crop of 1914, an account of present sales, and a consideration of prospects for the future.

At planting time fears were expressed in many quarters that hop growers would materially restrict their plantings and devote the land to other products from which the prospects of making profits might seem more flattering. The result has shown that these surmisings had a real foundation, for the area devoted to hop raising in Germany has decreased from 68,410 acres in 1914 to about 57,000 acres in the present season, i. e., about 17 per cent.

Yield Smaller, but of Good Quality.

In 1914 there were produced 51,120,500 pounds of hops in Germany and 42,050,800 pounds in Austria-Hungary. The 1915 crop in the former country is now estimated at 33,000,000 to 34,000,000 pounds and in the latter at 22,000,000 to 23,000,000 pounds, and even at 21,000,000 pounds by one expert. It is therefore apparent that the present German hop yield is only about two-thirds as large as that of last year, and in Austria-Hungary the crop is only about half as large.

As compensation for the disappointing quantity it is noted that the quality is generally good if not excellent. The plant is very green in color, but is somewhat lighter in weight than in 1914. However, the demand has diminished in about the same proportion as the quantity has declined, due to the large supplies laid in by brewers from the abundant 1914 harvest. This has affected prices unfavorably, and these now range, according to sort and quality, between \$8.65 and \$14 per 100 pounds, original cost.

Future Course of Market Doubtful.

If we roughly estimate the present crop in Germany at 33,000,000 pounds and in Austria-Hungary at 22,000,000 pounds, and the present needs of brewers in both countries at 33,000,000 pounds, this would leave a surplus of about 22,000,000 pounds, which under normal conditions would be exported. At present, however, Switzerland, Holland, and Scandinavia offer the only markets, and even this traffic is considerably impeded by the imperial prohibition of the exportation of jute, from which hop bags are made. Another unfavorable circumstance is the fact that the brewers in these countries also made large purchases of last year's crop.

It is now impossible to predict what the future market will be. Even if the German brewers, either from patriotic motives or from a farsighted prudence, decide to buy up all the German crop that can not now be exported, it is not likely that the present low prices will advance. On the other hand, it is not improbable that they will sink still lower. This unfavorable state of things for the hop grower will doubtless continue until a sure prospect of peace shall appear, when it is probable that the prices will suddenly rise, for the growers will then prepare to meet the demands of their regular foreign markets.

[Earlier references to the German and Austrian hop crops appeared during the current year in *Commerce Reports* for: Germany—Apr. 20 and June 19; Austria-Hungary—July 30 and Sept. 13 and 27.]

ECONOMIC CONDITIONS IN SWEDEN.

[Translation from the Swedish press, prepared in the American Legation, Stockholm, Aug. 10.]

It is now a whole year since the war upset the regular order of events. If we ask how conditions are in Sweden after this year of war, it must be said that they are comparatively good, and economic relations with foreign countries are far more favorable now than they were last fall.

Financiers state that the supply of money is enough for present wants. Loans that have been taken up have been successful, and financing of great industries has been better than expected. Rates of exchange on foreign money, especially dollars, pounds, and francs, were for a time very high, but now they have gone down in Sweden's favor, and have made it possible for Sweden to pay many debts to foreign countries to its great advantage, and Swedish bonds have been bought back from other countries at a gain. The stock market is low and all papers have dropped considerably, but the Balkan war had already started this.

A Made-in-Sweden Campaign.

There have been few failures here, owing to the very careful and considerate treatment of the banks. To a certain extent commerce and industry has had to seek different channels, but has adapted itself pretty well to the present circumstances. In spite of great difficulties shipping has been a source of considerable income to Sweden. That which has been worst here is the great expense the Government has had and the marked increase in food prices. It is, therefore, of the utmost importance that the crops be good this year, and the outlook is rather bright at present.

The war has taught Sweden many things about transit trade, and it is hoped that this knowledge will be applied later. After the war is ended it is expected that domestic manufactures will have to compete very strongly with foreign goods here in Sweden, for the countries now at war will try to find outlets for their wares in the neutral markets. Therefore the people here are being admonished to use Swedish goods as far as possible.

[Consul General Ernest L. Harris, Stockholm, Sept. 24.]

Work for the Unemployed in Stockholm.

The labor commission which has to do with the unemployed in this city has sent a memorandum to the mayor of Stockholm requesting that the unemployed be placed in a position to manufacture coconut mats. It is also suggested that they be so organized that they may be placed under the direct management of some laborer whom they may choose themselves. It is proposed that something like \$15,000 shall be expended for this purpose. From this sum it is proposed to spend \$3,000 for machines, furniture, and rent for a large house to work in.

The percentage of unemployed in this city is somewhat greater than last year, owing to the fact that in various parts of the country there has been less demand for labor. On the whole, the general prosperity of the country at large has not been augmented by existing conditions.

MARKET STATUS OF SOUTH AFRICAN PRODUCTS.

[Consul E. A. Wakefield, Port Elizabeth, Aug. 25.]

There has been very little change in the general condition of the market for South African products during the last few months. After the flurry in April and May, which caused a noticeable advance in prices of ostrich feathers in the local market, another dull period set in, which has continued practically without a change up to the present time. The municipal feather market resumed sales some little time ago [see *COMMERCE REPORTS* for June 29, July 19, Aug. 2, and Sept. 8 and 17, 1915], but the results have not been entirely satisfactory.

One of the principal difficulties experienced on the local market is the absence of any sort of control over the amount of feathers offered for sale. This is especially noticeable during periods like the present, when feather values are down. For instance, just when the market was slightly improving and indications were more hopeful for future trade, an enormous quantity of feathers was placed upon the market and one week's sales totaled over 7 tons in weight. This is a new high record for sales in any South African market for one week. The natural result was that the next week's sales were exceedingly small and prices dropped accordingly.

United States Chief Buyer—Feather Prices.

The United States has been far and away the most important customer for feathers this year. Besides large direct shipments, nearly two-thirds of the feathers shipped to England have been re-exported to the United States.

Since the great decline in prices of a year and a half ago the London feather market has been practically nonexistent and it is doubtful if it ever again assumes the importance in connection with the marketing of these products that it held in the past. Port Elizabeth market prices are the standard values of to-day, should have been in the past, and will continue to be in the future unless some other South African port secures the bulk of this export trade.

The following are the latest prices per pound quoted, but they have probably been exceeded slightly on this week's sales: Whites—superior lots \$10.20–\$17.25, good average lots \$7.50–\$10, poor lots \$4.25–\$6; inferior whites and feminas, \$1.25–\$2.50; feminas—superior lots \$8.50–\$13.50, good average lots \$5–\$7.50, poor lots \$3–\$4.25; blacks, drabs, and tails, \$0.50–\$3; spadonats, \$1.50–\$5.

Wool Market Firm.

The American demand has been almost entirely responsible for the firm prices which have been obtained on the Port Elizabeth and East London markets for almost all varieties of wool of reasonable quality. There is no trade in old stocks and seedy short wools are unsalable except at very low prices. The demand for scoured wools is weaker. Orange Free State and Transvaal wools, which have been placed upon this market during the past season, were much below the average on account of the drought. While rains have fallen in certain sections it is questionable if this season's wool production is not adversely affected to a similar or even greater extent than last season's clips.

Following are the latest quotations, expressed in American cents per pound, on the local markets: Grassveldt grease—long, 12 months (superior), 18–20, medium, 9 to 10 months, 15–17, short, 10–13; Karoo—long, 12 months, 15–18, medium, 9 to 10 months, 12–15, short, 9–12; Orange Free State and Transvaal super long, 14–16; Orange Free State—heavy, 9–12, short light (free or fairly free), 10½–11½, short heavy (or seedy), 8–10; Basutos, 12–12½, coarse and colored, 11½–12½.

Mohair Quotations.

The local mohair market is quiet and there is little inquiry for stocks at the present time. This is not surprising, as it is between seasons and there is a small amount of mohair at the present time in Port Elizabeth. Reports have been received here of the death of many thousands of goats because of the drought in the angora sections. If the mortality be anything like as large as reported the amount of angora wool produced this year will be decidedly below the average.

Some small lots of superior kid's hair have changed hands at prices ranging from 40 to 42 cents per pound. The local trade anticipates that the new season's winter hair will be sold at 19 to 20 cents per pound. This, however, is only a local estimate, based probably more upon past experiences than upon present conditions. Latest quotations, in cents per pound, are: Summer kids—special clips, 40–42; average to good, 32–36; mixed or short, 24–28; winter kids, 20–24; summer firsts—super, 23–25; average, 22–22½; short, 20–20½; mixed hair—good length, 19–20; average, 16–18; seedy and coarse, 12–14; winter hair, nominal, 19–20; locks, 13–13½; Basuto hair, 20–21.

Hides and Skins.

The hide market is fairly quiet and sheepskins are slightly lower. All other grades are practically unchanged. The latest quotations are, in cents per pound: Sheepskins, sound, 10½; same, damaged, 8. Sheepskin pelts, 8; same, damaged, 6½. Coarse woolled, 10; same, damaged, 6½. Angora goatskins, light, 15; heavy and sun dried, 13. Goatskins, light, 22½; sun dried, 20; heavy, 18; damaged, 11. Sun-dried hides, 23½; same, damaged, 21. Dry-salted hides, 21½; same, damaged, 19. Salted hair Capes were quoted at 63 cents each; same, damaged, at 12½ cents. For sound sun-dried Capes 37 cents apiece was asked, and 12½ cents for damaged.

IMPORT AND EXPORT TRADE IN COPPER.

The imports and exports of copper at the customs districts of New York, Massachusetts, Philadelphia, Maryland, Virginia, Galveston, New Orleans, San Francisco, Washington, and Michigan during the week ended October 9, 1915, were as follows: Imports—Ore, matte and regulus (copper contents), 426,799 pounds, valued at \$50,837; pigs, ingots, etc., 4,208,016 pounds, valued at \$550,927. Of the ore and matte, 422,749 pounds came from Canada, and of the pigs, ingots, etc., 2,888,372 pounds came from Peru, 743,745 pounds from Chile, and 488,199 pounds from Panama.

Of 4,335,622 pounds of pigs, ingots, etc., exported, valued at \$776,437, England took 2,543,102 pounds and Italy 1,412,234 pounds.

GROUND PEAT WANTED IN CANARY ISLANDS.

[Consul George K. Stiles, Tenerife, Sept. 8.]

An exceptional opportunity to supply the Canary Islands with ground peat (commercially known as "turba") is open to owners of peat properties in the United States. There is an almost absolute lack of this material, which is here considered indispensable for the dry packing of tomatoes and the damp packing of new potatoes—two vegetables that are exported in very large quantities to England.

Close calculations, made especially for the Tenerife consulate by firms representing at least 90 per cent of the total consumption of ground peat in this district, show that approximately 3,000 tons are urgently needed to handle the coming crops of potatoes and tomatoes. These two crops will be in full course of exportation by December next and will continue until May, 1916; and packers will practically be compelled to pay almost any price to European producers of ground peat unless a supply can be obtained from other sources.

High Prices Now Asked.

Just at this time fruit shippers are paying extraordinary prices for the small quantities being used in this by-season. In order to fill a contract two weeks ago a local commission house was forced to pay \$26.40 per ton for ground peat, of which the price in July, 1914, was \$9.60. This was certainly an exceptional case and one in which the price paid was a forced figure, due to the contract necessities of the firm.

On the other hand, the regular guaranteed delivery price for "turba" at this date is \$24 per ton c. i. f. Canary ports in lots of 100 tons or more. At a recent consultation of the principal buyers of ground peat in Tenerife, brought together by me to consider the chances of American ground peat for use between October, 1915, and May, 1916, it was agreed that if it could be landed here at a price between \$19.20 and \$21.60 it could undersell the supply from any other market. This is emphasized by the fact that 100 tons of ground peat were bought in England yesterday at \$22.80 per ton. This offer was snapped up as a bargain by cable.

From the American Viewpoint.

The proposition, however, from the American viewpoint can not well be solved by small-lot orders. It is generally agreed here among the important buyers that the best way for American producers to handle the ground-peat problem would be to load a sailing vessel with practically an entire cargo of ground peat. This cargo could safely approximate 3,000 tons. In this way the freight charges could be reduced to a point where they could compete with those for the shorter haul from Liverpool.

Moreover, there are four buyers of ground peat who claim at this time to be willing to place orders totaling 2,000 tons at a minimum price of \$19.20 per ton. Of course this standard of price is entirely contingent upon the continuation of war conditions, and for this reason buyers here are unwilling to take on a larger stock at this time than indicated above. As promptness is essential, it is of the

utmost importance that samples be sent with offers and that prices f. o. b. American port or, if possible, c. i. f. a Canary port be quoted, as well as time of deliveries.

How the Peat Should be Prepared and Packed.

To meet a quick sale here the peat must first be thoroughly dried, the maximum percentage of moisture not exceeding 10 per cent at time of packing as the sea voyage can be counted on usually to add an extra 3 per cent of humidity before actual delivery in Canary ports. After drying the peat should be ground extremely fine and soft. It should be odorless, as otherwise it seriously affects the flavor of the tomatoes packed in it. Another important point is the absence of sticks or lumps.

"Turba" should be packed in hessian-covered bales of 100 kilos (220.46 pounds avoirdupois), which gives 10 bales to the tonelada or metric ton. However, bales approximating 200 pounds and counting 10 to the ton would be acceptable commercially here. The ground-peat bales should be strongly compressed by machinery and thoroughly bound with wire over wooden staves.

[Samples showing the general character of the ground peat desired, together with the names of five Teneriffe importers now ready to buy considerable quantities, may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices by referring to file No. 67179.]

NEW REGULATIONS GOVERN CONTRACTS FOR SUPPLIES.

The Treasury Department has issued Department Circular No. 3, containing new regulations relating to the making of contracts for miscellaneous supplies for the executive departments and other Government establishments in Washington, under the provisions of section 4 of the act of June 17, 1910 (36 Stat., 531). The duties of the General Supply Committee and of the Superintendent of Supplies are defined in these rules, and details of the manner in which the committee shall prepare the annual schedules of required miscellaneous supplies and perform other duties in connection with the obtaining of bids by the Secretary of the Treasury are given. Persons who are interested in such contracts may obtain copies of Circular No. 3 by applying to the General Supply Committee, Washington, D. C.

AMERICAN LINOTYPE MACHINE IN TRIPOLI, AFRICA.

[Consul W. Roderick Dorsey, Tripoli, Libya, Sept. 8.]

The first American linotype machine has recently arrived in Tripoli and been installed by La Nuova Italia, the only newspaper in the colony. It is a Mergenthaler, Model 10, and cost, set up, 11,500 francs (\$2,300). The sale was made by the manufacturer's agents at Milan, Italy, whence an expert was sent to mount the machine and start it working. It replaces two of English make, operated by former owners of the paper, found too large for local requirements and taken back by the sellers when the company dissolved.

SWEDISH EXPORT TRADE FOR HALF YEAR.

[Consul Emil Sauer, Goteborg, Sept. 15.]

Statistics published in the Swedish Government Commercial Reports for July 31, 1915, present a comparison between the exports of Sweden during the first six months of 1915 and the corresponding period in 1914.

The export of horses increased from 3,148 in the six months of 1914 to 7,456 for 1915. The export of live cattle increased from 18,873 to 23,083, while that of live hogs decreased from 20,083 to 3,844. The exports of fresh beef increased from 2,244 to 5,200 metric tons (metric ton=2,204.6 pounds) and of pork from 6,379 to 10,617 metric tons. The increased export of live cattle and the increased slaughtering of cattle appear to have been chiefly due to the scarcity and high price of cattle feed.

Dairy Industry Suffers from Scarcity of Cattle Feed.

The dairy industry suffered for the same reason, the export of cream decreasing from 3,259 metric tons in 1914 to 436 metric tons in 1915 and butter from 10,833 to 7,842 metric tons. The export of milk increased from 837 to 2,251 metric tons, but this item accounts for only a part of the decrease in the exports of butter. The export of eggs almost doubled, being 26,979,866 eggs during the first six months of 1914 and 52,184,515 in 1915.

The increase is due in part to increase in the transit trade in Russian eggs, the imports of eggs for the same periods having increased from 21,746,155 to 26,190,017.

The export of fresh fish was about the same for the two periods, but the export of salted herring showed an increase from 1,981 metric tons in 1914 to 11,700 metric tons in 1915. There was practically no export of grain from Sweden in 1915, although in 1914 there was considerable export of oats, oatmeal, bran, and rice. The exports of hides of cattle decreased from 5,256 to 2,658 metric tons. The export of sausage casings increased from 528 to 1,206 metric tons.

Most of the items of export of lumber, which is one of Sweden's principal staple products, show a decided decrease during the first six months of 1915 compared with 1914. Wood pulp, another of the important staple products of Sweden, shows a still greater decline.

Decreases in Exports of Mineral Products.

Most of the items of export of mineral products show decreases, cement, which increased from 18,643 to 41,059, being the most important exception. Quicklime exports decreased from 2,469 to 340 metric tons; fire clay, from 11,966 to 2,230 metric tons; iron ore, from 2,527,991 to 2,026,762 metric tons; stone, unwrought, from \$458,114 to \$216,383 in value; paving stones, from \$1,585,143 to \$690,968; "edge" stone, building stone, etc., from \$312,094 to \$63,009; lime bricks and tiles, unglazed, from 11,993,616 to 8,407,576 pieces; and fire bricks, from 40,685 to 16,607 metric tons.

The export of pig iron during the first six months of 1915 was 118,004 metric tons, against 68,281 metric tons for the same period of 1914, an increase of over 73 per cent.

Declared Exports to United States.

The declared exports from this consular district to the United States, according to the invoices certified at this consulate, amounted

during the first half of 1915 to \$1,842,280, against \$2,043,110 for the corresponding period of 1914, a decrease of approximately 10 per cent. The most important decreases are to be noted in the case of bleached chemical wood pulp, from \$845,399 to \$488,934; wrapping paper, from \$148,421 to \$77,848; and matches, from \$266,909 to \$143,526. Ball bearings show a phenomenal increase, from \$87,501 to \$388,865. Several other items show an increase, including unbleached chemical wood pulp, from \$185,814 to \$257,999. The items of declared exports for the two periods named were:

Articles.	January- June, 1914.	January- June, 1915.	Articles.	January- June, 1914.	January- June, 1915.

AUSTRALIAN STEAMERS PURCHASED.

[Sydney Herald, Sept. 22.]

The increased trade of Japan and China consequent upon the war has caused a big demand for steamers in the East, and quite a fleet of well-known Australian vessels have left at different times and gone to new owners in these two countries.

Several of the Adelaide Steamship Co.'s older vessels have been sold in this way, the most recent being the *Wallowra*, which leaves about the end of the month for new owners in Shanghai.

Lane & Dawson, who recently purchased and dispatched to the East the steamers *Hauroto* and *Brisbane*, have just purchased the Australian twin-screw steamer *Moura* from the Union Steamship Co. of New Zealand (Ltd.), which will be sent to China for the China coast trade. The *Moura* is of 2,027 tons, was built in 1899 by Armstrong, Whitworth & Co. (Ltd.), and has accommodation for about 250 first and second class passengers. It will come to Newcastle, load a cargo of coal, and proceed via the Philippines to Hongkong.

A New Cuban Bagging Fiber.

Experiments are being carried on in Cuba with the fiber of a plant locally known as "malva blanca," which is said to produce an ideal fabric for sugar bags. According to the Habana correspondent of Sugar, the fiber is soft and silky, possesses a tensile strength greater than hemp, is capable of close weaving, and not susceptible to shrinkage if wet. No special machines are required for handling the fiber, those adapted for spinning and weaving hemp, jute, or henequen being suitable for malva blanca.

AUSTRALIAN SUGAR SITUATION.

[Commercial Attaché William C. Downs, Melbourne, Sept. 8.]

The full details of the arrangement between the Attorney General of Australia and the Colonial Sugar Refining Co. for the purchase, refining, and marketing of the Queensland sugar crop were made public a few days ago. Under this agreement the company undertakes the financial responsibility for the sugar acquired by the Commonwealth from the Queensland Government, agreeing "to take delivery of, pay for, ship, and dispatch" it to the various refineries. The company also undertakes to market the sugar when refined at the wholesale prices fixed by the Government, which for 1A sugar are declared to be, per long ton: Brisbane, \$124.10; Sydney, \$124.10; Melbourne, \$124.70; Adelaide, \$125.92; Perth, \$127.75. The sugar is to be sold to the public at not more than 3d. (about 6 cents) per pound.

Other Provisions of the Agreement.

When the sugar has been refined and sold the company is to account to the Government for the money received for the sugar and sirup produced, deducting "the cost of the raw sugar at cost and the expenses for bags, freight, etc., cost of refining, and expenses of sale—in all, not exceeding £3 3s. (\$15.33) per ton—and also a charge of 20s. (\$4.87) per ton of raw sugar as representing depreciation and interest on plant and stocks and the payment for the services of the company in connection with the refining of sugar." (It will be remembered that the price at which the raw sugar was to be acquired from the Queensland Government was not to exceed \$87.60 per long ton.) The agreement also provides that the company shall sell to the Government at net cost some 14,200 tons of Java sugar that recently arrived, payment to be made out of the proceeds of such sugar when sold, no interest being charged by the company.

The prices fixed for the sale of the refined sugar are to remain in force until the stocks of 1915 Australian sugar, together with the 14,200 tons of Java sugar, have been disposed of. The entire agreement is to remain in effect until February or March, 1916, when the Queensland sugar supplied to the company will have been refined and sold. It is further agreed that the company return to the Government one-half of the charge of 20s. per ton provided for as payment for the use of its refineries.

Further Stocks Must Be Imported—Loan Authorized.

Conservative estimates by competent authorities indicate that the amount of sugar to be bought, refined, and sold under this agreement will amount to some 120,000 tons; but as this is only about one-half the quantity required to supply the consumption of Australia until the 1916 Queensland crop is available, it will be necessary that a further 120,000 tons be imported. These importations will be made by the Commonwealth Government, probably acting through the Colonial Sugar Refining Co., and involve the expenditure of approximately \$14,600,000.

To cover the cost of raw sugar, payment of customs duties, and cost of refining and marketing, a bill has been introduced into Parliament authorizing the Commonwealth Treasurer to borrow money from

the Commonwealth Bank of Australia from time to time, but so that the indebtedness of the Commonwealth to the Commonwealth Bank under the act shall not at any time exceed \$24,332,500. Against the money so borrowed the treasurer is to pay into the Commonwealth Bank all moneys received by the Commonwealth in respect to the sale of sugar. Provision is made in the bill for interest at the rate of 5 per cent per annum.

[Reference was made to the shortage of sugar in Australia and the methods adopted to provide for the same in COMMERCE REPORTS for June 11, July 10 and 21, and Sept. 1, 1915.]

STEAM TRAWLING ON CHINESE COAST.

Mr. Tien Pu-sien, Commissioner of Fisheries and Animal Husbandry, in the Chinese Ministry of Agriculture and Commerce, at Peking, has issued the following statement:

The Ministry of Agriculture and Commerce is very desirous to encourage fishery by steam vessels. The first steam fishing vessels were used by the Kiang-Che Fishery (Kiangsu-Chekiang) Co. The name of the first built steamer is *Foo Hai*, which catches over 400,000 catties (catty=1½ pounds) of fish every year, and has made great profits. This steamer does not only fish in the ocean, but also helps to suppress piracy. The people of Kiangsu and Chekiang have looked upon it as a godsend in guarding their interest in fisheries. It is said that the company has bought another steamer called the *Foo Che*, in order to further the business on a larger scale. The next company that came into existence in the third year of the Republic is the Che Hai Fishery Co. Its head office is in Chinhal, Chekiang. All the vessels were built in China, and its only steamer, named *Fu Che*, was also built by Chinese contractors. Although established for only one year, the company has made progress enough to warrant it to build another steamer for the same purpose. Since the Ministry of Agriculture and Commerce has promulgated the regulations encouraging and governing the steam fishing vessels the people are very anxious to form big fishing companies along the coast. The prosperity of the fishing enterprise in China will be seen at an early date.

INSULAR BANK PROPOSED IN PHILIPPINES.

[Manila Daily Bulletin, Sept. 14.]

The creation of an insular bank of the Philippine Islands, with an initial capital of 10,000,000 pesos (\$5,000,000), authorized to make loans on real estate, liquid assets, and miscellaneous assets, the latter to include all classes of bankable paper not included under the other two heads; to issue real estate bonds in any sum not to exceed 75 per cent of the amount of real estate loans held by the bank; to issue circulating notes in any amount not exceeding 75 per cent of the liquid assets held by it; and to purchase and own such real estate as may be needed to carry on its business, is proposed in a bill drafted by Vice Governor Martin for submission to the Philippine Legislature and indorsed by the economic committee recently approved by the Governor General.

The measure was reported upon favorably yesterday morning by Teodoro R. Yanco, the rural credit subcommittee of the economic committee, and will be introduced by its author without change in any important particular.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Panama Canal supplies, No. 2725.—Sealed proposals will be received at the office of the General Purchasing Officer of The Panama Canal, Washington, D. C., until October 27, 1915, for furnishing, by steamer, free of all charges, on dock at either Colon (Atlantic port) or Port of Ancon (Balboa, Canal Zone) (Pacific port), Isthmus of Panama, steel windows, frame and sash, traveling crane, annunciators, buzzer push units, rivets, babbitt metal, sheet zinc, oil hose, copper tubing, flexible copper or brass conduit, galvanized pipe, pipe fittings, force cups, shower heads, flush pipe, wash-tray plugs, waste strainers, valves, cocks, vitrified pipe, drain tile, shovels, carbon brushes, burlap, tablecloths, towels, record books, office pins, lye, manganese dioxide, gasoline, and creosote oil. (Circular No. 978.)

Medical supplies, No. 2726.—Sealed proposals will be received at the Medical Supply Depot, U. S. Army, 543 Greenwich Street, New York, N. Y., until October 25, 1915, for furnishing and delivering at the Depot, arsenous acid, powdered camphor, cathartic compound tablets, glycerin, opium tincture, gauze bandages, corks, rubber tubing, and other medical supplies.

Wire and cable, No. 2727.—Sealed proposals will be received at the office of the Chief Signal Officer, United States Army, Washington, D. C., until October 25, 1915, for furnishing wire and cable. Further information may be had on application to the above office.

Plumbing fixtures, valves, etc., No. 2728.—Sealed proposals will be received at the office of the Superintendent of Prisons, Department of Justice, Washington, D. C., until November 16, 1915, for furnishing and delivering at the United States Penitentiary, Atlanta, Ga., plumbing fixtures, valves, etc., for the west main cell wing. Specifications and further information may be had on application to the Washington office.

Lighting fixtures, No. 2729.—Sealed proposals will be received at the Office of the Supervising Architect, Treasury Department, Washington, D. C., until November 15, 1915, for furnishing and installing lighting fixtures in the United States post office at Orange, N. J. Proposals are desired only from firms qualified to produce work of the highest grade, both artistically and mechanically. Drawings and specifications may be had on application to the Washington office.

Construction work, No. 2730.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until November 26, 1915, for the construction complete (including mechanical equipment and approaches, excepting lighting fixtures) of a one-story and basement, brick and stone faced building for the United States post office at Navasota, Tex. Drawings and specifications may be obtained from the custodian of the site or at the Washington office.

Construction work, No. 2731.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until November 27, 1915, for the construction complete (including mechanical equipment and approaches) of a one-story and basement, stone and brick faced building for the United States post office at Brenham, Tex. Drawings and specifications may be obtained from the custodian of the site or at the Washington office.

Food products, etc., No. 2732.—Sealed proposals will be received at the office of the Depot Quartermaster, U. S. A., 115-123 East Ontario Street, Chicago, Ill., until October 22, 1915, for furnishing and delivering on or before November 8, 1915, salmon, coffee, tea, sirup, flour, ginger ale, lard, olive oil, etc.

Materials and labor, No. 2733.—Sealed proposals will be received at the office of the Commissioner of Indian Affairs, Washington, D. C., until November 15, 1915, for furnishing materials and labor for the construction of an addition to the brick assembly hall of the Salem Indian School, Chemawa, Oreg. Plans and specifications may be examined at the United States Indian

warehouses at Chicago, Ill., St. Louis, Mo.; Builders' Exchange, St. Paul, Minn.; and at the office of the superintendent of the Salem Indian School, Chemawa, Oreg.

Construction work, No. 2734.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until October 28, 1915, for the construction of sidewalks, curbing, etc., at the new United States postoffice and customhouse, New Haven, Conn. Plans and specifications may be had on application to the superintendent of construction, New Haven, Conn., or at the Washington office.

CONDITION OF THE CROPS IN SWEDEN.

[Consul Emil Sauer, Göteborg, Sept. 23.]

The summary of the crop reports for the month of August has now been compiled, and shows the following figures in comparison with those for the corresponding month in 1914, as published in the *Göteborgs Handels-och Sjöfarts-Tidning*:

Crop.	August rat- ings.		Crop.	August rat- ings.		Crop.	August rat- ings.	
	1914	1915		1914	1915		1914	1915
Winter wheat.....	3.4	3.3	Maslin	2.2	3.5	Fodder root crops..	2.7	3.3
Winter rye.....	3.4	2.6	Peas.....	2.2	2.5	Hay:		
Spring wheat.....	2.4	2.3	Beans.....	1.4	3.0	On cultivated		
Spring rye.....	2.4	2.7	Vetch.....	2.1	2.5	land.....	2.2	2.6
Barley.....	2.7	3.8	Potatoes.....	2.7	2.7	On natural		
Oats.....	2.0	3.5	Sugar Beets.....	3.3	3.7	meadows.....	2.8	2.6

Of the whole numbers or "points" used in these crop reports, 5 represents very good crop; 4, good; 3, average; 2, less than average; 1, nearly failure; and 0, complete failure of the crops.

Situation Very Good in General.

The crop situation can be characterized as being very good in general. The August figures for winter rye and hay indicate yields somewhat below average, but all other crops of any importance promise returns above average. From the 1st of September to the present the weather has been warm, with plenty of sunshine and very little rain, and this has materially improved the condition of the crops.

In the case of potatoes, Sweden will be independent of foreign supplies and there will probably be some export. On account of the good crop of oats, maslin, peas, vetch, fodder, root crops, and a prospective second hay crop, Sweden will probably require less cattle feed from abroad than last year, but there will, of course, be considerable importation of corn (chiefly from Argentina), wheat bran, and oilseed cakes. Foreign flour, wheat, rye, and rye flour will also be purchased—mainly from the United States while the war lasts.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 923 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Barbers' supplies, No. 18837.—The Bureau is informed by an American consular officer in England that a firm of importers in his district desires to receive catalogues, prices, etc., of shaving brushes, strops, styptic pencils (alum), neck wool, curling tongs, hair slides, waving irons, spirit lamps, shaving mugs, and bottles for toilet preparations.

Toys, No. 18838.—A manufacturer of cheap toys in Spain informs an American consular officer that he desires to communicate with American importers who would act as agents in the United States.

Alpacas, No. 18839.—An American consular officer in Brazil reports that a business man in his district desires to receive immediately samples, with full particulars as to prices, etc., of alpacas of all kinds. He is willing to pay cash against documents and states that he can furnish bank references.

Canary seed, sulphur, and olive oil, No. 18840.—A business man in Spain has informed an American consular officer that he desires to communicate with American importers of canary seed, sulphur, and olive oil. He also desires to act as general representative of American exporting firms.

Machinery, No. 18841.—The Bureau is informed by an American consular officer in Norway that a business man in his district desires to receive at once catalogues, prices, etc., of machines for making sandstone bricks. The material to be used is quartz sand mixed with a small amount of chalk. Machines with a capacity of 23,000 bricks per day are desired. He particularly desires special mixing machinery. Correspondence may be in English. Reference is given.

Flour and grain, No. 18842.—An American consular officer in the Canary Islands reports that a commission agent in his district desires to represent an American exporter of flour and grain. He claims to have a business in these two commodities valued at \$15,000 annually. The flour should be packed in bags containing about 200 pounds each. The terms desired are 30 days, or at least 6 days' sight draft after arrival of shipping documents at destination. References are given.

Printing supplies, No. 18843.—An American consular officer in France reports the desire of a business man in his district to represent American manufacturers or exporters of printing supplies.

Chemicals, No. 18844.—A commission agent in Spain has informed an American consular officer that he desires to receive at once prices and terms on caustic soda, red bichromate, and fluid used for decoloring green sulphur oil. Correspondence should be in Spanish.

Hardware, cutlery, rubber goods, etc., No. 18845.—An American consular officer in the Netherlands reports that a trading corporation in that country, selling goods in the Dutch East Indies, desires to communicate with American manufacturers of hardware and cutlery, rubber goods, buttons, paper goods, toilet articles, household furnishings, boot and shoe findings, metals and minerals, stationery supplies, pins, needles, hooks and eyes, china and earthen ware, wearing apparel, glass and glassware, paints and varnishes, cotton goods, cordage and twine, jewelry, dyes and dyestuffs, novelties, etc. Samples are desired when practicable. The firm proposes to buy on its own account. If business results from preliminary negotiations, the firm intends to open a banking credit in New York. In order to expedite negotiations the firm suggests that manufacturers send samples, price lists, etc., direct to its office in Java. Correspondence may be in English. References are given.

Wine, No. 18846.—An American consular officer in Spain reports that a firm dealing in Spanish red wine desires to communicate with American importers in order to establish an agency in the United States.

Window glass, hardware, etc., No. 18847.—A firm in China has informed an American consular officer that it desires to represent American manufacturers or exporters of window glass, hardware, and similar goods.

SHIPMENT OF MUNITIONS TO MEXICO.

The following letter has been addressed by the President of the United States to the Secretary of the Treasury with respect to the shipment of arms and ammunition to Mexico:

THE WHITE HOUSE,
Washington, October 19, 1915.

MY DEAR MR. SECRETARY:

I am informed by the Department of State that the recognized *de facto* government of Mexico is now in effective control of all the ports of entry in Mexico except those along the international boundary in the States of Chihuahua and Sonora and all the ports in Lower California.

An exception is hereby made to the prohibition against export created by the President's proclamation of October 19, 1915; and you will please instruct the collectors of ports and other officers of the Treasury Department to permit to be exported through United States customhouses munitions of war for the use of the recognized *de facto* Government of Mexico, or for industrial or commercial uses within the limits of the territory under its effective control, as above set forth. An embargo, therefore, will be immediately placed against the *border* ports in the States of Chihuahua and Sonora, as well as all ports in the Territory of Lower California, whether or not controlled by the recognized *de facto* Government of Mexico, and you will so instruct the appropriate collectors of customs and other officers of the Treasury Department.

Sincerely yours,

WOODROW WILSON.

The honorable the SECRETARY OF THE TREASURY.

ST. LOUIS PLANS TO WIN MEXICAN TRADE.

[J. M. Bechtold, clerk in St. Louis office, Bureau of Foreign and Domestic Commerce, Oct. 13.]

A special meeting of the Foreign Trade Bureau of the Business Men's League was called yesterday by Mr. Ernest F. Cramer, chairman, for the purpose of planning a selling campaign of St. Louis manufacturers in Mexico. A tour of Mexico was authorized, and a number of concerns have pledged themselves to have their representatives make the trip. It is intended that the tour shall include all important towns in the Republic that may be reached by railroad,

from the United States border to Central America. The date set for the departure of the delegation is December 1. It is planned that when the delegates reach a town they will separate at the railroad station, visit their prospective buyers and solicit orders, and let it be generally known that the manufacturers of this city are now willing and anxious to resume trade relations.

Mexico has always been a good market for St. Louis manufactures, and it is generally thought that before long all the salesmen who were recalled from that country and placed in domestic territories will be again sent there and that the business secured will exceed that of the best years during normal conditions.

TRANSFER OF FREIGHT VIA PANAMA.

[Announcement of Maj. F. C. Boggs, chief of Washington Office of the Panama Canal.]

Referring to the circular issued by this office on October 8, advising that, in view of the closing of the Panama Canal by slides, ships waiting at the Isthmus to transit the canal would, as far as practicable, be permitted to transfer freight across the Isthmus by rail at \$3 per ton, including all charges, it has been decided to continue exchanging cargoes of ships arriving at the canal during the month of October at the special emergency rate quoted above.

Effective with arrival of ships at the Panama Canal on and after November 1, 1915, and during such times as the canal may be closed to traffic, the Panama Railroad will transfer freight across the Isthmus at the following rates per ton of 2,000 pounds: Class 5, \$2; class 4, \$2.50; class 3, \$3.50; class 2, \$4.50; classes 1 and D $\frac{1}{2}$, \$5.50; classes D1 and D1 $\frac{1}{2}$, \$10; classes D2 and T1, \$15. Rates on specie, gold, silver, precious stones, etc., one-fourth of 1 per cent ad valorem. Steamers will be charged wharfage, craneage, and for stevedoring of their cargoes in and out. The above classes are based on the Panama Railroad Co.'s present local classifications, the rates being reduced as indicated.

All inquiries regarding the above-mentioned rates or as to other questions relating to transfer of cargo, etc., should be addressed to the Panama Railroad Co., 24 State Street, New York, N. Y., or to the Governor of the Panama Canal, Balboa Heights, Canal Zone.

SPECIAL LEGISLATION IN URUGUAY.

[Diario Oficial, Sept. 1, 1915.]

The President of Uruguay has asked the Congress, now in extra session, to consider, among other proposed laws, an extension of the functions of the Government insurance bank, which now issues only fire, life, and accident insurance policies. As a part of the policy for the encouragement of agriculture, the Executive urges that steps be taken toward Government insurance against loss by storms and death of live stock. Other measures recommended, with the same motive, are appropriations of funds to be used for prizes at cattle fairs and amendments to the existing veterinary inspection laws. Legislation is also urged for improved methods of collecting municipal taxes, for a reorganization of the post office and telegraph service, and for amendments to the law establishing a national board of health.

HUDDERSFIELD WOOLEN MARKET.

[Extract from Woollen Market Report for Sept. 21, transmitted by Consul Franklin D. Hale, Huddersfield, England.]

The woollen trade remains in a very active state, and in nearly all Colne Valley mills machinery is being run day and night. Indications point to a continuance of these conditions, almost every factor being in favor of the trade in cheap goods and adverse to that in fine worsteds. Business in fine cloths is very poor, and the outlook is gloomy, manufacturers fearing that unless there are developments in regard to army cloth they will not be able to keep more than half their machinery fully occupied.

The main difficulty in the worsted branch arises from the high rates which spinners demand for botany and other fine yarns. Manufacturers of women's dress goods are taking fine counts in large quantities, and this greatly enhances prices to makers of men's-wear fabrics, who are totally unable to command commensurate rates for the finished article.

Export Trade Is Slack.

More and more are merchants turning their attention to woollen imitations of the fine worsteds and tweeds—goods which can not profitably be made by manufacturers catering for the West End trade. Fine worsted producers are also heavily hit, but by the lack of over-sea business, the South American being the only foreign markets which are at all active.

The bulk of the business in cheap and medium woollen goods is for the home trade, the Colonial demand being much smaller than usual, though a slight improvement in Canadian business is reported. Wools sell steadily, and rates are firm for all except low grades.

CONDITION OF THE NOTTINGHAM LACE TRADE.

[Consul C. M. Hitch, Nottingham, England, Oct. 1.]

A slight improvement has taken place during the past week in the demand for laces. Some nice orders have been received for cotton flouncings in widths of 12 to 18 inches, and also for Calais valenciennes with filet effect. Allovers are not in great demand, but a few pleating laces are selling. Embroidery machines are well employed, and some orders are being placed for Barmen torchons. Some of the best orders are coming from the South American markets, but these are mainly for low and medium class goods. The curtain manufacturers are doing a fair amount of business, but in consequence of the shortage of labor, makers have been forced to raise their prices.

There is a strong demand for plain nets, although the difficulty in obtaining an adequate number of workers has materially restricted the output, with the result that prices have been forced to a higher level. The prospect of a continuance of activity in this branch is extremely bright.

The making-up trade remains in a very satisfactory condition, and the supply of blouses and neckwear is scarcely equal to the demand. There is a good demand for veilings, and all qualities meet with a ready sale.

PUSHING U. S. TRADE OF NORWAY, SWEDEN, AND RUSSIA.

Present activities of foreign trade organizations in the United States are indicated by announcements from Commercial Agent E. C. Porter at New York that a new chamber of commerce has been launched there to develop Norwegian trade with the United States; that the Swedish Chamber of Commerce in that city is steadily increasing its membership and activities after a year of existence; and that influential Russian interests have established a new publication with the purpose of developing Russian-American trade.

The Norwegian-American Chamber of Commerce aims to build a center for trade information and to furnish a medium by which American manufacturers and exporters can be put in touch with Norwegian firms. It has the backing of commercial leaders in that country and is believed to be in a position to perform very valuable service. It will have permanent offices in New York City under the supervision of a staff of competent officials and will publish a monthly bulletin. It has established headquarters at 17 State Street.

Swedish Chamber of Commerce Doing Successful Work.

One of the most helpful agencies in the development of trade between United States and Scandinavian countries is the Swedish Chamber of Commerce, which was organized about a year ago. It has its headquarters at the Produce Exchange Annex, New York City. Its purpose is to create a medium of intercourse and central information in regard to the Scandinavian countries, and to furnish American manufacturers with specific requests in regard to trade. It has been doing very successful work, and is steadily increasing its membership.

The Russian-American Journal of Commerce will be issued monthly at New York, and will print its material both in English and Russian.

COMMERCE REPORTS has already printed references to the Spanish Chamber of Commerce in New York, on May 11, the Japanese Chamber of Commerce at San Francisco, on October 5, and Chinese chambers at New York and San Francisco, on October 2, 1915.

INDUSTRIAL EXHIBITS FOR DENMARK.

[Commercial Attaché Erwin W. Thompson, The Hague, Netherlands, Sept. 20.]

Recently the secretary to the commercial attaché paid a visit to the permanent Industrial Exposition at Copenhagen, Denmark, where there are on display machinery, hardware, agricultural implements, and other manufactures, mostly Danish. Knowing the high merit of American wares, he considered this an excellent opportunity to acquaint the Danish people with the good qualities of similar American products. Upon his return he stated:

It occurred to me that here would be a splendid chance and place tellingly to illustrate the superiority of American goods, and perhaps utilize this as an effective avenue for the introduction of American industrial products by installing a small permanent exhibit. Such display should be in charge of an American representative who could intelligently explain the merits of the exhibited article to visitors and inquirers, of whom there seemed a steady and quite appreciable number.

The suggestion is presented for the consideration of American manufacturers.

TAKE CENSUS OF RED SALMON IN WOOD RIVER, ALASKA.

This year's census of the number of red salmon entering Lake Aleknagik, the first of the Wood River series of lakes in Alaska, shows a total of 248,900, compared with 2,600,655 in 1908, 893,244 in 1909, 670,104 in 1910, 354,299 in 1911, 325,264 in 1912, and 753,109 in 1913, no census having been taken in 1914. The work was done under the direction of the United States Bureau of Fisheries. The object of the census was to determine, if possible, the percentage of salmon in a given region which must be allowed to escape to the spawning grounds in order to maintain a normal supply.

Counting was begun on June 14, when 161 fish passed through the gates, and was continued through August 2, on which date the number of salmon passing had dwindled to 70. The maximum run occurred on July 7, when upward of 26,000 fish were noted. The total count of salmon was 259,271, of which number, according to an estimate of the enumerator, 3 per cent were humpbacks and 1 per cent dog salmon, leaving a balance of 248,900 red salmon; 37 king salmon also passed through the gates.

The comparatively small run of fish into Lake Aleknagik may perhaps be partly accounted for by the unusually mild weather experienced this year in the Nushagak region, which afforded favorable opportunities for the taking for the canneries of a large percentage of the run.

HARVESTING ON AUSTRALIAN GOVERNMENT FARM.

[Sydney Herald, Sept. 6.]

TULLAMORE.—A new 60 horsepower Caterpillar engine and 24 Sunshine harvesters arrived on Friday for the New South Wales Government farm at Woodlands. It is intended to use this engine for hauling to and fro from Tullamore to Woodlands, and it is expected that the machine will pull 20 tons without any difficulty. Mr. B. Hart, engineer in charge at Woodlands, speaks very highly of the Caterpillar engines for all farm work. There are five on the area, and each one is to pull three harvesters. There are also 100 head of very fine draft horses. It is intended to work 10 reapers and binders, each to be drawn by horses. The crops on the whole area are looking splendid and, given another fall of rain, a big yield is assured. Fallowing is now in full swing, about 4,000 acres being completed. It is intended to fallow 15,000 acres this year. The clearing on the adjoining area of Orange Plains is being pushed on, but as most of the timber is green it is rather slow and expensive work as compared with the Woodlands area. The men on the clearing area are working under the butt system.

CONSULAR TRADE CONFERENCES.

Consul Julius D. Dreher, formerly at Toronto, now en route to his new post at Colon, Panama, will be in New York for several days prior to his sailing on November 4. Trade conferences may be arranged by addressing the Bureau of Foreign and Domestic Commerce, 409 Customhouse, New York.

PERMANENT REPRESENTATION SHOULD BE SOUGHT.

[Commercial Agent E. E. Judd, New Orleans, Oct. 7.]

American consuls and other writers on export-trade subjects have from time to time called the attention of American manufacturers to the fallacy of giving representation for their lines in Latin-American countries to the representatives of European concerns, unless some contract is made guaranteeing that the representation will be continued after the European manufacturers are again in the market.

A striking instance of this, which has just come to the attention of this office, is in connection with the sale of stearic acid in Central America. This product was formerly supplied by the United States in considerable quantities, but some years ago a European house put a permanent representative in the field and captured practically the entire trade. The outbreak of the European war made it impossible for the Continental firm to fill orders from its home plant, and its Central American representative is reported to have been buying acid in the United States. Some American firm is doubtless congratulating itself on the profitable business which has come to it as a result of the war, not realizing that it is merely assisting a foreign competitor to hold together his customers until his own firm is again ready to take up the business. The American firm is missing a golden opportunity to put its own man in the field, get in touch with the native market, and build up a permanent, profitable business.

CHILEAN IMPORTS, EXPORTS, AND DUTIES COLLECTED.

[Consul General L. J. Keena, Valparaiso, Aug. 31.]

Importations into Chile for the first six months of 1914 amounted to \$53,467,548 and for the first six months of 1915 to \$23,270,488, a decrease of \$30,197,060. Exportations from Chile for the first six months of 1914 amounted to \$65,730,877 and for the first six months of 1915 to \$47,708,272, a decrease of \$18,022,605. In the first six months of 1914 nitrate to the value of \$15,012,822 was exported, and for the corresponding period of 1915 exportations amounted to \$9,970,317, a decrease of \$5,042,505.

Import duties for the first six months of 1914 amounted to \$10,231,123 and for the corresponding period of 1915 to \$4,340,044, a decrease of \$5,891,079. Export duties for the first six months of 1914 amounted to \$15,143,071 and for the half year in 1915 to \$10,062,385, a decrease of \$5,080,686.

NAVIGATION LAWS OF THE UNITED STATES.

The new edition of Navigation Laws for 1915 is now available, the last issue having been in 1911. The Bureau of Navigation has included in the new volume the new seamen's act of March 4, 1915, and a table of laws giving the sections of the Revised Statutes and subsequent laws, the date of enactment and amendment. It is a cloth-bound volume of 585 pages, and may be purchased at the nominal price of \$1 from the Superintendent of Documents, Washington, D. C.

BRITISH CHEAP CLOTHING MANUFACTURE.

[Consul Rufus Fleming, Edinburgh, Scotland, Sept. 27.]

In a lecture a few days ago to the classes in the South of Scotland Technical College, Galashiels, Dr. Thomas Oliver, the principal, said that the great development of the ready-made clothing trade had been the most conspicuous feature of wool-cloth marketing in recent years.

The enormous amount of cheap female labor in London has determined the flow of this trade in that channel, and now London competes with Leeds for the honor of having the largest clothing trade in the United Kingdom. There also are to be found the very cheapest grades made up with the help of the low-priced labor offered in the East End of London. Some years ago suits were made to sell to the wearer at 9s. (\$2.19). The cloth could be bought in Leeds at 6½ d. (13 cents) per yard, 54 inches wide; 3½ yards of cloth were required, so that the cloth cost was 1s. 9d. (42½ cents) per suit; the cost of making and trimming amounted to 3s. 3d. (79 cents), for the most part made on subcontract in "sweatshops." The clothing manufacturer was thus enabled to sell to the retailer at 6s. 9d. (\$1.64), but the increase in the cost of materials has changed these figures and now prices are 30 to 50 per cent higher. The new conditions in clothing manufacture in Scotland were thus described by Dr. Oliver:

Thirty years ago Glasgow was a very important center of distribution of wool cloths for the tailoring trade, but the merchant trade of Glasgow has largely disappeared, owing to so many of the firms taking up the ready-made line. The rise of the ready-to-wear branch of the industry has been a strong temptation to the economical buyer. If he can buy a satisfactory suit at 25s. (\$6.08) to 30s. (\$7.30), there is little likelihood that he will invest £3 (\$14.60) to £4 (\$19.46) in a suit. So a tailoring business which at one time employed about 40 hands is now reduced to, say, 3 men, while the clothier is everywhere in evidence offering the ready-to-wear garments. Some of these are marvelous productions. Last year, before the war, a firm in Leith was offering suits made to measure at 15s. (\$3.65) from cloth on view in the shop. The cloth was not the old-fashioned article, with cotton warp and weft, but consisted of a twist made up of woolen and cotton threads in both warp and weft, and was a good imitation of a fancy woolen cloth.

Last month in another city I saw that one tailor was offering a very fair production at 18s. 11d. (\$4.11), made to measure. I handled the cloth, and, even allowing that the price was a special offer during the cheap-sale period, I can not figure out where the profits came in to the various firms concerned. Division of labor is nowhere in greater evidence than in the manufacture of clothing. In the recent boom in army requirements clothing firms have been constrained to sublet part of their contracts. They have allowed subcontractors 5s. 6d. (\$1.34) per overcoat and about the same price for a suit for making, with all material supplied. Before the war lower prices were obtained.

A method which is gaining ground in the provincial towns is for tailors, instead of ordering cloth from the merchants, to send the measurements of their customers to the clothing manufacturers, who in a few days sends back to the tailor a finished garment. The tailor may make any slight alteration required, and the customer is under the impression that the suit is made on the tailor's premises. The system has the advantage that the garments are well made and allows a tailor with small knowledge of the business to get along without engaging an experienced cutter, and he is not burdened with keeping a number of tailors, who would only be irregularly employed according as the fluctuations of the seasons imposed. The same system has also been introduced in costume departments, but has not gained such a foothold, because ladies usually are not satisfied unless they get a number of "fittings on," with numerous alterations, and those who are less fastidious can buy from a draper a garment ready to wear.

FOREIGN TARIFFS.

ARGENTINA.

[Boletín Oficial, Aug. 3, 1915.]

Classification of Iron and Steel Beams.

A presidential decree, published August 3, 1915, establishes the following tariff classifications for certain iron and steel beams and structural shapes imported into Argentina. I-shaped iron of more than 7 centimeters (2.76 inches) maximum thickness, whether or not perforated, is to be considered as heavy beams and classified under tariff No. 1150, at the rate of 25 per cent on an official valuation of 0.04 peso per kilo. Beams joined together or riveted shapes, forming a double T, are assimilated to "wrought iron not specified in the tariff" and made dutiable under No. 1153, at 25 per cent on a valuation of 0.10 peso per kilo. Structural shapes which have been subjected to some process after rolling, such as cutting, filing, bending, etc., are also classified under No. 1153, unless they are imported as knockdown parts of columns, posts, etc., in which case they are dutiable under No. 1152, at 25 per cent on a valuation of 0.08 peso per kilo. A surtax of 2 per cent of the valuation is to be added to all the rates above quoted. [Peso, \$0.965.]

BRAZIL.

[Ambassador Edwin T. Morgan, Rio de Janeiro, Sept. 6, 1915.]

Proposed Regulations for Samples and Advertising Matter.

Efforts have been made from time to time to obtain more favorable customs treatment for samples of commercial travelers, as well as for advertising matter, imported into Brazil, and it is now stated that the budget committee of the Brazilian Chamber of Deputies has reported favorably on a proposal to incorporate in the budget law for 1916 new and more liberal regulations on this subject. If the proposed article is included in the new budget law, which will go into effect January 1, 1916, as now appears probable, commercial travelers in Brazil will be greatly facilitated in the discharge of their business.

According to the proposed legislation, samples accompanying commercial travelers are to be exempt from duty, provided a bond for their reexportation within such time limit as the customs authorities may prescribe is furnished, or the amount of duty leviable deposited pending such reexportation. In this respect they are assimilated to articles imported for exhibition purposes, for which the present tariff provides temporary free admission under bond. Samples are to be accompanied by a certificate of origin duly legalized and a detailed list of their number and character. A reduction of 50 per cent in the duties on illustrated catalogues, circulars, posters, and advertising cards of all kinds is also provided for, and a similar reduction is proposed in the case of articles such as pocket knives, pencil holders, cigarette cases, etc., intended exclusively for distribution as advertisements and bearing on their surface an indication of such destined use.

[At present there is no legal authority, according to a recent report of the Brazilian Minister of Finance, for the temporary free admission of travelers' samples. It has therefore usually been necessary, in order to obtain exemption from import duty, to make

the samples entirely unsalable by mutilation or other means, involving considerable delay and inconvenience at the customhouse.]

MADAGASCAR.

[Consul James G. Carter, Tamatave, May 12, 1915.]

Marking of Cotton Goods.

According to a Madagascar decree published May 8, 1915, which is to go into effect one year from the date of publication; if cotton goods (bleached and unbleached) imported into the colony and its dependencies bear on their surface a statement as to length, the measurement must be expressed in terms of the metric system and in French. Measurements stated otherwise will be permitted only when the corresponding length in meters is indicated in figures of equal size. A maximum variation of 2 per cent between the actual length and that stamped on the goods is allowed.

SALVADOR.

New Customs Tariff.

The Bureau of Foreign and Domestic Commerce is in receipt of a copy of the new customs tariff recently enacted in Salvador, which is to go into effect January 1, 1916. Information concerning the new rates of duty will be furnished to those interested upon request. [It is expected that a translation of the new tariff will be published by the Bureau of Foreign and Domestic Commerce in the near future.]

[Diario Oficial, Sept. 18.]

Certificates of Purity for Lard.

A presidential decree of September 18, 1915, requires that all lard imported into Salvador after December 1, 1915, be accompanied by a duly legalized certificate of purity, setting forth the quantity and quality of the shipment. The Salvadorian consuls in the country of exportation are forbidden to certify the invoices for lard shipments unless such a document is furnished.

[Lard was declared exempt from customs duty and surtaxes upon importation into Salvador by a decree of Jan. 29, 1915, as reported in Foreign Tariff Notes No. 16, p. 91.]

SWEDEN.

[Chargé d'Affaires Jefferson Caffery, Stockholm, Aug. 14, 1915.]

Reduction on Sugar.

A royal decree of August 13, 1915, prescribes the following reductions in the rates of duty on sugar imported into Sweden, to go into effect January 1, 1916 (kilo, 2.2046 pounds; crown, \$0.268):

	Rate of duty.	
	Old.	New.
Sugar:	<i>Crown per kilo.</i>	<i>Crown per kilo.</i>
Refined, all kinds.....	0.11	0.105
Not refined—		
Not below No. 18 Dutch standard in color11	.105
Below No. 18 Dutch standard in color (even if imported in a liquid state)..	.11	.075

The drawback on refined sugar is reduced from 0.11 to 0.08 crown per kilo.

COPPER MINING BY CHINESE GOVERNMENT.

[Extract from Peking Daily News of Sept 2, by Commercial Attaché Julian H. Arnold, Peking.]

Yunnan Province is one of the richest copper districts of the world. The late Ch'ing dynasty depended on the copper supply from that Province for the minting of copper cash. The Imperial Government appointed officials to supervise the mining works, and at one time the Yunnan mines regularly shipped 6,000,000 catties (catty=1½ pounds) of copper to Peking every year. The best mines are situated in the Tungchuan district. During the Taiping rebellion the mining operations were suspended, the regular supply of copper to Peking was cut off, and the Imperial Government has had to resort to minting 10-cash copper pieces so as to save material. After the Taiping rebellion not much success has been obtained in running the mining works.

Upon the establishment of the Republican Government the copper mines were taken over by the Tungchuan Mining Co. This company had a capital of \$300,000, the Government supplying one-half of the capital. But the capital has never been fully subscribed, and the company has never secured satisfactory results in the development of the mines. Consequently the output is limited, and as the adoption of antiquated native methods means greater expenses, the price quoted by the company for its copper is high. Thus the various Government mints found it unprofitable to purchase Yunnan copper, and therefore the raw material for the minting of copper coins was all secured from Japan and other countries.

The Government recently organized the Gold Mining Bureau, under the Ministry of Finance, to control the gold, silver, copper, and other metals necessary for the minting of coins. The Ministry of Finance now requests that a high official be appointed to superintend the development of the copper mines at Tungchuan. The Tungchuan Mining Co. will be taken over by the Government, so that better results may be secured. The lead and zinc mines will also be developed under official supervision. Mr. Sung Lien-kuei has been appointed director general of the Tungchuan mines.

STARCH SHORTAGE IN IRELAND.

[Consul Wesley Frost, Cork (Queenstown), Sept. 28.]

Laundry starch is now costing \$6.81 per 112 pounds, this being an average figure for the average grade. The single starch factory at Cork is curtailing its deliveries, and the leading English starch firms are also unable to serve their customers promptly or at normal prices.

The use of laundry starch in the south of Ireland, while not as prevalent as in the United States, is considerable. The city of Cork has three laundries, while Queenstown, Buttevant, Youghal, and a number of other large towns have laundry establishments. The string of hotels conducted by the Great Southern & Western Railway Co. have their own laundry plants. Prominent dealers at Cork buy in lots of two tons, more or less. The starch must be absolutely pure white.

[The address of a starch dealer at Cork who has asked the consulate for an American connection may be had from the Bureau of Foreign and Domestic Commerce; refer to file 67279.]

ARGENTINE FOREIGN COMMERCE, FIRST HALF OF 1915.

[Consul General W. Henry Robertson, Buenos Aires, Aug. 24; supplementing dispatch in COMMERCE REPORTS for Sept. 23, 1915.]

Statistics of the foreign commerce of Argentina for the first six months of 1915, by countries, are:

Countries.	Imports.		Exports.	
	First half of 1915.	Increase or decrease from 1914.	First half of 1915.	Increase or decrease from 1914.
United Kingdom.....	\$34,276,560	— \$22,180,506	\$73,153,749	+ \$17,055,394
United States.....	18,580,397	— 1,697,606	38,868,889	+ 16,142,760
Italy.....	9,275,524	— 4,578,096	29,514,898	+ 26,235,419
France.....	5,422,797	— 9,054,182	24,239,157	+ 9,003,070
Spain.....	5,097,906	+ 331,868	3,858,440	+ 2,990,507
Germany.....	4,362,638	— 24,370,921		
Holland.....	1,863,579	— 632,435	9,943,817	+ 3,133,980
Austria-Hungary.....	150,707	— 1,534,618		
Belgium.....	631,602	+ 7,908,425		
Brazil.....	4,666,888	+ 191,727		
Paraguay.....	940,891	+ 15,759	634,724	+ 14,113
Uruguay.....	842,510	— 138,364	3,376,302	+ 1,140,543
Chile.....	338,727	+ 137,712	784,093	+ 67,351
Bolivia.....	173,917	+ 37,229		
Exports to order.....			90,986,655	+ 40,523,309

It is estimated that about 60 per cent of the "exports to order" were for British account. Germany, Austria-Hungary, and Belgium have disappeared from the export list, although it must be considered almost certain that at least the first two have received Argentine products to a large extent through neutral countries. In the first half of 1914 Argentine exports sent to these three countries were: Germany, \$26,994,037; Belgium, \$15,119,662; Austria-Hungary, \$1,152,444.

Import duties in the first half of 1915 amounted to \$18,787,713, a decrease of \$12,333,079.

MANUFACTURERS' SALES METHODS.

[Consul Homer Brett, La Guaira, Venezuela, Sept. 25.]

So many criticisms of American business methods are heard that it is well to mention an occasional complimentary statement that is made. An automobile agent in this district was approached by a person who, considering himself entitled to special treatment, proposed to purchase a car, but demanded that the agent relinquish his commission in favor of the purchaser. The proposition was declined, and no sale was made. This individual, however, going to New York shortly after, bought one of the cars while there. The manufacturers, solely because of the shipping directions, sent the entire commission to their Venezuelan agent who by telling the story somewhat gleefully is thus stimulating further interest in American trade.

A Trinidad newspaper commenting on the arrival of four American automobiles for Ciudad Bolivar states that there are now 50 motor cars, all of American make, in that Venezuelan metropolis on the Orinoco River. American cars, however, have been much farther up the Orinoco than Ciudad Bolivar. In the dry season the trip from Caracas to San Fernando de Apure is frequently made; it requires about 48 hours driving.

IRON-ORE SHIPMENTS FROM NARVIK TO CONTINUE.

[Consul General Ernest L. Harris, Stockholm, Sweden, Sept. 13.]

Owing to recent seizures of a number of Swedish steamers carrying iron ore from the Norwegian port of Narvik to Rotterdam, it was reported that it was the intention of the Trafik-Aktiebolaget Grangesberg-Oxelösund to discontinue shipments from Narvik. The company, however, states that this report is incorrect, and that it is its intention to continue shipments as heretofore. This will be of interest in the United States, for the reason that about 300,000 tons of Lapland ore are being exported to Philadelphia each year. These shipments will continue.

The truth of the matter is that if shipments ceased from the port of Narvik, the mining industry in Lapland would practically come to an end, as the Finnish Bay port of Lulea is icebound during seven months of the year. This would place Sweden also, for the time being, dependent solely upon the German market, a condition which would seriously affect the ore output on the whole.

The exportation of iron ore from the port of Oxelosund is on the increase. This ore goes chiefly to Germany. The traffic in the Baltic has not thus far been interfered with. It has been the practice of the Trafik-Aktiebolaget Grangesberg-Oxelösund to have continually in store at Oxelosund something like 100,000 tons of ore. The exportations have been such that the supply now actually on hand at this port amounts to but 45,000 tons.

Arrangements Made to Double Output.

The daily supply of iron ore from the Grangesberg district in central Sweden is 2,000 tons, but arrangements are being made to double the output. A special road is now being constructed in Oxelosund, and it is the intention of the Grangesberg Company to send bottom-tipping ore cars from Gellivaara in Lapland in order to be able to handle more easily the increased demands upon the loading capacity of the quay at Oxelosund.

According to the "Affärsvärlden" of September 8, 1915, the Iron Association, at a meeting held in Stockholm August 31, reported:

The conditions of sale for export have been unfavorable for the more important products of the Swedish iron trade, except pig iron, throughout the first half year. The quantities exported during that time, partly of ingot and steel blooms, partly of ready-rolled bar and fine iron, fall even under the low figures of the first half of 1914. An improvement, has, however, asserted itself in July and August, with more lively demand and increased export; and as the home consumption is also good, the rolling mills are busily engaged, whereas the demand for steel blooms and hammered iron is still very insignificant. The export of pig iron has also been checked. Other difficulties, caused by the war, oppress the iron industry. Hard coal can now scarcely be obtained from abroad. The difficulties in procuring other important necessities from abroad are still greater, in some respects insurmountable, and the prices that have to be paid are, as everybody knows, raised beyond all reasonable limits. Owing to these difficulties, and the general unsafety, caution regarding future sales is still advisable.

[Chargé d'Affaires Jefferson Caffery, American Legation, Stockholm, Sept. 6.]

Export of Iron Products Very Poor During Year.

With the exception of pig iron, the export of iron products was very poor during the last year. During July and August, however, the demand has been greater and the exportation a little more lively, and as the demand within Sweden is satisfactory the iron plants

have had plenty of work. The demand for wrought iron has been very small, and exportation has had many difficulties because of measures taken by the belligerent countries. Other obstacles in the way of the iron industry are the difficulty in getting anthracite coal, and the difficulty and almost impossibility of getting certain other products that are necessary.

A report shows that on June 30 there were 109 smelting furnaces in action out of 125; 168 Lancashire forges out of 255; 14 Bessemer furnaces out of 24; 59 Martin furnaces out of 75. On July 31 there were in action 108 smelting furnaces, 14 Bessemer, and 61 Martin furnaces. The production from January 1 to July 31 was:

Class of production.	1914	1915	Class of production.	1914	1915
	<i>Tons.</i>	<i>Tons.</i>		<i>Tons.</i>	<i>Tons.</i>
Pig iron.....	412,300	426,500	Martin iron.....	284,800	285,400
Bloom.....	78,300	85,200	Rolled iron and steel.....		218,300
Bessemer iron.....	63,000	62,200			

The importation of iron and steel has greatly decreased. During the first half of 1915 there were 35,400 tons less imported than in the corresponding time last year.

NEW ZEALAND COMMERCIAL NOTES.

[Consul General Alfred A. Winslow, Auckland, Sept. 15.]

War Increase for Food Products.

The average increase in retail prices of food products in the 25 more important towns and cities in New Zealand from July 31, 1914, to July 15, 1915, was 12.15 per cent, with the greatest advance for groceries.

Large Exports.

The exports from New Zealand during August, 1915, amounted to \$9,668,441 against \$13,448,889 for July, August, and September, in 1914, with heavy exports for the first half of September. A large portion of the above exports consisted of frozen beef and mutton.

Imports from the United Kingdom.

Imports from the United Kingdom to New Zealand during June decreased 12½ per cent over June, 1914, while there was a 5 per cent decline for the June quarter against a 23 per cent decline for the March quarter, as compared with 1914. Imports of china and earthen ware for June suffered most, being only about 50 per cent of normal, with woollens and worsteds next at about 75 per cent.

Wheat and Oats in New Zealand.

According to a special grain census taken in New Zealand, there were 4,161,805 bushels of wheat and 2,391,361 bushels of oats in the country, which is more than enough to supply the local demand until another harvest.

New Zealand Government Debt.

The national debt of New Zealand on March 31, 1915, was \$486,941,552, of which \$118,358,536 falls due before March 31, 1922. Of this, public works, such as railways, public buildings, telegraph and telephone lines, roads and bridges, water-power development, etc., account for \$249,231,437, and advances to settlers, workers, and local authorities for \$71,238,776.

ANTUNG TRADE FOR SECOND QUARTER OF YEAR.

[Consul John E. Davis, Antung, China, Aug. 19.]

Chinese customs returns at Antung show that during the second quarter of 1915 the amount of import duty collected was \$24,305, American currency, less than in the corresponding quarter of 1914. However, this was more than counterbalanced by an increase in export duty of \$34,588.

The chief item of interest in the Antung trade returns for the June quarter of 1915 is the decrease in the imports of Japanese cotton goods into Manchuria through this port.

As a result of the inauguration of lower freight rates on through shipments over the Chosen and South Manchurian railways, a considerable portion of the Japanese cotton goods has undoubtedly been diverted to this port from Dairen, and it is a remarkable fact that in spite of the increase thus resulting, practically every line of Japanese cottons shows an appreciable decrease.

A large increase in exports of beans, bean cake, and cereals was due to the unusually fine crops gathered throughout this district last year, which were held until this year for market. Silk products show an increase this year because of the unfavorable market obtaining in 1914, with the consequent reduction of exports at that time. Timber increases were due to the floods in the autumn of 1914, which brought down an abnormally large number of logs.

Drop in Prices of Manufactured Cotton.

The prices of Japanese piece goods, sheetings, drills, jeans, and imitation native cloth have been about 20 per cent lower than for the corresponding quarter in 1914. This has been occasioned by the same factors that produced a decrease in the imports of these goods. The price of cotton yarn also fell about 20 per cent, but the steady demand and the fact that the Chinese mills could not produce a sufficient supply to satisfy it combined to keep the price of the imported article more steady.

Increases in prices of metals were: Zinc, 200 per cent; galvanized-iron sheets, 100 per cent; brass, 60 per cent; galvanized-iron wire, 50 per cent; iron plates and sheets, 40 per cent; copper, 40 per cent; wire nails, 30 per cent.

Sugar has increased in price by about 50 per cent, but the market has been rather dull. The importation of foreign flour was 6,169,866 pounds in 1914, but none was imported in 1915, on account of the great demand in Europe, and the consequently small supply and high prices of American flour. The increase in the receipts of native flour from 4,529,000 pounds in 1914 to 8,608,800 is a natural result of the decrease in the foreign article.

One result of the shortage of dyestuffs during the quarter was the systematic and thorough manner in which the Japanese went through this district gathering up and reexporting to Japan all stocks of dyes. This district was carefully combed and any new consignments were also quickly bought up and sent to Japan.

An elaborately illustrated volume issued by the Fine Cotton Spinners' and Doublers' Association (Ltd.), of Manchester, which outlines the development of the cotton industry of Lancashire, England, has been added to the library of the Department of Commerce through the courtesy of Consul R. E. Holaday.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Paper, No. 18848.—An American consular officer in France reports that a commission agent in his district desires to represent, on a commission basis, American manufacturers and exporters of all articles and raw materials required in the paper trade. Reference is given.

Leather goods, jewelry, tobaccoists' supplies, etc., No. 18849.—An American consular officer in Canada reports that a business man in the Fiji Islands desires to communicate with American manufacturers or exporters of novelties, such as cheap watches, clocks, imitation and rolled jewelry, electric torches, leather goods, electric plated ware, tobaccoists' goods, cutlery, toys, and trick goods. Correspondence should be in English.

Foodstuffs, No. 18850.—The Bureau is informed by an American consular officer in Spain that a firm dealing in preserved vegetables, peppers, etc., desires to communicate with American firms interested in that line of goods.

Carpets and rugs, china and earthen ware, etc., No. 18851.—An American consular officer in Chile reports that a merchant in his district desires to receive catalogues, price-lists, samples, etc., from American manufacturers and exporters of unmounted plate-glass mirrors, mouldings for frames of all kinds, carpets and rugs, chinaware and glassware, wool and mixed blankets, wrapping paper, paper for making flowers, and paper flowers. Correspondence in Spanish is preferred, although English may be used.

Tobacco, No. 18852.—A business firm in Denmark has informed an American consular officer that it desires to represent American exporters of leaf tobacco. Correspondence may be in English.

Gasoline and lubricating oils, No. 18853.—An American consular officer in Chile reports that a business man in his district desires to secure the agency for American motor spirits and lubricating oils. He desires to contract for the territory of Magallanes and the southern part of Argentina. The spirits should be of a high and uniform quality. In order to avoid delay in the receipt of samples, they should be sent by ordinary mail, when possible, marked "Muestras sin valor" (samples without value) instead of by parcels post.

Tartaric products, No. 18854.—The Bureau is informed by an American consular officer in Spain that a firm desires to communicate with American manufacturers or exporters of tartaric products.

Rubber stamp materials, etc., No. 18855.—A manufacturer in Russia has informed an American consular officer that he desires to establish business relations with American manufacturers or exporters of material and equipment required for the manufacture of rubber stamps and engraving work. Correspondence should be in Russian or German.

Construction materials, arsenal equipment, etc., No. 18856.—An American consular officer in the Far East reports that a merchant in his district desires to receive catalogues, prices, etc., of building materials, machinery, and appliances for the construction and equipment of an arsenal. Further information may be had on application to the Bureau or its branch offices.

Brandies, etc., No. 18857.—An American consular officer in Spain reports that a firm in his district desires to establish business relations with American importers of brandies, liquors, etc.

General agency, No. 18858.—A firm of commission agents in Chile has informed an American consular officer that it desires to secure the agency for American goods of all kinds. No particular line is mentioned. The firm is also willing to purchase for American importers such Chilean products as algarobilla beans, hides, nuts, linseed, quillai bark, nitrate, etc.

Staves, No. 18859.—An American consular officer in Portugal reports that a firm in his district desires to purchase staves for the manufacture of wine pipes. Large quantities will be bought if suitable quotations are made. Correspondence may be in English. Terms desired are "cash against documents." Reference is given.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Navy Department supplies, No. 2735.—Sealed proposals will be received at the Bureau of Supplies and Accounts, Navy Department, Washington, D. C., until November 9, 1915, for furnishing the following materials. Firms interested therein should make application to the Bureau of Supplies and Accounts, giving the schedule numbers desired: Schedule 8902, steel cap screws; schedule 8903, universal grinding machine and wire feed screw machines; schedule 8904, furnishing and erecting wooden water tanks; schedule 8905, furnishing and installing exhaust system; schedule 8906, polishing and buffing lathes; schedule 8907, watch-mark braid, whisk brooms, combs, cotton handkerchiefs, and needles; schedule 8908, furnishing and erecting forging furnace; schedule 8910, steel hoop and locking ring forgings; schedule 8911, rubber air hose and drawing and tracing plan sheets; schedule 8912, power gap shear and rotary shear with circular cutting extension; schedule 8913, blowers to deliver 1,000 cubic feet of air per minute; schedule 8917, bolts and nuts, brass chain, boat chains, files, adjustable hack-saw frames, brass spur grommets, steel nuts, planes, hammock rings, copper tacks, portable electric drills, and electric bench grinders; schedule 8918, window glass, wash deck rubber hose, unlined linen hose, pump leather, and cotton twine; schedule 8919, paint drier, dry white lead, and pure lard oil; schedule 8920, steel shapes and sheet steel; schedule 8921, megaphones; schedule 8922, hot-rolled or forged carbon steel and medium steel "I" beams; schedule 8923, single conductor wire; schedule 8924, bar steel, brass pet cocks, admiralty metal condenser tubes, check valves, and gate valves; and schedule 8925, water-gauge glasses, hard rubber in sheets, and insulating varnish. Bids will also be received until November 16, 1915, for the following: Schedule 8906, radio motor generator; schedule 8914, grade No. 1 glycerine; schedule 8915, bells for motor boats, sal ammoniac, and 32-inch wide mattress ticking; and schedule 8916, crystal oxalic acid.

Construction work, No. 2736.—Sealed proposals will be received at the United States Engineer Office, Room 415, Customhouse, Cincinnati, Ohio, until November 1, 1915, for reconstructing, in concrete, part of abutment at Dam No. 1, Muskingum River, Ohio. Specifications, blue prints, and further information may be had on application to the above-named office and at the United States Engineer Suboffice at Zanesville, Ohio.

Oil tanks, No. 2737.—Sealed proposals will be received at the office of the General Purchasing Officer of the Panama Canal, Washington, D. C., until November 16, 1915, for furnishing, by steamer, free of all charges, on dock, at either Colon or Cristobal (Atlantic ports) or Port of Ancon (Balboa, Canal Zone) (Pacific port), Isthmus of Panama or furnishing and erecting steel oil-storage tanks. Circular No. 951.

Panama Canal supplies, No. 2738.—Sealed proposals will be received at the office of the General Purchasing Officer of the Panama Canal, Washington, D. C., until November 5, 1915, for furnishing, by steamer, free of all charges, on dock at either Colon (Atlantic port) or Port of Ancon (Balboa, Canal Zone) (Pacific port), Isthmus of Panama, copper cable and wire, steel reinforcing bars, steel wire, poultry netting, bolts, nuts, rivets, nails, lag screws, boat spikes, washers, pipe fittings, ship augers, twist drills, winch, hinges, key blanks, hammers, coal baskets, street lamps, water-gauge lamps, hose, packing, rubber bands, pencils, cardboard, Japan oil, locomotive black, yellow ocher, yellow chrome, and lumber. Circular No. 979.

Iron and steel scrap, No. 2739.—Sealed proposals will be received at the office of the General Purchasing Officer of the Panama Canal, Washington, D. C., until November 15, 1915, for the purchase of miscellaneous iron and steel scrap which is no longer needed. Circular No. 980.

SUCCESSFUL SALE OF GOVERNMENT FURS.

Excellent prices were realized for the United States Government's Alaska fox and beaver skins at St. Louis, on October 21, the public auction for which was announced in **COMMERCE REPORTS** for October 11 and 16, 1915. The following telegram, dated October 21, has been received by the Secretary of Commerce from Funsten Bros. & Co., of St. Louis:

We sold Government furs this morning as follows: Blue fox at an average of \$114.47, against \$42.21 average previous sale (in December, 1913, which was the first sale in the United States), an advance of 171 per cent. White fox at an average of \$24.55, against \$14.77 previous sale, an advance of 66 per cent. Beaver at an average of \$12.75. All Government furs sold at highest prices on record.

CHINESE IN UNITED STATES START PACIFIC LINE.

The China Mail Steamship Co., financed wholly by Chinese in the United States, has been organized on the Pacific Coast, for traffic between San Francisco and China. A telegram from Commercial Agent E. G. Babbitt, at San Francisco, to the Bureau of Foreign and Domestic Commerce, announces that the former Pacific Mail liner *China*, which has been secured by the new company, will inaugurate the service with a sailing on October 30.

Mr. Babbitt reports that the capital of the China Mail Steamship Co. is \$2,100,000. Besides acquiring the *China* the company is said to hold options on other steamships. Mr. Look Tin Eli, president of the Canton Bank of San Francisco, has been active in the negotiations that preceded the formation of the China Mail Co. The original plan called for the cooperation of Chinese on both sides of the ocean. San Francisco Chinese, however, have intimated that they preferred to have the project financed in this country.

The *China* is a vessel of 5,060 gross tons and 3,186 net.

NEW PUBLICATION OF BRITISH COMMERCIAL ORGANIZATIONS.

The Bureau of Foreign and Domestic Commerce has been studying British commercial organizations, and has just published a booklet that is full of concrete, pertinent facts on the subject. The world-encircling foreign commerce of the United Kingdom bulks large in the consideration of every phase of international economics; it is a factor to be reckoned with in the most famous marts and in distant jungle and desert stations. Americans engaged in developing export trade observe its manifestations in many lands, but with the system back of this activity, the methods and conduct of commercial affairs in the United Kingdom itself, the way in which the British Government fosters and directs expansion, the people of the United States are, perhaps, not so familiar.

As long ago as 1912 the Commercial Intelligence Branch of the British Board of Trade received 16,488 inquiries concerning trade possibilities, and in replying to these the branch was enabled to draw on a store of information supplied by a corps of investigators covering every section of the globe. If British exporters want concrete samples, the Government has available for inspection such articles as cotton vests from Bushire, Persia; raisins from Azerbaijan; antimony from Chungking, China; "kieselguhr" from Chile; hosiery and overalls from South Africa.

The title of this new publication of the Bureau is "Commercial Organizations in the United Kingdom," and its author is Mr. Archibald J. Wolfe, who has investigated the subject on the ground. In its 53 pages are included lists of all British chambers of commerce and a discussion of their methods and functions, a detailed account of the State aid to trade, and a description of manufacturers' and employers' organizations in all the leading industries.

This pamphlet is Special Agents Series No. 102, and 5 cents will bring it from the Superintendent of Documents, Washington, D. C.

URUGUAY ENDS NEGOTIATIONS FOR AMERICAN LOAN.

[American Minister Robert Emmett Jeffery, Montevideo, Sept. 4.]

There has just appeared in the local press a semiofficial statement to the effect that the Government had resolved to "desist" from the negotiations which have been in progress with American bankers for a loan of \$10,000,000. The statement explains that the Government desires to place the loan at 93, and that the bankers having required a new extension of time to consider this proposition, it had been decided to abandon the negotiations. The statement further suggests that, in any event, the financial situation of the Government is now reacting favorably and that the necessity for the loan no longer exists.

Navassa Island Light Station Contract Awarded.

The contract for furnishing and delivering all the materials (except the metal work and lantern glass) and labor for the erection of Navassa Island Light Station, West Indies, in the sum of \$89,800, has been awarded by the Secretary of Commerce to the Snare & Triest Co., 233 Broadway, New York, N. Y. The contract calls for the completion of the station within 18 months from October 8, 1915,

OPENING A RAILWAY TUNNEL IN TURKEY.

[Consul General G. Bie Ravndal, Constantinople, Sept. 3.]

Undoubtedly the most important event in railroad construction in Turkey to date is the recent completion of the large tunnel on the Bagdad Railroad piercing the Amanus Mountains on the border between Asia Minor and Syria. It is known as the Baghtché Tunnel, taking its name from the station of Baghtché, at its northern entrance, about 75 miles east of the city of Adana and some 60 miles northwest of Aleppo.

With the completion of this tunnel the most serious difficulties connected with the construction of the Bagdad Railroad have been overcome, and the work of connecting up many of the isolated stretches of track may be expected to be completed with reasonable rapidity. In spite of delays occasioned by the war, this most important undertaking in railroad construction in Turkey has passed the problematical stage and is now certain to become an accomplished fact in the near future.

The following details, taken from a recent issue of the local "Osmanischer Lloyd," throw interesting light upon the importance of the Baghtché Tunnel from a technical point of view:

Leaving Mamoure, last station on the Bagdad Railway in the Cilician plain, the line begins, at the foot of Amanus Mountains, to ascend, at a grade of 394 feet, the slopes of these mountains, which are intercepted by ravines crossed by means of eight steel bridges and seven small tunnels, the latter having a total length of 6,355 feet. Thus it arrives at Baghtche station, situated at an altitude of 1,754 feet, near the entrance of the great tunnel which bears its name. Before reaching the mouth of the tunnel the line runs through two other tunnels, having a length of 236 and 394 feet, respectively, and over a small bridge.

The great tunnel has a length of 16,028 feet. For about 8,000 feet it ascends to 246 feet above the level of the entrance, and then begins to descend and emerges at the other end 197 feet above the level of the entrance. Between this point and Istahle station, which is still building, there are four more tunnels having a combined length of 3,500 feet. The total length of the tunnels it has been necessary to construct in crossing this chain of mountains is therefore a little more than 26,250 feet.

The great tunnel with its length of more than 3 miles is by far the longest in Turkey. It is only exceeded in length by the great tunnels in the Alps and elsewhere. Still, the technical difficulties which had to be overcome in piercing through have been just as great as those encountered in the Alps. In fact, for several hundred yards, the engineers encountered a rock of practically pure quartz, which was so hard that it was necessary to have recourse to boring machines of special construction.

ASIATIC APPLES FOR AUSTRALIA.

[Consul General Ransford S. Miller, Seoul, Chosen, Sept. 9.]

A Chosen newspaper announces that an order for 500 and 5,000 cases of two varieties of apples has lately been received by the Fruit Growers' Guild at Taiku, Chosen, for export to Australia, the export being undertaken by the Nagasaki branch of a British company in London. The firm has hitherto been exporting apples produced in Aomori Prefecture in Japan, but having recently heard of the good reputation of apples produced in Taiku has decided on making the above venture. The agent who came to Taiku to negotiate with the fruit growers is said to have declared that Taiku apples are very good in quality.

MEXICAN OIL PRODUCTION.

[Vice Consul Thomas H. Bevan, Tampico, Oct. 9.]

During the week of September 9, one of the biggest gushers in the Mexican fields was brought in by George Harmon. The well is located in the Panuco field less than 100 feet from the big Dutch-Shell gusher which has an estimated production of 100,000 barrels of oil per day. The oil was struck at a depth of 2,120 feet, or 314 feet deeper than the Dutch-Shell well. As a 55,000-barrel tank had already been constructed on the lease, all the oil was saved and accurate gauge of the well was made. In about 15 hours the tank was filled and the well was shut in without any leakage. This well is estimated as being capable of producing 90,000 barrels per day.

New Drilling Decree.

A decree was issued on August 14 prohibiting oil companies from drilling for the production of crude oil within 30 meters (98½ feet) of the boundaries of their lands. It is understood that this decree will not be retroactive and, consequently, will not affect the wells now being drilled within the 30-meter zone.

Difficulties in Making Crude-Oil Shipments.

The shipments of crude oil from Tampico to United States ports during September amounted to 809,728 barrels, as compared with 951,589 barrels shipped during September of the preceding year. This decrease was due to a great extent to the condition of the harbor. The heavy sea caused by the recent hurricanes in the Gulf, combined with a freshet in the Panuco River, caused a sand bar to be formed about 165 feet from the end of the jetties on which there is only about 19 feet of water. The Huasteca tanker *Charles E. Harwood* was the first steamer to leave after the storm and struck the bar, drawing 21 feet. The stern post was bent and several blades were broken off the propeller. After pumping about 5,000 barrels of oil overboard, the steamer was floated and towed back to Tampico. Since then the pilots have refused to take any ships out of Tampico drawing over 17 feet, which means that they can carry only about one-third of a cargo. A number of oil ships have been laying in Tampico for over 10 days, waiting for the pilots to sound the bar and see if there is not a deeper channel, as it would be unprofitable to sail with one-third of a cargo.

A Suction Dredge Proposed—Shipments to United States.

Negotiations are now pending between the oil companies and the Government in regard to raising money to bring a seagoing suction dredge from the United States to keep the bar open, and it is most probable that a satisfactory arrangement will be made, as it is vitally important to the oil companies as well as to the Mexican Government that the Tampico Harbor be kept open. A channel of about 24 feet could be maintained in this manner.

Barrel shipments were made to United States ports during September as follows: 147,682 to Baltimore; 115,887 to New Orleans; 100,326 to Port Arthur, Tex.; 93,000 to New York; 88,070 to Lynchburg, Tex.; 75,120 to Tampa; 49,087 to Port Cristobal, Canal Zone; 40,000 to Sabine, Tex.; 33,251 to Aransas Pass, Tex.; 32,305

to Freeport, Tex.; 20,000 to Warner, N. J.; and 15,000 to Baton Rouge, La.

Barrel shipments from Tuxpam by the Compania Mexicana de Petroleo "El Aguila" S. A. included 63,950 to New York; 48,884 to Carteret, N. J.; 126,384 to Philadelphia; and 40,502 to Baton Rouge, La. The statistics of shipments made by the Penn Mexican Oil Co. from Tuxpam during September are not yet available.

SEPTEMBER, 1915, IMPORTS, EXPORTS, AND TRADE BALANCE.

Figures to-day made public by the Bureau of Foreign and Domestic Commerce reveal new high records in American export trade and export balance. September, 1915, exports totaled \$297,766,750 and exceeded by \$79,526,749 the total for September, 1913, and by \$141,714,417 that for September, 1914. September imports this year aggregated \$151,422,831, being less by \$19,662,012 than those of September, 1913, and more by \$11,712,220 than those of September last year.

Nine months' exports this year totaled \$2,529,575,095, compared with \$1,467,401,989 last year and \$1,733,422,158 two years ago. Imports for the nine months' period of 1915 were valued at \$1,302,281,591, against \$1,410,071,874 last year and \$1,327,385,071 two years ago.

The September export balance was \$146,343,919, being nine times as much as the export balance of \$16,341,722 in September, 1914, and only \$41,693,371 short of the export balance for the entire fiscal year 1910. The nine months ending with September last show an export balance of \$1,227,293,504, an increase of \$1,170,000,000 over that for the corresponding period of 1914 and \$821,256,417 over that of 1913.

Duty-free imports comprised 71.6 per cent of the total imports for September, 1915, and 61 per cent of those of September, 1914. Their increased percentage this year reflects the marked growth in imports of factory materials, mostly on the free list.

Gold imports during September totaled \$42,042,648, exceeding by \$40,008,658 the month's exports of gold, which were \$2,033,990. In the nine months ending with September gold imports aggregated \$265,871,213 and gold exports \$12,936,680, making the net inward gold movement \$252,934,533, compared with a net outward movement of \$117,714,832 in a like period of 1914 and a net outward gold movement of \$27,879,671 in a like period of 1913.

COTTON CROP IN CHOSEN.

[Consul General Ransford S. Miller, Seoul, Sept. 9.]

The Seoul Press states that the present estimate of the cotton crop in South Zenra Province for this year shows an increase over the crop of last year of some 2½ per cent, making the total crop in that Province according to the present estimate 28,375,248 pounds. This crop shows an average production per 0.2451 acre of 463.1 pounds. A much better crop was hoped for by the authorities in this Province, which is the leading cotton district in Chosen, but the severe rains and the unseasonable weather during August hindered somewhat the growth of the plants.

RESULTS OF MAGNETIC SURVEY OF UNITED STATES.

Observations have been made at more than 1,000 new stations and 200 repeat stations since the publication in 1910 by the United States Coast and Geodetic Survey of a report containing its isogonic chart, based upon the magnetic survey of the United States which was begun in 1899. The results are given in Special Publication No. 33, Serial No. 18, of the Survey, on: "Terrestrial magnetism—Distribution of the magnetic declination in the United States for January 1, 1915, with isogonic chart and secular change tables."

The plan for this work contemplated, first, a general magnetic survey of the country, with stations 30 or 40 miles apart, and, second, the addition of more stations in magnetically disturbed areas. It also provided for observations at a sufficient number of "repeat" stations to determine the change in the magnetic elements from year to year. The work has now advanced to the point where observations have been made at a great majority of the county seats, and the examination of areas of marked local disturbance is in progress.

The isogonic chart is a map on which lines are drawn through places at which the values of the magnetic declination are the same. The present chart is based on about 6,000 values of declination, including about 800 in Canada and 300 in Mexico and the West Indies.

This chart is also published separately, on heavier paper, for the use of those who do not need Special Publication No. 33 or desire an unfolded map for mounting purposes. The publication or the separate isogonic chart may be obtained by application to the Coast and Geodetic Survey, Washington, D. C.

RICE CROP OF CHOSSEN.

[Consul General Ransford S. Miller, Seoul, Sept. 9.]

Official estimates now published show an apparent diminution of this year's Chosen rice crop from last year's of only 6.9 per cent. This gives an indicated crop of 57,946,332 bushels, an actual decrease from the 1914 crop of 4,308,603 bushels. The following table shows the rice crops in Chosen for the past six years:

Year.	Bushels.	Year.	Bushels.
1909	38,184,530	1912	45,982,30
1910	40,538,220	1913	51,664,102
1911	51,060,332	1914	62,254,835

NEW PARCEL-POST ARRANGEMENTS IN SPAIN.

In continuation of information sent by him and published in COMMERCE REPORTS for July 29, 1915, Consul Wilbur T. Gracey, of Seville, reports that the Government has signed an imperial order extending the parcel-post service to the Spanish post-offices in North Africa.

PROGRESSIVE PEKING.

[Extract from Peking Daily News of Aug. 26, forwarded by Commercial Attaché Julean H. Arnold, Peking.]

In spite of old-fashioned notions and old-fashioned ways Peking, it must be conceded, is showing progress in a western sense, though not perhaps at a western rate of acceleration. The most noticeable improvements being carried out at present concern public health, pure food, markets, sanitation, care of roads, traveling facilities, etc. We have seen in the Hatamen, Morrison Street, and other main thoroughfares the introduction of up-to-date road-making methods, and now we are pleased to note that the Chien Men Ta Chai is being similarly modernized. The large stones which formed the bed of the road and which rendered traveling uncomfortable have been removed and a macadamized road constructed, thus giving a proper approach to the Temple of Heaven.

Last week we outlined the ambitious scheme of the Ministry of the Interior for securing a better irrigation system for Peking. Attention is to be paid to the dredging of the canals which by neglect have become filled with mud and dirt. The elaborate scheme submitted by the engineers for improving the waterways could not be undertaken for lack of funds, but it has been decided to proceed with the more important part of the work. The Ministry proposes to dredge the canals which follow the city wall and flow past the three city gates at the south of the metropolis, these canals to have an average width of 6 chang and a depth of 6 feet. They will then be rendered waterways in the strict sense of the word, as they will then carry off more effectively the sewage of the city, for not only are the century-old drains being repaired but new ones are being constructed, with the result that a distinct advance in sanitation will soon be recorded in Peking.

In the matter of public health a beginning is being made in the education of the people in hygiene, care of children, food precautions, etc., and private effort in these directions is being supplemented by organized municipal supervision. Of course "Rome was not built in a day," and neither will Peking be made a model city in a month or a year. Principles of municipal activity having been recognized, they will be developed as public funds permit, and in due course as public opinion demands and money is forthcoming Peking will be the model city which the administration hopes to make it and the model prefecture it is designed to be, thus setting an example which can be of practical value to the cities throughout the 18 Provinces, and indeed to every patriotic Chinese.

PROTECTION OF TRADE-MARKS IN PARAGUAY.

[Consul Samuel Hamilton Wiley, Asuncion, Sept. 7, 1915.]

In view of the frequency with which foreign trade-marks are registered in Paraguay by third parties in order to force the real owners to buy the right to their use, the American consul at Asuncion has suggested that he be notified when American firms arrange for the registration of their marks in that country. He will then be in a better position to determine whether the marks are being registered in the name of the owners or not, and may be able to save manufacturers and exporters considerable annoyance and expense at a later date.

HOSPITAL AND MEDICAL SCHOOL SUPPLIES FOR CHINA.

[Commercial Attaché Julean H. Arnold, Peking, Aug. 18.]

The commercial attaché has received from time to time suggestions from American hospitals and medical schools in China urging the establishment in Shanghai of an American firm carrying a full stock of hospital and medical school supplies.

It would seem that the hospitals and medical schools in China experience much difficulty in securing supplies of gauze, cotton of different fibers (sterilizing done in China), suture material, drugs and chemicals in bulk, and surgical instruments. It is recommended that an establishment be opened in Shanghai capable of combining the carrying of stocks of drugs and chemicals with surgical instruments and appliances. There will be a growing demand for these materials in China, especially since the inauguration of the work of the Rockefeller Foundation Commission toward encouraging medical education in this country. The work of this commission will result in securing for certain medical schools and hospitals already in the field a better and more complete equipment and facilities for more extensive work, all of which will involve the creation of a greater market for American drugs, chemicals, surgical instruments and appliances.

It is also desirable that the suggested establishment make provision for repairing and nickel-plating surgical instruments, as there is a large and increasing demand for this line of work.

The China market is already well supplied with tabloids, as the firms of Parke, Davis & Co. and Burrows, Wellcome & Co. have their representatives in China supplying the demand for these materials. There is now wanted a general supply house for all of China for the other materials already mentioned, and this office is of the opinion that this opportunity is one worthy of the consideration of American firms interested in these lines. It may be possible that one firm could advantageously represent a number of American manufacturers of the different varieties of goods above enumerated. The needs of this market may be found to be somewhat different from those obtaining in the United States and for this reason it would be well for the manufacturers interested to send their representatives or a representative to study the situation, with the object in view of noting the peculiar demands which conditions in this country create.

This office is informed that there are 500 medical missionaries in China, and probably more than one-half of these are American.

The work of the Rockefeller Foundation Commission will result in giving an impetus to medical education in this country, so that the demand for surgical appliances and hospital materials will increase from year to year, making it imperative that a general supply house be established in some center, such as Shanghai, and the opportunity now presents itself for American manufacturers to see that this general supply house is American.

[The commercial attaché sends the name of a new Chinese-American publishing company which is about to open offices in Shanghai for the representation of certain American publishers of text books and dealers in scientific instruments. He suggests that American manufacturers of surgical instruments and laboratory apparatus and of medical school and hospital supplies may be able to ar-

range with this concern to handle their products. The address of the new company may be had from the Bureau of Foreign and Domestic Commerce; refer to file 753.]

As of interest in connection with the plans of the Rockefeller Foundation, the following from the Peking Gazette of August 24 will be of interest:

A Great Medical Mission.

The Japan Advertiser reports the arrival in Yokohama on August 23 of the Rockefeller Institute party, which is coming to China on a great medical mission. The party consists of Dr. William H. Welch, president of the board of directors of the Rockefeller Institute and one of the leading pathologists in America; Dr. Wallace Butterick, executive secretary of the General Education Board of the same institution; and Dr. Simon Flexner, one of the directors of the Rockefeller Institute. They will be in China about three months.

FOR MODERN MEDICAL EDUCATION.

"The object of our trip to China," said Dr. Butterick, "is to start to plan modern medical education there. The Rockefeller Institute plans to do this under its subsidiary branches, chief among these the China Medical Board. Our plans deal entirely with medical education and have nothing to do with medical research."

Among the things that the mission aims to make possible, Dr. Butterick mentioned the following: More medical schools organized on modern lines and financed by the Rockefeller Institute, nurses' training schools for Chinese girls, more hospitals with modern equipment, better chances for Chinese medical school graduates, hospital staffs, and missionaries to study medicine and do research work. One of the proposals is to establish a system of pensions that will allow missionaries on furlough to study medicine in American universities.

Dr. Butterick, as the spokesman of the party, last night outlined the plans for their work in China.

A CONFERENCE AT PEKING.

"We have purchased the Union Medical College at Peking, and the primary purpose of this trip is to go there and confer with the faculty of the college, which has been established for 25 years, on the subject of reorganizing and developing the institution along modern medical lines.

"Following the completion of our work at Peking we shall go to Shanghai for a conference with representatives of three other of the foremost medical schools in China—St. John's, Harvard, and the Union Medical College, the latter being at Nanking.

"The Union Medical College at Nanking has invited us to talk over the matter of uniting with it in establishing a second strong school there equal to the first at Peking.

"We shall then go up the Yangtse River to Chang Sha, where is located the Hunan Yale Medical School, supported largely by Chinese Yale alumni. The General Education Board is already supporting six medical professors in this school, and we are going there to confer with them particularly concerning the installation of better and more modern physical equipment.

A TRIP TO CANTON.

"Returning to Shanghai, we will then journey to Canton to take up with the authorities of Canton Christian College the matter of improved medical education.

"We are also authorized by the Rockefeller Foundation to aid a number of missionary hospitals and to build several more in addition to those already in that part of the country.

ARRANGE FOR INTERNES.

"One of the most important features of our work in China is to effect more friendly relations between the medical schools and hospitals in China, so that the hospital staffs may for three months in each year attend the colleges for

special courses and in turn to allow the graduates of the medical schools every opportunity to enter the hospitals as internes.

"Another thing that should not be overlooked is our intention to arrange for the establishment of one or more nurses' training schools for Chinese girls, so that native Chinese young women nurses may be obtained for the hospitals.

"There will be six more fellowships established for Chinese students desiring to take up medicine as a profession. We already have six. The additional ones, as at present, will be awarded on the basis of competitive examinations for Chinese graduates in medicine.

"We will also establish five nurses' fellowships, by which stipends will be paid to missionaries returning to the United States on furlough, to allow them to study at medical schools in the States."

While Dr. Buttrick did not make any estimate as to the sum which will be expended in this great work for the advancement of Chinese medical science, the expenditure will be many millions.

A NATIONAL INDUSTRIAL BANK FOR CHINA.

[Extract from Peking Daily News of Aug. 31, by Commercial Attaché Julian H. Arnold, Peking.]

The Chinese Ministry of Finance is making active preparations for the early establishment of the Min-Kuo Industrial Bank, the organization regulations of which have recently been sanctioned by the President. The preparations are so advanced that even the necessary clerks and accountants for the bank are being secured. The Bank of China will soon hold an examination for the purpose of selecting competent accountants, most of whom are believed to be intended for the service of the new bank. Needless to say the necessary capital for starting the business of this bank has also been secured. This new financial institution will in a short time prove to be one of the most important business houses of the country.

The Min-Kuo Industrial Bank has an authorized capital of \$20,000,000 (about \$10,000,000 United States currency). One-half of this amount will be provided by the Government and the other half will be secured by issuing shares. Besides financing the various industrial enterprises according to the approved modern system, this new bank will also undertake transportation and insurance business.

The head office of the Min-Kuo Industrial Bank will be in Peking and branch offices will be established in the more important trading centers of this country, such as Shanghai, Tientsin, Hankow, Canton, etc. According to the regulations this bank will do business for a period of 60 years, at the end of which the bank authorities may apply to the Minister of Finance for an extension of the period. The \$20,000,000 capital of the bank will be divided into 200,000 shares of \$100 each.

CORRECTION.

In COMMERCE REPORTS for October 18, 1915, the table of August export trade on page 253 was made up from unrevised figures. August, 1915, exports of paints and varnishes should have read \$739,000 and eight months' exports, \$5,870,000. Agricultural implements for August, 1914, totaled \$674,000 and in August, 1915, \$1,455,000; while for the eight months ending with August, 1914, the exports of that group aggregated \$19,946,000, compared with \$9,279,000 in a like period this year.

REVIVAL OF COPPER MINING IN SWEDEN.

[Consul General Ernest L. Harris, Stockholm, Sept. 24.]

It is reported that a number of new copper-ore deposits have been found in the neighborhood of Bjornange, in the County of Are, Province of Jamtland. Ten applications have been made to the Government authorities in order to investigate and possibly mine these deposits, in case they are found to be of sufficient importance. It is claimed that an analysis of these deposits shows anywhere from 10 to 20 per cent of copper.

Copper ore (chalcopyrite) is at present mined extensively in only one district, the Falun, Province of Dalecarlia. This is the largest copper-ore deposit in Sweden and supposed to be one of the largest deposits of chalcopyrite in the world. This mine has been worked for nearly 700 years. Other copper deposits are found at Garpenberg in southern Dalarne, at Tunaberg in Sodermanland, Bersbo in Ostergotland, and Areskutan in Jamtland. The last-named mine is commonly known as an American mine from the fact that some American capital is invested in it and also because it is partly fitted up with American machinery.

Decline in Production—Could Supply Own Needs.

Sweden's copper production has declined from 44,274 tons in 1875 to 5,458 tons in 1913. During the past year, however, there has been a revival of this industry. Lack of transportation facilities and high freight rates hampered Swedish manufacturers in securing their customary supplies from the United States, and this spurred many to see if it were not possible to mine a sufficient quantity of copper in Sweden to cover the domestic needs. Considerable difficulty was encountered in installing the proper machinery and in getting the right sort of labor, so that whatever increase there may be in the amount of copper mined in the Kingdom will be but temporary, and as soon as the war is over American copper will promptly take its old place in the importations of Sweden. [Official American statistics show that in the fiscal year ended June 30, 1915, the United States shipped to Sweden 34,545,504 pounds of copper pigs, ingots, and bars, valued at \$4,815,949, against 16,005,094 pounds (value, \$2,362,204) in 1914, and 9,080,914 pounds (value, \$1,471,885) in 1913; 519,980 pounds of copper rods and wire, valued at \$69,041, against 3,608 pounds (value, \$827) in 1914 and none in 1913; and \$244,181 worth of other copper manufactures, against \$51,403 worth and \$10,196 worth in the two preceding years, respectively.]

In 1865 Sweden imported only 196 tons of copper; in 1913 the amount imported was 9,560 tons. In 1865 the amount of copper exported from Sweden amounted to 1,487 tons; in 1913 the amount exported was 1,401 tons. These figures indicate that in a crisis like the present Sweden could mine sufficient copper for its own needs. As showing the importance of the copper mine at Falun in the past, it may be stated that during the history of the mine no less than 40,000,000 tons of ore have been mined, from which 500,000 tons of copper have been extracted. The copper produced in Sweden to-day is extracted from burnt pyrites obtained in the manufacture of sulphuric acid.

RENTS FOR DWELLINGS FIXED BY LAW.

[Commercial Attaché William C. Downs, Melbourne, Australia, Sept. 4.]

An interesting example of the paternal care exercised by the governments of the Australian States over the welfare of the small wage earner or proprietor is furnished by a bill introduced into the Parliament of New South Wales on August 19 "for the determination of fair rents for certain dwelling houses." The act applies to any dwelling subject to a lease made before or after the commencement of the act, for any term not exceeding three years, at a rent not exceeding \$500 a year, and within localities appointed by the governor.

It provides for the appointment by the governor of fair-rents courts, to which any lessor or any lessee who has paid or tendered all rent due under his lease may apply to have the fair rent of the dwelling house leased by or to him determined. In all cases the rent determined by the courts shall be the rent of the dwelling as from the date of the application. Neither barristers nor solicitors are allowed to appear for any party or upon any application in the courts.

Powers of the Court.

The following are the rules laid down to govern the court in fixing the rent:

In determining the fair rent the court shall first ascertain the capital value of the dwelling house. Such capital value shall be the unimproved value of the land, plus the estimated cost of erecting a similar dwelling thereon at the time of the receipt of such application, less such fair and reasonable sum as may be estimated for any depreciation which diminishes the letting value of the house.

Where it is proved that the dwelling house, upon purchase within three years before the application, with any additions subsequently made, cost more than the sum representing the capital value under the next preceding paragraph, the court may, if satisfied as to the bona fides of such purchase, add to such capital value the whole or any part of such greater cost.

The current rate books of the municipality or shire in which the dwelling is situate shall, as soon as they are available, in the year 1915 and in every year thereafter, be conclusive evidence of the unimproved capital value of the land.

The court shall determine the fair rent at a rate of not less than 5 nor more than 7½ per cent of the capital value of the dwelling house determined as aforesaid, plus the annual rates and taxes on the same, plus the amount estimated to be required annually for repairs (including painting), and plus insurance of any buildings, and plus an amount estimated to be the annual depreciation in value of the buildings, if such depreciation diminishes their letting value, and plus such amount, if any, as the court may deem proper to be allowed for the estimated time per year when the house may be untenanted, but the fair rent shall not in any case exceed 10 per cent of the capital value as ascertained under this section.

Where a building is occupied by two or more separate lessees, the court shall determine the fair rent of the building, and then determine the proportion of such fair rent as it shall deem to be the fair rent of the dwelling of the lessee making the application.

If any applicant being a lessee duly pays the rent of the dwelling leased by him, and otherwise performs the conditions of his lease, the lessor shall not demand any increased rent or give any notice or take any proceedings to terminate the tenancy during the pendency of the application.

In any case where the applicant is the lessee of a dwelling house and furniture, the court shall determine the fair rent of the dwelling house irrespective of the furniture, and shall also determine, in its discretion, the amount of rent to be paid for the furniture.

Findings Remain in Force for Three Years.

Unless otherwise provided the determination of the court remains in force for three years, and during that period no application can be made to vary it, unless where the applicant is the lessor and satisfies the registrar of the court that substantial alterations or additions have been made to the house.

Any covenants to pay rent in excess of that determined are void, and fines are imposed on the lessor who receives any sum in excess of the amount fixed. Penalties are also prescribed for any person who, by threat, endeavors to prevent or dissuade a lessee from making or prosecuting any application under the act, or who wilfully endeavors to impose any detriment or disadvantage upon a lessee by reason of his having made an application.

No costs are allowed in any proceeding under the act.

OPENING THE YANGTZE GORGES.

[Extract from Peking Gazette of Aug. 6, by Commercial Attaché Julian H. Arnold, Peking.]

The directors of a steamship company have petitioned the Chinese Government for a grant from the Szechwan provincial government to open certain gorges in the upper courses of the Yangtze River. The petitioners inform the Government that through their efforts some narrow and dangerous gorges in the upper Yangtze have been opened, proving a boon to navigation in that part of the river, but at present there still remain four gorges to be opened. The estimated expense will be \$200,000, of which the governor of Szechwan has consented to raise \$60,000 for the work. The petitioners request that the other \$140,000 be temporarily appropriated from the public funds of the Szechwan provincial government, to be refunded by the proceeds from a toll to be levied upon ships passing that part of the river after the gorges are opened. The Ministry of Interior has approved the plan of the petitioners' enterprise, but adds that the question relating to the appropriation of funds for this work should be decided after the ministry has obtained the views of the Szechwan governor.

THE HORSE-BEAN CROP OF SPAIN.

[Consul Wilbur T. Gracey, Seville, Sept. 6.]

One of the crops that is largely raised in Andalusia and is appearing more frequently among the exports is the horse bean, or "haba" (*Faba vulgaris*). Recent statistics given out by the Director General of Agriculture show that the production of "habas" in Spain amounts to 146,975 metric tons (Metric ton=2,204.6 pounds). The area devoted to the cultivation of this legume is 206,910 acres—87,586 acres in irrigated districts, producing 50,190 metric tons, and 119,324 acres cultivated by dry-farming methods, producing 96,785 metric tons.

The sections of Spain in which the crops are the largest are eastern Andalusia (32,020 tons), western Andalusia (27,830 tons), and Navarra and the Basque Provinces (12,860 tons).

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Refrigerating machinery, No. 18860.—A commission agent in Spain has informed an American consular officer that he desires to represent American manufacturers of ice-making and refrigerating machinery. Catalogues and communications must be in Spanish.

Iron and steel, wool, cotton, etc., No. 18861.—An American consular officer in Portugal reports that a firm desires to establish commercial relations with American manufacturers or exporters of iron in bars and steel, tin and tin plates, wool and cotton for the textile industry, soaps and perfumery, stationery, knitted goods, chemical and pharmaceutical products, rice, preserved meats, and lubricating oils. The firm also desires to secure the agency for some transport company or steamship line. Correspondence should be in Portuguese or French.

Trunk handles, etc., No. 18862.—A business man in Canada informs an American consular officer that he desires to purchase trunk handles, casters, and hinges.

Flour, No. 18863.—An American consular officer in Africa reports that a firm desires to establish connections with an American manufacturer of flour. The firm is in a position to handle about 4 tons of the commodity a month. Correspondence should be in French or Portuguese, and quotations made c. i. f. destination.

Machinery, No. 18864.—A firm in the Kongo has informed an American consular officer that it desires to purchase at once a machine with a capacity of about 4 tons a day for hulling, cleaning, and polishing rice, together with a 5 or 6 horsepower steam engine suitable for wood fuel. The firm desires to purchase machine and engine from the same manufacturer, if possible. Prices should be quoted c. i. f. destination, or Lisbon, Portugal. It is essential that all information possible should be contained in the first letter. Correspondence should be in Portuguese or French.

Gums, No. 18865.—An American consular officer in India reports that a firm in his district desires to communicate with American importers of gums.

Gilt sulphur of antimony, pigments, etc., No. 18866.—A firm in Portugal has informed an American consular officer that it desires to purchase gilt sulphur of antimony, pigments, white zinc oxide, and aluminum tubes. Samples and price lists are desired. Terms: Cash against document. Correspondence should be in French or Portuguese.

Window glass, metals, etc., No. 18867.—An American consular officer in China reports that a firm of importers in his district desires to establish connections with an American manufacturer of window glass, tin plates, metals, cotton and woolen piece goods, sundries, such as shoe accessories, playing cards, leather, needles, sulphurous acid, and aniline dyes, cotton yarns, etc.

Trouser buttons, No. 18868.—An importing tailor in Chile has informed an American consular officer that he desires to communicate with American manufacturers or exporters of trouser buttons similar to the samples which may be examined at the Bureau or its branch offices. (Refer to file No. 67136.) The buttons should bear the words "Sastreria Inglesa Antofagasta."

Fancy cotton and silk piece goods, No. 18869.—An American consular officer in India reports that a firm in his district desires to communicate with American manufacturers or exporters of fancy cotton and silk damaged cut piece goods, ranging from one-half to 2 yards per pound; also fancy cotton piece goods.

Electrical machinery and appliances, No. 18870.—The Bureau is informed by an American consular officer in Paraguay that a firm desires to receive prices on machinery and appliances desired for the installation of an electric lighting plant. A list of the articles desired, together with additional information, may be obtained upon application to the Bureau or its branch offices.

Metals, fuel, machinery, etc., No. 18871.—An American consular officer in Uruguay has informed the Bureau that a firm desires to represent American manufacturers of pig iron, coal and coke, wire, wire rope, wire nails, wire fencing, agricultural machinery and implements, paints and varnishes, soap, brandy, and wines. Correspondence may be in English.

Paper bags, No. 18872.—An American consular officer in Honduras reports that an importer desires to secure bids on 500,000 Manila paper bags of the common square-bottom type. The sizes required range from one-fourth pound to 12 pounds. Quotations should be made f. o. b. New York or New Orleans. Correspondence may be in English.

Perfumery bottles, No. 18873.—A business man in Uruguay has informed an American consular officer that he desires to communicate with American manufacturers of fine quality glass perfumery bottles. Correspondence is preferred in Spanish.

Machinery, No. 18874.—The Bureau has received a report from an American consular officer in India to the effect that a man in his district desires to communicate with American manufacturers of machinery and appliances for making pills, tabloids, and powders.

Canned tomatoes, No. 18875.—A business man in the United States has informed the Bureau that his representative in Cuba desires to represent American exporters of canned tomatoes.

Kerosene burners, No. 18876.—The Bureau has received a letter from a firm in England expressing its desire to communicate with American manufacturers of kerosene burners with circular wicks 1 inch to 1½ inches in diameter, for use with an incandescent mantle. The burner must be of the nonpressure type with the mantle above, and preference is given to a burner which draws the air through the side of the wick and not through a tube from the bottom of the fount.

Trouser buttons, No. 18877.—An American consular officer in Honduras reports that a merchant in his district desires to receive samples and prices of bone trouser buttons, composition buttons for men's suits, and pearl buttons. Prices should be made for immediate delivery.

General agency, No. 18878.—The Bureau is informed by an American consular officer in Uruguay that a commission house in that country intends to handle American goods and desires to receive manufacturers' catalogues, samples, prices, and usual terms. No particular line is specified. Correspondence may be in English. Reference is given.

Piano parts, No. 18879.—An American consular officer in Italy reports that a firm in Brazil desires to communicate with American manufacturers of piano felt, keys, strings, and other parts used in the repair of pianos; gut and wire strings (also silk coated) for other musical instruments. References are given.

Machinery, No. 18880.—An American consular officer in the Netherlands reports that a manufacturer of brushes in that country desires to communicate with American manufacturers of brush-making machinery in general and especially "mixing machines for fiber and bass."

Paper, iron, and steel machinery, etc., No. 18881.—A commission house in Uruguay has informed an American consular officer that it desires to represent American manufacturers of printing, writing, and binding paper; cardboard boxes; iron in general; steel in bars and sheets; galvanized plate; artisans' tools; electric cables and wires, lamps, meters, and transformers; machines and stationary and semistationary boilers of from 50 to 500 horsepower for electric plants; and internal combustion petroleum motors. Correspondence may be in English, but Spanish is preferred.

"Opportunities for Foreign Students at the Colleges and Universities in the States" is the title of Bulletin 27 of the United States Bureau of Education, which is being sold at the nominal price of 30 cents by the Superintendent of Documents, Washington, D. C.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Timber, undergrowth, and brush, etc., No. 2740.—Sealed proposals will be received at the office of the United States Reclamation Service, Meadow Creek, Wash., until December 1, 1915, for clearing the reservoir site at Lake Keechelus, Wash., of all timber, undergrowth, and brush and for the purchase of sawmill machinery at the site. Bids are also invited on about 160,000 feet b. m. of lumber and 200,000 feet b. m. of logs. Further information may be had on application to the United States Reclamation Service, Meadow Creek, Wash.; Denver, Colo.; or Washington, D. C.

Surgical instruments, No. 2741.—Sealed proposals will be received at the office of the medical supply depot, United States Army, Fort Mason, San Francisco, Cal., until October 29, 1915, for furnishing and delivering at warehouse D, foot of Laguna Street, Fort Mason, scissors, forceps, infusion apparatus, surgical needles, etc.

Tractors, No. 2742.—Sealed proposals will be received at the office of the Chief of Ordnance, United States Army, Washington, D. C., until November 1, 1915, for furnishing and delivering, f. o. b. Honolulu, Oahu, three gasoline tractors of the track-laying type. Specifications and further information may be had on application to the Washington office.

Excavation work, No. 2743.—Sealed proposals will be received at the office of the United States Reclamation Service, Mills Building, El Paso, Tex., until November 17, 1915, for the excavation of the Leasburg Canal from Station 310 to Station 570, and the Picacho Branch Canal, involving about 162,000 cubic yards; and the San Elizario Feed Canal, involving the excavation of about 54,000 cubic yards. For further information address the United States Reclamation Service, El Paso, Tex.; Las Cruces, N. Mex.; Denver, Colo.; or Washington, D. C.

Subsistence stores, No. 2744.—Sealed proposals will be received at the office of the quartermaster, U. S. Army, 308 Gumbel Building, Kansas City, Mo., until October 26, 1915, for furnishing and delivering jam, sugar, cloves, oleomargarine, lemon flavoring extract, bacon, sliced beef, cream cheese, lard, and preserves.

Extension and remodeling building, No. 2745.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until November 29, 1915, for the extension, remodeling, etc., of the United States post office and customhouse at Muskegon, Mich. Drawings and specifications may be obtained from the custodian at Muskegon, Mich., or at the Washington office.

Medical supplies, No. 2746.—Sealed proposals will be received at the office of the Field Medical Supply Depot, United States Army, 21 M Street NE., Washington, D. C., until October 26, 1915, for furnishing and delivering absorbent cotton, camphora pulvis, and collodium.

Potatoes, onions, butter, bacon, etc., No. 2747.—Sealed proposals will be received at the office of the Quartermaster, United States Army, 308 Gumbel Building, Kansas City, Mo., until October 26, 1915, for furnishing and delivering potatoes, onions, butter, bacon, cheese, ham, and yeast.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

EXAMINATIONS FOR LIFEBOAT MEN.

The Secretary of Commerce on October 22 approved Department Circular No. 267, designating the officers to conduct the examination of applicants for certificates as lifeboat men, as follows:

United States supervising and local inspectors, Steamboat-Inspection Service, and others concerned:

In accordance with the provisions of the seamen's act, I hereby designate the following officers to examine applicants for certificates as lifeboat men:

Any commissioned or warrant officer of the United States Navy who may be detailed for such duty by the commandant of any navy yard or the commanding officer of any vessel of the United States Navy.

Commissioned officers of the line and warrant officers of the rank of boatswain or keeper in the United States Coast Guard.

Deck officers of the vessels of the Lighthouse Service, Coast and Geodetic Survey, and Fisheries Service.

Local and assistant inspectors of hulls in the Steamboat-Inspection Service.

Applications to any of the above officers for examination for certificate as lifeboat man will receive prompt attention, and the applicant will be examined within the most reasonable time, and certificates will be issued by the examining officers if the applicant is found qualified.

Supplies of certificates and other forms required will be furnished the various officers.

WILLIAM C. REDFIELD,
Secretary.

RESTORATION OF FRENCH DUTIES ON FLOUR AND WHEAT.

[Telegram from American Consul General, Paris, Oct. 18, 1915.]

A decree of October 16, 1915, restores the import duties on wheat, spelt, and maslin, flour of wheat, spelt, and maslin, and bread, which were suspended by the decree of July 31, 1914 (see Foreign Tariff Notes No. 14, p. 10). Shipments exported direct to France before October 17 are to be entitled to free admission.

The United States Bureau of Standards recently inspected and tested 700 automatic parcel-post scales for the Post Office Department at the factory of the manufacturer in Chicago.

CHANGES IN BRITISH EMBARGO LIST.

[Telegram from American Consul General, London, Oct. 14, 1915.]

A small number of changes in the British embargo list, principally in the nature of more complete specification of articles or of transference from absolute to qualified embargo, have recently been published. Certain new articles are placed under partial embargo.

Harness and saddlery of all kinds, including metal fittings, are now under complete embargo.

Leather, undressed or dressed, suitable for military clothing, is transferred from the absolute to the qualified embargo list. Sheepskins woolled and skins of sheep and goats, undressed or dressed, with certain restrictions, may be exported to British possessions and protectorates. The following items, not heretofore under embargo, may be exported only to British territories: Leather belting, hydraulic leather, pump leather and picking bands, stearine pitch, and other pitches derived from fatty oils and acids.

Blankets of all kinds and cotton fabric suitable for air craft are now under prohibition of export except to certain European countries. Deerskins and pigskins, undressed or dressed, are subject to a more liberal régime than formerly, as are also certain salts of aluminium. The exportation of the following articles not previously subject to embargo is now prohibited to certain European countries: Desiccated coconut, borax, boric acid and other boron compounds, bookbinding leather, chamois, glacé kid, morocco, persian, roan, and seal leather, and leather suitable for textile machinery except picking bands.

[Detailed information on the subject of British embargo provisions is on file in the Bureau of Foreign and Domestic Commerce, and inquiries in regard to specific articles will be answered by the Bureau.]

GRAIN-CROP ESTIMATES FOR SOUTH AUSTRALIA.

[Commercial Attaché William C. Downs, Melbourne, Sept. 24.]

According to a statement issued by the Government Statist for South Australia, giving estimates of the grain crop of that State for the season 1915-16, the total acreage under crop with wheat, barley, and oats is 3,594,057 acres, an increase of 411,168 acres as compared with the previous season. The acreage of wheat is 3,192,381, of barley 87,686, and of oats 313,990.

In regard to the present outlook of wheat acreage under crop, 621,515 acres are classed as below the average; 1,486,421 as equal to the average of good seasons; and 1,084,445 as above the average. For the decennial period 1903-4 to 1912-13 the mean annual average yield was 10.28 bushels of wheat and 1.25 tons of hay per acre, and these are accepted as the pre-ent averages of good seasons for the whole State. The present prospects are stated to be better than the average.

American motor trucks are now being handled by a Barcelona firm in place of a Continental truck the supply of which was cut off by the war. The American consulate general in that city was instrumental in bringing about this new trade connection, through assistance rendered the motor company's representatives, who spoke no Spanish.

FISH LANDED AT NEW ENGLAND PORTS.

The United States Bureau of Fisheries announces that fishing fleets landing fish at Boston and Gloucester, Mass., and Portland, Me., during September, 1915, included 296 steam and sail vessels. At Boston 388 trips were landed, aggregating 10,228,293 pounds of fish, valued at \$291,225; at Gloucester 181 trips were landed, aggregating 8,542,380 pounds, valued at \$199,502; and at Portland 91 trips were landed, amounting to 683,668 pounds, valued at \$26,095; a total for the three ports of 660 trips and 19,454,341 pounds of fresh and salted fish, for which the fishermen received \$516,822.

On September 1 large quantities of small mackerel were landed at Boston, and on September 8 the schooner *Tattler* arrived at Gloucester with 475,000 pounds of salted cod. This is the largest hand-line fare landed at this port since 1909, when the same craft weighed off 479,433 pounds of cod. Swordfish have been quite plentiful. The catch of mackerel this year to September 20 amounts to 58,161 barrels of fresh and 8,240 barrels of salted, as compared with 65,900 barrels of fresh and 13,015 barrels of salted for the same period in 1914.

Fish landed at Boston and Gloucester, Mass., and Portland, Me., by American fishing vessels in September, 1915.

FRENCH REQUISITIONS OF WHEAT AND FLOUR.

[Cablegram from Consul General A. M. Thackara, Paris, Oct. 18.]

The law of October 16 provides that the Government, through the Minister of Commerce, may requisition foreign or native wheat and flour for the civil population, at prices not exceeding 30 francs per 100 kilos (\$2.63 per 100 pounds) for wheat containing not more than 2 per cent of impurities, weighing 77 kilos per hectoliter (59.8 pounds per bushel). The prices are subject to an increase or a decrease of 1 per cent per kilo over or under 77 and a reduction of 1 per cent for each extra 1 per cent of impurities. The law also provides that flour prices shall be fixable by decree.

According to the administrative circular of October 16, although the right of requisition is general, it is preferable that requisition should be of stock from warehouses, and although previous contracts do not safeguard against requisition, such merchandise should be taken only in cases of extreme necessity, the fulfillment of contracts to be subject to the decision of the courts. Hard wheats can not be requisitioned for alimentary pastes.

THE INTERNATIONAL HOP TRADE.

In commenting on the hop situation the latter part of September a Sydney (Australia) daily said:

Recent advices from Hobart indicate that the market for Tasmanian hops in that center is very firm. That has no doubt been brought about by the high rates demanded in England for Kent hops, the crop of which this season will probably be the smallest harvested during the past 30 years. Already shipments of 1915 Tasmanian hops have been made to London, and further inquiries are being made for both the 1915 and 1916 crops. In Sydney 1915 Tasmanian hops are offered at 1/6 [37 cents] per pound, delivered usual terms. The latest cablegrams from America report an advance of 2 cents in the price of the 1914 crop. American hops are available on spot at 1/5 [35 cents] per pound, duty paid and delivered. So far no quotations for the 1915 crop of American hops have been received. New Zealand hops, for prompt delivery, are worth 1/6 per pound, duty paid and delivered. The bulk of the stocks which were held in Nelson (New Zealand) have been shipped to London at full rates, and there is now a good demand for the 1916 crop.

Mention has already been made in **COMMERCE REPORTS** of the short hop crop in England, Germany, and Austria-Hungary (see the issues for Oct. 6 and 20, 1915), that for England and Austria-Hungary being estimated at half of last season's harvest and Germany's at two-thirds.

American Crop—Imports and Exports.

Figures of the American yield are compiled by the United States Department of Agriculture only as to average quantity per acre and quality. For the current crop the average per acre is placed at 1,042 pounds, against 985 pounds last season. As the acreage does not vary much from year to year, this would seem to indicate a larger total for 1915. The quality, however, is not so good as last year, being rated at 88 as compared with 92; and this is reflected in the price, which in August was 15 cents, against a quotation of 20 cents at the corresponding date in 1914.

England is a large purchaser of American hops, taking 88 per cent of the total exports in the fiscal year (ended June 30) 1913, 92 per cent in 1914, and 85 per cent in 1915, or 15,409,093 pounds, 22,219,620 pounds, and 13,823,889 pounds out of total shipments of 17,591,195 pounds, 24,262,896 pounds, and 16,210,443 pounds, respectively. Canada takes over 1,000,000 pounds yearly, and in 1915 613,123 pounds of hops were shipped from the United States to Australia.

While ranking as the world's largest producer of hops—the commercial movement of American hops being unofficially estimated at 57,060,000 pounds for the year ended June 30, 1914—the United States is also a regular, though unsteady, buyer of certain grades of foreign hops. In the fiscal year 1910 such imports totaled 3,200,560 pounds; in 1911, 8,557,331 pounds; in 1912, 2,991,125 pounds; in 1913, 8,494,144 pounds; in 1914, 5,382,025 pounds; and in the 12 months ended June 30 last, 11,651,332 pounds. Germany and Austria-Hungary supply practically all of the hop imports, though England also participates in the trade and Belgian hops figure to a slightly larger extent than the English.

Pretoria is anxious to establish a local diamond-cutting industry, and the municipality is prepared to offer a free site, a water supply, and a subsidy.

BANKING INNOVATION FOR COLLECTING INSURANCE PREMIUMS.

[Consul E. M. Lawton, Tegucigalpa, Honduras, Sept. 30.]

An American life insurance company asked a bank in this city to undertake collections of premiums for policies held by Hondurans, and complained of the large number of policies which had lapsed in Honduras since the beginning of the European war. The local bank investigated and found that the general complaint was the increased rate of exchange for gold drafts, which had advanced from 240 per cent to 310 per cent since the beginning of the war (at present the Honduras peso is worth 32 cents in exchange for American drafts). An arrangement was made whereby the bank may accept 8 per cent interest-bearing notes in payment of premiums, which are at once credited on open account to the insurance company, but on which the latter does not draw until 90 days after payment by note. The bank guarantees the notes which it accepts, and in consequence a number of policies have been restored and other policyholders have been persuaded to continue policies which would otherwise have lapsed.

EXEMPTION OF FOODSTUFFS IN MEXICO.

[Consul Wilbert L. Bonney, San Luis Potosi, Oct. 12, 1915.]

A decree promulgated in Vera Cruz September 29, 1915, in addition to prescribing new rates of export duty on ixtle (pita fiber), rubber, and refined quicksilver, exempts from import duty fresh meat, dried fish, preserved foods of animal origin, lard, rice, fruits, vegetables, corn, sugar, olive oil in tins, flour, biscuit, oats, and common soap. [It is presumed that the exemption from import duties is a temporary provision to remain in operation pending the restoration of normal conditions as regards food supplies in Mexico.]

FURTHER EXPORTATION OF WOOL FROM GREAT BRITAIN.

[Telegram from American Consul General, London, Oct. 20, 1915.]

Applications for licenses to export to the United States 10,000 bales of East India wool, to be purchased at forthcoming Liverpool wool sales, will be considered. No licenses will be granted for the exportation of black, gray, and brown wool or of yellow pieces, low and medium grade hard white blanket wool, and combed wool, all of which are required for military purposes. The usual conditions as to guarantee against reexportation to countries hostile to Great Britain are applicable.

INDIANAPOLIS TO HAVE ELECTROLYSIS SURVEY.

Preliminary arrangements have been made for an electrolysis survey in the city of Indianapolis by the United States Bureau of Standards. The bureau found, on receiving the request to undertake this work, that there was considerable need of such a survey, as the electrolysis conditions are unfavorable and the property of utility companies is being affected. A representative of the bureau was sent to Indianapolis to attend to the preliminary work.

FOREIGN TARIFF.

AUSTRALIA.

[Commonwealth of Australia Gazette, Sept. 9, 1915.]

Prohibition of Sugar.

By a proclamation of September 7, 1915, the importation of sugar into Australia is prohibited, except with the consent of the Minister of Trade and Customs.

NICARAGUA.

[La Gaceta, Aug. 21, 1915.]

Prohibition of Revolvers and Pistols.

The Government of Nicaragua has enacted a decree, dated August 17, 1915, and effective from the date of publication, prohibiting for the period of one year the importation of revolvers and pistols of all kinds, except in cases where application to import had been approved or consular invoices certified prior to the date of publication of the decree.

PARAGUAY.

[Consul Samuel Hamilton Willey, Asuncion, Sept. 7, 1915.]

Protection of Trade-Marks.

In view of the frequency with which foreign trade-marks are registered in Paraguay by third parties in order to force the real owners to buy the right to their use, the American consul at Asuncion has suggested that he be notified when American firms arrange for the registration of their marks in that country. He will then be in a better position to determine whether the marks are being registered in the name of the owners or not, and may be able to save manufacturers and exporters considerable annoyance and expense at a later date.

PERU.

[Consul General William W. Handley, Callao-Lima, Sept. 1, 1915.]

Proposed Export Duties.

Owing to the decrease in revenues occasioned by the war, the Peruvian Government has under consideration a bill providing for the levying of export duties on mineral products and one for the establishment of similar taxes on other important products of the country.

Mineral products of all kinds, in whatever form exported, are to be subject to a tax of 3 per cent ad valorem, if originating in the territory covered by the Central and Southern Railways of Peru, while the duty on such materials produced elsewhere in the country is to be 2 per cent ad valorem, and an export tax of 2 shillings per ton is to be imposed on petroleum. These imposts, if enacted, are not to go into effect until November 9, 1915, as it was provided by a law of November 8, 1890, that no additional export duties on mining products should be levied for a period of 25 years from that date.

An export duty of 6 pence per 100 pounds, gross weight, is to be levied on sugar of all kinds, when the price (f. o. b. place of embarkation) of granulated sugar polarizing 96° is not less than 11 shillings 6 pence per 100 pounds.

When the price of cotton ("Piura rough") is not less than 7 pence per pound, a duty of 7½ pence per 100 pounds is to be imposed, and

an additional $2\frac{1}{2}$ pence per 100 pounds for each advance in price of $\frac{1}{2}$ penny; on other cotton ("semi-rough and Mitafifi") an export tax of 5 pence per 100 pounds is to be levied, when the price is not less than $6\frac{1}{2}$ pence per pound, with an increase of $2\frac{1}{2}$ pence for each advance of $\frac{1}{2}$ penny in price. "Smooth" cotton is to be dutiable at 6 pence per 100 pounds when the price ranges between $5\frac{1}{2}$ and $6\frac{1}{2}$ pence per pound, at 1 shilling when the price is between $6\frac{1}{2}$ and $7\frac{1}{2}$ pence per pound, and at 2 shillings in case the price should exceed $7\frac{1}{2}$ pence. On washed wool a duty of 2 shillings per 100 pounds is to be collected when the Liverpool quotation is not less than 10 pence per 100 pounds. Rawhides in general and goatskins are to be subject to a duty of $1\frac{1}{2}$ pence and dried hides to a duty of $1\frac{1}{2}$ pence per kilo.

All duties are to be paid by means of 90 days sight drafts on London or New York. [Shilling (12 pence) = \$0.243 (par value).]

[It was expected that there would be considerable opposition to these measures in the Peruvian Congress, but, as announced in *COMMERCE REPORTS* for Oct. 14, 1915, the bill providing for the export duties on sugar, cotton, wool, and hides was enacted October 6. There are on file in the Bureau of Foreign and Domestic Commerce a number of reports and press clippings regarding the probable effect of the proposed legislation, which will be loaned upon application.]

PORTUGAL.

[Consul General W. L. Lowrie, Lisbon, Sept. 17, 1915.]

Duty on Structural Iron.

A new item added to the Portuguese customs tariff by a recent decree makes iron or steel, shaped or grooved, for use in the construction of buildings, plain, painted, or varnished, dutiable at 0.030 milreis per kilo. [Milreis (escudo) \$0.76 (July, 1915); kilo, 2.2046 pounds.]

SALVADOR.

[Diario Oficial, Sept. 16, 1915.]

Supplementary Charges at La Union.

A concession has been granted by the Salvadorian Government for the levying of supplementary charges on goods shipped through the port of La Union. The schedule of fees for loading, unloading, warehouse, etc., as proposed by the concessionary and approved by the Salvadorian authorities, is on file in the Bureau of Foreign and Domestic Commerce and may be consulted by those interested.

TRINIDAD.

[Vice Consul John V. Swearingen, jr., Trinidad, Aug. 21, 1915.]

Standards for Butter.

The health authorities of the Island of Trinidad have recently been enforcing more strictly than before the Food and Drugs Ordinance of 1905, which prescribes standards of purity for butter. According to section 2 of this ordinance, any substance sold as butter must contain not less than 80 per cent of butter fat if sold in tins weighing not over 5 pounds, and at least 72 per cent of butter fat and not over 16 per cent of water, nor over 12 per cent of salt, if sold in larger containers, and must be free from other fats. Substances consisting of butter but sold as "cooking butter," "cooking grease," or under any other name than butter, must contain at least 75 per cent of butter fat.

SPAIN A FERTILE FIELD FOR AMERICAN COMMERCE.

[Consul Wilbur T. Gracey, Seville, Spain, Sept. 1.]

The success achieved recently by American commercial travelers who have called at the Seville consulate has made it evident that, at present, there is an exceptional opportunity for the sale of various classes of American goods in that district if merchants will go after it in the same way they do in the United States. A traveler in the hardware and machinery line came to Spain, after a tour of several months through Russia, Switzerland, Italy, and France, expecting to pick up a few orders en route from the north to Gibraltar, where he intended to take a steamer to return to the United States. He was astonished to find Spain the most fertile field for orders in Europe. In a hurried trip through the Spanish cities, covering less than three weeks, he had taken over 250 substantial orders, more than he had received in all the other European countries he had visited. The consul gave him local addresses and introductions to firms in Seville, and he left after five days with another large number of orders for direct shipment.

The Seville consulate has received an exceptional number of inquiries for various classes of goods in recent months, all of which have been made the subject of Trade Opportunity notes and published in *COMMERCE REPORTS* or made the subject of special confidential circulars sent out by the Department of Commerce, but the business was not properly followed up.

Poor Results Disgust Spanish Dealer.

A particular case in point is that connected with inquiries for photographic plates and papers, in which there was, and still is, a shortage. This need was reported by telegram, and afterwards followed up by an elaborate report in which it was particularly stated that the shortage was in plates, paper, and other such supplies and that there was no call for cameras at the present time. The results of these efforts were to receive from America one catalogue of snap-shot cameras and another sheet describing a camera for taking "penny pictures." No particulars of the goods required have been received, and the dealer, the largest in his line in the city, was disgusted with the nonsuccess of his efforts. He is now seeking the goods in other countries.

If this need had been followed up by a commercial traveler, or by full information, prices, etc., being sent to the inquirer, probably substantial orders would have resulted. If commercial travelers will visit Spain in the near future they will find it a particularly favorable time to secure orders and establish a good business on a permanent basis, which can be continued after conditions become normal in Europe. They should plan to enter the country through Gibraltar or Cadiz and leave it via Portugal.

Lists of Dealers Should Be Obtained.

With such an itinerary a total of 58 days or two months would be spent in Spain and Portugal. Actual experience would probably vary the time somewhat, giving a longer or shorter period in different cities according to the commodity that was to be sold, and side trips might be necessary for special lines of goods. The cost of such a trip would be approximately \$620. The commercial traveler would do well to provide himself beforehand with a list of the dealers in his line in

each of the cities he contemplates visiting. Such lists can be secured upon application to the Bureau of Foreign and Domestic Commerce, Washington, or its branch offices. The traveler should also provide himself with a supply of circular letters, printed in Spanish, to notify such dealers of his intended visits.

On arrival at the first port in Spain the traveler should notify the consuls or consular agents of the United States of the dates on which he expects to arrive at their respective cities, inclosing lists of those in his line of business whom he intends to visit and requesting the consul to correct or supplement this list. Catalogues in Spanish should also be sent to the local merchants.

Personal Element Enters into Business.

The commercial representative should be authorized to make such terms, etc., as seem advisable, to grant credits where the information received justifies, to appoint agents for a town or district when desired, to arrange for a supply of samples or a stock of the goods, etc. There are several men in Seville who would be very satisfactory agents, but who are not in a position to make outright purchases. A traveling representative could judge these men and probably arrange for shipments to be made to them on time payment or for sale on a commission basis. The personal element enters more largely into business in Spain than almost anywhere else in Europe, and it is this lack of immediate touch that is preventing American merchants from securing a large portion of the present trade of Spain.

The commercial traveler for Spain should, of course, have a knowledge of the Spanish language. Lack of this might be compensated for by engaging a guide, who would cost about \$1 per day and expenses, but getting business through an interpreter is never as successful as by direct methods. Familiarity with Spanish customs, manners, and ideals is valuable. A considerable amount of tact is desirable, with ability to combine sociability and business, taking time for the little courtesies that mean so much to the Spanish business man, who is not used to the quick, abrupt, and, to him, mannerless "hustle" of the average American traveler.

May Get Orders in Many Different Lines.

There are many lines for which a commercial traveler visiting Seville now can secure orders. These include oil presses, electrical machinery and supplies, electrical and gasoline pumps, hardware, paper, iron and steel products, tools, chemicals, flour and other cereals, sausage casings, stationery and office supplies, bromide, refrigerating and ice-making machinery, abattoir equipment, road-making machinery, oil drums, agricultural machinery and implements, drugs, piping, concrete mixers and machinery, photographic supplies, shoes, advertising novelties, codfish, shoe polish, fans, fire-arms, lubricating oils, paraffin, paints and varnishes, wire fencing, machine tools, leather, automobiles, railway ties, and gas stoves for heating.

The municipal officers have recently authorized the floating of a loan, amounting in United States currency to \$6,984,000, for city improvements, which include the paving of the streets by modern methods, the erection of a first-class hotel, improvement of the sewerage and water systems, building of filter beds, etc., which have been fully covered in **COMMERCE REPORTS** for October 5, 1915.

DEMORALIZATION IN THE COCONUT-OIL TRADE.

[Consul General George E. Anderson, Hongkong, Aug. 31.]

The trade in coconut oil in Hongkong and Far Eastern ports generally has come to be somewhat demoralized, not only as an indirect result of the war but by reason of changes in industrial processes in Far Eastern factories. Incidental to the situation it appears that an attempt on the part of Japanese interests to dominate the coconut-oil market in Japan, and to some extent in other Eastern markets, by obtaining control of the South Sea Islands, whence German manufacturers obtained a large share of their oil previous to the war, has ended, for the time being at least, in more or less disaster.

The chief sources of copra in this part of the world have been the East Indies, particularly Ceylon, Java, and Singapore, the Philippines and the South Sea Islands, such as the islands in the Marshall group. Before the outbreak of the war in Europe the demand for copra was particularly strong in France and Germany, other nations taking considerable of the product but in lesser volume. Most of the copra from the East Indies and the Philippines went to France, while that in the South Seas went to Germany through the organization of the trade of that part of the world possessed by German interests. Considerable quantities went to the United States and to Japan, though it has been more profitable to ship coconut oil rather than copra to the former country. In Japan the industry of pressing oil from copra imported from various points was inaugurated and assumed considerable proportions. The oil made was usually of comparatively poor grades made from the cheapest grades of copra and was mostly used for soap making.

Qualities of the Oil.

When the South Sea Islands were captured by Japan during the earlier portions of the war their copra was sent to Japan almost exclusively. In the meanwhile the market for oil in Europe was shut off to a considerable extent, and for a time the course of the local copra and oil markets in this part of the world was very uncertain. The high price of good oil at one time led to a number of changes in the trade, and these have become permanent. Oil in the Malay States and the East Indies has been produced at such a rate and by such methods that it can undersell Japanese oil. A low grade "solid oil" imported largely from the Philippines and the East Indies through Hongkong has supplanted the higher grade oil in Japanese, and in Hongkong, Shanghai, and other Far Eastern soap factories.

Singapore and Manila oils are sold, even in Japan, under a special customs arrangement for admitting raw materials under bond, in competition with Japanese-made oil, and naturally control in the Hongkong and other lower Asiatic markets. Clarified and refined fish oil is coming to be used more generally in industrial concerns in the Far East as a substitute for the coconut product. Altogether the coconut oil situation has changed from what it was a year ago. For all that, prices still realized afford ample profit for the modern and properly equipped oil-pressing establishments.

The Hongkong market for coconut oil continues good, though prices have a lower range than anticipated at the beginning of the

year. Exports of copra to both Europe and the United States by way of Hongkong have been far below normal.

Better Product from Philippines Anticipated.

Philippine copra, heretofore of comparatively low grade because of the manner in which cured, is likely soon to be of the highest grade and to produce the best oil. Philippine copra producers have been agitating for modern "copra centrals," for drying coconuts, similar to the large sugar centrals erected by the Government for sugar producers. A Government commission appointed to study processes for drying the nuts is testing various drying machines including machines used by German interests in the South Sea Islands, whence some of the best copra has been received. When a standard dryer has been selected central plants will be established in various parts of the Philippines. It is estimated that by reason of the inferior Philippine product native producers are losing one to two million dollars gold a year. The Philippine Government has been endeavoring for several years to improve methods of curing, but with comparatively little success.

NORTH MANCHURIAN TRADE NOTES.

[Consul Charles K. Moser, Harbin, China, Aug. 8.]

Business Develops Rapidly at Manchuli.

A newspaper published at Station Manchuli reports that the rapid development of business and the increase in exports from that region of North Manchuria, compelled the local banks and the Chamber of Commerce to ask the board of directors of the Russian Transporting, Steamship & Insurance Co., at Petrograd, to open a special forwarding office at Manchuli. The board of directors appointed an agent to investigate the North Manchuria frontier district. He reported surprising possibilities in the fishing industry of the district and in the future of its trade with Mongolia. He investigated the proposed trade routes along the Kurouloun, Onona and Argun Rivers, and as a result of his investigations he advised the opening of these routes and the construction of a railway to the Nerzhinskisavod and to Urga as soon as peace is declared in Europe.

The Russian company mentioned has already opened an office at Manchuli, which is especially concerned with exports to foreign countries. The transportation of freights between Manchuli, Urga, and Kiakhta is to be accomplished by an automobile service inaugurated by this company.

Trade on Sungari River between Harbin and Amur Falls Off.

Trade on the Sungari River between Harbin and the ports of the Amur district has fallen off this summer, from the amounts recorded in previous seasons. On account of the war, there is little travel and little freight from Harbin. Many of the Amur steamers coming up the river stop at small ports on the Sungari for grain cargoes, and then return to the Amur without touching at Harbin at all. It is said that this is unprecedented.

New Macaroni Factory Being Built.

A Chinese firm at Fuchiatien is constructing a new macaroni factory which, it is claimed, will have an output of 1,800 pounds per day.

FRUIT CRISIS CURTAILS TRADE IN CANARIES.

[Consul George K. Stiles, Teneriffe, Canary Islands, Aug. 31.]

The fruit exportation, which produces approximately 90 per cent of the buying resources of the Canary Islands, is undergoing a season of depression that threatens to have serious consequences, on account of the marked insufficiency of the ocean tonnage now available.

Since July 1 it has been found alarmingly difficult to ship bananas. During July and August bananas by the hundreds of thousands have rotted on the plantations, on barges in the Canary Island harbors awaiting transportation, and on the wharves usually occupied by fruit steamers. This is the result of the lack of bottoms to carry the fruit to England and France, the two principal markets, with British ports absorbing close to 90 per cent of the total output.

In June, 1914, there were 39 steamers carrying fruit cargoes to England alone, while in June of this year there was a reduction of about 33½ per cent in the number of available bottoms, as only 28 steamers secured fruit cargoes here. The reduction in tonnage was even greater than the shortage in the frequency of sailings, and a tremendous increase in freight rates has resulted.

Permanent Injury to Industry Feared.

Conditions among the planters are very bad and threaten to produce permanent injuries to the industry. The Spanish Government has set aside \$193,000 to be employed in hiring vessels, and numerous public meetings have been held, though no definite action has been taken. On the other hand, a new British company has just been organized and has announced the chartering of six small steamers to make a regular schedule. Another company has secured two additional vessels to ply between Liverpool and Canary Island ports.

At this time the banana bunches are selling at \$0.38 each, while the price just before the outbreak of war was \$0.97. Even at this price, less than 60 per cent of the fruit is being sold, and as a result the fruit growers are facing a loss, estimated by the Fruit Growers' Association at approximately \$200,000 per month.

Conditions are reflected by the treasury returns made by the collector of customs for the archipelago, which show for July a 20 per cent and for August a 25 per cent reduction in the assessed valuation of imports, based on the general average of the last five years.

Reduced Purchasing Power of Public.

The real importance of the situation to American business men lies directly in the reduced purchasing power of the general public. This reduction has been strongly shown by the recent arrival of a number of fruit carriers from Liverpool, whose cargoes for the Canary ports have been very small indeed. While American merchandise is undoubtedly making a strong bid for favor and has succeeded in making a noticeable proportionate gain, as compared with the status of other nations in this market, it is doubtful if an actual increase in American importations can be effected under present circumstances.

NEW ZEALAND AS A MEAT-SUPPLYING COUNTRY.

[Consul General Alfred A. Winslow, Auckland, Sept. 14.]

The frozen-meat industry of New Zealand is receiving much attention at this time, and much is being done to improve the herds and flocks of this Dominion, as well as to develop the grazing lands of the country. Marketable cattle and sheep can, without doubt, be raised in most of New Zealand cheaper than anywhere else in the world; for the grazing period is good all the year and but little feed is necessary, even in the remote south of the islands.

There are but four countries on which the world's markets can depend for surplus meat supplies, and these are Argentina, Australia, New Zealand, and Uruguay. The population of each, with totals of cattle and sheep to be supplied, is as follows:

Countries.	Population.	Cattle.	Sheep.
Argentina.....	7,123,638	29,120,000	85,544,000
Australia.....	4,872,023	11,497,943	85,049,697
New Zealand.....	1,120,864	2,020,171	24,788,763
Uruguay.....	1,084,058	8,162,603	20,280,290

During 1914 these countries sold to Great Britain alone, 12,788,836 frozen sheep carcasses, and 1,433,034 frozen beef carcasses, weighing in all about 694,460 tons. To date the exports of frozen beef and mutton from Australia have been 5 per cent of the sheep and 3 per cent of the cattle; from New Zealand, 25 per cent of the sheep and 4 per cent of the cattle; and from South America, 3 per cent of the sheep and 3 per cent of the cattle; while from older countries as many as 20 per cent of the cattle and 40 per cent of the sheep are slaughtered. The increase of sheep in New Zealand very nearly reaches 100 per cent.

NEW MARKETS DESIRED FOR SPANISH EXPORTS.

[Consul Wilbur T. Gracey, Seville, Sept. 4.]

A commission recently organized to promote the export of Spanish products announces that among other petitions received by it were 3 from Seville industries, 2 from Badajoz, 2 from Cadiz, and 1 from Caceres, in this consular district, with a total of 71 from other parts of Spain. The commission does not specify the particular industries in this district that desire new outlets, but gives a list of commodities for which foreign markets are wanted. These include paper, electrical machinery, preserved fish and vegetables, printing type, chocolate, biscuits, paints, chemical products, sanitary supplies, fertilizers, silver-plated tableware, alpaca, glass and glassware, ground peppers, textiles, olive oil, soaps, cider, hats, iron and steel products, hardware and cutlery, waterproof cloth, flour, cement, candles, agricultural tools, and cork products.

Consul General Ernest L. Harris, of Stockholm, reports that during the eight months, January to August, 1915, the income of the Swedish State from customs, taxes, net railway income, etc., amounted to \$26,237,200, as compared with \$26,325,640 during the like period of 1914.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau and its branch offices.]

Gauges, No. 18882.—The Bureau is informed by an American consular officer in Italy that a firm in his district desires to purchase a quantity of "limit gauges" for machine tools, the sizes of which should be stated in the metric system. Payment will be made against documents. References are given. Correspondence may be in English.

Metals, tools, etc., No. 18883.—The commercial agent in charge of the Bureau's branch office in New York reports that the representative of a firm in Sweden desires to purchase, for cash in New York, metals, tools, and machine tools.

Locomotive repairs, No. 18884.—An American consular officer in Chile transmits a report relative to an opportunity for the sale of repair parts for locomotives. A copy of the report may be had on application to the Bureau or its branch offices.

Hardware, office supplies, etc., No. 18885.—The commercial agent in charge of the Bureau's branch office in New York reports the desire of a representative of a firm in Colombia to represent American manufacturers or exporters of hardware, office supplies, and paper in that country. Catalogues and agency details should be forwarded at once. References are given.

Fire-fighting apparatuses and appliances, No. 18886.—An American consular officer in Uruguay reports that a man in his district wishes to receive catalogues of fire-fighting apparatuses and appliances. Similar catalogues should also be sent to the American consulate.

Stationery, No. 18887.—An American consular officer in France transmits the names of business firms in his district which desire to represent American manufacturers or exporters of stationery.

Wire rope, No. 18888.—The Bureau is informed by the commercial agent in charge of its branch office in New York City that the purchasing agent of a firm in Portugal, who is now in this country, desires to purchase 500,000 meters of galvanized wire rope of 10 millimeters in diameter, composed of 7 wires of 3 millimeters diameter and one central hemp core. The rope should have a breaking strain of 60 to 70 kilos per square millimeter and should be supplied in rolls of 500 meters. Samples and prices should be forwarded at once. It is stated that 60,000 to 100,000 meters of the rope must be delivered within one month after the order has been given.

Wall paper, No. 18889.—The representative of a South American Republic has informed the Bureau that a business man in his country desires to purchase wall paper ranging in price from 5 cents to 80 cents per roll of 8 yards. He will pay cash. Samples and full information should be sent at once.

Sponges, No. 18890.—A business man in France has informed an American consular officer that he desires to represent American exporters of sponges.

Appliances for sugar factories, No. 18891.—The Bureau is in receipt of a letter from a business man in Argentina who desires to receive catalogues and price lists of articles used in sugar factories, such as cloths for mechanical filters and filter presses, packing, manometers, vacuumeters, lubricators, glass disks for evaporating plants and vacuum pans, steel tubes of all kinds, screws of all kinds, paints, cloths or perforated brass or copper sheets for centrifugals, etc.

Vacuum sweepers, No. 18892.—An American consular officer in Canada reports the desire of a firm in his district to receive catalogues and price lists of vacuum sweepers.

Chemicals, No. 18893.—The Bureau has received a letter from a man in Panama who desires to learn the names of American manufacturers of turmeric and other preparations of curcuma.

Machinery, No. 18894.—An American consular officer in Canada reports that a man in his district desires to communicate with American manufacturers or exporters of machines for applying the filling or covering to cloth for window shades. Prices, etc., should be sent at once. Reference is given.

- Chemicals**, No. 18895.—The commercial agent in charge of the Bureau's branch office in Chicago reports the desire of a firm in India to receive prices, c. i. f. destination, on chloride of magnesium, chloride of zinc (96°), farrina flour, and Epsom salt.
- Aluminum goods**, No. 18896.—An American consular officer in Norway reports that a commission agent in that country desires to receive catalogues, prices, etc., of American aluminum goods, such as spoons and novelties. Reference is given.
- Celluloid**, No. 18897.—The Bureau is informed by an American consular officer in England that a firm desires to purchase celluloid in sheets for use in the manufacture of Christmas cards. The firm states that it purchases in large quantities, and requests prices, terms, and definite information with regard to time of delivery. Reference is given.
- Tin foil and paper**, No. 18898.—An American consular officer in France reports that a man in his district desires to represent American manufacturers of tin foil and paper.
- Cable**, No. 18899.—A business man in Norway has informed an American consular officer that he desires to communicate with American manufacturers or exporters of vulcanized (stranded) cable. The quality must conform to 1911 Code in the United States. Principal size used is 1½ mm. (0.069 inch) square. Correspondence may be in English. Reference is given.
- Women's hosiery**, No. 18900.—The commercial attaché of the Department of Commerce in Australia reports that a firm of manufacturers' agents in that country desires to represent American manufacturers of lace, lisle, and silk hosiery. Reference is given.
- Printing ink**, No. 18901.—An American consular officer in Japan reports that a firm desires to purchase American printing ink. The firm states that if favorable connections can be secured business will be transacted on the basis of confirmed letter of credit.
- Towels**, No. 18902.—A business man in France has informed an American consular officer that he desires to represent American manufacturers of towels.
- Hyper-phosphate of lime**, No. 18903.—The Bureau is informed by an American consular officer in the Canary Islands that a man in his district desires to purchase large quantities of hyper-phosphate of lime. Prompt delivery is essential. He states that he will pay cash against bill of lading at destination. Correspondence should be in Spanish. Time of delivery and terms on quantities up to 10 tons should be clearly stated.
- Blasting fuses**, No. 18904.—A firm of merchants in South Africa has informed an American consular officer that it desires to represent American manufacturers or exporters of blasting fuses. Prices and samples are desired. The specifications state that the fuses must pass the Government regulations for South Africa, the burning time being 90 to 110 seconds per yard; that they must be packed in tin-lined air-tight wooden cases, each case containing 20 packets of 25 rings 24 feet long.
- Meat products, confectionery, toilet articles, etc.**, No. 18905.—A man in the United States has transmitted to the Bureau the names and addresses of business firms in the West Indies which desire to represent, on a commission basis, American manufacturers of packing-house products, chocolate and candy products, perfumery, and toilet articles.
- Toys**, No. 18906.—An American consular officer in France has transmitted the name of a business man in his district who desires to represent American manufacturers or exporters of toys of all kinds.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

CRISIS IN CHINA LEAD MARKET.

[Consul General George E. Anderson, Hongkong, Sept. 3.]

A serious crisis has developed in the import trade in lead in Hongkong, affecting directly and vitally the lead trade in all China; and a number of industries dependent upon supplies of the metal for existence are in serious straits. Lead, pig and bars, was imported into China last year to the amount of 7,256 short tons, valued at \$577,597, as compared with 7,502 short tons, valued at \$562,176, in 1913, while sheet and "tea" lead was imported to the amount of 230 short tons, valued at \$21,505, compared with imports of 216 short tons, valued at \$22,574, in 1913. Nine-tenths of all these imports come from Australia direct or through Hongkong, the latter port directly handling about two-thirds of the whole. Of the 6,000 tons or so imported into Hongkong annually, Canton uses from 250 to 300 tons a month in its various paint and other establishments, Hongkong importers listing about 40 factories in Canton using the metal.

The Australian Government has just stopped the export of lead from that Commonwealth as a war measure, and for the time being the Hongkong market and through it the Chinese markets are practically without supplies. In addition to the Chinese trade ordinarily handled through Hongkong large quantities are imported into Hongkong for local industries and for export to other far eastern countries. It is probable that the annual imports into Hongkong have a customs valuation of over \$500,000 gold in normal years. Small amounts of lead are imported into China in ordinary years from Japan, Great Britain, and Russia, but the supplies from Europe for the time being have been shut off and at present there is no supply of a material sort coming from other sources.

The effect of the shortage of the metal is felt particularly in the tea trade, the larger portion of the supplies being used for manufacturing the lead sheets with which tea chests are lined to protect the tea from dampness. Various other industries, like the pewter industry at Swatow, are likely to suffer seriously. Arrivals of lead the present year have amounted to only about 3,000 tons. The price quoted at present is £23, or about \$112 gold per ton, as compared with about £14, or \$68 gold per ton a year ago. There are about 1,000 tons of the metal now in stock in Hongkong—about half the usual stock.

Correction in Steamboat-Inspection Rules.

Notices have been sent out to the United States supervising and local inspectors in the first, second, third, fifth, and tenth districts of the Steamboat-Inspection Service calling attention to a correction that should be made in the edition of August 11, 1915, of the General Rules and Regulations, by the substitution of the word "with" for "of," on page 122, in the third line of the fourth paragraph of section 8 of Rule IX, making the sentence read:

The filling pipes on tanks shall run through the top of tank and be carried to the bottom with a U bend extending upward at least 12 inches above the bottom to prevent filling pipe from clogging, to expel gases in the tank through the vent pipes when tanks are being filled.

COMMERCE REPORTS

ADDITIONS TO BRITISH EMBARGO LIST.

[Telegram from American Consul General, London, October, 1915.]

The exportation of all manufactures and products of cotton, except cotton lace and cotton waste, is now prohibited to all countries in Europe and on the Mediterranean and Black Seas other than France, Russia, Italy, Spain, and Portugal. The same prohibition applies to arsenical ore, black plates, and black sheets under one-eighth inch in thickness, ramie, furs, dressed or undressed, and manufactures thereof. The former item, "grindstones, carborundum, and emery wheels," subject to the same prohibition, is amended to read "grindstones and emery corundum, natural or artificial, such as alundum, carborundum, and crystolon, and manufactures thereof, including wheels, disks, paper, cloth, stones, and powder.

Coke from gas works and coal of all kinds, not including coal allowed by the customs authorities to be shipped as bunker coal, are now under embargo except when shipped to British possessions and protectorates. Copper wire, insulated electric light wires and cables, and power cables are under similar embargo, the last three being new items. Chronometers and nautical instruments of all kinds, compasses for ships and parts thereof (including fittings such as binacles), animal hair of all kinds, and tops, noils, and yarns of animal hair, formerly prohibited to European countries except the allied countries, Spain, and Portugal, are now prohibited to all foreign destinations other than British possessions.

The exportation of acetic ether, ether, phosgene (carbonyl chloride), and platinum to all destinations is now prohibited.

SWISS EMBARGO ON COTTON.

[Telegram from American Minister, Berne, Oct. 20, 1915.]

The exportation from Switzerland of cotton, cotton yarn, and mixed yarns has been prohibited by an order put into effect October 19.

WAR'S EFFECT ON DUTCH HOTELS AND SUMMER RESORTS.

[Consul Frank W. Mahin, Amsterdam, Netherlands, Sept. 30.]

While the war has detrimentally affected some producing and trading industries of the Netherlands (though materially, if not entirely, offsetting this by stimulating certain other industries), it has had the beneficial effect of keeping in this country a large sum of money which in peace times has been distributed in other countries.

Every Hollander takes a summer vacation of two weeks or more. Everyone who can afford it (and that includes thousands of people) usually spends his vacation in a foreign land. This year so few did so that their number was negligible. Yet they all had their customary vacation, but it was spent at Dutch seaside and rural resorts. Some of these were thronged during the past summer as they were never before. Though foreigners were relatively few on account of the war, their absence was supplied by Dutch people.

However, while the hotels at these resorts reaped an abundant harvest, the hotels in the cities keenly felt the lack of foreign tourists during the past summer. Large hotels in which in peace times accommodation could be had in summer only by advance application, and which then refused to make pension rates, were this year so lacking in guests that they were inclined to accept upon almost any terms such as did come. Dividends will be rare on the business of such hotels this year. But happily for their stockholders the capital investments are relatively small, and a very large profit balance is not necessary to yield a fair dividend. I am told that the greatest capital stock of any hotel in Amsterdam is 700,000 florins (\$281,400).

BEGINNING A NEW FISHERY.

The auxiliary fishing schooner *Stranger*, in the service of the Bureau of Fisheries, landed its first fare of about 8,000 pounds of tilefish at Fulton Market, New York City, on October 21. This large, attractive appearing and excellent food fish, which soon after its discovery in 1877, was supposed to have been exterminated by a submarine cataclysm, is now abundant near the 100-fathom line, within easy sailing distance of New York and Boston. To introduce a new sea food into the market and to give employment to a small fleet of fishing vessels ordinarily idle during the fall and winter, the bureau is conducting a campaign to acquaint both the consumer and the fisherman with the merits of the tilefish, and to this end it has prepared a circular giving a popular account of the fish and recipes for cooking it, and a large display card recommending it as a food. The circular or cookbook will be furnished on application, and the placard, which is illustrated with a cut of the fish, will be supplied to dealers willing to place the tilefish on sale. Address Bureau of Fisheries, Washington, D. C.

Developments in the marble and stone-working industry of Barre, Vt., in the past five years are indicated in a statement on manufactures in that city, issued by the Bureau of the Census. The value of the products of this industry forms practically nine-tenths of the total for the city. While the number of these establishments decreased from 114 in 1909 to 88 in 1914 there was an increase of 11.4 per cent in value of products and of 4.7 per cent in capital invested.

BRADFORD SHIPMENTS TO THE UNITED STATES.

[Consul Augustus E. Ingram, Bradford, England, Oct. 4.]

The declared exports to the United States from the Bradford consular district during September, 1915, amounted to \$1,231,057, as compared with \$2,744,071 in September, 1914. This decline is largely due to smaller shipments of raw wool, which only amounted last month to \$198,706, as against \$761,141 in the corresponding month of 1914. No wool tops were shipped, while in September, 1914, the exports amounted to \$266,215; and the shipments of wool yarns were practically negligible, as against \$131,299 in September, 1914. There was also a large falling off in the shipments of woolens and worsteds and in wool dress goods and linings. Cotton cloths, however, which are principally linings, showed an increase, the total for such shipments being \$225,974 as compared with \$161,379 in September, 1914. Spun-silk yarns also showed an increase, such shipments amounting to \$89,892.

The total shipments during the nine months of the present year amount to \$12,012,140, as compared with \$26,085,361 in the corresponding period of last year.

In regard to the Government restrictions on exports, it is evident that, despite the announcement that licenses would be granted for a limited amount (125,000 bales) of crossbred and similar wools, such licenses for shipments to the United States are not being granted very freely, but it is understood that some firms have received licenses and it is hoped that others will soon be received. The export of crossbred wool tops is now being agitated, but even if the matter is favorably entertained by the Government it is believed locally that the export will be limited to shipments to allied countries, which in this connection would mean France and Italy.

In compliance with the demands of the Admiralty an embargo has been placed on cotton cloth suitable for aircraft, so as to guard against the possibility of such cloth reaching enemy countries through neutral States. While this is a matter which primarily affects the Manchester or Lancashire trade, it is also of considerable interest to Bradford merchants and exporters, who handle large quantities of cotton cloths, receiving the goods in the gray from Lancashire and having them dyed and finished in Bradford. Such cloths consist not only of umbrella cloths, linings, etc., but also of dress goods.

Cotton linings and dress goods are normally shipped in large quantities to the United States from this consular district. The test by which it is intended to discriminate between cloths which are unsuitable for air craft and those which might be so applied is one of count, weight, and ratio of strength to weight. Complete details of the required test are expected to be made public very shortly. For cloths which are unsuitable for air craft a Chamber of Commerce certificate will be required, while for cloths which might be useful for air craft a license from the War Trade Department in London will be required.

Platinum prices were uniformly \$43.50 per ounce during the first seven months of 1914, went up to \$50 in September, receded to \$42 in December, 1914, and are now (October, 1915) \$51 to \$55.

DEVICE FOR COTTONSEED-OIL COLOR TESTS.

Incidental to the cottonseed-oil color tests that have been made by the United States Bureau of Standards, there is special interest in the design and construction of a labor-saving device for computing. By its use the computer can now do in a short time with ease what was formerly a long and onerous task. The glass blower and optician have prepared for the use of the bureau special glass cells designed to contain oil for fading tests which involve optical measurement of color.

LARGE INCREASE IN EXPORTS OF AMERICAN AUTOMOBILES.

American automobile manufacturers doubled their sales abroad last year, their exports of automobiles and parts thereof in the year ending June 30, 1915, having aggregated over \$74,000,000, against \$38,000,000 in 1914, \$2,000,000 in 1904, and \$1,000,000 in 1902, the first year of record. The gains were most pronounced in the second half of the fiscal year, and if the record made by July is maintained until the end of December, which seems probable from present indications, the total exports of automobiles in the calendar year 1915 will be well above \$120,000,000.

All parts of the world are buying American motor trucks and passenger automobiles, about 80 different countries being represented in the year's sales. Our motor trucks are being sold most largely in England, France, and Russia. In Greece, Denmark, Sweden, and Serbia sales have also reached unparalleled proportions. Increased sales are likewise being made in many countries far removed from the war zone, including Canada, Cuba, Central America, Java, Australia, British South Africa, and in our own territories of Hawaii, Porto Rico, and Alaska.

The year's exports of passenger automobiles were slightly less than those of 1914. Large gains in exports to the United Kingdom, Asiatic Russia, Cuba, Central America, the British West Indies, British Guiana, Venezuela, and British East Africa were more than offset by numerous decreases occurring elsewhere, notably France, Germany, and various countries in Europe, South America, and Asia.

The constituent factors in the automobile export trade for the last two fiscal years are as follows:

Kinds.	1914	1915
Commercial automobiles	\$1,181,611	\$32,140,688
Passenger automobiles	25,392,963	21,113,833
Automobile tires	3,505,267	4,963,270
Automobile engines	1,391,823	1,405,334
Automobile parts	6,624,232	7,853,183
Total exports to foreign countries	38,095,906	74,476,422
Total to Alaska	68,435	91,331
Total to Hawaii	1,285,278	1,514,585
Total to Porto Rico	686,906	775,879

Countries Buying Motor Vehicles.

A complete record of the United States export trade in automobiles is contained in the table which follows. It shows the number of automobiles of each class exported to the different countries in the fiscal years 1914 and 1915 and the value of the exports in the latter year:

Exported to—	Commercial auto- mobiles.			Passenger automobiles.			Auto parts.	
	Number.		Value.	Number.		Value.	Value.

Note.—The shipments to American territories included: Hawaii, 864 automobiles valued at \$972,000; Porto Rico, 548 valued at \$433,000; Alaska, 59 valued at \$80,000 in fiscal year 1915.

COTTONSEED-OIL MILLS MAKING PEANUT OIL.

Production of oil from the peanut is being tried by some cottonseed-oil mills in the United States. The short cotton crop this season and soaring prices for cotton seed have offered the prospect of a curtailment of the season unless some change were made. Several oil mills in North Carolina are reported to have been successful in the experiment of substituting peanuts for the customary raw material.

Figures are given to show that the peanut yields between 50 and 60 gallons of oil to the ton, comparing favorably with the yield from cotton seed. The strength in ammonia of the cake is also an important element favoring the peanut.

A Tarboro mill was the first to install the necessary machinery for this change in the raw material used, and after the experiment had extended over several weeks the company purchased more than 200 tons of last season's crop of peanuts and entered upon the extracting of the oil and grinding of the cake with full confidence in the results.

This season's quotations on cotton seed have been in marked contrast to those prevailing last year, when the farmers of the South sold the seed for much lower prices than they had received for several years—as low as \$12 a ton in some instances. A recent report was received from Montgomery, Ala., that cotton seed, for the first time in the history of that State, had sold for \$50 a ton. Prices of from \$36 to \$40 a ton at Dallas have been quoted as the highest on record in that section.

Possibilities in the utilization of peanuts may be estimated from the imports, which for the year ended June 30, 1915, were: Not shelled, 14,540,982 pounds, valued at \$490,779; shelled, 9,643,691, valued at \$333,980.

SWISS COMMERCIAL ORGANIZATIONS.

In order that American business men may be able to procure condensed, authoritative information with respect to the way in which the European nations carry on trade campaigns and organize their commercial activities at home, the Bureau of Foreign and Domestic Commerce has been issuing pamphlet presentations of the subject covering several of the leading European countries. Monographs on Germany, France, and the United Kingdom have already appeared, and one on Switzerland is the latest to come from the press.

This booklet, entitled "Commercial Organizations in Switzerland," reviews the history of chambers of commerce and trade, explains the independent and official types of organizations and their functions, and gives particular attention to the Swiss Commercial and Industrial Association, which comprises in its membership all Swiss commercial organizations of consequence. There is a discussion of the Swiss Federal Department of Commerce and an outline of its evolution, as well as general information concerning such matters as the localization of industries, principal products, and commercial publications.

It is No. 101 in the Special Agents Series, and 5 cents will bring it from the Superintendent of Documents, Washington, D. C.

Transvaal coal is being tested by Egyptian railways.

SWEDISH-AMERICAN LINE BUYS FIRST SHIP.

[Consul Emil Sauer, Goteborg, Sweden, Oct. 2.]

The Swedish-American Line (Rederiaktiebolaget Sverige-Nordamerika) has purchased the first vessel for its direct mail, passenger, and freight service [mention of which was made in Daily Consular and Trade Reports for Nov. 8, 1913, and Dec. 11 and 28, 1914]. The vessel is the steel twin-screw *Potsdam*, formerly belonging to the Holland-America Line, having a length of 550 feet, a draft of 34 feet, and a speed of 15½ knots; the gross tonnage is 12,606 and the displacement 22,070 tons. It can carry 275 first-cabin, 225 second-cabin, and 2,000 steerage passengers. The *Potsdam* will arrive at Goteborg in November and will immediately be put in commission on the run to New York.

The present depth of water (28 feet) at the Goteborg quays is not sufficient to permit of the *Potsdam* coming alongside. Two years ago the Government approved plans for dredging the entrance channel and berths to 33 feet, and it is likely that this work will be begun in the near future. Even with this improvement, however, the *Potsdam* could take on only a portion of its cargo at the quay and would be compelled to go out and anchor at Rifo Fjord to complete loading. With regard to depth of water Goteborg is no worse off than many other large harbors. There are many foreign ports which Atlantic liners can not enter, the vessels being obliged to anchor outside. The inconveniences resulting from this course can partly be overcome by the construction of landing piers, etc., and according to the local press similar arrangements will have to be made here.

SPAIN'S WINE AND GRAPE PRODUCTION.

[Consul Robertson Honey, Madrid, Sept. 27.]

The Directorate General of Agriculture publishes to-day advance statistics of Spain's wine and grape production for 1915. It is thought that the final figures will be practically the same. The grape crop is placed at 895,036 metric tons (metric ton=2,204.6 pounds), of which 829,319 tons were devoted to wine making, producing 267,142,400 gallons of must.

The above figures are much below the corresponding totals for 1914, as the following summary discloses:

	1914	1915	Decrease.
Grape production.....tons..	1,400,050	895,036	505,014
Grapes used for wine making.....do..	1,254,431	829,319	425,112
Production of must.....galls..	427,109,275	267,142,400	160,966,875

There were 3,169,114 acres under grape cultivation in Spain this season, as against 3,066,830 acres in 1914.

Chilean Nitrate Production.

Official figures of the production of Chilean nitrate during the first two months (July and August) of the current nitrate year place the total at 6,365,022 quintals of 101.4 pounds; during the like period of 1914-15 the output was 10,552,764 quintals. For August alone production totaled 3,443,409 quintals, compared with 4,839,657 a year ago.

NEW FIBERS FOR PAPER MAKING.

[Consul General W. Henry Robertson, Buenos Aires, Argentina, Aug. 23.]

The success that attended the experiments undertaken some time ago by the Argentine Bureau of Forestry to produce a commercial pulp from the pines (*Araucaria imbricata*) of Neuquen territory directed attention to other pine-bearing areas of the Republic, and announcement has just been made of the successful conclusion of similar experiments with cellulose from Misiones.

The Misiones pines, although possessing characteristics different from those of the trees of Neuquen, show practically identical results. The fiber of the former is longer, but, on the other hand, that of the Neuquen pine is more resistant, and in both cases one-half ton of pulp can be obtained from a ton of the wood. Another basic difference offered by the pine of Misiones is that it has its resin between the wood and the bark, thus obviating the necessity of extracting that product.

The experiments with Misiones trees were not made with white pine, but with a specimen whose wood had a reddish color, due to soil influences. In spite of this, the fiber when treated with bisulphite gave a pulp surpassing in whiteness that of the paper materials which are imported from Europe.

Will Prove a New Source of Wealth.

In commenting on the outcome of the Bureau of Forestry's work the local newspapers said:

It is needless to dwell upon the importance of these experiments and the opportunity they offer for the promotion of an industry which, in a more or less short period, is capable of becoming a constant source of riches. If, as the results of the experiments made up to now allow it to be hoped, the pulp obtained from the pine trees of Neuquen and Misiones is a good article commercially, the enormous supplies of these forests will permit the satisfying of the national needs and the exportation of the remainder. Moreover, the stands of pine in Misiones are largely on public lands, so that the Government would be the first beneficiary from their industrial utilization.

Prior to the war in Europe—that is to say, in the year 1913—there were imported into Argentina more than 70,500,000 pounds of wood pulp, 8,289,400 pounds of which came from Germany, 19,290,500 pounds from Norway, 38,801,400 pounds from Sweden, 1,964,300 pounds from the United States, 910,500 pounds from Denmark, 846,500 pounds from Holland, 343,900 pounds from Switzerland, and 264,500 pounds from Austria.

[The Indian (Government) Trade Journal, Aug. 13.]

Indian Weed Yields a Good Fiber.

Whether *Hedychium coronarium* will ever be used to any large extent in other countries is problematical, but it seems worth while for Indian paper makers to give it their attention. This plant of the ginger family is distributed from the Himalayas to Ceylon and Malakka, ascending to 4,000 feet in the Khasia Hills and 6,000 feet in Ceylon. It is also native in Central America, the West Indies, New Zealand, Mauritius, and West Africa (Corsico Bay). Many years ago it was introduced into Brazil, where it has been wild in many of the States. In India the plant appears to thrive best in swampy tracts, but here also it runs wild.

As a paper-making material it seems to have first been put forward by Brazil, but those who have experimented with it are disposed to

think that *Hedygium coronarium* will yield good paper-making qualities from whatever part of the world it is gathered, and that any differences in the pulp from Calcutta as compared with that from Brazil are to be attributed to the method of preparing the raw fiber prior to shipment rather than to any variation in the growth of the plant itself. The pulp it yields is easy to manipulate and is capable of producing a paper of exceptional strength.

A Valuable Swamp Crop.

In India *hedychium* is a common wild plant in swamps and wet places, and on the edges of paddy fields. It is easily propagated. In one of the plantation districts in the south the estates are very much broken up with valleys and nullahs, the latter carrying off monsoon water, and consequently there are many swamps which can not be put under either tea or coffee. These are a source of trouble to the planter, since they grow weeds that seed into cultivated areas, and are apt also to be reserves of scales, grasshoppers, and various harmful insects, which escape to the coffee and tea.

It was suggested some years ago that such swamps might be planted with a plant that could be kept under control and cut and used as a mulch. The suggestion was adopted. In at least one instance *hedychium* was the plant selected as a useful, clean weed. It was a great success. It grew quickly, exterminating all other weeds and shrubs; and each year it is cut at regular intervals and used as a mulch for the grower's staple products. The same plan is now being carried out on other areas, and there is no doubt that the supplies of the plant could be increased very largely.

It has been grown also in British Guiana, and a recent report states that the first planting produced 28 tons of stalk and leaves per acre as a five months' crop on dry land. On irrigated land the first trial failed.

[Consul Talbot J. Albert, Brunswick, Germany, Sept. 20.]

Successful German Experiments with Hop Vines.

Announcement has been made of the results of experiments undertaken by the Institute of Chemical Technology at Brunswick looking toward the discovery of new and cheaper methods of manufacturing paper from vegetable fibers. Willow-tree bark and broom fiber did not give satisfactory results. Experiments were then made with the fiber of hop vines, of which there is a plentiful supply in Germany.

It was found that when the fibers are treated with lye their separation is difficult. They are more easily separated by soaking in a 0.5 per cent solution of an inorganic acid. The same result can be obtained by a steam pressure of half an atmosphere. Separation of the fiber is easier when working with old hop vines that have stored for a long time in the open air. It follows that storage in the open air or, better still, artificial storage in a warm, moist storehouse, is the best method of furthering separation. In this way a return of 20 per cent of good fibers was obtained.

The remaining wood, when treated with soda lye under a pressure of 3 atmospheres, produced an excellent paper pulp, and the roots of the vines yield an especially long fiber.

SWANSEA MARKET FOR LEATHER BAGS AND CASES.

[Consul W. L. Jenkins, detailed as vice consul at Swansea, Wales, Sept. 29.]

The value of "leather manufactures, unenumerated (other than boots, shoes, belting, and gloves)" imported into the United Kingdom in 1914, was \$2,838,069, as compared with \$4,824,852 in 1913, and \$4,208,130 in 1912. Germany supplied the largest part of these imports, its share amounting to \$2,251,062 in 1914, \$4,290,131 in 1913, and \$3,789,173 in 1912. The respective values from the United States were \$358,860, \$158,312, and \$133,342. The United States was the only country the imports from which during 1914 showed a considerable increase over those for the two preceding years.

Official statistics for the Swansea consular district alone are not available, but the demand for leather handbags and suit cases is considered to be a steady one. There is one firm handling sample cases and extension-tray bags, but in the absence of large wholesale houses there is only a small and occasional trade in these articles. The manager of this firm states that half Gladstone cowhide bags, with trays and divisions, retail for \$6 to \$8.50.

Local Interest in American Goods.

Local dealers are interested in hearing from American firms exporting hand bags and suit cases, as prices have increased over 25 per cent since the outbreak of war, due to the shortage of leather. Prices should be quoted c. i. f. Swansea, in English currency, and should be accompanied by fully illustrated catalogues or descriptive circulars.

Women's hand bags retail from \$2.25 to \$10.25 and men's cases from \$7.25 to \$14.50, in all sizes from 20 inches to 28 inches and having either nickel or brass fittings. One dealer states that a general criticism of American bags is that they have too much brass about them to suit the average Britisher. Gun-case handles are preferred.

An active London agent carrying samples should find it worth while to visit this district, but in the absence of such a connection, American exporters could doubtless obtain by correspondence trial orders that might lead to a profitable trade in the future.

[The names of two Swansea firms that sell leather bags and cases may be obtained upon request from the Bureau of Foreign and Domestic Commerce or its branch offices; refer to file No. 67458.]

COPRA CRUSHING AT LIVERPOOL.

[Consul Horace Lee Washington, Liverpool, England, Sept. 30.]

A \$1,500,000 company has been formed in Liverpool to handle raw material used by margarin and fiber manufacturers, also coffee, cocoa, tobacco, and castor oil. The concern has also acquired a palm coconut estate of 25,000 acres in Brazil and further estates of about 320,000 acres bearing all kinds of tropical produce.

Heavy shipments of coconuts from West Africa, Brazil, and elsewhere have been coming to Liverpool, but the bulk of them has been transhipped to other ports for manufacture. As such transshipments have ceased thousands of tons of coconuts have accumulated in Liverpool warehouses, probably a large percentage of which would deteriorate and result in total loss were it not for this new enterprise.

The nuts will now be crushed for the oil, on the Liverpool Dock Estate, and the margarin and other industries will be thus supplied with needed materials for their manufacture.

TANNING MATERIALS IN BRAZIL.

[Consul General Alfred L. Moreau Gottschalk, Rio de Janeiro, Aug. 8.]

The tanning materials used by Brazilian tanneries include: Carbatimão bark, obtained from the State of Minas Geraes, considered to be an excellent tanning material, containing about 60 per cent of tannin; angico bark, also obtained from the State of Minas Geraes, regarded as a good tanning material, very light in color, but containing only about 28 per cent of tannin; and mangue bark, which is found all along the Brazilian coast and is well known in the United States and Europe under the names of mangrove, palétuvier, etc.

There are no factories in this country manufacturing tanning extract, the bark being employed as such.

Local Tanneries Affected by Scarcity of Materials.

It is said that the principal reason for the undeveloped condition of the tanning industry in Brazil—which annually exports raw hides to the value of many millions of dollars and imports large quantities of foreign-tanned leather for manufacturing purposes—may be principally attributed to the scarcity of tanning material. There is only one important tannery in Rio de Janeiro, owned by Durisch & Co., 45 Rua da Alfandega; São Paulo and Porto Alegre each have several small ones.

The manager of the Rio firm states that although its establishment is working day and night, owing to the increased demand for leather in Europe, with a daily production of about 200 hides, it is believed that before many more months the factory will either have to close down entirely or work shorter hours, owing to the apparent growing scarcity of tanning materials.

Difficulties That Hamper Exportation.

The inquiry of an American firm at whose request this report has been prepared was shown to Durisch & Co., who state that Brazil, for the present at least, is not in position to export tanning materials. The difficulty which this country has found in the exploitation of its valuable hardwood forests (the best varieties of trees being situated far from railway facilities) and the high cost of labor and transportation at most interior points seem to have hampered the extraction of tanning materials, of which the country should possess large quantities.

At present rates of exchange the price of carbatimão and angico bark in Rio de Janeiro and São Paulo averages about \$30 United States gold per metric ton (2,204.6 pounds).

[Consul A. T. Haeberle, Pernambuco, Aug. 4.]

Supplies Might be Obtained from Pernambuco.

Barks for tanning may be exported from the Pernambuco district to the United States. Those most used are the angico and mangue, the former being the more abundant. Mangue leaves are also used, but they are not available for exportation because they easily lose their properties.

[Samples of mangue and angico bark, transmitted by Consul Haeberle, may be inspected at the Bureau of Foreign Commerce or its branches; the address of a Pernambuco dealer in tanning barks may be obtained from the same offices. Refer to file No. 65420.]

IRON PIPES AND FITTINGS FOR FAR EAST.

The following table shows the imports of iron pipes and fittings into Far Eastern countries during certain stated years, and the countries whence imported. The figures were compiled from official returns of the respective countries.

[1 picul=100 kin=133½ pounds; 1 Halkwan tael—in 1913, 72.9 cents, and in 1914, 60.7 cents; 1 yen=49.8 cents; £1=\$4.8665.]

AUTUMN PRICES FOR SPANISH PIGS.

[Consul Wilbur T. Gracey, Seville, Sept. 4.]

The first contracts for the autumn slaughtering have been closed with Madrid butchers for 6,000 pigs to be killed in October and November from the districts of Andalusia, Estremadura, and Murcia. The price is said to be 1.73 pesetas per kilo, equivalent at present exchange to 14.2 cents per pound.

[A review of the swine industry of Andalusia appeared in *COMMERCE REPORTS*, for June 26, 1915.]

LACK OF DIRECT SHIPS TO SICILY.

[Consul Samuel H. Shank, Palermo, Italy, Sept. 10.]

The greatest hindrance to the extension of American trade in Sicily is the inability to send goods direct to Sicilian ports. Formerly the *Sicula Americana* had some ships direct from American ports for Palermo, but none have come during the past year. The Hellenic Steamship Co., of Greece, has some ships which stop at Palermo on the voyage from New York to Piraeus, but so far as I can learn they have never discharged cargo at this port.

During normal times nearly all the ships going from Genoa and Naples call at Palermo on their way to New York, but none call on the voyage from New York to Naples or Genoa. If one or two ships a month would make Palermo the first port of call in Italy it would materially assist in the development of American trade.

Through Bills of Lading Would Help.

Even without making this the first port, matters would be helped if the shipping companies were to issue through bills of lading to Palermo. Under present conditions merchandise is billed to Genoa or Naples and there transferred to a local boat for Palermo. The result of this is a largely increased freight cost and a delay.

As illustrative of this point might be cited a shipment of merchandise sent to this consulate from New York via Genoa. The cost from New York to Genoa, including freight, insurance, and war risk was \$4; the cost of unloading and shipping to Palermo amounted to another \$4. This merchandise was unloaded in Genoa the middle of December and reached Palermo in March; had it remained on board the vessel in which it was shipped from New York it would have arrived in Palermo 10 days after it reached Genoa.

Another instance is that of a case of goods unloaded in Naples. The ship on which it came to Naples went afterwards to Genoa and then came to Palermo, and was here some two weeks before the case was received from Naples.

Special Holds for Palermo Freight.

Even if the steamship companies can not change their routings there would seem no reason why they could not consign the goods direct for Palermo and keep them on board until the vessel arrived here on its return trip. This might not be feasible for large cargoes, but for smaller shipments it could not interfere materially with the loading or unloading at other ports. This cargo could be put in holds reserved for Palermo freight.

The matter has been discussed with various agents here, but as they are not directly interested in the incoming freight, and as they have no authority to act, they have done nothing. However, if it were taken up with the steamship companies in New York, some improvement might be made in the service. I have been informed that a company in New York is contemplating putting on a line of steamers specially ventilated for carrying lemons from Palermo to New York, and if this service materializes it may bring about an improvement and should lead to increased trade in American products in Sicily.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

- Automobiles**, No. 18907.—A firm in the United States has informed the Bureau that its agent in Spain desires to represent an American manufacturer of a high-class automobile costing from \$1,500 upward. He also desires to secure the agency for a worm-driven auto-omnibus.
- Paraffin wax**, No. 18908.—An American consular officer in Italy reports that a business man in his district desires to represent American manufacturers of paraffin wax. References are given.
- Dairy machinery and appliances**, No. 18909.—A firm in India has informed an American consular officer that it desires to represent American manufacturers or exporters of dairy machinery and appliances.
- Typewriters and supplies**, No. 18910.—An American consular officer in France transmits the names of business men in his district who desire to represent American manufacturers or exporters of typewriters and supplies.
- Hooks**, No. 18911.—A hardware dealer in England has informed an American consular officer that he desires to communicate with the manufacturers of the "X hook" for hanging pictures (Patent No. 28289/06).
- Sugar**, No. 18912.—An American consular officer in Switzerland transmits a report relative to an opportunity for the sale of refined sugar. A copy of his report may be had on application to the Bureau or its branch offices.
- Machinery**, No. 18913.—A business firm in this country desires the names of American manufacturers of a machine to be used for wrapping lumps of sugar as required by the sanitary laws of Cuba.
- Undertakers' supplies**, No. 18914.—An American consular officer in France reports the desire of a firm in his district to represent American manufacturers or exporters of undertakers' supplies.
- Automobiles and accessories**, No. 18915.—The commercial agent in charge of the Bureau's branch office in New York reports that the representative of a foreign firm desires to represent American manufacturers of automobiles and accessories in Holland.
- Clothing, etc.**, No. 18916.—The Bureau is informed by a commercial organization in the United States that a man in Argentina desires to represent American manufacturers or exporters of wool and cotton clothing, and tailors' novelties and supplies.
- Sugar-making plant**, No. 18917.—An American consular officer in Honduras reports that a man in that country desires to purchase a small outfit for making raw sugar, including cane mill, kettle, and all necessary accessories for treating about 10 tons of cane daily, the plant to be operated by animal power. If possible, prices should be quoted for delivery at Amapala. The man states that he has no objection to paying cash for the goods if their delivery in good condition is guaranteed. Correspondence should be in Spanish.
- Upholstery leather**, No. 18918.—A business man in France has informed an American consular officer that he desires to represent American manufacturers or exporters of upholstery leather.
- Leather bags, suit cases, etc.**, No. 18919.—An American consular officer in Wales reports that a firm in his district desires to receive catalogues and prices of leather bags, sample cases, and suit cases, with a view to securing the exclusive agency for that district, buying goods on their own account. The firm states that the minimum amount of brass is desirable and that drill or linen lining is satisfactory. Prices should be quoted in English currency and should be made c. i. f. destination.
- Cotton**, No. 18920.—A business firm in Sweden has informed an American consular officer that it desires to communicate with American producers of cotton in order that it may import direct.
- Furniture**, No. 18921.—The Bureau is informed by an American consular officer in Uruguay that the proprietors of a restaurant in his district desire to receive catalogues and prices of iron chairs and tables suitable for sidewalk use. Copies of the catalogues should also be sent to the consul.

Construction and operation of railway, No. 18922.—An American consular officer in England reports that tenders will be opened at the "Dirección General de Obras Públicas" in Madrid on November 12 for the construction and working, for a period of 99 years, of a secondary railway from Manacor to Arta, in the island of Majorca. The cost of construction is estimated at 4,491,265 pesetas, (about \$874,267), on which interest not exceeding 5 per cent per annum will be guaranteed by the State. The minimum rolling stock required to work the line will be 4 locomotives, 13 passenger coaches, 5 brake vans, and 27 goods wagons. An option on the concession is held by Don Rafael Blanes Tolosa. Construction work must be begun within six months from the date of the award of the concession and completed within a period of two years. It is stated that, although the contract may be awarded to Spanish firms, the execution of the work may involve the purchase of materials abroad. The Bureau has no further information relative to this opportunity.

Nickel goods, No. 18923.—The Bureau is informed by an American consular officer in England that a firm in his district desires to receive prices of nickel goods, such as shaving mirror stands, letter scales, china tea trays with nickel rims, etc. Prices should be quoted c. i. f. British ports if possible.

Corks, bottles, stationery, etc., No. 18924.—The Bureau is informed by a business man in Canada that he desires to receive catalogues and prices of chromos suitable for calendars, Christmas cards, etc.; corks of all sizes; cheap lead sprayers used for perfumery bottles; amber, blue, and plain bottles for packing chemicals, in sizes of 4, 6, 8, and 16 ounces; varnish tins and tin containers for chemicals and powders in sizes of 2, 4, 6, 8, and 16 ounces; cheap stationery; cheap bond paper; cover paper for mount boards; lead pencils; and aniline dyes.

Chemicals, soap, etc., No. 18925.—An American consular officer in Scotland reports that a firm in his district desires to represent American manufacturers of dyewood and dyestuffs, chemicals, machine blankets, lappings for paper mills, soap, rosin, and mineral colors.

Furniture, No. 18926.—A business firm in New York has informed the Bureau that its representative in Trinidad desires to represent, on a commission basis, American manufacturers of bentwood chairs and rockers.

Copper sulphate, No. 18927.—An American consular officer in Greece reports that a firm in his district desires to represent American exporters of copper sulphate. The sulphate should have a guaranteed strength of 98 to 99 per cent and should be shipped in casks containing 5 hundredweight each. Quotations should be made c. i. f. destination. Correspondence may be in English.

Office supplies, No. 18928.—The Bureau is informed by a commercial organization in this country that a firm in France desires to receive catalogues, samples, and price lists of office supplies of various kinds, such as paper, typewriter ribbons, carbon paper, etc. Correspondence and printed matter may be in English.

Cotton goods, hardware, foodstuffs, etc., No. 18929.—A firm in the United States has informed the Bureau that a business firm in British Guiana desires to represent in British, Dutch, and French Guiana American manufacturers of cotton goods of various kinds; hardware, such as axes, galvanized-iron wire, buckets, tin plates, and cheap razors; food products, such as flour, oats, cottonseed oil, and lard; household furnishings, such as earthenware and enameled ware. The man also desires to secure a moving-picture agency.

Safety razors, No. 18930.—An American consular officer in England reports that a firm in his district desires to receive prices on cheap safety razors in nickel cases. If possible, prices should be quoted c. i. f. British ports.

Marine hardware, cotton goods, etc., No. 18931.—The Bureau is informed by a commercial organization in this country that a business man in one of the Pacific Islands desires to receive catalogues, price lists, etc., from American manufacturers of marine hardware, wire and wire fences, cotton cloth, cotton sheeting (150 to 180 centimeters wide), overalls, and horseshoes. Correspondence should be in French.

REGULATING COTTON SUPPLIES AND PRICES IN RUSSIA.

[Consul General John H. Snodgrass, Moscow, Sept. 1.]

According to a recent bill in Russia, there are to be established two special committees, one for supplying raw material to the cloth factories producing half-cotton goods and the other for supplying material to the cotton factories. According to the decision of the conference that took place on July 14, the committee for supplying cotton will consist of one representative of each of the following bodies: Ministries of Trade and Industry, Ways of Communication and Agriculture, the Army Supply Department, the Moscow Exchange, the Kokand Exchange, the cotton manufacturers of the Petrograd district, 5 representatives of the cotton manufacturers of the Moscow central district, and 3 representatives of the cotton dealers. The Minister of Trade will be the president of this committee. The functions of the committee include ascertaining the maximum prices to be established by the Ministry of Trade, investigating the requisition of such cotton supplies as the holders would not sell at prices fixed by the ministry, and distributing supplies among the factories.

The functions and rights of these committees will be established by special regulations, which will also determine their headquarters. It is supposed that the committees will be located in Moscow.

The Ministry of Trade and Industry will be authorized (in accordance with the judgment of the committees) to fix the price limits for cotton and to introduce all necessary measures, including the requisition of cotton for better distribution among consumers.

AMERICAN LUMBER USED IN PORTUGAL.

[Consul General W. L. Lowrie, Lisbon, Portugal, Sept. 16.]

Most of the foreign lumber used in Portugal is imported from Sweden and the United States, especially from the Gulf ports—Pensacola, Apalachicola, Gulfport, New Orleans, and Galveston. Pitch pine, oak, ash, and satinwood are the kinds of American lumber in demand. Pitch pine is used for roof building and flooring, oak and ash for building railway cars and trucks, and satinwood for furniture making.

The present price of pitch pine in Lisbon is between 56 and 62 cents per cubic foot, as compared with 42 cents before the war. The difference is not due to an increase in the price of the lumber itself, but to the exorbitant freight rates and the unusually low exchange.

The average sizes of pitch pine imported are 27½ and 30 cubic feet. The usual sizes of Swedish lumber imported are 3 by 9 and 3 by 10, employed mainly for beams and for making doors and windows. The price, owing to present circumstances, has increased about 70 per cent.

The stock of foreign lumber on hand is very small, but dealers state that they have no desire to increase it, in view of present conditions. The cheap native lumber, which sells for about 25 cents a cubic foot, is being used extensively, thus replacing to a considerable extent the imported product. Occasionally small shipments of pitch pine from New Orleans are received, to supply the most urgent demands of the market.

OVERSTOCK OF RICE IN JAPAN.

[Consul General George H. Scidmore, Yokohama, Sept. 28.]

The "Chugai Shogyo" (Tokyo) urges the Japanese authorities to take immediate steps to export abroad some 2,000,000 koku (10,000,000 bushels) of rice, in order to relieve the depression on the rice market. In the early part of the present year the price of rice fell to 13 yen per koku (\$1.2948 per bushel), and the authorities adopted certain measures to regulate the price, withdrawing the sum of 5,000,000 yen (\$2,490,000) from the treasury and purchasing large quantities of rice on the domestic market. This step, however, had little result. Quotations in Tokyo, Osaka, and other districts continued to fall, and at present—September—delivery rates at 10 yen per koku (\$0.996 bushel), while October delivery is quoted at 11 yen per koku (\$1.0956 per bushel). The commercial paper fears that the market rates will show a still further depreciation when the new rice is actually placed on the market. Official returns just issued indicate that this year's crop will exceed 57,000,000 koku (285,000,000 bushels). The annual consumption of rice in this country amounts to about 55,000,000 koku (275,000,000 bushels). It will thus be seen that there will be a surplus of some 2,000,000 koku (10,000,000 bushels). The authorities appear to be at a loss how to handle the situation, seeing the recent measures were unsuccessful.

VESSELS ADMITTED TO AMERICAN REGISTRY.

During the period from October 2 to October 23, 1915, there were admitted to American registry under the act of August 18, 1914, 2 vessels, freight steamers, of 3,304 gross tons, as follows: *Yucatan*, formerly Mexican *Yucatan*, 751 gross tons, J. W. Jolly, owner, home port, Philadelphia, Pa.; *Hocking*, formerly Danish *Gronland*, 2,553 gross tons, American Transatlantic Co., owner, home port, New York, N. Y. The total admitted for the period from July 1 to October 23, 1915, was 19 vessels, of 49,082 gross tons.

IMPORTS AND EXPORTS OF COPPER.

The imports and exports of copper at the customs districts of New York, Massachusetts, Philadelphia, Maryland, Virginia, Galveston, New Orleans, San Francisco, Washington, and Michigan during the week ended October 16, 1915, follow:

COTTON GINNED, CONSUMED, AND ON HAND.

The United States Bureau of Census reports that the number of bales (counting round as half bales) of cotton ginned from the growth of 1915 prior to October 18, 1915, was 5,713,347, compared with 7,619,747 for 1914 and 6,973,518 for 1913. Round bales for 1915 amounted to 54,422, against 15,235 for 1914 and 49,080 for 1913. Sea island included 40,257 bales for 1915, 30,078 for 1914, and 31,139 for 1913.

Cotton consumed during the month of September, 1915, amounted to 498,219 bales. Cotton on hand in consuming establishments on September 30 was 1,089,614 bales and in public storage and at compresses 2,796,500 bales. The number of active consuming cotton spindles for the month was 31,295,104. Domestic cotton exported during September, 1915, was 502,031 running bales, and foreign cotton imported 26,197 equivalent 500-pound bales.

The figures for 1915 are subject to slight corrections.

BRITISH COTTON GROWING IN AFRICA.

[Manchester Guardian, Oct. 9.]

The one hundred and fortieth meeting of the Council of the British Cotton-growing Association was held in Manchester on October 5, 1915.

The cotton which is being grown on the Government experimental plot at the Moor Plantation, West Africa, is doing well this season, and it is expected that there will be sufficient seed either from the Georgia or Uplands varieties for distribution next season to plant about 500 acres. It was agreed that it would be advisable for the association to offer a higher price for the cotton produced from this seed, even if it left the association with a loss, as it is important that the efforts of the Agricultural Department to improve the quality of Lagos cotton should be supported.

It has been decided to close down the association's operations in the Gold Coast and at Illushi, in the southern Province of Nigeria. At the same time it is considered advisable to keep open the ginnery at Labolabo for the benefit of those natives who are already committed to the cultivation of cotton, and it is not anticipated that there will be any difficulty in making arrangements to this effect.

The West Africa Committee has had a meeting with Maj. Armitage, the Chief Commissioner of the Northern Territories, who reported that cotton cultivation in the Northern Territories was a failure last year owing to the unfavorable climatic conditions, and he expressed the opinion that under better conditions the results would be more favorable. Outside of cotton growing, the only other industry in the Northern Territories of any note is cattle breeding, and, as quantities of cotton seed have been distributed to the local farmers for planting for the new crop, Maj. Armitage hopes that arrangements may yet be made for the operations to be continued, at any rate for another year, in order to give the farmers an opportunity of marketing their crop.

The purchases of cotton in Lagos to the end of September amounted to 5,974 bales, as compared with 13,486 bales for the same period of last year and 13,645 bales for 1913.

The purchases of cotton in northern Nigeria to the end of August amounted to 497 bales, as compared with 518 bales for the same period of last year.

Report from Nyasaland.

A report has been received from the Director of Agriculture stating that the crop grown by white planters in the Shire Highlands is above the average, and that some planters have particularly fine crops, which are now being harvested. The river crops are very late, and suffered from drought in February and early March, but late rains have improved conditions considerably.

The cotton exported from Nyasaland for the year ended March 31 last amounted to 6,620 bales, valued locally at \$350,816, showing an increased value over the preceding year of \$32,026.

As regards the native crop, the Mlanje and Upper Shire crops are being harvested, and it is expected that these two districts will produce 350 tons. The native crop is of superior quality, and a sample has recently been received and valued at 1d. (2 cents) "on" the price of middling American.

CONDITION OF NETHERLANDS CROPS.

[Vice Consul G. H. Krogh, Rotterdam, Sept. 30, supplementing report published Oct. 4.]

Since the publication of the previous crop report the weather has been very unfavorable for the various products. Grain, particularly wheat and oats, suffered considerably from rain during harvest time; the condition of the latter is, in fact, very bad considering the damage done by dryness and frosts in the early summer. The production of wheat was rather good, but its quality (weight) did not come up to general expectations.

Turnips also suffered from the unfavorable weather, as did onions in the Province of South Holland. The condition of the bean crop varies from fair to good, brown beans are satisfactory, peas medium to good. Fall cattle feed is generally considered favorable. Clover and grass are in excellent condition; on those lands where a second cut was made it was an excellent one. Potatoes for consumption promise a rather favorable crop. The growth on clay soil was generally better than on sandy soil, but nowhere is an abundant crop expected. Potatoes for factory use suffered much from night frosts during the month of June and have recovered but little since.

Wet weather caused much damage to the sugar beets, as dryness and sunshine, particularly during August, are essential for a good crop. Notwithstanding this, and the insufficiency of Chilean saltpeter, the sugar beets are in a comparatively favorable condition. It is reported that the leaves are turning yellow too early in the Provinces of South Holland and Zealand, which is attributed to the lack of nitrate. The crop of sugar beets is good in the Provinces of Friesland and Overijssel, rather good in Groningen and South Holland, and from rather good to good in the other Provinces.

NEW RADIO STATIONS OF UNITED STATES.

Additions to the list of radio stations of the United States as given by the Bureau of Navigation in its October list include 11 special land stations and 6 ship stations. Among the ship stations are the *Azaiea* and *Ellington*, owned by the Immigration Service of the United States Department of Labor. Others are: *Alicia*, De Forest system, 300 and 600 wave lengths, for general public use; no regular hours; operated and controlled by Alfred I. du Pont; *Fort Bragg*, 300 and 600, owned by Higgins Lumber Co.; *Mount Hope*, composite system, 300 and 600; for private use; owned by Providence, Fall River & Newport Steamboat Co.; *Silver Shell*, Marconi system, 300 and 600; operated and controlled by Marconi Co.

The special land stations, all of which maintain private service, with no regular hours except at the stations at Louisville, Ill., and Tiffin, Ohio, are: Auburn, Ala., wave lengths, 1,625 and 1,800, controlled by Alabama Polytechnic Institute; Davenport, Iowa, 300, William H. Kirwan; Denver, Colo., 200 and 425, Edward C. Stockman; Louisville, Ill., 200 and 425, Cecil Bridges; New Orleans, La., 300 and 600, Marconi Co.; New York, N. Y., 233, 300, and 600, Y. M. C. A. Telegraph School; Ridgway, Pa., 300 and 425, Pittsburgh Wireless Equipment Co.; Rockford, Ill., 200, Rockford School of Engineering; Tiffin, Ohio, 200 and 425, John J. Grossman; Washington, D. C., 200, 300, and 400, McKinley Manual Training School; Washington, D. C., 200, 400 and 1,800, National Radio School.

TRADE EXPANSION IN THE SOUTHERN REPUBLICS.

[Commercial Attaché Lincoln Hutchinson, Rio de Janeiro, Brazil, Sept. 19.]

The South American view of the North American interest in trade expansion in the southern republics was presented in a recent issue of a prominent Brazilian journal. The comments on the situation seem so pertinent that they are quoted below:

Among officials and among business men in the United States, the dominant purpose at the present time is to develop commercial relations with the countries of South America.

Perhaps it is because another such propitious occasion may not offer itself soon and because the situation of to-day will last even after the establishment of peace that the North Americans desire to improve the present occasion; for after the war the belligerent nations will not be able immediately to resume their former industrial and commercial activity.

The Government of the United States does not wish to lose this opportunity, and it has prepared a Pan American politico-commercial plan. This plan, which has been formulated by the Secretary of the Treasury, consists principally of a tariff agreement with the different countries of this hemisphere, which will assist both the United States and the other countries in facilitating commercial relations to the advantage of all. A part of the plan, also, is the greatest possible development of navigation between the different countries, with the purpose of lowering the freight rates and of maintaining regular communication between the different ports.

But while official initiative may be responsible for the realization of part of this program, the development of commercial relations largely depends upon the private parties interested in it, just as is the case with domestic commerce of any nation. Official action or aid can do much in favor of the proposal, but it alone can not produce the desired result; on the contrary, all will be lost if there is not added thereto the intelligent assistance of exporters, manufacturers, and merchants, who can not contest with advantage for a market unless they observe the custom of that market, which is to sell moderately priced goods on agreeable terms. Without the application of this method the North Americans, it is true, may be able to capture the market by force of present circumstances, but they will have to abandon it as soon as the warring countries re-establish themselves in commerce and the world returns to its former condition.

[A discussion of "American Trade Methods in Argentina," in which similar views are set forth at much greater length, was published in **COMMERCE REPORTS** for Oct. 4, 1915.]

MARGARINE REPLACING BUTTER IN LEEDS.

[Consul Homer M. Byington, Leeds, England, Oct. 1.]

The price of butter in Leeds has risen above all previous records. Current wholesale quotations on foreign butters are now approximately 45 per cent higher than in July, 1914, as the following comparative summary shows:

Kind of butter.	Price per 112 pounds.	
	July 25, 1914.	Sept. 25, 1915.
Danish.....	\$31.63-\$32.36	\$46.23-\$46.96
Swedish.....	31.27- 31.63	45.26- 45.75
Finnish.....	31.02- 31.27	44.29- 44.77
Siberian.....	25.06- 25.55	35.53- 36.99

Butter is being generally retailed in Leeds at 47 cents per pound and in consequence large numbers are turning to margarine at 20 to 24 cents per pound. Dealers report that for several years the use of margarine has been steadily increasing among the working classes, but only since the high prices of butter have ruled, because of the war, have the middle classes turned to this substitute.

CANADIAN OLD-AGE ANNUITIES.

[Consul Felix S. S. Johnson, Kingston, Ontario, Sept. 20.]

In 1908 the Canadian Government inaugurated a system of annuities which at first was under the management of the Department of Trade and Commerce, but is now a part of the Post Office. The object sought was to provide old-age pensions for Canadians on a voluntary instead of a compulsory basis. Under the system now in operation no one can begin to receive a Government annuity until 55 years of age, although the purchase of such annuity may begin at any time. [See Daily Consular and Trade Reports for Mar. 23, 1908, and Sept. 15 and Dec. 18, 1909.] The annuity is absolutely the property of the person for whose benefit it was bought. It can not be mortgaged, sold, traded, or in any other way endangered.

Every resident of Canada is free to contribute to and enjoy the advantages of the system. There is no exclusion on account of sex, no age limit, no medical qualifications as to health or strength. The annuitant pays what he can, when he can; but the officers in charge do all that their official duties will allow to insure the regular payment of premiums as agreed. If for any reason the annuitant has not been able at 55 years of age to pay the cost of the smallest annuity allowed, his money is not forfeited, but is returned to him with interest.

The calculations for this system are based on 4 per cent interest compounded annually, and no charge whatever for expenses or management, the salaries of officers and other outlays being voted by the Canadian Parliament. Every postmaster has been made an agent of the annuity system and is paid a small commission on the business done through his office. According to the latest report the Government has made 3,450 annuity contracts, amounting to \$700,000 a year.

RECLAMATION WORK IN HAWAII.

[A. H. Stephens, correspondent, Honolulu, Sept. 27.]

The Territory of Hawaii now has in hand reclamation works that will cost about \$300,000, with several other projects in contemplation. At Honolulu a strip of land half a mile wide, starting near the wharves and extending for about 3 miles along the shore, is being put in sanitary condition. Another project well under way, known as the Waiolama reclamation project, will improve the water front of Hilo, on the island of Hawaii. This tract has been condemned and notice served by the department of public works upon the property owners. Within a few weeks the contract will be let and active filling operations commenced.

Preliminary surveys are being made for the Waikiki reclamation project, and filling will soon begin. This parcel of land adjoins the famous Waikiki Beach, and its reclamation will open up a large area of desirable residence property. In all these filling operations a dredge pump is employed, which draws up sand and coral from the ocean bed and deposits it on the condemned land. By this system it is possible to make these fills at a total cost of 40 to 45 cents a cubic yard.

To start this work the Territorial Legislature appropriated \$300,000. Property owners are allowed five years in which to make payment of the costs assessed against them, and as fast as the money is returned it becomes available for new projects.

CHINA ACTIVE IN TRAINING OF FARMERS.

[Commercial Attaché Julean H. Arnold, American Legation, Peking, Sept. 1.]

While much importance attaches to the fact that the Chinese Government has employed an American cotton-growing expert, H. H. Jobson, of College Station, Tex., on a three years' contract, this is only a portion of the work it has planned in agricultural lines. The Ministry of Agriculture and Commerce has recently undertaken a system of extension teaching for the farmers of the country, starting with the establishment of an extension school for the training of lecturers and demonstrators, who are to travel throughout the country introducing improved methods of farming. One of the agricultural experts of the ministry has been specially delegated to start such a school, which is already in the process of preparation.

The extension workers to be selected are to act in cooperation with the staffs of the agricultural experiment stations of the Ministry of Agriculture and Commerce. This department of the Government received from the Ministry of Finance last spring more than \$100,000 for the purpose of starting such stations. They are grouped in four classes, devoted, respectively, to cotton, sugar, afforestation, and pasturage. There are now 3 cotton farms, 1 sugar plantation, 2 forestry farms, and 3 pasturage farms. The Government has a model ranch at Chu Chow, in North Anhui, directed by an American ranchman, and there have been excellent reports of the work that is being done there. The director has had under cultivation 200 acres of corn, oats, barley, millet, and other grains for the stock, and although the new cereals were nearly all destroyed by the locusts in April and May, there were prospects that he would be able to harvest practically enough to feed the stock. Forty acres of peach, plum, pear, and apricot trees have been planted and will bear fruit next year, while there are 10 acres of mulberry trees.

It is required that the appointees for extension work shall be over 25 years of age and shall be men of practical farming experience in the designated district. They will have the following duties: (1) To travel through the territory and give lectures; (2) to distribute selected seeds for the improvement of crops; (3) to demonstrate the use of improved implements; (4) to investigate the cause of natural calamities and of pests; and (5) to plan for the gradual improvement of the various phases of farming methods. These appointees are to serve as honorary commissioners of the Ministry, but official awards will be made after three years of faithful service.

SHIPS FROM NEWCASTLE, AUSTRALIA, TO AMERICAN PORTS.

[Consul Lucien N. Sullivan, Newcastle, Sept. 6.]

From July 23, 1915, to September 3, 1915, four steamships, averaging about 5,000 tons each, have cleared from this port for American ports on the Atlantic Coast by way of the Panama Canal.

The first three of these vessels carried zinc concentrates. Two were British steamers and bound for Galveston; one—the steamship *Arna*—was Norwegian and carried 7,753 tons of zinc concentrates consigned to Mobile, Ala. The last vessel to clear—the steamship *Canastota*, British—had no cargo from Newcastle, but took on 1,400 tons of bunker coal. This vessel will call at the New Caledonian Islands, where it will load 6,800 tons of chrome ore for New York.

INCREASING PRODUCTION OF RICE IN BRAZIL.

[Consul General Alfred L. M. Gottschalk, Rio de Janeiro, Aug. 24.]

The growing importance of the rice production of Brazil and the fact that the country is rapidly learning to support itself in this important foodstuff is shown by the gradual decrease through the years of Brazilian imports of rice. The more recent changes are indicated by the figures for 1913 and 1914, with the respective quantities and values for each of the countries from which Brazil imports rice. These figures, with the weights given in kilos of 2.2046 pounds each, are:

Countries of origin.	1913		1914	
	Quantity.	Value.	Quantity.	Value.
	<i>Kilos.</i>		<i>Kilos.</i>	
Germany.....	758,679	\$76,188	292,880	\$17,479
United States.....	10,375	1,368	2,798	325
United Kingdom.....	247,783	28,825	21,224	2,132
Netherlands.....	123,185	12,668	235,162	17,681
India.....	5,538,991	539,068	4,506,993	262,333
Other countries.....	1,086,349	91,108	1,563,978	119,499
Total.....	7,777,361	744,116	6,886,033	519,209

Changes during a period of five years are indicated by the quantities imported annually. In kilos the amounts were: In 1910, 17,320,437; 1911, 16,532,262; 1912, 10,226,264; 1913, 7,777,361; 1914, 6,535,033.

Statistics for the Several Brazilian States.

Rice production in the State of São Paulo, the principal center of activity in this respect, was discussed in *COMMERCE REPORTS* for September 28, 1915. Recent statistics of the rice production of the several States of Brazil are not available. The latest, for 1910, in liters of 0.9081 quarts each, are: Para, 200,000; Maranhao, 971,000; Parahyba, 1,950,000; Ceara, 2,730,000; Espirito Santo, 24,000; Rio de Janeiro, 11,323,000; São Paulo, 62,555,000; St. Catharina, 1,820,000; Rio Grande do Sul, 2,925,000; Minas, 28,463,000.

Later returns when received will undoubtedly show large gains in the Brazilian production of rice, the domestic article gradually displacing the imported product. This follows in line with a movement noticeable in certain parts of the country to diversify crops and to make certain regions produce their own supplies of foodstuffs formerly imported from abroad.

[A list of local importers of rice may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 67,212. The rice market of Bahia, Brazil, was described in *COMMERCE REPORTS* for Apr. 8, 1915.]

Unusual percentages of increase are shown by the Bureau of the Census in its preliminary statement of the 1915 census of manufactures for Anaconda, Mont., in which figures for 1914 are compared with those for 1909. The primary horsepower increased 198.4 per cent; wage earners, 158.8; wages, 112.7; capital, 91.2; materials, 65.6; value of products, 27.6; and value added by manufacture, 13.8 per cent. The capital invested increased from \$489,000 to \$935,000.

TASMANIA'S IMPORTS FROM AMERICA AND ELSEWHERE.

[Consul W. A. Bickers, Hobart, Sept. 7.]

The decrease in imports into Tasmania for the year ended June 30, 1915, shows the ill effects that Tasmania has suffered on account of the war and drought. It is considered that the drought was responsible for the greater part of the loss, but this, fortunately, is now over, and normal trade conditions should soon return. The imports for the calendar year 1914 amounted to \$4,972,235, while for the fiscal year ended June 30, 1915, the value was only \$3,947,972. Tasmania's purchases of foreign goods, therefore, amounted to about \$1,000,000 more during the first six months of 1914 than during the corresponding period of this year. As Tasmania, in common with the rest of Australia, has found it necessary to purchase large quantities of grain and foodstuffs, it follows that the imports of manufactured goods have undergone a far greater decrease than the above figures would indicate.

Imports from United States Show Material Increase.

In spite of the heavy losses in imports, the value of imports from the United States has shown a very material increase, being \$708,631 for the fiscal year ended June 30, 1915, as against \$576,782 for the calendar year 1914. This shows that the United States increased its sales by \$131,849 in the first six months of 1915 in comparison with the corresponding period of last year. This increase would have been much greater if shipping facilities were better, since large quantities of goods, which under normal circumstances would have arrived and been delivered during May and June, did not reach here until August.

Better Freight Service Needed—Influence of Exchange.

During the first few months of the war there was a strong tendency on the part of merchants to confine their purchases as far as possible to the United Kingdom, but this is now practically a thing of the past and it is evident that merchants are looking more and more to the United States to supply their wants. This tendency would become more marked if there were a better and more economical freight service. Under present conditions merchants often hesitate in making purchases from America, not only on account of heavy freight rates but because it is frequently uncertain whether goods will arrive within a reasonable time. As Hobart is a regular port of call for mail steamers from England, merchants can always count upon goods arriving here from that country in a short time after shipment. This advantage has always been enjoyed by English exporters, but it was not in ordinary times so important as at the present, when there is such a shortage of available freight ships.

In this connection it is well to mention the high cost of exchange on America. At the present rates it adds materially to the cost of American goods. It is to be hoped that this will soon be adjusted.

British picklers of vegetables and makers of sauces and jams have been handicapped for bottles and jars owing to their reliance on the Continent. British imports of bottles in 1913 totaled \$3,965,000, of which the United States supplied only \$15,000 worth.

USE OF VENEERS IN BRAZIL.

[Consul General A. L. Moreau Gottschalk, Rio de Janeiro, Sept. 1.]

A fairly large number of inquiries has reached the Rio de Janeiro office concerning the possibility of introducing veneers of American make in Brazil, and it may prove interesting to the trade in general to have the following notes placed on record, since they apply not only to Brazil but to most tropical and subtropical countries in the Western Hemisphere.

There are no veneer factories in the immediate district of this consulate general, though there are several large furniture factories, a number of them employing American machinery.

Veneered furniture (usually imported from abroad) is decidedly unpopular, because the humidity of the climate (which is excessive, especially during the summer months) produces swelling in most foreign woods and causes veneers to "raise."

There are no dry houses here. Usually the kiln-dried furniture of foreign countries falls far short of the local air-dried woods.

Foreign Furniture and Insect Pests—Veneers Little Used.

A very formidable objection to most foreign furniture—and the writer has heard this objection made particularly to American office furniture, which as regards design and practicability is admired by many—is that the "core" of most of the pieces imported is made either of softwood or of such inferior hardwoods as to be utterly unable to resist the attacks of the termite (wood ant) and other insect pests that abound here. It is for this reason that the local trade often copies models from American catalogues, making them in native hardwoods throughout, rather than take the chance of importing an original article that might not prove durable here. These statements apply, unfortunately, to some of the best American office furniture, which has occasionally been imported here.

A person who has canvassed the local furniture trade thoroughly says that there is but one factory that he has seen using veneers at all, and this was for the making of billiard tables. The so-called "straight work" on some of the tables was veneered in a wood imported from France under the name of érable (maple). It resembles our own bird's-eye maple, and is, it appears, not a French wood, but one imported from French colonies. The sheets, or veneers, come to this country in 2-foot widths and are cut to suit the manufacturer.

The city of São Paulo, next in importance to this as a furniture-manufacturing center, uses more of this veneer than Rio de Janeiro (perhaps because of the colder highland climate there), but only on panels or conspicuous parts, for effect. It is stated that the output of one 6-foot veneer cutter would more than supply a year's demand on the part of the furniture manufacturers of Brazil. It would seem that none of the thicker veneer stock, of from $\frac{1}{4}$ to $\frac{3}{4}$ inch, has been seen here; nor have any veneers been made successfully of Brazilian native woods.

Fine Furniture Made from Native Hardwoods.

There are many beautiful native hardwoods, such as rosewood, canela, imbuya, vinhatico, and the lighter and more easily worked peroba, that are used extensively here, the Brazilian having a de-

cided appreciation for handsome, solid furniture of hardwood, often heavily carved or turned. One of the largest American concerns here recently spent \$8,000 in furnishing the offices of its largest branch office in Brazil with railings, partitions, desks, bookcases, and other office furniture, all manufactured locally, copied from American catalogue models, and made of native imbuaya wood. The general effect is that of black walnut, with a very dark vein running through it.

It is unlikely that there will ever be a demand for foreign veneers in commercial quantities here. If there were, it is probable that the Brazilians would prefer to import from Europe, for a general belief exists here—fostered by former importations of cheap American oak and other furniture, with softwood cores, linings, drawers, etc.—that European furniture and woods generally are preferable for furniture to those from the United States, as being more resistant to humidity and insect pests.

SWEDISH FISHERY NOTES.

[Consul General Ernest L. Harris, Stockholm, Sept. 17.]

Iceland Herring and North Sea Mackerel.

The market price of fish in Sweden is always greatly influenced by the herring output of Iceland and the mackerel catch in the North Sea. According to late reports the result of the herring fishing in the waters of Iceland has been better than last year, while on the other hand the mackerel caught in the North Sea is only about one-fourth of the output of 1914. It is estimated that the total Icelandic catch of herring this season will amount to 400,000 barrels, or very much more than last year. The season is practically ended and most of the fishing vessels have left those waters. Thus far only about 7,000 barrels of mackerel have been caught off the shores of Sweden and Norway.

Swedish Industry Expanding.

In Sweden there is very little State ownership of and only mild laws governing the fisheries. The salt-water fish include the herring, cod, mackerel, flounder, lobster, and eel, and there are also important fresh-water varieties. The growth of the Swedish fisheries is seen in the exportation during 1913 of 400,000 quintals (metric quintal=220.46 pounds) of fresh fish, whereas in 1870 no exportation took place beyond a few small shipments of a special kind of fish.

PANAMA CANAL TRAFFIC IN AUGUST.

[Canal Record for Oct. 13.]

The number of ocean-going vessels passing through the Panama Canal during August was 161. Of these, 89 were westbound and 72 eastbound. The aggregate number exceeded the total for all preceding months except July.

The cargo carried through the Canal during August amounted to 575,337 tons—249,119 tons from the Atlantic to the Pacific and 326,218 tons from the Pacific to the Atlantic. The August movement brings the grand total of cargo since the opening of the Canal up to 6,250,598 tons.

DECREASE IN OUTPUT OF MICA IN INDIA.

[Consul Lucien Memminger, Madras, Aug. 31.]

From the report of the Chief Inspector of Mines in India for 1914, which has just been issued, it appears that 4 mica mines in the Nellore district in Madras were relinquished and 40 were suspended, and the output during the last five months of the year was only 700 hundredweight, as compared with 4,700 hundredweight in the first seven months. The demand from London for slab mica kept the prices of this grade fairly firm, but the market for splittings, especially for those below the first grade, was much reduced.

Mica Industry Suffers as Result of War.

As to the mica mines for all of India, the report says the total output was 38,189 hundredweight, as compared with 43,660 hundredweight in 1913, a decrease of 12.51 per cent and the first decrease since 1910. The condition of the trade was fairly good during the first half of the year, prices being slightly lower than in 1913, which was an exceptionally good year. The trade suffered severely from the beginning of the war, and the output fell away in consequence. A large proportion of the demand for this mineral has hitherto come from Germany for use in its electrical industries. Certain firms with German interests, which were large purchasers of mica, have, it is stated, closed down. The export of mica to other countries in Europe was practically cut off, and the industry generally was much hampered by the abnormally high rates for ocean freights and insurance, brought about by the war. There was considerable difficulty with regard to shipments to America—to which country considerable consignments are sent direct in normal times—and the American market itself was dull.

TRACK-SCALE TESTING EQUIPMENT STANDARDIZED.

Representatives of the United States Bureau of Standards have recently standardized the large weights for test car No. 2, at St. Johnsbury, Vt., which has been built this year. The adjustment was accomplished with very great precision, the probable error in the adjustment of the total 90,000 pounds of large weights being but one-tenth of a pound.

The weights of test car No. 1 were retested at the bureau to ascertain the change in weight that might have occurred during the past two years of service. This test disclosed the fact that the loss on the total 90,000 pounds of weights was but 1.2 pounds, an average of one-tenth pound on each of the 12 weights. The weights are now having machine work done on them in order to provide a convenient method of sealing them.

Substantial increases in the 1915 census of manufactures for the city of Joplin, Mo., are shown by the Bureau of the Census in a preliminary statement comparing the figures for 1914 with those for 1909. The capital invested gained 35 per cent. Other items of increase are: Value of product, 43.9 per cent; salaries, 40.8; wage earners, 39.3; number of establishments, 29.9; proprietors and firm members, 26; wages, 25.1; primary horsepower, 21.7; and salaried employees, 17.2 per cent.

GREEK MARKET FOR AMERICAN SUGAR.

[Consul Arthur B. Cooke, Patras, Sept. 21.]

All sugar consumed in the Patras district is imported, the source of supply having in the past been Austria. The amount of sugar annually imported into the district through its several ports of entry is, according to official statistics, about 8,000,000 pounds.

During the first months of 1915 heavy supplies of sugar were brought into this district. For many months, however, the import trade has been cut off, and a shortage of sugar on domestic markets seems imminent. Local import merchants are already making inquiry at the Patras consulate with a view to possible importations from the American market.

Grades of Sugar Demanded—Prevailing Prices.

Four grades of sugar are consumed by this market: (1) Domino sugar (small squares), imported in cases of 50 kilos (110 pounds) each; (2) granulated sugar, imported in bags of 100 kilos (220 pounds) each; (3) loose lump sugar, imported in bags of 100 kilos each; (4) powdered sugar, imported in small quantities chiefly for confectioners. The consumption is fairly equally divided between the first three grades. The granulated sugar is of a common quality. The loose sugar consists of irregular hard lumps of white sugar, the sugar having apparently been cast into large cones and afterwards broken up.

The police authorities fix the wholesale and retail prices of most commodities on the domestic market. The price of sugar at present (for all grades indiscriminately) is: Wholesale, 1.25 drachmas per oke (\$0.0855 per pound); retail, 1.35 drachmas per oke (\$0.09234 per pound). These prices will apparently soon be increased, since the wholesale merchants have protested that they can not profitably sell at the price fixed.

Import Duty and Other Charges.

The import duty on sugar as fixed by the Greek tariff is 46 drachmas per 100 okes, or \$3.1464 per 100 pounds. To this must be added certain surcharges for city and harbor dues, which bring the charges up to a total of 50.96 drachmas per 100 okes, or \$3.48½ per 100 pounds.

Greece Looks to Importation from American Market.

Unless the foreign sugar markets now closed on account of hostilities are opened soon, the Greek importer will be compelled to turn to America for supplies.

Interested American firms are requested to send at once to the Patras consulate samples of their several grades of sugar, indicating clearly on each sample the price per 100 kilos (220 pounds). Prices should be given c. i. f. Patras, if possible, as the market is accustomed to this, and it is difficult for importers to secure at this end ocean freight rates out of New York. Rates could be secured by addressing National Steam Navigation Co. (Ltd.) of Greece, 45 Pearl Street, New York, which is the only line now operating regularly direct to Greece. Samples may be sent by parcel post at the rate of \$0.12 per pound, packages being limited to 11 pounds each. The samples should be clearly marked as such.

The advisability of having samples of American sugars at the Patras consulate is emphasized, since American sugars are not known here, and importers desire always to see samples first, where this is possible.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau and its branch offices.]

Glues and gums, No. 18932.—A business man in Scotland has informed an American consular officer that he desires to represent American manufacturers of glues and gum.

Fruits, flour, etc., No. 18933.—The commercial agent in charge of the Bureau's branch office in San Francisco has received a letter from a firm in Norway which desires to communicate with American exporters of apples, canned and dried fruit, wheat flour, and similar products.

Fountain pens, No. 18934.—An American consular officer in England reports that a firm in his district desires to receive quotations on cheap fountain pens. If possible, prices should be quoted c. l. f. British ports.

Machinery, No. 18935.—An American consular officer in Denmark reports that a firm in his district desires to receive catalogues, prices, etc., of the necessary machinery for the equipment of a factory capable of producing 50,000 tons of salt from sea water annually. References are given.

Varnish, No. 18936.—The Bureau has received a letter from a man in Italy who desires to represent American manufacturers or exporters of varnish. References are given.

Hosiery, No. 18937.—An American consular officer in England reports that a firm in his district desires to receive quotations from American manufacturers of women's luster ankle, lisle, and cashmere hose, in case lots of from 40 to 100 dozen pairs. Quotations should be made c. l. f. British port and for spring delivery.

Chewing gum, No. 18938.—An American consular officer in New Zealand reports that a firm in his district desires to secure the sole agency in New Zealand for the sale of chewing gums. Samples, circulars, prices, etc., should be sent at once.

Cotton yarns, No. 18939.—A firm in England has informed an American consular officer that it desires to represent American spinners of cotton yarn.

Cocoa beans, coffee, etc., No. 18940.—The Bureau is informed by an American consular officer in Denmark that a business man desires to represent American exporters of such products as cocoa beans, coffee, tea, etc.

Pearls, No. 18941.—A business man in Venezuela has written an American consular officer relative to an opportunity to purchase small quantities of pearls at greatly reduced prices. He offers to act as agent for prospective purchasers. Correspondence may be in English.

Gold leaf, No. 18942.—An American consular officer in England transmits the name of a dealer who desires to represent American manufacturers of gold leaf. The man states that he can place orders at once for large quantities of gold leaf for cash, and desires to receive samples with prices, etc. Names of other dealers are submitted.

Metallurgical journals, No. 18943.—An American consular officer in Spain reports that a commercial organization in that country desires to receive sample copies of metallurgical journals.

Hats, No. 18944.—A business man in Denmark has informed an American consular officer that he desires to purchase American straw and felt hats for women; also other articles used in the millinery trade. Correspondence may be in English.

Paper, linen goods, etc., No. 18945.—An American consular officer in Brazil reports that a man in that country desires to represent American manufacturers or exporters of printing paper and linen goods and thread. References are given.

Overshoes, No. 18946.—A commission agent in Spain has informed an American consular officer that he desires to receive samples, catalogues, price lists, etc., of American rubber overshoes. Correspondence, etc., should be in Spanish. Commissions and freight rates should be specified.

Bottles, No. 18047.—An American consular officer in England states that a firm in that country desires to receive quotations on bottles suitable for containing flavoring extracts, castor oil, etc., in sizes of from 1½ to 6 drams. Delivery is desired in lots of 1,000 gross. Best cash discount should be specified.

Trunk hardware, No. 18048.—A firm in Brazil has informed an American consular officer that it desires to receive catalogues, price-lists, etc., of locks and hardware for trunks and travelers' bags.

Sewing machines, No. 18049.—The Bureau is informed by an American consular officer in the Canary Islands that a firm desires to represent a well-known make of American sewing machines.

Earth for bleaching vegetable oils, No. 18050.—A manufacturer of vegetable oils in Spain has informed an American consular officer that he desires to establish commercial relation with American shippers of earth used for bleaching crude vegetable oils. Correspondence may be in French or in Spanish.

Automobiles, etc., No. 18051.—An American consular officer in Brazil reports that an engineer in that country desires to represent American manufacturers of electric vehicles, storage batteries, and supplies for generating and utilizing electrical power (not light).

Chemicals, No. 18052.—An American consular officer in India reports that a firm in that country desires to receive full information relative to chemicals.

Asphalt, No. 18053.—An American consular officer in Austria states that a commercial organization in that country desires the names and addresses of American exporters of asphalt used in making varnish.

Machinery, No. 18054.—A representative of one of the South American Republics reports that a business man in his country desires to receive descriptive circulars, prices, etc., of machines for the extraction of oil from castor beans.

Machinery, No. 18055.—An American consular officer in Cuba reports that a firm desires to purchase machinery to be used in a plant for the manufacture of citric acid. Further details may be had on application to the Bureau or its branch offices.

Hides, No. 18056.—The commercial agent in charge of the Bureau's branch office in Chicago reports that a foreign representative in that city desires to dispose of about 10,000 first-class dry hides. Sixty per cent are winter hides and the remainder summer hides. They average about 21 pounds in weight. It is explained that shipments in small lots can be made almost immediately. If desired, prices will be quoted to include freight prepaid from point of shipment in South America to New York.

Paper napkins, No. 18057.—An American consular officer in England reports that a firm in his district desires to receive prices of paper napkins with Japanese figures or designs. If possible, prices should be quoted c. l. f. British ports.

Chemicals, No. 18058.—The Bureau has received a letter from an American firm in China expressing its desire to receive from American manufacturers and exporters of chemicals printed matter stating the properties and uses of certain chemicals. The firm also desires to receive information regarding extracts used in tanning, such as quebracho, gambier, and cutch; and particulars and different formulas relative to match making. The request is prompted by a desire to satisfy a growing demand in China for American chemicals. A list of the chemicals may be had on application to the Bureau or its branch offices. (Refer to file No. —.)

Machinery, No. 18059.—The Bureau has been informed by an American consular officer in Brazil that a man desires to receive catalogues, prices, etc., of machinery, etc., for the complete installation of a rice plant; also all kinds of agricultural machinery, implements, etc. The consul desires to receive duplicates of the catalogues for the use of his office.

HALF-YEAR'S TRADE OF RUSSIA.

[Consul General John H. Snodgrass, Moscow, Sept. 18.]

According to figures published by the Ministry of Finance, for Russia's exports across the European frontier during the first six months of 1915 amounted to 94,984,000 rubles (\$48,917,000 at the normal exchange rate of \$0.515 to the ruble), while the value of the total imports was 181,243,000 rubles (\$93,340,000). This shows that the value of the exports during this period decreased by 582,600,000 rubles (\$300,039,000), or 86 per cent, from that of the corresponding period of 1914, while the value of the imports decreased by 528,871,000 rubles (\$272,369,000), or 74.5 per cent.

The trade with Finland experienced a considerable development, the exports to this country having increased by 33,833,000 rubles (\$17,424,000). An increase is noted in all items of the export trade.

The quantity of grain exported during the first six months of 1915 amounted to only 4 per cent of the total and to 8 per cent of the value of the exports of the corresponding period in 1914; the bulk of this grain was exported to Finland. An increase is observed in the exports of wheat flour, rye flour, potato flour, starch, fruit and berries, pork, and red caviar. The countries to which the goods were exported were England, France, Roumania, Sweden, Serbia, Norway, Denmark, Italy, the United States, Bulgaria, Greece, and Finland, a considerable increase of exports being noted in the cases of Finland and Serbia.

A considerable increase is noted in the imports from Sweden, Japan, Bulgaria, and Finland, while imports from all the remaining countries decreased. The greatest value was represented by the imports from England (\$30,622,000) and from Finland (\$17,827,000).

INCREASE IN TELEPHONE RATES AT NOTTINGHAM.

[Consul C. M. Hittah, Nottingham, England, Oct. 4.]

An increase in the telephone rates at Nottingham went into effect on October 2. In some instances the charges are now double what they were before the increase became effective. Local calls, which have hitherto been 2 cents, are now 4 cents. Junction calls to suburban points within a radius of 10 miles have increased from 4 cents to 6 cents.

On trunk calls the old rates have been increased 33½ per cent, the cost of a 3-minute conversation over a distance of 25 miles now being 8 cents; 50 miles, 16 cents; 75 miles, 24 cents; and 100 miles, 32 cents. A reduction of 50 per cent is allowed on trunk calls between the hours of 7 p. m. and 7 a. m. where the ordinary charge is 1 shilling (24 cents) or more.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 308 United States Customhouse; Seattle, 922 Alaska Building. FRENCH EMBARGO ON KID SKINS.

[Telegram from American consulate general, Paris, Oct. 25, 1915.]

Permission for the exportation of kid skins, raw and prepared, from France to allied countries and to the United States has been revoked by an order dated October 23, 1915. [Skins of all kinds were placed under embargo at the beginning of the war, but their shipment to the above destinations had been allowed since April 16, 1915.]

SHIPMENTS FROM RUSSIA TO THE UNITED STATES.

[Cablegram from Commercial Attaché Henry D. Baker, Petrograd, Oct. 24.]

Export goods not required for military purposes are now proceeding on consignment to the Secretary of Commerce. American buyers or agents must arrange to give guarantee bonds and otherwise conform to the regulations. Permits are being granted thus far without awaiting information whether bonds are filed in New York, but shipments are allowed only on allied vessels via Archangel or Vladivostok. I have suggested that American ships now obliged to return from Russia empty be allowed to convey exports to the United States the same as allied ships. Committee discussion of this point is promised for Wednesday (Oct. 27). Caviar exports are now allowed by any route without applying for permits.

CONSIGNMENT TO NETHERLANDS OVERSEA TRUST.

[Telegram from American Consulate General, London.]

Exports from the United States to Holland should be consigned to the Netherlands Oversea Trust, as heretofore. (See Foreign Tariff Notes No. 17, p. 140.) It is understood that the requirement that goods from foreign countries be consigned to the trust is not obligatory under the terms of the British order in council, but is highly advisable, as failure to consign in this way creates presumptions on the part of the British officials involving detention and possible

seizure. The British Foreign Office, under date of April 27, 1915, stated as follows: "While His Majesty's Government do not require that cargoes be consigned to the trust, they do accept consignments in that form as proof that cargo is intended for bona fide consumption in Holland. This practice has greatly facilitated and expedited the release of vessels bound for British ports when brought in for examination."

SOUTH AFRICAN OSTRICH FEATHER MARKET.

[Consul E. A. Wakefield, Port Elizabeth, Sept. 9.]

On the public market for the week ending September 4 ostrich-feather prices in general were at least 10 per cent higher than for the preceding week. This week, ending September 11, is shown a further 10 to 12 per cent increase and a decidedly firm market.

From inquiries made here it appears that the increased demand is caused by London purchases or inquiries. This demand appears to have been created by American purchases. At least it is so credited by the local market buyers. With the existing advantages for purchasing direct through representatives on the market here it is difficult to explain why American purchasers should continue to pay the additional commission and expenses incidental to purchases through London dealers.

A comparatively large quantity of feathers was disposed of on the market this week, the total amount being 10,600 pounds, valued at approximately \$47,000.

Some lots of Prime Whites sold valued from \$21.90 to \$37 per pound. Feninas were sold from \$15.80 to \$19.45. These naturally were very good grade feathers. Ordinary average lots and ordinary wings are not in good demand, and Blacks, Drabs, and Tails have improved very little in price.

JAPANESE REDEEMING FOREIGN LOANS.

[Extract from Japan Chronicle, Sept. 10, forwarded by Consul General George H. Seidmore, Yokohama.]

In view of the prevailing slackness of money in Japan, while the money market in London is maintained firm, it is reported that the Kawasaki Dockyard, Oji Paper Mill, and Kanegafuchi Spinning Companies, the Naniwa and Fifteenth Banks, and several other companies have decided to redeem their existing foreign loans either in part or wholly by raising corresponding loans at home. The Asahi (Osaka) says that these foreign loans are estimated at between \$7,470,000 and \$9,960,000, and their conversion into domestic loans will have a considerable effect on the money market.

The radio station of the Signal Corps of the Army at Nome, Alaska, now maintains continuous service, and the Signal Corps station at Fort Worden, Wash., is now open to general public service. The Signal Corps station at Fort St. Michael, Alaska, has been discontinued as an examination point where operators may secure licenses, the Bureau of Navigation announces.

TRADE AT CERTAIN CUSTOMS DISTRICTS.

The imports, duties collected, and exports for the week ending October 23, 1915, at 13 principal customs districts of the United States were:

Districts.	Imports.	Duties collected.	Exports.
Georgia (Savannah).....	\$51,553	\$3,008	\$1,390,257
Massachusetts (Boston).....	2,254,454	209,705	2,701,902
New York.....	15,481,594	2,970,386	67,537,135
Philadelphia.....	958,853	159,035	2,508,587
Maryland (Baltimore).....	270,565	17,247	2,392,501
Virginia (Norfolk).....	155,472	36,851	1,459,339
New Orleans.....	1,260,585	10,457	3,094,598
Galveston.....	223,455	1,389	6,560,868
San Francisco.....	1,122,017	53,320	2,592,935
Washington (Seattle).....	3,853,015	14,814	2,799,502
Buffalo.....	1,189,921	60,597	1,628,017
Chicago.....	685,776	113,461	129,639
Michigan (Detroit).....	651,354	49,003	3,380,935
Total	28,167,614	3,609,263	98,777,016

The above figures show a favorable balance on merchandise transactions for the week ending October 23 in the 13 customs districts of \$70,609,402. The 13 districts cited handled about 91 per cent of the import and export business of the country, based on the transactions in July, 1915.

Cotton exported during the week ending October 23 amounted to 167,516 bales, making the total since August 1, 1915, approximately 1,125,661 bales.

OUTFLOW OF GOLD AND SILVER FROM YOKOHAMA.

[Extract from Japan Gazette, Sept. 17, forwarded by Consul General George H. Seidmore, Yokohama, Sept. 20.]

The outflow of gold and silver from Yokohama during the first eight months of this year amounted to \$15,998,250 and \$138,444, respectively. Compared with the corresponding period of last year, there was an increase of \$14,937,610 in gold and \$30,378 in silver. The greater portion of the specie this year was shipped to the United States.

The monthly outflow of gold from Yokohama during the past eight months was: January, \$747,000; February, \$1,145,400; March, \$2,651,850; April, \$2,763,900; May, \$2,490,000; June, \$1,245,000; July, \$2,863,500; August, \$2,739,000.

ORIENTAL CAMPHOR MARKET DEPRESSED.

[Japan Chronicle, Sept. 10.]

The Government has announced that from October 1 the price of crude camphor placed on the market by the Monopoly Bureau will be increased by \$0.747 to \$28.386 per 100 pounds. On the other hand, the market for refined camphor remains depressed. There are no buyers of slab camphor even at \$23.157 per 100 pounds. Though some orders are arriving from the United States, this is not sufficient to revive the market to any appreciable degree. In these circumstances, camphor refiners will be put to considerable difficulties.

NEW GOVERNMENT PUBLICATIONS.

The Superintendent of Documents, Washington, D. C., announces that he received in stock during the week ended October 23 the following new United States Government publications of a business character, which he will sell at the nominal prices affixed:

Some Economic Aspects of War, a lecture delivered before the Army War College at Washington, D. C., April 11, 1913, by Henry C. Emery, Professor of Economics at Yale University, reprint.—A lecture presenting some of the economic arguments in favor of a strong military organization and treating somewhat on the subject of "Preparedness." Price, 5c.

Testing of Thermometers, Standards Bureau Circular No. 8, reprint.—Covering methods of testing thermometers, types of thermometers, and general inspection. Price, 10c.

Fusible Tin Boiler Plugs.—An investigation of Standards Bureau Technologic Paper 53.—A technical work covering design, construction, types, testing, etc. Price, 20c.

Resistance of Radiotelegraphic Antennas.—Note on the Standards Bureau Scientific Paper 257.—A technical discussion on the resistance, with formulas and charts. Price, 5c.

Flow of Heat through Furnace Walls, Mines Bureau Bulletin 8, reprint.—Covers construction, position, and use of furnaces for heating purposes, etc. Price, 5c.

Heat Transmission through Boiler Tubes, Mines Technical Paper 114.—A study of the transmission of heat into boiler water, with a definition of heating plate and surfaces, etc. Price, 10c.

Navigation Laws of the United States, 1915.—Embracing Vessels, Measurement, Documents, Officers, Seamen, Inspection, Passengers, Tonnage, etc. Price, \$1, cloth.

Cultivation of Peppermint and Spearmint, Farmers' Bulletin 694.—An addition to the works on medicinal plants, embracing description of the plants, cultural requirements, yield, cost and prices. Price, 5c.

School System of Ontario, with special reference to Rural Schools, Education Bureau Bulletin 32, 1915.—Covers general system of rural life conditions in Ontario and description of the Rural School system. Price, 15c.

Public Schools.—Statistical Study of Southern Appalachian Mountains, Education Bureau Bulletin 11, 1915.—Covers general characteristics, illiteracy, teachers, school expenditures, etc. Price, 20c.

Training of Elementary School Teachers in Mathematics in countries represented in the International Commission on the Teaching of Mathematics, Education Bureau Bulletin 39, 1915. Price, 10c.

Foreign Credits, a study of the foreign credit problem with a review of European methods of financing export shipments, Special Agents Series No. 62, Bureau of Foreign and Domestic Commerce.—Covers the German methods of financing foreign shipments, English banks, and the financing of exports through London, England, French efforts and improved foreign credit facilities with aspect of the problem in America, etc. Price, 30c.

SWEDEN'S LARGEST PAPER MILL COMPLETED.

[Chargé d'Affaires Jefferson Caffery, American Legation, Stockholm, Sept. 16.]

The largest paper mill in Sweden, considered to be one of the world's foremost in point of technical perfection, has just been finished in the town of Hallsta. The situation is favorable because of the good harbor, easy communication with Stockholm, and possibilities of procuring cheap power. Dwellings will be erected for the employees. A concrete quay 310 meters (1,017 feet) long has been constructed, the water being deep enough for large vessels. The factory has machinery of the most modern character.

IMPORTS AND EXPORTS BY COUNTRIES.

Details showing the value of merchandise imported from and exported to each of the principal countries during August and the eight months ended with August, 1915, compared with corresponding periods of the preceding year, have been completed by the Bureau of Foreign and Domestic Commerce of the Department of Commerce, as follows:

JAPANESE LINE TO BUY MORE STEAMSHIPS.

[Consul General George H. Scidmore, Yokohama, Japan Sept. 24.]

The president of the Toyo Kisen Kaisha, which recently purchased the Pacific Mail steamship *Persia*, announces that his company has entered into negotiations for the purchase of two other Pacific Mail steamships of 10,000 tons each, now under construction in San Francisco. It is intended to put these ships on the Pacific with the others of the Toyo Kisen Kaisha fleet.

The company announces that its bookings for the next five or six steamers out of San Francisco are already fully taken, and that it will do everything possible to increase accommodations to cope with the traffic, especially for the coronation. At present the demand exceeds the accommodations.

The negotiations for the amalgamation of the Toyo Kisen Kaisha with the Nippon Yusen Kaisha have been dropped, according to the secretary of the Toyo Kisen Kaisha, though he acknowledges that an amalgamation of all three Japanese companies—the Nippon Yusen Kaisha, the Osaka Shosen Kaisha, and the Toyo Kisen Kaisha—would be of mutual advantage.

[Extract from Japan Advertiser, Sept. 23.]

Joint Schedule Arranged by Two Lines.

A joint schedule for liners running between San Francisco, Yokohama, and Hongkong is now being arranged by the Toyo Kisen Kaisha and the Osaka Shosen Kaisha. It is now known that the Osaka Shosen Kaisha has decided to put two of its vessels, the *Panama Maru* and the *Seattle Maru*, on the San Francisco run, while two other ships will be added to its Tacoma and Seattle line—the *Todzan Maru* and the *Keishin Maru*.

The schedule agreement between the two companies will name the dates for the sailings of five Toyo Kisen Kaisha ships, the *Shinyo Maru*, the *Tenyo Maru*, the *Chiyo Maru*, the *Nippon Maru*, and the *Persia*. Arrangements will be made later for the new liners that the T. K. K. expects to place on the San Francisco run in the near future.

The Osaka Shosen Kaisha ships on the new line will make Honolulu a port of call both ways. The O. S. K. plans at first to have one ship leave Yokohama for San Francisco every month, and more ships may be added to the line later. Running from San Francisco to Japan, their cargoes will consist largely of raw cotton.

On the O. S. K.'s Tacoma and Seattle line there will be the *Canada Maru*, the *Tacoma Maru*, the two new liners the *Hawaii Maru* and *Manila Maru*, the *Todzan Maru*, which will leave Yokohama for Tacoma and Seattle about October 5, and the *Keishin Maru*, which will sail about October 15.

[Extract from Japan Chronicle, Sept. 24.]

Japanese Shipping in Prosperous State.

The prosperous state of Japanese shipping may be seen in the recovery of the Toyo Kisen Kaisha from its former condition. Negotiations for amalgamation with the Nippon Yusen Kaisha and the Osaka Shosen Kaisha having come to nothing, the company was nearly at the end of its tether. Owing to the prosperity brought to Japanese shipping by the war, the Toyo Kisen Kaisha will, if the present state of things continues, become a very profitable concern.

The bulk of the profits of the Toyo Kisen, it is stated, have been reaped on the San Francisco service, from which British, German, and other steamers were withdrawn in consequence of hostilities. In view of the withdrawal of the Pacific Mail Steamship Co. from that service, a further improvement of the Toyo Kisen's position will be shown in the business returns for the next term. It is expected that the company will hold a practical monopoly of the San Francisco service as long as the war lasts.

The Asahi (Osaka) quotes Mr. Shiraishi, managing director of the Toyo Kisen, as saying that though the company has long suffered losses, it has made an unexpectedly good showing for the last term. The company's debentures and loans amounted to \$4,332,600 at the beginning of the last term, but decreased to \$3,635,400 by the end of the term. If things continue as they stand, it is hoped to redeem loans to the extent of about \$498,000 each term, so that the greater part of the indebtedness may be cleared off in a few years.

[Recent dispatches published in *COMMERCE REPORTS*, in regard to the subject of Japanese shipping on the Pacific, were in the issues of October 4, 5, 7, and 14.]

COMPRESSIVE STRENGTH OF MORTARS AND CONCRETES.

Contractors, engineers, and users of cement will be interested in a publication recently issued by the United States Bureau of Standards on the compressive strength of Portland cement mortars and concretes.

Concrete differs from most structural materials in that it is not manufactured at a mill or plant according to chemical formula under the observation of skilled specialists, subject to rigid inspection and test and such control as to produce a uniformly homogeneous product; nor is the process of manufacture completed in a few hours or days, as in the case of steel products. Furthermore, concrete is made from materials obtained from sources differing widely in characteristics which affect its quality. The proportions of the ingredients; the amount of water used in mixing; the thoroughness of mixing; the manner of placing; the atmospheric temperature and humidity; exposure to sun, rain, and wind; immersion in fresh water, sea water, or other natural solutions—all affect the quality of the concrete.

This paper contains the results of some 20,000 tests. It shows the general effect of variation in the methods of preparing the concrete and suggests the proper methods to follow in order to obtain the best quality.

The paper states that certain generally accepted methods of testing aggregates and proportioning mixtures are incorrect and suggests methods of selecting concrete aggregates, proportioning the mixture, mixing, placing, and curing. Copies of this publication, *Technologic Paper No. 58*, may be obtained by application to the Bureau of Standards, Washington, D. C.

A British Trade Exposition at Glasgow in 1916 is recommended by the Glasgow Municipality.

FIRST FORECAST OF INDIAN COTTON CROP.

[Consul General James A. Smith, Calcutta, Sept. 18.]

The first official forecast of India's cotton crop for the season 1915-16 has just been made public. It is based upon reports furnished by Provinces that comprise, on the average, about 76 per cent of the entire cotton area of India. It relates generally to sowings up to the end of July, no attempt being made at this stage to estimate the probable outturn. The returns show that an area of 11,847,000 acres has been sown this year as against 15,187,000 acres on the corresponding date last year, a falling off of 22 per cent. The decrease is most noticeable in Ajmer-Merwara (60 per cent), Rajputana (43 per cent), the Punjab (41 per cent), the United Provinces (38 per cent), Central India (22 per cent), Bombay and Burma (20 per cent each), Hyderabad and Bihar and Orissa (19 per cent each), the Central Provinces and Berar (11 per cent). Madras shows an increase of 74 per cent and Mysore of 73 per cent.

As presented in the Indian (Government) Trade Journal, the acreage under cotton at the date of the first forecast for the last three seasons was:

Provinces and States.	1915-16	1914-15	1913-14	Provinces and States.	1915-16	1914-15	1913-14
	<i>Acres.</i>	<i>Acres.</i>	<i>Acres.</i>		<i>Acres.</i>	<i>Acres.</i>	<i>Acres.</i>
Bombay (Deccan) ^a	1,429,000	1,794,000	1,639,000	Northwest frontier.....	54,000	58,000	57,000
Central Provinces and Berar.....	4,113,000	4,646,000	4,503,000	Ajmer-Merwara.....	8,000	20,000	32,000
Madras.....	106,000	61,000	109,000	Assam.....	32,000	32,000	35,000
Punjab ^a	1,085,000	1,831,000	1,914,000	Hyderabad.....	2,296,000	2,834,000	2,829,000
United Provinces.....	1,050,000	1,699,000	1,573,000	Central India.....	1,000,000	^b 1,367,000	1,328,000
Burma.....	232,000	291,000	235,000	Rajputana.....	210,000	366,000	388,000
Bihar and Orissa.....	67,000	83,000	84,000	Mysore.....	19,000	11,000	15,000
Bengal.....	86,000	90,000	85,000	Total.....	11,847,000	^b 15,187,000	14,833,000

^a Including native States.

^b Revised figures. The figures given in the first forecast of 1914-15 (namely, 890,000 acres for Central India and 14,710,000 for grand total) excluded the Indore and Bundelkhand States in Central India, from which returns were not received in time.

The decrease in the area sown this year is attributed chiefly to low prices and to some extent to the late arrival of the monsoon in Northern, Western, and Central India. The present condition of the crop is reported to be generally from fair to good, except in the Punjab, where the crop has been affected by the absence of rain in June and July.

FORESTRY COMMISSION IN VENEZUELA.

[Consul Homer Brett, La Guaira, Sept. 27.]

The Venezuelan Government has just created a central Commission of Forestry and Water Supplies to fulfil the duties indicated by its name. The address of the body is "La Comision Central de Montes y Aguas, Ministerio de Fomento, Caracas." The officers are Dr. Elias Toro, botanist; Dr. R. Pino Pau, entomologist; Dr. A. P. Moro, agricultural chemist; Dr. German Stelling, forester. Other members are Dr. Alejandro Vargas, attorney; Dr. A. Carnivali M; Sr. Don Henrique Eraso; Dr. Samuel Mario Maldonado; and Gen. P. Guiseppi Monagas.

NEW WATERWORKS FOR LAGOS, NIGERIA.

[Consul W. J. Yerby, Dakar, Senegal, Sept. 9.]

It has been officially announced that the Lagos waterworks, which were begun in October, 1910, may now be considered as nearly completed and are about ready to supply the town (of approximately 75,000 population) with an abundance of good, fresh water. The water is drawn from the Iju River. The pumping plant consists of two driving engines and three forcing engines; the former are coupled through helical gear to three throw-well pumps. The capacity of each set of pumps is 5,000 gallons per minute; one set will be ample to do the work.

The filters are eight in number, the area of each being 820 square yards; the depth of filtering sand is 2 feet 6 inches. The water is let onto the filters by floating arms at top water level, which is 4 feet above the sand. The filters are working most satisfactorily.

Mains and Distribution Pipes—Capacity and Cost.

From the service reservoir the water is conveyed to Lagos by a 28-inch, cast-iron main 71,872 feet in length. This main ends at Ebute Metta, and from there the main is 24 inches to the center of Lagos, making a total distance of 81,550 feet. The total length of the distribution pipes will be 28 miles. There will be 200 4-way street fountains and more than 350 fire hydrants. The head of water in the mains will average 169 feet.

The capacity of the scheme, which, as completed, can supply water to about 115,000 inhabitants, is about 2,250,000 gallons per day. The cost will be under £313,000 (\$1,523,058), representing a saving of about £26,000 (\$126,516) on the estimate. With an additional expenditure of about £25,000 (\$121,650), the capacity could be increased to 3,000,000 gallons daily.

CHEESE SHORTAGE IN AUSTRALIA.

[Commercial Attaché William C. Downs, Melbourne, Sept. 23.]

According to the returns of the census of food supplies in Australia, compiled by virtue of an order in council which has just been made public, 910,000 pounds of cheese were held in stock on July 31 last. It is estimated that from 30 to 40 per cent of the dairy cattle in the Commonwealth have been lost in consequence of the drought, and that with the limited milk supply an output of only 13,000,000 pounds of cheese can be expected for 1915. The annual consumption in Australia is somewhat in excess of 18,000,000 pounds.

Stocks of butter amounted to 854,000 pounds. The consumption of this article in 1913 was 123,000,000 pounds, the production being 199,000,000 pounds. On account of the loss of dairy cattle the production for 1915 will probably not exceed 130,000,000 pounds, so that while supplies are ample for home consumption very little butter will be available for export. In the fiscal year 1914-15 Australia exported domestic butter to the value of \$12,950,550.

[The scarcity of butter in Australia and the shipment of American butter thither during recent months was noted in **COMMERCE REPORTS** for Aug. 25, 1915.]

NEW ZEALAND BUSINESS FOR FIRST HALF YEAR.

[Consul General Alfred A. Winslow, Auckland, Sept. 18.]

Business conditions in New Zealand during the first six months of 1915 have been very satisfactory, with a good outlook. Trade balances exceeded those of any other like period in the history of the country, with large bank balances. There seems to be confidence in the future, and the Government has decided, notwithstanding the war, to go on as usual with internal improvements, having determined to place a local loan of \$9,733,000 at 4½ per cent. Crop prospects, because of the abundant rainfall, are above the average for this time of year, and the farmers are planning an increased seeding for the year.

Imports Show Marked Decrease.

The imports for the first six months of 1915 amounted to \$46,275,485 (including specie valued at \$2,854,538), against \$55,595,358 (including specie valued at \$2,433,323) for a like period in 1914, showing a decrease of \$9,319,873 for the period. The following table gives the value of monthly imports, compared with 1914:

Months.	1914	1915
January	\$12,662,909	\$8,463,729
February	9,298,377	6,668,468
March	9,891,908	9,302,758
April	7,526,694	7,076,416
May	7,541,473	7,201,900
June	8,763,989	7,562,206
Total	55,595,358	46,275,485

The table below gives the countries supplying the greater part of the above imports, showing clearly the trend of the business.

Imported from—	Six months ended June 30—		Imported from—	Six months ended June 30—	
	1914	1915		1914	1915
Australia	\$9,581,627	\$8,483,468	Japan	\$231,165	\$431,415
Belgium	360,578	5,500	Netherlands	342,037	165,193
Canada:			Philippine Islands	47,560	53,229
East coast	950,544	1,354,040	United Kingdom	29,922,410	22,932,855
West coast	254,693	597,324	United States:		
France	385,485	182,766	East coast	4,861,808	3,494,093
Germany	1,786,244	7,553	West coast	917,831	2,210,062

There was a decided increase from Canada, which is partly accounted for by American goods being forwarded through the Canadian ports of Montreal and Vancouver, the ports of sailing of two direct lines to New Zealand. The United States shows a marked gain on the west coast, with a corresponding loss on the east coast. There should have been a gain all round had business been pushed here thoroughly and as the market would warrant.

Comparative Value of Principal Articles.

The following table gives the comparative value of many of the more important items for the period under consideration. It merits careful study by interested manufacturers and exporters.

Articles.	Six months ended June 30—		Articles.	Six months ended June 30—	
	1914	1915		1914	1915

Foodstuffs.....	2,873,320	3,017,712	Tea, coffee, etc.....	1,253,571	1,147,336
Furniture.....	125,599	73,134	Timber, hewn and sawn.....	1,058,941	697,476
Gas engines, etc.....	392,128	255,588	Tin, sheet and block.....	319,671	210,564
Glass and glassware.....	463,174	331,326	Tobacco.....	856,553	745,113
Greases.....	16,770	13,609	Tools.....	266,574	229,397
Hardware.....	941,308	549,267	Turpentine.....	31,428	29,471
Hats and caps.....	286,831	221,046	Wearing apparel.....	3,256,559	2,051,750
Hosiery.....	504,948	431,420	Woolen piece goods.....	1,044,399	749,168

Of the above items, wearing apparel was imported during June, 1915, to the value of \$21,291 against \$324,396 during June, 1914; plain fencing wire, \$28,751 against \$56,904; pig and scrap iron, \$9,437 against \$29,535; tinplate, \$23,768, against \$35,428; and chassis, \$182,829 against \$342,003.

Exports from New Zealand.

The exports for the first six months of 1915 show a slight increase over the like period of 1914, as shown by the following table:

Months.	1914	1915
January.....	\$13,965,959	\$14,609,676
February.....	16,209,964	19,471,903
March.....	18,489,357	20,495,318
April.....	15,287,594	13,774,404
May.....	13,716,843	9,242,710
June.....	8,674,551	8,884,764
Total.....	80,341,258	86,478,775

Heavy shipments of frozen meat are going forward during September that are expected to increase materially the favorable balance for 1915, with bright prospects for the future.

What American Interests Have Done.

American manufacturers and exporters have been securing an increased amount of New Zealand business, but they do not seem to be awake to the possibilities and present demands of this market. They have been letting the business men of this country go after the

supplies instead of bringing their goods here or coming after the business. A few active American salesmen, with samples, could do wonders toward increasing American shipments to this Dominion. During the past week three steamers arrived at Auckland from New York loaded with American goods, and two are now loading on the west coast of the United States and Canada for New Zealand, to say nothing of the regular steamers from that coast every two weeks.

What New Zealanders Expect.

The following extract from the Auckland Star, a leading daily of this city, in its report of the speech made by Prime Minister Massey during the budget debate in Parliament, indicates how the interests here view United States markets and how they propose to secure them. This points to a larger market for American goods in New Zealand:

Mr. Massey expressed the opinion that there would be a decrease in the purchasing power of past customers for our produce in the future—he spoke of the United Kingdom, but other markets were opening up. By the opening up of the Panama Canal there was presented to us the whole of the Atlantic portion of America as a market. He believed we should get full value for our outlay at the Panama Exhibition. The success of our exhibits had been phenomenal, and he was very strongly of opinion that our exhibits there should be followed up by increased efforts to promote trade. He was, in fact, going to ask the Government to send a live commercial man, one of the best they could find, to represent us in the eastern States of America, where, he believed, we should find a particularly good market. He believed in doing business with the people of our own blood, but, if we could not find a market among them, we could do the next best thing—we could go where the language is the same and where the population was mostly of the same stock as ourselves.

The Outlook—American Exporters Should Act Promptly.

There is a splendid opening here, and it behooves Americans to make the most of it. The large excess of exports over imports makes it easy for the New Zealand people to buy what is necessary. The decline in imports has not been due to a shortage of money, but to the disturbed source of supply. Orders have gone forward as a general thing to the regular English houses, only to be turned down for the present—often with a promise to fill them in the near future, if possible. The New Zealand merchant has waited until his warehouses and stores are depleted and now hardly knows where to turn. This situation calls for prompt action on the part of American exporters if they are to make the most of it.

OLIVE OIL USED FOR LIGHTING.

[Consul General W. Stanley Hollis, Beirut, Syria, Aug. 31.]

Green olives are just beginning to be offered for sale at the markets. The olives to be pressed for oil will be gathered during September, and the farmers wait for two or three rainfalls, which are necessary to insure the full ripening of the olives specially suited for oil. Prices of olive oil are still advancing, particularly because the people are using that oil for lighting in place of petroleum. As previously reported, the prospects of the new olive oil crop are very unfavorable.

Prices of olive oil are 16.30 piasters per oke (20.88 cents per pound) for first quality and 15.10 piasters per oke (19.04 cents per pound) for second quality. The piaster quoted is the market piaster, valued at \$0.035 in American currency.

GERMAN PROGRESS IN USE OF ANIMAL CHARCOAL.

[Consul Talbot J. Albert, Brunswick, Aug. 31.]

German chemists have been making progress in the use of animal charcoal for medical purposes. The property of animal charcoal in attracting mechanically to itself organic matter suspended in water as gases or coloring material has long been known. On this account it is used in technical practice for decoloring solutions, purifying drinking water, etc.

Lately it has been discovered by experiments on animals that different kinds of poisonous substances, such as morphia, strychnine, and carbolic acid, lose partly or entirely their effect when given with animal charcoal. Not only can directly administered poisons be neutralized in their effect upon the organism by animal charcoal, but also poisonous substances which arise in the intestinal canal, as in the case of cholera. The action of animal charcoal extends to the bacteria themselves, which it mechanically absorbs, destroying their destructive influence.

Promoted by Phosphates, Sulphates, and Nitrates.

The labors of the chemists Freundlich, Lichtwitz, Glassner, and Suida have established the fact that the absorbing quality of animal charcoal is promoted by the presence of the phosphates, sulphates, and nitrates of calcium, sodium, and potassium. The rapidity of the absorption increases with the temperature, so that the heat of the animal body aids the therapeutic effect of the animal charcoal.

The application of animal charcoal extends chiefly to cases where the poison is conveyed to the organism from the outside, and where it arises from bacteria in the intestinal canal in the natural course of living. Cholera is therefore the first disease to be considered. Then come typhus and dysentery only when it is the purpose to remove the injurious microbes from the system or to drive them out of the intestinal canal.

As naturally the coal becomes infected with the bacteria or with the poisons which it absorbs, such aperients as Glauber salts, Karlsbad salts, etc., should be used.

It also appears that animal charcoal is applicable in surgery, as it can stop suppuration which destroys the tissues.

ADVERTISING IN COLOMBIA.

[Commercial Agent E. C. Porter, New York, Oct. 18.]

La Union Comercial, a daily newspaper published at Cartagena, Colombia, has recently sent a representative, Mr. J. A. Gownder, to New York City for the purpose of increasing American advertising in its columns.

La Union Comercial believes that there is a favorable opportunity for developing American trade with Colombia and it believes that one of the important methods in establishing closer relations between the two countries will be through advertising. A plan has, therefore, been worked out by which American manufacturing firms can take advertising space in La Union Comercial and at the same time obtain exhibit space for samples to be placed in a hall in Cartagena under the direct supervision of the American consul, Mr. Hazeltine. Small, well selected exhibits are advisable.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Safety razor parts, No. 18960.—The Bureau of Foreign and Domestic Commerce is in receipt of a letter from a firm in Canada stating that it desires to have a number of holders for stropping safety razor blades manufactured. The firm wishes to receive the names and addresses of manufacturers who are in a position to make steel parts for such a strop.

Umbrella ribs, No. 18961.—An American consular officer in India has transmitted a report relative to an opportunity for the sale of umbrella ribs. A copy of his report may be had on application and samples of the ribs may be inspected at the Bureau or its branch offices. (Refer to File No. 66907.)

Gauges, No. 18962.—A business man in Spain writes the Bureau of Foreign and Domestic Commerce that he is in the market for cheap pressure gauges for carbonating machines. He desires a gauge ranging in pressure from 200 to 250 pounds, to sell for about \$1 each. Interested firms should send catalogues and lowest jobbers' prices at once.

Washboards, broom handles, etc., No. 18963.—The commercial attaché of the Department of Commerce in London reports that a firm in that country desires to be placed in communication with American manufacturers of pegs, washboards, broom handles, etc.

Drugs, cereals, etc., No. 18964.—One of the commercial agents of the bureau writes that a business man in this country desires to represent American manufacturers and exporters of drugs, dry goods, cereals, etc., in the West Indies, Central America, and northern countries of South America. It is explained that the man has just returned from a successful selling campaign throughout these countries and desires to return with a complete line about January of 1916. He wishes to handle goods on a commission basis only. References are given.

Leather handbags, No. 18965.—An American consular officer in England reports that a firm in his district desires to receive offers on handbags of black patent auto leather. A sample of the quality of the leather may be examined at the Bureau or its branch offices. (Refer to File No. 67316.)

Necklaces, No. 18966.—A firm in Australia writes an American consular officer that it wishes to establish commercial relations with American manufacturers of bead necklaces known as flower beads. The firm prefers to communicate with dealers on the Pacific coast.

Coupons and tickets, No. 18967.—An American consular officer in Paraguay transmits the names and addresses of a number of firms in his district which are users of coupons and tickets.

General agency, No. 18968.—An American consular officer in Burma transmits the name and address of a business man in his district who desires to represent American manufacturers and exporters. He does not specify any particular line.

Enamel ware, No. 18969.—A business man in Australia informs an American consular officer that he wishes to communicate direct with manufacturers of enamel ware with a view to having manufactured in the United States a lidless kettle which he has recently patented.

Printing supplies, etc., No. 18970.—An American consular officer in India has received a letter from a commercial printing company requesting the names and addresses of American manufacturers and exporters of metal for casting type, brass rulers, gold leaves for bookbinding, printing paper, etc.

Cotton, No. 18971.—A firm in Sweden informs an American consular officer that it desires to make new connections in the United States with a view to importing cotton direct. It is desired to make preliminary arrangements for shipments to begin at the termination of the European war.

Shells, No. 18972.—The bureau has been informed by a man in Honduras that he desires to communicate with American importers of shells used for the manufacture of pearl buttons, novelties, etc.

- Water pipes and accessories**, No. 18973.—An American consular officer in Central America reports that a Government desires to receive bids for water pipes and accessories. A copy of the consul's report containing specifications, etc., may be examined at the Bureau or its branch offices.
- Railway supplies**, No. 18974.—Supplementing Confidential Circular No. 755, the American consular officer has transmitted specifications and detailed information relative to an opportunity for the sale of railway supplies to a Government in South Africa. Bids will be received until November 24, 1915. The specifications, etc., may be examined at the Bureau or its branch offices. (Refer to file No. 67351.)
- Clinical thermometer tubes**, No. 18975.—A firm in the United States states that it is in the market for 2,000 gross of 4-inch clinical thermometer tubes with the mercury blown in.
- Confectionery, leather, wearing apparel, etc.**, No. 18976.—An American consular officer in China reports that a man in his district desires to represent American manufacturers of confectionery, patent medicines and chemicals, stationery, photographic supplies, millinery, leather, underclothing, handkerchiefs, collars, and coffee. The man states that he pays cash against shipping documents through certain specific banks. Correspondence may be in English.
- Iron strapping**, No. 18977.—The Bureau is informed by an American consular officer in Spain that a business man in his district desires quotations on a 10-ton lot of malleable iron strapping, one-half inch wide, similar to the sample which may be examined at the Bureau or its branch offices. (Refer to file No. 67312.) He states that he needs about 20 tons annually.
- Rice, coffee, sugar, etc.**, No. 18978.—A business man in Greece has informed an American consular officer that he desires to establish commercial relations with American exporters of rice, coffee, sugar, pepper, and dried codfish. Prices should be quoted c. i. f. destination. Correspondence may be in English.
- Heaters**, No. 18979.—An American consular officer in Italy reports that an importer in his district desires to communicate with an American manufacturer of sheet-metal heaters similar to an illustration which may be examined at the Bureau or its branch offices. (Refer to file No. 67366.) Quotations should be made c. i. f. destination. Importations are to be made in lots of 100. Quotations are desired from manufacturers only.
- Thread**, No. 18980.—A firm in Greece has informed an American consular officer that it desires to purchase American spool sewing thread of all sizes, colors, and kinds. Prices should be quoted c. i. f. destination if possible. Correspondence may be in English.
- Electrical appliances**, No. 18981.—The Bureau is informed by an American consular officer in Australia that a business man in his district desires to secure the sole agency for American electrical appliances.
- Cloth**, No. 18982.—A firm in England has informed the Bureau that it desires to communicate with American manufacturers of striped matting cloth similar to the sample which may be examined at the Bureau or its branch offices. (Refer to file No. 71.)
- Stylos**, No. 18983.—An American consular officer in England reports that a firm in his district desires to receive prices on cheap stylos. If possible, quotations should be made c. i. f. British ports.
- Electrical goods**, No. 18984.—The Bureau is informed by an American consular officer in India that a man in his district wishes to be supplied with catalogues, price lists, etc., of electrical goods, with the intention of becoming the sole representative of an American firm.

SPAIN'S TRADE WITH FRANCE DURING PRESENT YEAR.

[Consul Robertson Honey, Madrid, Spain, Sept. 22.]

The press of Madrid comments this day on the falling off in Spain's exports to France. Between January 1 and August 1, 1915, Spain exported to France 363,840 hectoliters (9,611,600 gallons) of ordinary wine as against 1,510,822 hectoliters (39,910,700 gallons) during the corresponding period of 1914—a decrease of 30,299,100 gallons.

During the first seven months of 1915 Spain exported to France 4,075,500 kilos (4,500 short tons) of olive oil, as against 15,477,000 kilos (17,060 short tons) during the same period of 1914—a decrease of 12,560 short tons.

During July, 1915, Spain exported to France 3,441,800 kilos (3,793 short tons) of fruit, as against 14,010,800 kilos (15,443 short tons) during July, 1914—a decrease of 11,650 short tons.

In spite of these losses Spain has a favorable balance of trade in its dealings with France. During the first seven months of 1915 Spain's exports to France amounted to 299,436,000 francs, while the imports from that country were valued at 56,320,000 francs—a balance in favor of Spain to the extent of 243,116,000 francs. The franc is the equivalent in Spain of about 17.4 cents; in normal times it is the equivalent of about 19.3 cents.

BRAZILIAN IMMIGRATION STATISTICS.

[Consul General A. L. M. Gottschalk, Rio de Janeiro, Sept. 8.]

According to recently published official statistics immigrants entering Brazil during 1914 through the port of Rio de Janeiro numbered 33,913; through Santos, 47,570; through other ports (except Para, Pernambuco, and Bahia, which are not usually immigrant ports), 1,089; a total of 82,572, or 110,111 fewer than in 1913. Portuguese (27,935), Spaniards (18,945), and Italians (15,542) continue to be in the majority.

Many of the immigrants were "colonos," or tenant-farmers, as they are called, who come to work coffee plantations on some sort of profit-sharing basis. A favorite system in some portions of the Republic is to allot to such men a certain acreage of the planter's coffee to care for; in return for his labor he is permitted to raise vegetables, etc., between the rows of coffee, the planter pledging himself to buy this produce from the colon at prevailing market rates when the crops are ripe.

TO STANDARDIZE ELECTRIC CONSTRUCTION.

The work of developing the proposed national electric safety code, which has been undertaken by the United States Bureau of Standards, has attracted much attention among electrical companies, State commissions, city officials, and numerous others interested in electrical construction and operation throughout the United States. Practically all these interests have given their cordial cooperation in the project, which aims at a standardization of these branches of electrical work.

The task of bringing the details of the code to the attention of the interests that would be affected by its general use and securing their approval is found to be very great and requires a large amount of time and effort.

DAMAGED AMERICAN GRAIN EXPORTS.

A cablegram from the consul general at Genoa calls attention to the unsatisfactory condition in which certain shipments of American grain reached that Italian port. He reports:

Four steamer cargoes of wheat and one of oats arrived from Newport News. All in very bad condition, heated, musty; have taken samples. In the interest of American commerce shippers should use the greatest care in the storage of grain, being certain that same will stand shipment without heating.

In transmitting this message to the Secretary of Commerce the Secretary of State remarked:

As American products and merchandise have more and more in late years been reestablishing themselves in foreign markets, the idea has been growing that the terms "quality" and "American" were synonymous. The present international commercial conditions offer favorable opportunities for the continued extension of the overseas trade of America. It would, therefore, be unfortunate if practices were allowed to grow up in our ports and other centers, which were detrimental to the admittedly high reputation of American products.

While there may not now exist any means of control over outward-bound cargoes, and the conditions under which they are shipped, it is possible some method may be found that will discourage such conditions as are shown by the cable quoted above.

AMERICAN CAPITAL WANTED IN DUTCH GUIANA.

[Commercial Agent E. G. Babbitt, San Francisco, Oct. 26.]

Dr. H. W. van Ash Vanwijck, president of the Legislative Council and judge of the Supreme Court at Paramaribo, Dutch Guiana, is scheduled to arrive in New Orleans about November 7; Washington, November 10; and New York, November 17. He desires to interest American capital in Government concessions and in developing mining, railroad, and agricultural industries in Dutch Guiana. His Washington address will be care of the Netherlands Legation.

FOREIGN COTTON SUPPLIES AND CONSUMPTION.

The following information on the condition of the cotton industry in the countries given was prepared from the best sources available. The figures represent the number of cotton spindles and the percentage of activity at the end of September, 1914 and 1915, mill consumption of cotton during the month, amount of cotton on hand, and the value of cotton goods on hand.

Country.	Month ended Sept. 30—	Cotton spindles.		Mill consumption of cotton (bales of 500 pounds).	Cotton on hand (bales of 500 pounds).	Cotton goods on hand (value, U. S. currency).
		Number.	Activity (per cent).			
Brazil	1914	13,000	100	20,000	18,000	\$2,550,000
	1915	13,000	110	22,000	19,500	2,805,000
Egypt	1914	19,080	35		a 140,607	
	1915	19,080	100		a 205,520	
France	1914	7,400,000	50	40,000	100,000	
	1915	7,400,000	b 100	60,000	75,000	
Japan	1914	2,608,870	89	118,811		
	1915	2,784,358	92	119,825		
Russia c	1914	5,729,067	100		308,600	
	1915	6,729,067	100		259,300	
South Africa	1914					7,000,000
	1915					4,000,000
Spain	1914	2,085,422	52	17,094	31,500

	1915	1,022,963	96	87,796		

a Available for export.

b For Normandy; probably for all of France, 65 per cent.

c For Moscow district.

JAPANESE GLASS FOR ENGLAND.

[Extract from Japan Chronicle of Sept. 21 by Consul General George H. Seidmore, Yokohama.]

The paralysis of the glass industry in Belgium and Germany has led to an increased demand for Japanese glass. Most remarkable are the large orders arriving from England, where glass articles have scarcely ever been exported from Japan. The Nippon Yusen Kaisha is now receiving applications for space and freight to London for lamp chimneys, cups, bottles, and other glassware calculated at about 4,000 tons in all. These will be shipped between October and February next. Exports to India and Australia also continue to expand.

CONVENTION OF AGRICULTURAL CHEMISTS.

The thirty-second annual convention of the Association of Official Agricultural Chemists is to be held at Washington, D. C., November 15-17. The arrangement of the program has been altered from that of recent years, the first day being given over to the reports of the referees on water, feeds and feeding stuffs, sugar, separation of nitrogenous substances, dairy products, and food adulteration. The second day is to be devoted largely to committee reports and the address of the president, and the third day to reports from the remaining committees and referees, including the sections of fertilizers and medicinal plants and drugs.

SOLVING THE POTASH PROBLEM.

Several new methods of increasing the supply of American potash have recently been brought to the attention of the Bureau of Foreign and Domestic Commerce. One of the most promising of these efforts to find a substitute for German fertilizers is a patent taken out a few weeks ago by a Canadian for a method of using the potash in ordinary feldspar.

The process is a simple one, consisting of heating the feldspar with limestone and iron oxide at a temperature of about 2,200 degrees Fahrenheit, which produces a partly fused mass that is easily decomposed by a weak acid. From this product the potash salts can readily be extracted for further purification. The inventor has been in consultation with Dr. Norton, the expert who has been looking after the potash and dyestuff situations for the Bureau of Foreign and Domestic Commerce, and it seems very possible that a greatly simplified method of transforming feldspar into fertilizer will soon be available.

A practical try-out for another method of obtaining potash fertilizer will soon take place at a New Orleans distillery where molasses is used in large quantities. It is a fact that 106 tons of potash are wasted daily by the 25 or more distilleries in this country that subject molasses to processes of fermentation. The New Orleans company is planning to install the process of saving the potash in distillery waste recently brought to the attention of the public by the Bureau of Foreign and Domestic Commerce. It should be possible to make fertilizer from this otherwise worthless material at a price that will meet competition even after the war is over.

BUREAU OF STANDARDS STUDIES SPECIMENS OF BRONZE.

The quality of metal castings is usually determined by measuring the properties of a test specimen cast from the same metal. The United States Bureau of Standards has completed an investigation of the various foundry operations that influence the properties of the test specimen, for one of the most generally used commercial alloys, known as Government bronze, having the composition 88 copper, 10 tin, and 2 zinc. The bureau studied the effects of temperature on casting, methods of gating, casting, molding, kind of sand, heat treatment, and the effect of similar factors upon the resulting mechanical properties.

A microscopic examination of the fractured test specimens showed that the most common source of weakness was the occurrence of oxides within the metal. Such oxides appear frequently as thin films throughout otherwise sound metal, producing a condition of brittleness and low ductility.

This investigation will be published as a Technologic Paper of the Bureau of Standards, and may be obtained by application to the bureau, at Washington, D. C.

American Ambassador Frederic C. Penfield reports from Vienna that a decree by the Ministries of Finance, of the Interior, and of Commerce of the Government of Austria-Hungary, issued August 27, 1915, provides for a still greater reduction in the production of beer, amounting to from 40 to 50 per cent of the total output.

AMERICAN SHIPS LAND FISH AT CANADIAN PORT.

[Vice Consul Irving N. Linnell, Prince Rupert, British Columbia, Oct. 11.]

The Canadian Fishery Order in Council, permitting American fishing vessels to sell their catches in British Columbia ports, to be shipped in bond to the United States, was signed March 9, 1915. The result has been that many American fishing vessels have brought their fish to this port and sold them to the dealers here. No American ships took advantage of this privilege during the month of March, and only three came here in April. Since that time, however, the number selling their halibut here and the amount of halibut sold have increased steadily. Several of the larger vessels have alternated between this port and Seattle, bringing one catch here and the next to Seattle.

In addition to the halibut brought in, several small American vessels have been bringing in salmon and selling it here. This has, of course, been shipped to the United States.

Prices Paid for Halibut Higher in Seattle.

The prices paid the vessels for halibut have, on the whole, been higher in Seattle than in Prince Rupert during this period, but this difference is offset to the vessels which have been fishing off the Alaskan coast and the coast of northern British Columbia by the saving in time and fuel.

Several of the American fish companies now have their agents in Prince Rupert, buy here, and ship to the United States via the Grand Trunk Pacific Railway.

The amounts involved from month to month, showing the changes in the traffic, have been:

Month.	Pounds landed from American vessels at Prince Rupert.	Number of trips made by American vessels to Prince Rupert.	Number of pounds shipped to United States from Prince Rupert.	Value of halibut shipped to United States from Prince Rupert.	Number of pounds landed at Seattle.
1915.

* Figures not yet available.

[COMMERCE REPORTS, in dispatches published Feb. 20, Mar. 23, and Mar. 27, 1915, has described the steps taken by Canadian authorities which have affected the Pacific fishing industry.]

AFRICAN ORANGES FOR ENGLAND.

It is anticipated that large quantities of oranges and other citrus fruits will be available for shipment from South Africa to England during the coming season. In another four years the South African shipments of such fruit will, according to the estimate of Mr. C. du P. Chiappini, British Government Trades Commissioner to South Africa, amount to 400,000 boxes, and in 10 years to 4,000,000 boxes annually.

EXPORTS OF DOMESTIC BREADSTUFFS, OILS, ETC.

The following table, prepared by the Bureau of Foreign and Domestic Commerce, Department of Commerce, gives the quantities and values of domestic breadstuffs, cottonseed oil, food animals, meat and dairy products, cotton, and mineral oil exported from the principal customs districts of the United States during September, 1914 and 1915, and the nine months ending September, 1914 and 1915:

Currants for Canada.

In forwarding the names of six Kingston firms interested in dried currants, Consul Felix S. S. Johnson suggests that Canada should offer an unusually good market for this fruit this season. The addresses may be had upon application to the Bureau of Foreign and Domestic Commerce or its branch offices; refer to file No. 67390.

UNEMPLOYMENT IN 12 CITIES OF UNITED STATES.

The Bureau of Labor Statistics of the United States Department of Labor has summarized the results of the third study in the series of investigations being made into unemployment. This study, which was undertaken for the bureau by the Metropolitan Life Insurance Co., includes 12 cities in the Rocky Mountain and Pacific Coast States.

The results of the survey of unemployment in New York City, made in January, 1915, by the Metropolitan Life Insurance Co., tallied very closely with the results obtained from an independent study made by the Bureau of Labor Statistics. Because the information on unemployment thus collected for New York was believed to be trustworthy and representative, the Metropolitan Life Insurance Co. was employed by the Commissioner of Labor Statistics to make studies in these 12 additional cities. The canvass was made during June and July, 1915, and followed the same lines as the Metropolitan's study of unemployment in New York City and vicinity, as published in Bulletin 172 of the Bureau of Labor Statistics. The information collected is to appear shortly as a bulletin of the Bureau of Labor Statistics. In the following table are given the leading facts thus far tabulated, and it includes data relative to the part-time workers as well as to the wholly unemployed:

Cities.	Number of families canvassed.	Number of wage earners in families.	Unemployed.		Part-time wage earners.	
			Number.	Per cent.	Number.	Per cent.
Butte, Mont.	3,557	4,229	298	7.0	536	12.7
Los Angeles, Cal.	5,621	7,227	822	11.4	1,744	24.1
Oakland, Cal.	2,927	4,256	610	12.0	1,144	26.9
Ogden, Utah.	591	887	40	4.5	137	14.3
Portland, Oreg.	1,783	2,347	469	20.0	406	17.3
San Francisco, Cal.	1,288	1,856	179	9.2	439	23.7
Salt Lake City, Utah.	1,052	1,694	173	10.4	296	17.7
San Diego, Cal.	1,466	1,828	305	16.7	633	34.7
San Francisco, Cal.	5,320	7,749	1,203	15.6	1,971	25.4
Seattle, Wash.	10,112	12,473	1,713	12.7	1,993	14.8
Spokane, Wash.	1,012	1,259	210	16.7	257	20.4
Tacoma, Wash.	1,818	2,558	457	17.9	627	20.6
Total.	36,537	49,333	6,373	12.9	9,971	20.2

SAVING THE WASTE IN COKE MAKING.

By-products from retort coke ovens in the United States in 1914 included 61 billion cubic feet of gas worth 6 million dollars, 110 million gallons of tar worth 2½ million dollars, 7½ million dollars' worth of ammonia, and 1 million dollars' worth of benzol, etc. However, 57 per cent of the coke production of the country—35 million tons in 1914—still comes from the old-style beehive oven.

About two-thirds of the gas saved is used industrially, but over 50 million cubic feet is sold daily for domestic purposes. Almost the entire supply of gas in some cities is from retort coke ovens. Among these cities are Boston, Mass.; Camden, N. J.; Indianapolis, Ind.; Hamilton, Ohio; Baltimore, Md.; Duluth, Minn.; South Chicago, Ill.; and Milwaukee, Wis.

CHINESE MARKETS FOR AMERICAN LUMBER.

For many months Mr. Franklin H. Smith, a commercial agent of the Bureau of Foreign and Domestic Commerce, has been traveling in the Far East and Australasia, conducting a thoroughgoing investigation into the markets there for the products of American forests. In his report on China, which has just come from the press, he reviews in detail the lumber situation in the great oriental Republic. Mr. Smith is optimistic with respect to China, believing that the future will witness a largely increased use of American woods. The population, he says, "is slowly shaking off the old order of existence and turning toward the new—toward greater agricultural and industrial activity—absorbing new ideas and adopting modern methods. With increasing development along many lines and with the extension of the railroads, with their civilizing and trade-creating effects, there must of necessity come a larger, wider call for lumber. The United States with its durable, easily worked, and comparatively cheap timber will, with proper precautions, control this trade."

Yet, notwithstanding the confidence here expressed and the fact that the United States already gets about half of the Chinese business, Mr. Smith sounds a note of admonition. He points out the desirability of a standard list price, advises closer adherence to grades, touches on the possibility that new competitive sources of supply may come up, and emphasizes the need of direct representation in the Chinese field, and of a campaign of education to acquaint prospective purchasers with the superior qualities of American woods.

Mr. Smith's new booklet is entitled "China and Indo-China Markets for American Lumber" and is No. 104 in the Special Agents Series. The practical, pertinent information contained in it includes many tables of import and export statistics and a careful examination of the situation in each of the principal markets. Attention is given to railroad demands for timber, the market for boxes, barrels, and shooks, and practically all other aspects of the trade that are of interest to American manufacturers. Five cents is the price of this publication, obtainable from the Superintendent of Documents, Washington, D. C.

CEREAL CROP OF ROUMANIA.

[*L'Economiste Européen*, Oct. 1.]

The International Institute of Agriculture estimates at 2,960,000 metric tons (1 metric ton=2,204.6 pounds) the Roumanian harvest of 1915, as compared with 1,260,000 tons in 1914. The harvest was excellent, surpassing by more than 600,000 tons the average of the harvests from 1910 to 1914. The crop of oats for the current year reached 380,000 tons, against 367,400 tons in 1914; that of corn, 2,800,000 tons, against 2,782,700 tons in 1914; barley, 516,000 tons, against 536,600 tons in 1914; rye, 80,000 tons, against 49,700 tons in the preceding year.

The exports of cotton yarn from the United States to Argentina during May, June, and July of this year amounted to nearly ten times as much as those for the entire fiscal year of 1914.

SUGAR-CANE CULTIVATION IN SOUTHERN INDIA.

[Consul Lucien Memminger, Madras, Aug. 31.]

Sugar-cane cultivation in Cochin on the Malabar coast is now said to be reviving, and the agricultural department of that district proposes suitably to encourage extensive planting. This is due to increased interest in sugar production throughout India. The amount of raw sugar produced in Madras Presidency in the crop year ended June, 1913, the latest for which statistics are available, was 195,666 long tons. Besides cane juice, raw sugar is prepared in this country from the juice of the date tree (*phoenix sylvestris*), the palmyra palm tree (*borassus flabellifer*), and the coconut palm tree (*cocos nucifera*). The palmyra palm affords much of the sugar of South India, especially Tinnevely. It is one of the sources of the substance known in Indian commerce as "jaggery." Southern India does not produce nearly enough sugar for its own needs, and sugars from northern India are consumed as well. The imports by sea to ports in Madras Presidency from all countries in the fiscal year ended March 31, 1913, were valued at \$1,952,279, the bulk of this sugar being from Java.

Factories for making sugar from cane juice have not been invariably successful in South India; in fact, rather the contrary. Some years ago, when the indigo business began to decline, some of the planters built so-called modern sugar factories, but the sites chosen proved not infrequently to be unsuitable, the cane could not be obtained in sufficient quantity, and the factories were too far from the railways.

Difficulty of Establishing Sugar Factories.

With regard to the difficulty of establishing sugar factories in India the following appeared in Commerce, a Calcutta publication, of August 18, 1915:

Mr. William Hulme, sugar engineer expert to the Government of India, in the course of a communication to the International Sugar Journal, draws attention to one of the chief drawbacks at present existing. In his opinion improvement will be slow until some alteration is made to enable the cultivation of the canes to be more concentrated than at present. The cane is grown on scattered areas in little patches of a few acres, which makes it very difficult to supply a factory with anything more than 300 tons per day. Very often the cane is stale when delivered by the slow-moving bullock carts. The cultivators are extremely conservative and difficult to handle. If the proprietors of a factory were to buy the land, the cultivator can not be moved if he holds occupancy rights, as is often the case. Mr. Hulme has known cases where advances have been made to the cultivator for the delivery of sugar cane during the crushing season, when he has retained the best of the canes for making "gur" by the indigenous methods, and delivered the worst of poor cane to the factory.

In short, as the law exists the factory proprietors are dependent upon the cultivators. If the latter refuse to grow sugar cane, the factory proprietors have no redress. This is undoubtedly one strong reason why there are so few sugar factories in India. Another reason is that many orthodox Indians will pay more for sugar made by the indigenous methods and refuse to purchase that made in modern factories. Still there is already some indication that the prejudice against modern sugar is breaking down.

The Review of the River Plate for September 17 announces that the Transandine Railway is expected to be clear for traffic in a few days, thus enabling international service to be resumed after an interruption of several months.

THIS YEAR'S EGYPTIAN COTTON CROP.

[Cablegram from Consul Arthur Garrels, Alexandria.]

The Government estimate of the Egyptian cotton crop for 1915 is 607,890 bales of 800 pounds each.

Shipments of Cotton.

The Alexandria General Produce Association furnishes the following statistical résumé of the Egyptian cotton season, September 1, 1914, to August 31, 1915:

Arrivals at Alexandria, 642,849,900 pounds. The exports from Alexandria, by ports of destination, follow:

Country.	Bales.	Country.	Bales.
England:		Italy:	
Liverpool.....	224,947	Genoa.....	135,340
Manchester.....	154,511	Naples.....	7,735
India (Bombay).....	475	Venice.....	21,030
Spain (Barcelona).....	28,104	Leghorn.....	3,556
United States:		Portugal (Oporto and Lexiones).....	756
New York.....	12,126	Russia:	
Boston.....	159,856	Odessa.....	1,293
Philadelphia.....	2,400	Archangel.....	3,795
France:		Vladivostok.....	2,440
Marseille.....	22,395	Sweden and Norway.....	31,442
Dunkirk.....	210	Greece and Turkey.....	2,616
Havre.....	4,502	Total bales.....	832,731
Japan (Kobe and Yokohama).....	18,169		

The 832,731 bales exported were equal to 625,889,640 pounds. The stock at Alexandria to September 1, 1914, was 75,901,249 pounds. The local consumption amounted to 4,644,407 pounds, and that destroyed by fire 30,804 pounds.

Export Movement of Egyptian Cotton Seed.

The following is a statistical résumé of the export movement of Egyptian cotton seed for the cotton season September 1, 1914, to August 31, 1915:

The arrivals at Alexandria were 20,554,704 bushels, and the total stock at Alexandria to September 1, 1914, was 616,789 bushels, making a total of 21,171,493 bushels. The exports from Alexandria were as follows: England (Hull, 8,900,254 bushels; London, 2,482,301 bushels; and other British ports, 6,400,473 bushels); Marseille and other European ports, 48,027 bushels, making a total of 17,831,055 bushels exported. The local consumption was 3,266,400 bushels, and the stock on hand at Alexandria to August 31, 1915, was 74,038 bushels.

TRADE MAGAZINES AND COMMERCIAL PAPERS.

[Consul Felix S. S. Johnson, Kingston, Canada, Oct. 9.]

Requests from this consulate for American catalogues, published in **COMMERCE REPORTS** for August 30 and October 4, 1915, have had the desired results, and the office staff at present is busy indexing and filing away these books.

Merchants and importers at Kingston are desirous that, in addition to catalogues, there should be on file at the consulate trade magazines and commercial newspapers. It is hoped that publishers of such journals may, in the interest of trade extension abroad, favor this office with copies.

SPAIN PREPARED TO BUY AMERICAN LEATHER.

[Consul Wilbur T. Gracey, Seville, Sept. 16.]

A shortage in the leather market at Seville, due to the closing of certain sources of supply by the war, offers an exceptional opportunity for the sale of American goods. Several inquiries have been made at the Seville consulate recently, and the consul has shown samples on file there. One inquirer, after investigating prices, terms, etc., has sent to the American manufacturer for a sample shipment of 70 skins and expects to do a good business.

An investigation by the consul shows that there is a call for almost all classes of leather. The varieties especially needed are russet, black, and patent leather for shoe tops. Sole leather is manufactured in Spain, and it seems doubtful if American firms can compete in this line, owing to the lower prices here.

Inquirers state that, in buying leather, quality is usually considered before price, and while the market is accustomed to terms of from 30 to 90 days, cash will be paid if necessary. A permanent business can hardly be built up on those lines, however, and the orders will return to the old channels as soon as normal conditions are resumed, unless American manufacturers are prepared to meet the terms heretofore given in this country.

Does Not Always Use Entire Credit Extended.

In the past, leather has been received here from Germany, France, and England, the first-mentioned country giving credit of 120 days. The Spanish merchant does not always use the entire credit extended to him, but looks upon the willingness to extend credit as evidence of confidence in his business integrity. A refusal to give credit is looked upon almost as an insult.

Prices for this market should be given in pesetas, if possible, c. i. f. Seville or Cadiz. Prices in francs are similarly satisfactory, and can be more easily compared with Spanish prices and prices received from other European countries than if quoted in American dollars. If quotations c. i. f. are impossible, they should at least be f. o. b. New York, or other point from which regular shipping facilities to Spain exist. The cost of packing is usually included in the price by European firms.

Heretofore purchases have been made almost entirely from European sources through commercial travelers visiting the Spanish cities at regular periods, because of better prices, cheaper freight and insurance rates, and shorter time required in transit. Commission agents handling this class of goods here usually expect a commission of 5 per cent. The importations of leather at Seville during 1914, in kilos of 2.2046 pounds each, were:

Classes of leather.	From abroad.	From Spanish ports.
	<i>Kilos.</i>	<i>Kilos.</i>
Untanned.....	2,080	3,010
Tanned.....	617	14,679
Patent.....	511	1,100
Sole.....	1,854	265,180

Some Foreign Leather Reshipped to Seville.

These importations from abroad do not represent the entire quantity of foreign-made leathers here, as much of the leather credited to Spanish ports originates abroad, comes to the large importers at Barcelona, and is reshipped to Seville. A considerable quantity of leather also comes here by rail from other Spanish cities and does not appear on the customs statistics of Seville.

Lists of persons interested in leather, and who have made inquiries at the consulate, may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 67128. The consul suggests that samples and prices be sent to the persons on the list, and duplicates sent to the consulate, to be filed and shown to other interested parties. Correspondence and literature should be in the Spanish language.

AUSTRALIAN TRADE NOTES.

[Commercial Attaché William C. Downs, Melbourne, Sept. 23.]

New Houses Erected—Incandescent Gas Mantles.

Though not so active as last year, the building trade is steady. During August 339 new houses were erected in Melbourne; in the corresponding month of 1914 the total was 558.

The governmental elimination of the company that up to this time has enjoyed a practical monopoly of Australia's trade in incandescent gas mantles opens this market to the wares of other manufacturers. Australia's imports of incandescent mantles in 1913 (the latest year for which figures are at hand) were valued at \$139,850.

Woolen Piece Goods—Linen Window Shades.

Importers of woolen piece goods for men's clothing report that some difficulty is being experienced in obtaining supplies from Europe. American manufacturers of such goods are advised to send out their samples and quote prices. Very light fabrics, of almost tropical weight, are in demand in all the States except Victoria, which uses medium-weight goods.

Linen window shades, commonly known as "Hollands," may find a market in Australia if prices are satisfactory and deliveries can be made with reasonable promptness. Lightweight material is most in demand in widths of 36, 42, 45, 54, and 72 inches.

Bill to Regulate Footwear Trade.

A bill which has just been introduced into the Parliament of Victoria "to regulate the manufacture and sale of footwear" prohibits, under penalty, the sale of boots and shoes the soles of which do not consist entirely of leather, unless a true statement of the materials composing the sole is conspicuously and legibly stamped upon its outer surface. The name or registered trade-mark of the manufacturer must also be stamped upon or impressed into the soles of all footwear offered for sale in the State. In case the bill is passed by the Victorian Parliament, it is to go into effect by proclamation of the Governor in Council, to be made when the Governor is satisfied that a similar act has been passed by the Parliament of New South Wales.

[A copy of this bill may be examined at the Washington office of the Bureau of Foreign and Domestic Commerce; refer to file No. 779.]

FOREIGN TARIFF NOTES.

CANADA.

[Customs Memorandum No. 1955-B, Oct. 12, 1915.]

Admission of Potatoes from United States.

The prohibition of the importation of potatoes originating in the States of Maine and New York has been removed and such potatoes may now be admitted into Canada without inspection by an officer of the Department of Agriculture. [For previous notices regarding restrictions on potatoes imported into Canada from the United States, see Foreign Tariff Notes No. 15, p. 56, and No. 17, p. 135.]

CEYLON.

Export Duties.

According to a dispatch appearing in the London Times, October 2, 1915, the Government of Ceylon has established the following export duties, in effect October 1: Tea, 1.50 rupees for 100 pounds; rubber, 7.50 rupees per 100 pounds; cocoa, 1.50 rupees per 100 pounds; cardamoms, 7.50 rupees per 100 pounds; coconuts, 2 rupees per 1,000 pounds; desiccated coconut, 0.70 rupees per hundredweight; copra, 0.40 rupee per hundredweight; coconut oil, 0.75 rupee per hundredweight. The former export duties on tea, cocoa, and cardamoms were, respectively, 0.15, 0.15, and 0.75 rupee per 100 pounds; the remaining products were previously exempt from export duty. [Rupee, \$0.324; hundredweight, 112 pounds.]

GERMANY.

[Nachrichtenblatt für die Zollstellen, Aug. 1, 1915.]

Temporary Exemptions and Reductions.

From time to time since the outbreak of the European war, the German Government has granted temporary free admission in the case of various articles, mostly foodstuffs and mineral products, and in a few instances has reduced the rate of duty on imported products. The reduction, as well as the exemptions, are to continue indefinitely, presumably until the end of the war. [A complete list of the products for which exemption or admission at reduced rates of duty has been allowed was issued under date of Aug. 1, 1915, and a copy is on file in the Bureau of Foreign and Domestic Commerce.]

ITALY.

[Bollettino Ufficiale, No. 85, Aug. 29, 1915.]

Admission of Sausage Casings.

The removal of the prohibition of the importation of pork (fresh, salted, smoked, or otherwise prepared) from the United States has been followed by the rescinding of the regulation prohibiting the importation into Italy of sausage casings of American origin. Such articles may now be admitted, provided they have been properly dried, salted, or otherwise preserved, and that shipments are accompanied by the usual sanitary certificate, as well as by the certificate of origin required in the case of imports from countries entitled to most-favored-nation treatment, which must be viséed by the Italian

consular officer having jurisdiction in the place of production. Such shipments are subject to inspection by the sanitary officials at the port of entry, and importation is restricted to the ports of Genoa, Naples, and Venice. [For notice regarding the admission of pork see Foreign Tariff Notes No. 17, p. 137.]

RUSSIA.

[Vyestalk Finansov, Oct. 6 (19), 1915.]

Exemption from Presentation of Certificates of Origin.

In accordance with the provisions of a customs circular under date of August 29 (Sept. 11), 1915, a number of articles are added to the list of those which may be imported without presentation of certificate of origin. In determining the origin of such articles, the customs authorities are to be guided by the shipping documents, but should also make use of any other sources of information at their disposal. In case evidence is found that the goods are of German, Austro-Hungarian, or Turkish origin the discriminating surtaxes are to be applied. [See Foreign Tariff Notes No. 16, pp. 90-91, and No. 17, pp. 137-138.] The articles included in the present customs circular are as follows: Hides and skins, dressed and undressed; leather belting; wooden parts of machines; grindstones and whetstones; grinding and polishing substances and manufactures thereof, including carbon articles for electrotechnical purposes; colophony; rubber and gutta-percha and manufactures thereof; chloride of lime; certain chemicals included under No. 112, such as chlorates of potassium and sodium, calcium carbide, benzol, etc.; white lead and zinc white; mineral ores; cast iron; copper, aluminum, nickel, and various alloys, not specified, in bars, rods, and sheets; manufactures of such metals and alloys; manufactures of cast iron; manufactures of iron or steel, not specified, forged, stamped, or cast, including forged nails; steam boilers and accessories; wire of copper, aluminum, nickel, and various alloys; manufactures of wire and electric cables; cutlery; scythes and sickles; machinery and apparatus of all kinds; scientific instruments and apparatus of all kinds; wood pulp; wool and hair; various textiles for industrial purposes, including camel-hair belting; twine; bags and bagging; machine belting of hemp and cotton.

MILK AND BUTTER PRICES IN NORMANDY.

[Consul John Ball Osborne, Havre, France, Sept. 16.]

In Normandy the retail prices of milk are 15 to 20 centimes (\$0.029 to \$0.039) per liter (1.06 quarts) in summer, and 20 to 25 centimes (\$0.039 to \$0.048) per liter in winter. The prices of butter in summer are 2.80 to 3.20 francs (\$0.54 to \$0.62) per kilo (2.2 pounds), and in winter 3.70 to 4.20 francs (\$0.71 to \$0.81) per kilo. Cream is sold only in the neighborhood of the cities and towns. The retail prices are: In summer, 1 to 1.20 francs (\$0.19 to \$0.23) per liter; in winter, 1.50 to 1.80 francs (\$0.29 to \$0.35) per liter.

The cost of production of milk is given as 8 to 10 centimes (\$0.015 to \$0.019) per liter in summer and 12 to 15 centimes (\$0.023 to \$0.029) in winter.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau and its branch offices.]

Bridge, No. 18985.—The county councils of Kilkenny and Wexford, Ireland, invite designs, etc., for a bridge at Ferry Mountgarrett over the river Barrow. Further particulars may be obtained on application to Mr. A. M. Burden, county surveyor, Kilkenny, Ireland, accompanied with a cash deposit of \$24.33, which deposit will be returned when the particulars sent are handed back either with or without a design. Designs must be filed with the county surveyor by November 30, 1915. The Bureau has no further information relative to this opportunity.

General agency, No. 18986.—A business man in Australia is making a tour of the United States with a view to consummating selling agreements with American manufacturers who desire to place their commodities on Australian markets. Full information may be had on application to the Bureau or its branch offices.

Boilers, No. 18987.—Tenders are invited by the New South Wales Government Railways and Tramways Department for the supply, erection, and maintenance for 12 months of two water-tube boilers, with accessories, at Newcastle, N. S. W. Copies of specification, conditions, and form of tender may be obtained from the office of the Electrical Engineer, New South Wales Government Railways and Tramways, 61 Hunter Street, Sydney, N. S. W., on payment of \$5.11 for the first copy and \$2.43 for each subsequent copy. Tenders will be received by the Chief Commissioner for Railways and Tramways, Phillip Street, Sydney, N. S. W., until January 12, 1916. Tenders must be accompanied by a deposit on the following scale: \$24.33 for tenders not exceeding \$973; \$48.66 for tenders over \$973 but not exceeding \$2,433; \$73 for tenders over \$2,433 but not exceeding \$4,866; \$97.33 for tenders over \$4,866 but not exceeding \$9,733; and 1 per cent of the value of the offer if above \$9,733. Local representation is necessary. The Bureau has no further information relative to this opportunity.

Automobiles, electric apparatus, etc., No. 18988.—An American consular officer in the Netherlands reports that a man in that country is interested in automobiles, electric apparatus, boat motors, motor cycles and supplies, typewriters, and new inventions in the technical line. It is stated that the man desires to buy such goods for his own account and act as sole buying agent for Holland and colonies. He proposes to pay cash against documents in the Netherlands or cash in New York. Correspondence may be in English. References are given.

Railway, No. 18989.—The Gaceta de Madrid of September 17, 1915, states that tenders will be opened at the "Direccion-General de Obras Publicas," Madrid, Spain, on November 20, 1915, for the construction and working, for a period of 99 years, of a secondary railway from Zumarraga to Zumaya. The cost of construction is estimated at about \$1,411,285, on which interest not exceeding 5 per cent per annum will be guaranteed by the State. The minimum rolling stock required to work the line will be 5 locomotives, 19 passenger coaches, 5 brake vans, and 78 goods wagons. An option on the concession is held by the Compania de los Ferrocarriles Vascongados. Construction work must be begun within three months from the date of the award of the concession and completed within a period of three years. Although the above contract will probably be awarded to Spanish firms, nevertheless the carrying out of the work may involve the purchase of materials outside of Spain. The Bureau has no further information relative to this opportunity.

Automobile tires, No. 18990.—An American consular officer in an insular possession reports that there is a market in his district for automobile tires. Correspondence may be in English.

Vegetable glue, No. 18991.—The Bureau is informed by an American consular officer in Portugal that a firm in his district is in the market for vegetable glue, sometimes called "zeaport," probably made of potato and other ingredients, and used in the tanning industry. It is usually packed in barrels,

in an almost liquid state. The firm requires about 3,000 kilos. Samples and prices are desired at once. The firm will pay cash against documents. Correspondence may be in English.

Mailing machine, No. 18992.—The Bureau is informed by a firm in the United States that its agent in Holland is in the market for a mailing machine to wrap newspapers.

Wire netting, No. 18993.—A firm in the United States has informed the Bureau that a sea-bathing establishment on the Pacific coast of Central America desires to secure samples or catalogues giving views of different netting to inclose the bathing inclosure from the open sea. Prices should be given f. o. b. New York.

Sewing machines, typewriters, etc., No. 18994.—The Bureau is informed by an American consular officer in Russia that a firm desires to know the names and addresses of manufacturers of sewing and knitting machines, typewriters, needles, typewriter ribbons, carbon paper, cigarette lighters, and black and white press-buttons. Samples are desired. Correspondence should be in Russian. Prices, weights, etc., should be stated in Russian equivalents. Quotations should be made c. i. f. Vladivostok.

Advertising novelties, spectacle frames and lenses, etc., No. 18995.—An American consular officer in England reports that a firm in his district desires to be placed in communication with American manufacturers of advertising novelties, spectacle frames and lenses, and electrical pocket lamps.

Plumbers' supplies, No. 18996.—The Bureau is informed by an American consular officer in India that a man in his district wishes to be supplied with catalogues, price lists, and terms of sole agency for the sale of sanitary plumbing supplies.

Automatic typesetting machine, No. 18997.—An American consular officer in Central America reports that a firm in his district desires prices and catalogues on automatic typesetting machines, preferably of the monotype variety. Correspondence should be in Spanish.

Cloth and canvas fishing bags, No. 18998.—An American consular officer in the United Kingdom transmits the name of a firm desiring to receive catalogues and price lists, in English currency, for sailcloth fishing bags, with shoulder straps, which can be retailed at 49 cents, and brown canvas bags retailing at \$1.82 each. It is suggested that a price of \$4.26 per dozen for the former, and \$14.60 per dozen for the latter, would receive consideration. Quotations should be c. i. f. destination, or f. o. b. New York. The firm is accustomed to a 2½ per cent discount monthly.

Boiler supplies, No. 18999.—A commercial organization in the United States informs the Bureau that a business man in Spain is interested in Martin Siemen's soft steel plates for boilers, pipes, and tools for boiler manufacturers, bases for boilers and hydraulic presses, and steam and water cast-iron turbines. Correspondence should be in Spanish.

Statistics of the French Ministry of Agriculture, furnished by Consul Osborne, of Havre, show the number of farm animals of each kind in France on July 1, 1915. There were 2,227,209 horses, 152,266 mules, 332,244 asses, 12,286,849 beef cattle, 13,483,189 sheep, 5,490,796 swine, and 469,487 goats.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 308 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

INDIA'S NEW CROP OF SESAME SEED.

[Consul Lucien Memmlinger, Madras, Sept. 7.]

From the first forecast of the sesame crop in British India for 1915-16, which has just been issued by the Department of Statistics, it appears that the total area sown up to date in the Madras region is 296,000 acres, which is 38 per cent in excess of the area at this date last year. This should produce about 26,000 tons.

The area sown is above normal throughout the whole Telugu country or northern parts where rains have generally been favorable. The only districts showing a decrease are Kurnool and parts of Anantapur. In the center and the south the sowings have been short in Chingleput, South Arcot, North Arcot, and to a lesser degree in Salem, but are practically up to the average elsewhere. Of the entire area under cultivation in India this year, estimated from preliminary returns at 1,811,000 acres, 16.6 per cent is in the Madras district. In this region the seed are usually sown in April and May and the crop reaped three or four months later, but in the case of irrigated lands sowings sometimes take place in January or February. Exports of sesame seed from Madras ports for the fiscal year ended March 31, 1915, were 19,075 hundredweight, valued at \$62,642. This was 71 per cent less both in quantity and value than in the previous year, and the figures were the smallest ever recorded. Exports to France and Austria-Hungary entirely ceased, and those to Ceylon fell off 7 per cent. Local consumption, however, continued as great as ever.

Properties and Utilization of Sesame Seed.

Sesamum indicum, the til or gingeli of British India, has at least two easily recognized forms in this country—one with white seeds (safed til), the other with black (kala til). The latter is the most abundant and is reputed to yield a superior oil. The method of manufacture is by expression in mills. The oil is clear and limpid, varying in color from pale yellow to dark amber. In India this product is largely used for culinary purposes, in anointing the body, in soap manufacture, and as a lamp oil. It is also frequently employed as an adulterant of ghee, a form of native butter. As it resembles olive oil in many of its properties, it is accordingly similarly utilized. When exported to England it is chiefly used there for making soap.

The oil from the black variety of sesame is generally stated to be more suitable for medicinal purposes than the white. It is also extensively employed in the manufacture of Indian perfumes, and for this purpose the perfume is frequently extracted by the seeds direct—layers of the seeds being placed between layers of flowers, etc. Thus a favorite jasmine extract in India is made by layers of sesame seed wetted in water being placed alternately with layers of jasmine flowers, all being covered with a cloth and left for 12 to 18 hours, after which an oil is obtained that has all the scent of the flower.

The white-seeded form of sesame is largely eaten as an article of food, more especially in certain sweetmeats. The oil cake left after expression of the oil is even eaten as food by the poorer classes. In Madras tanghedi bark is sometimes added to the seed before being pressed for oil.

FISHERIES BUREAU CRAFT LANDS TILEFISH.

The fishing schooner *Stranger*, of Gloucester, Mass., which is being used by the United States Bureau of Fisheries in its efforts to establish a fishery and market for tilefish, returned to New York City with a second fare of tilefish on the morning of October 27, after having been away from port less than five days. The catch consisted of 12,000 pounds, and the fish were reported as abundant. The grounds on which this catch was made are those lying most conveniently with reference to New York City.

FIFESHIRE LINEN TRADE WITH UNITED STATES.

[Consul H. D. Van Sant, Dunfermline, Scotland, Oct. 9.]

The Scottish linen export trade from the Dunfermline consular district to the United States shows a total decrease of \$400,423 compared with the corresponding quarter of 1914. The total value of the exports was \$288,546 compared with \$697,971 for the previous September quarter. Linens and union goods were valued at \$218,519, a decrease of \$389,677; cotton goods, \$10,122, a decrease of \$7,797; and linoleums, \$27,346, a decrease of \$28,085.

For several months the trade has been in a somewhat depressed condition, though an extra supply of flax and yarns helped to revive the linen industry for a time during the spring, falling off again in July and August. At one time it was anticipated by some manufacturers that before now several factories might have had to close, but as a result of the gradual substitution of cheaper cotton goods for linens all the manufacturers have been enabled to keep the factories running on short time. Linen yarns are higher in price and more difficult to obtain, yet there is a fair prospect of fall trade. Cotton yarns also seem to be rising rapidly in price with difficulty of securing prompt deliveries. Many looms in the factories are idle, partly owing to the shortage of labor occasioned by the war. The improvement in American orders has not been marked, and increased freight and the dislocation of shipping appear to be disturbing factors of the future. Not much improvement can be expected until some time after the closing of the crisis; in some quarters the prospects appear to be for even lower shipments for the time being.

INEXPENSIVE JEWELRY FOR THE PHILIPPINES.

[J. F. Boomer, correspondent,¹ Manila, Sept. 4.]

The Philippines offer a good market for jewelry of all kinds. These islands in 1913 bought \$158,000 worth of gold and silver articles, \$139,000 worth of plated jewelry, \$21,700 worth of plated tableware, and \$17,700 worth of other plated goods. Last year purchases fell off except as to plated tableware, but the trade was still important, as the table of imports below discloses.

Cheap watches and similar lines are especially in demand; ornate toilet sets of the cheaper grades also sell well. Filipinos are particularly susceptible to the appeal of the mail-order catalogue, and American houses would undoubtedly be able to increase their business materially by the judicious use of carefully prepared catalogues; even those in English would reach a large circle of buyers at the present time. Full and explicit directions for ordering should always be included.

SASH AND DOORS FOR ITALY.

[Consul Jay White, Naples.]

In spite of war conditions there is considerable building being carried on in Naples. Apartment houses are being erected in the Vomero, Piedegrotto, Torretto, and other sections, one of the finest being in course of erection near the center of the city on the reclaimed ground to the south of Santa Lucia. The contracts for these works, however, were all let before the European hostilities began.

Construction work in Naples is different from that in the United States, the only point of resemblance being in the use of steel and iron girders for strengthening the floors of buildings. Window frames, doors, and shutters are all made by hand, and there would seem to be an opportunity in this business for American enterprise. American flooring and trimmings are used, but up to the present American builder's hardware and plumbing goods have not been able to compete in Naples with European products on account of prices.

¹ Mr. Boomer is unable to reply to letters of inquiry from American firms. All letters and catalogues received by him are turned over to the Manila Merchants' Association, with which he has made arrangements to have correspondence answered. Stamps in denominations of the United States are of no value in the Philippine Islands and should not be inclosed.

AUSTRALIA'S INCOME-TAX LAW.

[Commercial Attaché William C. Downes, Melbourne, Sept. 23, supplementing report published Oct. 9.]

Section 14 of the Federal Income-Tax Assessment Act provides (1) that in the case of a person selling goods in Australia on account of a person not resident in Australia, or on account of a company not registered in Australia, the principal shall be deemed to have derived from such sale a taxable income equal to 5 per cent upon the price at which the goods were sold; and (2) that the person selling the goods shall be assessable on the taxable income as the agent for the principal, and shall be personally liable for the payment of the tax. The Federal Income-Tax Commissioner, Mr. G. A. McKay, has made public the following interpretation of the application of this section, which appears to concern all American commission houses and some manufacturers doing business through agents in Australia:

There are many cases in which the selling agents do not handle any of the proceeds of the sales made by them. This section will require all such persons to arrange with their principals to be supplied with funds out of which they may pay the tax. In the many cases in which the principal is doing business through a separate agent for each State, or for sets of States, the agents should arrange between themselves as to which of them should be placed in funds for the purpose of payment of tax, because the act requires that the whole of the agents for a principal shall send their separate returns of their principal's business to the commissioner's office, at the Rialto, Collins Street, Melbourne, in order that one assessment may be made of the whole of the income derived by the principal from his Australian business.

It will be noted that the agent contemplated by the section is a selling agent, i. e., an agent who takes orders, either personally or through an employee, on account of the principal. It does not apply to a representative who may travel throughout Australia to urge persons to purchase his principal's goods but does not receive orders, the orders being given to some established Australian house, or Australian house of, for example, an export agency in Europe or America, and such representatives are not called upon to make any return on behalf of their principal's business. They must, however, render their personal returns for all income derived by themselves in Australia from all sources.

It is to be noted that the act fixes at 5 per cent the profit derived from transactions covered by the above section 14, whereas in the majority of cases the gross commission of the larger houses doing business with Australia does not exceed 2½ per cent, and in transactions of considerable volume is frequently less than 2½ per cent.

IMPORTS AT RIO DE JANEIRO.

[Boletim da Alfandega, Sept. 15.]

During the first half of the month of September nearly one-fifth of the vessels, or 10 out of 53, from foreign ports entering the port of Rio de Janeiro carried entire cargoes of coal, just half of them coming from the United States and the other half from England. The next largest single item of import was wheat, two cargoes coming from Argentina and one from the United States. With the exception of one cargo each of alfalfa and fuel oil, the remaining cargoes were of mixed goods, one-third of them coming from the United States.

AMERICAN MERCHANTS IN CHINA ELECT OFFICERS.

[Consul C. B. Gauss, detailed as vice consul, Shanghai, China, Aug. 22.]

At a meeting of American business men of Shanghai on August 18, the American Chamber of Commerce of China completed organization, adopted by-laws and rules, and elected officers and a committee. The object of the chamber, as set out in its rules, is to watch over and protect the general interests of American commerce, to collect information on all matters of interest to the American mercantile community, and to use every means within its power for the removal of evil, the redress of grievances, and the promotion of the common good; to communicate with the authorities and others thereupon; to receive references and to arbitrate between disputants, the decisions to be recorded for future guidance.

Membership in the organization is open to all American mercantile firms and persons engaged or interested in American commerce or shipping in China.

The first president of the Chamber is Mr. J. H. McMichael, senior partner of the firm of Frazar & Co., which has long been established as an American firm in China. The vice president is Mr. J. W. Gallagher, general representative in China of the United States Steel Products Co. The secretary is Mr. P. L. Bryant, assistant editor of the *Far Eastern Review*, an American journal of commerce, engineering, and finance, published at Shanghai.

Committee Chosen at Organization Meeting.

The committee of the Chamber, as chosen at the organization meeting, includes Mr. L. Andersen, managing director of Mustard & Co., one of the oldest American houses in China and the distributors of the British-American Tobacco Co. of China; Mr. C. H. Blake, general manager of the Standard Oil Co. of New York in China; Mr. J. Harold Dollar, of the Robert Dollar Co.; Mr. F. A. Fairchild, manager of the China & Japan Trading Co.; Mr. J. W. Gallagher, vice president of the Chamber; Mr. J. N. Jameson, of Wisner & Co.; Mr. N. T. Saunders, of George H. Macy & Co.; Mr. J. H. McMichael, the president of the Chamber; Mr. J. B. Southmayd, manager for China of the Singer Sewing Machine Co., and Mr. P. F. Wisner, the senior partner of P. F. Wisner & Co.

Honorary membership in the Chamber is provided under the by-laws, and was conferred upon the American minister at Peking, the American chargé d'affaires, the commercial attaché of the legation, the American consul general at Shanghai, and the senior American vice consul at Shanghai.

The Chamber of Commerce proposes to affiliate with the Chamber of Commerce of the United States, and it is expected that it will exert a wide influence, working through the national organization of the United States, for a better understanding of conditions in China on the part of American manufacturers and others interested in the China trade. The temporary office of the secretary is at 5 Jinkee Road, Shanghai.

[A copy of the by-laws and rules of the American Chamber of Commerce of China will be loaned upon application to the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 66639.]

[Commercial Attaché Julian H. Arnold, American Legation, Peking, Aug. 25.]

Will Be Helpful in Extending American Trade.

The American Chamber of Commerce of China ought to do a great deal to help in the extension of American trade in this country, for this represents the first steps taken by the exclusively American business interests in China to effect an American trade organization to assist, in a general way, the advancement of the interests of American trade in this country.

The Chamber will be very helpful in furnishing information in regard to matters which concern American trade interests in China, and this office hopes in turn to be of much assistance to the Chamber in supplying it with material which would be useful to its members in their desire to extend their business dealings with the Chinese. It is to be hoped that American manufacturers and exporters securing agencies and other business connections will communicate with the American Chamber of Commerce, soliciting their assistance, so that, wherever possible, agencies for American materials may be placed with American firms.

Undoubtedly, as soon as this commercial organization has perfected its details of operation, a statement will be made for the benefit of American manufacturers and exporters who are desirous of utilizing its services for the advancement of their interests in this country.

[Previous references have been made by COMMERCE REPORTS to the formation of the American Chamber of Commerce in China, Aug. 6, 1915; the American Chamber for Spain, Apr. 29; the American Chamber in Milan, Mar. 9, Apr. 8, Apr. 30, and Aug. 12, 1915; American Chamber for the Levant, Jan. 20 and Jan. 30; American Chamber at Naples, June 25; American Chamber for Brazil, Oct. 5; and American Export Chamber at Amsterdam, Sept. 3 and Sept. 16.]

FORECAST OF INDIA'S OILSEED CROPS.

[Consul General James A. Smith, Calcutta, Sept. 18.]

Yesterday's issue of the Indian Government Trade Journal contained a supplementary forecast of the 1914-15 oilseed crops of India. These latest figures place the area and yield of rape, mustard, and linseed at:

	Acres.	Tons.		Acres.	Tons.
<i>Rape and mustard.</i>			<i>Linseed.</i>		
United Provinces	2,540,300	573,400	Central Provinces and Berar	1,222,600	78,700
Bengal	1,315,600	232,000	United Provinces	886,300	157,600
Punjab	1,042,200	165,400	Bihar and Orissa	623,800	101,700
Bihar and Orissa	681,300	97,600	Bengal	188,700	26,600
Assam	300,500	59,200	Bombay (including Native States)	125,500	16,700
Northwest Frontier Province	113,900	13,100	Punjab	48,000	4,600
Sind (including Native States)	428,500	46,300	Hyderabad	234,000	8,900
Bombay (including Native States)	85,000	21,000			
Hyderabad	7,000	200	Total	3,328,000	394,600
Total	6,524,200	1,208,200			

RESULTS OF FOREIGN TRADE OPPORTUNITIES.

Consul W. Roderick Dorsey, at Tripoli, Libya, writes that a sample order for saddles has been placed in the United States by a merchant at Tripoli as a result of Foreign Trade Opportunity No. 16895, which was published in COMMERCE REPORTS on May 22, 1915.

SPANISH COOPERATIVE FARM COLONY LAUNCHED.

[Consul Paul H. Foster, Jerez de la Frontera, Sept. 18.]

Operating under a law which provides for the settling of unused lands and the diminution of emigration, the municipality of Jerez de la Frontera has conveyed pasture land to a cooperative colony known as "Colonia Agrícola de Caulina." There are 479.39 acres, and about 75 per cent will be subdivided into 75 lots of 4.94 acres each, to be assigned to 75 families, the balance to be used for community and administrative buildings, roads, canals, and forestry reserve.

These families, selected from among the poor, and considered capable of agricultural work, will be settled on the property, and all expenses of buildings, clearing, and seeding will be advanced from the appropriation. In addition, domestic animals will be furnished to the colonists, as well as all implements, tools, etc., necessary for the proper cultivation, the cost to be deducted from the proceeds of the crops in equal annual installments for 10 years.

To Deduct Cost of Supplies from Proceeds of Crops.

All food, clothing, medicines, etc., necessary to the sustenance of the families will be issued from the cooperative depot, on orders, and will be deducted annually from the proceeds of the crops. Expenditures for buildings or irrigation are to be repaid in equal annual installments for 50 years.

For the first five years the colonist will be a mere possessor of the soil, without title, and may be dispossessed for cause. At the end of this period, title passes to the settler, subject to any liens still held by the association.

This colony follows the lines of the one established in San Lucar de Barrameda in 1911, which has proved quite successful, except that this project provides for the return of the advanced capital to the State, while the one at San Lucar does not. The land itself, being a gift of the municipality, will be absolutely free to the settlers.

OUTLOOK FOR CANADIAN LOBSTER FISHERIES.

[Consul Felix S. S. Johnson, Kingston, Ontario, Oct. 18.]

Last year the United Kingdom purchased Canadian canned lobsters to the value of \$1,010,367; France, \$703,469; Belgium, \$124,283; Germany, \$182,033; and Russia, \$2,160. Other countries purchasing were: United States, \$808,296; Denmark, \$33,069; Netherlands, \$31,713; Norway, \$14,114; Sweden, \$69,092. Europe will doubtless take but small quantities of Canadian lobsters this year, and from all accounts there will be a falling off in exports to the United States (which, in addition to the canned lobsters mentioned, purchased \$70,748 worth of fresh lobsters).

Canadian cannerymen have asked the Dominion Government to suspend fishing licenses for a year, so that surplus stock may be sold. It is stated on good authority that the Canadian lobster beds need a rest and that the present is an opportune time to remedy the damage done by the extensive and illegitimate capture of young lobsters; further, that if another season's catch is thrown on the overstocked market the returns to fishermen and cannerymen would be very small in comparison with the cost of production.

PARAGUAYAN MARKET FOR SHOE POLISHES.

[Consul Samuel Hamilton Wiley, Asuncion, Aug. 18.]

The shoe polishes sold in Paraguay have in the past been imported principally from Germany. Polishes of German manufacture are offered for sale here at about one-half the price charged for the American article. To customers here price is a factor of far greater importance than quality. The greater part of the polishes sold here are bought by bootblacks. As the charge for polishing is, at the present rate of exchange, about 2 cents, it follows that the polish used must be of the cheapest grade obtainable.

Tan polishes are used more largely than any other, with black second, and white dressings third. In black and tan polishes, the paste without any liquid dressing is used almost exclusively. Polishes retail here at the following prices: Tan and black paste polishes, \$0.02, \$0.04, and \$0.06 per can; white dressings, \$0.10 to \$0.25 per package.

Practically all the dealers handling shoe polishes buy direct from manufacturers or foreign commission houses. The terms vary; in small orders the rule is cash with order, while in larger orders 90 days after acceptance of draft has been allowed. It would be better to sell to various dealers than to establish an exclusive agency, as no dealer buys in very large quantity.

The best method of introducing polishes would be by sending personal letters and catalogues in Spanish, as well as samples to dealers. The demand for polishes here would not warrant an expensive campaign of introduction. The demand is for the cheapest possible polishes.

[A list of dealers in shoe polish in Asuncion may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 66587.]

RESTRICTING ALCOHOLISM AT TRIESTE.

[Consul Ralph C. Busser, Trieste, Austria, Aug. 9.]

An order issued from the governor's office August 6, 1915, provides that no alcoholic drinks shall be sold on Sundays or holidays, and on other days their sale shall be permitted only from 7 a. m. to 4 p. m. Neither wholesale nor retail dealers may sell to army men, to employees of undertakings working on account of the military, to persons liable to military service, or to prisoners of war. During the passage of army transports, military trains, etc., no alcoholic drink shall be sold to anyone, except by medical prescription or by order of a military commandant. Such drinks must not be supplied to youths under 18, to habitual drinkers, to persons under the influence of drink, to beggars and vagabonds, or to weak-minded or violent persons. No drink is to be sold on credit or in exchange for eatables.

Wholesale dealers and distillers may execute orders received from retailers during the prohibited hours of sale to the public, but such operations are to be effected in places closed to the public.

The penalty for offenses against this order may be a fine of 2 to 200 crowns, arrest from 6 hours to 14 days, the closing of bars or other premises, and the withdrawal of licenses.

MINING INDUSTRY IN CATALONIA.

[Consul General Carl Bailey Hurst, Barcelona, Spain, Sept. 9.]

The mineral wealth of northeastern Spain, the most mountainous part of the country, has not yet been fully exploited. Formerly the inhabitants of this region devoted particular attention to mining, and by their ingenuity invented what is known as the Catalan forge, still cited as a model in chemical and metallurgical treatises, even after centuries of scientific progress. However, all such forges have now disappeared from this consular district, except one found intact in the Pyrenees and regarded as an object of great interest in connection with the Spanish mining industry.

People Turned from Mining to Manufacturing—Development in Andalusia.

On account of the rapid increase in manufacturing activity that took place in this country during the nineteenth century the attention of the people in this district turned from mining to other industries, which have since greatly developed, resulting in the neglect of vast mineral resources. At the same time in other parts of Spain mining steadily progressed. First in this respect is the district of Andalusia, where the extraordinary development of mineral deposits may be attributed in part to an unusual manner of exploitation. When indications are discovered of the existence of an exploitable mineral there an association is organized and a prospectus drawn up as to the probable expense of mining. The members of the association then pay their pro rata share of the expense in monthly installments, which, according to the number of members, varies from 5 to 10 pesetas (\$0.90 to \$1.80) each. If the venture is successful, very profitable results are obtained, and if not the loss is comparatively insignificant.

Lack of Smelting Works—Lead-Mining Enterprises.

In Catalonia this small cooperative system is not in vogue, and there are numerous difficulties to overcome because of a lack of smelting works in the neighborhood, thus necessitating the shipment of ore by rail to distant parts of the Kingdom. The long transportation makes the minerals mined so expensive that the profits are generally reduced to a minimum. In order to avoid the cost of freight one large mining enterprise in Catalonia has erected a smelter at the mouth of its mines. The less important mining companies, however, which can not alone stand the expense of similar improvements, are obliged to sell their products on a very narrow margin. This is especially the case with lead-mining enterprises. While northeastern Spain is rich in this metal, most of the lead foundries of Spain are controlled by foreign capital. Recently an enterprise in Barcelona has built a lead foundry in a suburb of this city on the left of the Llobregat River delta near principal lines of communication by land and water. This new work marks an advance, and it is hoped here that it will encourage the investment of capital for the further exploitation of the mineral resources of this region.

The contract for the construction of a Bolivian railway between La Quiaca and Tupiza has been awarded to a Paris firm, which has already acquired 160,000 quebracho sleepers in Argentina, as well as other materials.

CONDITIONS IN NORTHERN PARAGUAY.

[General Samuel Hamilton Wiley, Asuncion, Aug. 20.]

The city of Concepcion, about 132 miles north of Asuncion, is the trading center of northern Paraguay. It has a population of about 15,000 inhabitants and is connected with other parts of the Republic and with Brazil and Argentina by river steamers plying on the Paraguay River.

Commercial Inactivity Prevails—Prospective Purchasers of American Goods.

Commercial conditions in Concepcion at present are, as in all other cities of the Republic, in a state of stagnation. Merchants there say that there has never been such a period of commercial inactivity. The depreciation in the value of the paper currency of the country has reduced the purchasing power of their customers to a minimum, and the closing down of many industries has deprived them of a very considerable trade.

The two principal merchants of Concepcion (names and addresses obtainable from the Bureau of Foreign and Domestic Commerce or its branch offices; refer to file No. 66629), both of whom do a general wholesale and retail business, say that they are beginning to investigate products of the United States with a view to making future purchases there. They say, however, that business conditions preclude any extensive purchases at this time.

The most important lines handled by these firms are: Hardware, cutlery, agricultural implements, cotton and other piece goods, comestibles, beverages, notions, hats, shoes, stationery and other paper goods, and necessaries in general. Correspondence with these firms, as with all firms in this Republic, should be in Spanish, as should catalogues for distribution here.

Principal Industries—Some Leading Companies.

The principal industries in the country surrounding Concepcion are cattle raising and lumber. There is also a considerable trade between Concepcion and points on the border between Brazil and Paraguay, the goods being carried in wagons from Concepcion.

A company known as the Compañía Industrial y Comercial Norte del Paraguay, capitalized at 1,500,000 Argentine gold pesos (\$1,347,500 United States currency) is engaged in developing the resources of the country to the northeast of Concepcion, between that city and the Brazilian State of Matto Grosso. This company is at present operating a sawmill on the Paraguay River in the suburbs of Concepcion. It has also constructed and is operating a railway 1-meter (3.28 feet) gauge, between Concepcion and the town of Horqueta, a distance of 42 kilometers (26 miles). This railway is used for passenger service and to carry products of the country to Concepcion for export. Lumber is the principal freight. It is planned to extend this railway to the border of the Brazilian State of Matto Grosso, opening up the country along the way and giving an outlet on the Paraguay River for products from Matto Grosso.

At San Salvador, about 40 hours from Asuncion, on the east side of the Paraguay River, is the largest meat-packing establishment in Paraguay. The capital invested is German; it is managed by an

American, and much of the machinery used is of American manufacture. The plant can handle about 300 animals per day, the principal products being canned tongue, corned beef, and beef extract. Many by-products are also exported. Practically all the products of this establishment are exported to European markets.

This plant is not in operation at present on account of a lack of materials, principally tin. It is probable that such articles may be imported by this company from the United States.

Quebracho—Extract Plants.

At various points on the upper Paraguay River are situated five plants for the extraction of the tanning fluid from quebracho logs. The process is similar to the manufacture of sugar. The capital invested in the plants is Argentine and German. Practically all the machinery used is of German manufacture.

During 1912 these plants closed down. Since the beginning of the war the price of extract has practically quadrupled, three of these plants have resumed operations, and it is probable that the other two will soon follow. The closing down of these plants was, no doubt, one of the causes of the financial crisis from which this country has been suffering, as a conservative estimate puts the gold currency brought into the country for the operation of the five plants at \$105,000 per month.

The New York & Paraguay Co.

At Puerto Pinasco, on the Chaco or western side of the Paraguay River, the New York & Paraguay Co. owns 200 leagues (926,625 acres) of quebracho timberlands. This company owns a large sawmill, which is not, however, in operation. Since the beginning of the recent activity in quebracho extract the company sold to two of the extract plants its large supply of cut quebracho logs. Its activities at present consist in hauling these logs from interior points to the river for shipment. In this work a railway of 42 kilometers (26 miles) owned by the company is used. On the company's lands there are about 12,000 head of cattle, the land affording excellent pasturage. The capital invested in this company is American; it is capitalized at \$1,500,000.

Cattle Raising the Basic Industry—Present Difficulties and Future Prospects.

Cattle raising is the really basic industry of northern Paraguay. It is the industry through which this section of the Republic will be developed and the one offering the largest and most attractive field for foreign capital.

The cattle of Paraguay are of good-sized frame, but light in weight. They are better suited for canning than freezing. Few attempts have been made to improve the native breed, the principal reason for this being the prevalence of the garapato, or cattle tick, whose activities cause great loss among cattle not acclimated.

Land for cattle raising may be bought for about \$8,000 to \$16,000 per league (4,633½ acres in a Paraguayan league) on the eastern side of the Paraguay River, the price depending on proximity to the river. On the Chaco or western side of the river land suitable for cattle raising may be bought for \$3,000 to \$6,000 per league.

On both sides of the river there is abundant pasturage. It is estimated that one league of land will pasture 500 to 800 head of cattle. The climate permits outdoor pasturing during the entire year. Practically all the land now stocked with cattle is fenced, fencing costing about \$1,000 to \$1,500 per league.

Some of the difficulties encountered in cattle raising here are the prevalence of ticks and of the ura (an insect that lays eggs in the hides of the cattle); the scarcity of fresh water in parts of the Chaco country and the occasional floods in the Chaco in which many cattle are drowned; the scarcity of efficient labor; the lack of transportation facilities within the Republic and high freight rates to the exterior; the uncertainty sometimes found in land titles; and similar conditions.

In spite of the difficulties, many of which will disappear with the development of the cattle industry on a large scale, the northern part of Paraguay offers a field for the cattle business worthy of investigation. It is, however, for the investor with large capital rather than for the man of limited means, since the development attendant on entering the cattle business there would be expensive at the beginning.

TOY TRADE OF SPAIN.

[Consul General Carl Bailey Hurst, Barcelona, Sept. 8.]

An exposition of toys, games, and sporting articles of Spanish manufacture is now being held in Barcelona, organized by an association of toy makers of this city.

Although this Kingdom ranks after France and Germany among European countries in the manufacture of toys, Spain has none the less been a large importer in this line. During 1913, the latest year for which applicable statistics are available, toys to the value of \$250,876 were imported into Spain. Germany contributed \$177,659 worth of these goods; France, \$49,653; Great Britain, \$11,103; while the United States, standing fourth in the list, furnished high-class toys valued at \$4,455. Switzerland, Austria, Belgium, and Italy also exported toys to Spain in small amounts.

Manufacturing Centers—Exports.

As some of these sources of supply are now closed by reason of the war, Spanish manufacturers are making an effort to augment their output in order to meet the domestic demand. The principal centers for the manufacture of toys and sporting articles in Spain are Barcelona and Valencia. Factories of lesser importance are scattered through Andalusia, Aragon, and Castile. The export of toys from Spain amounted in 1913 to \$91,060. Cuba has been Spain's leading customer, having taken in 1913 toys valued at \$24,744. Argentina followed with purchases of \$14,004 worth; the Canary Islands, \$11,425; France, \$10,892; and Turkey, \$6,319. The United States bought Spanish toys to the value of \$4,843.

The value of toys imported into Spain in 1913 was greater than in 1912, when only \$183,863 worth was entered. The export figures for 1913 show a decline, \$145,225 worth having been consigned to foreign markets in 1912, or \$54,000 more than in 1913.

TANNING MATERIALS IN SOUTH AFRICA.

[Vice Consul Eugene M. Lamb, Johannesburg, July 29.]

The steady exhaustion of the world's supply of tanning materials, coupled with an increasing demand, lends new importance to the industry in those countries where it is capable of expansion. South Africa is one of these, for the wattle, sumac, "elandsboontjes," bastard sumac, and mangrove could all be produced here upon a commercial scale.

The bastard sumac, the least important of the varieties named, is found in the Transvaal, Orange River Colony, the highlands of Natal, and, though less frequently, in Southern and Northern Rhodesia. As the plant contains but a low percentage of tannin, it is doubtful whether it could profitably be exported.

Results of Experiments with "Elandsboontjes."

"Elandsboontjes" (*Elephantorrhiza burchellii*, leguminosæ) is found in great abundance in the Transvaal, Orange River Colony, and in the uplands of Natal. The roots of "elandsboontjes" have been used for many years by the Boers for tanning, though it is said that the red color which this plant imparts to the leather, together with its tendency to render the leather unduly soft, reduces its value as a tanning material.

In his annual report for 1904-5 the Director of Agriculture, after describing certain experiments that had been carried on by his department, said:

The following results indicate that the roots of *Elephantorrhiza burchellii* form a fairly satisfactory tanning material for local use, but that it is doubtful whether it would pay to export it. As a general rule it is not remunerative to export materials containing less than 30 per cent of tannin unless, like sumac, they possess some particularly valuable characteristic not readily procurable in other tanning materials.

It is possible that it might pay to prepare a tanning extract from the roots of *Elephantorrhiza burchellii* for export, but there are several difficulties in the way of doing this. The roots contain a considerable quantity of a reducing sugar which would find its way into the extract, and the latter would, therefore, be liable to ferment, and for that reason would be difficult to store or transport, especially in hot countries. Further, the red coloring matter present in the roots would also appear in the extract, and this would, to some extent, detract from its value as a tanning agent, especially in Europe. It would be possible to free the extract from this red coloring matter by bleaching it with sulphur dioxide or by the addition of sodium meta-bisulphite, but there is a certain amount of prejudice among tanners in European countries against the use of extract bleached in this way, and it is not advisable to adopt this plan if it can be avoided.

Wattle Bark an Important Product.

The production of wattle bark is an industry of much importance in South Africa. The bark is gathered from several species of acacia in Natal, Orange River Colony, and the Transvaal. [See COMMERCE REPORTS for Apr. 12, 1915. An interesting account of wattle cultivation in Natal appeared in the issue for Jan. 30, 1908.] Its most extensive use is in tanning heavy leathers, but it furnishes as well a full, soft finish with calfskin and can be used advantageously for the production of light leathers. Leather tanned with wattle bark has a faint reddish tinge, the color darkening slightly upon exposure to light, but not more so than that of leather tanned with oak or hemlock bark or extract.

Exports of tanning materials (wattle bark) from the Union of South Africa for the calendar year 1914 totaled \$1,393,761, being the value of 130,216,826 pounds. For the year preceding the value was \$1,505,350; for 1912, \$1,377,267; for 1911, \$1,409,123; for 1910, \$1,067,870. The distribution of the shipments during 1913 and 1914 was:

Exported to—	1913		1914	
	Pounds.	Value.	Pounds.	Value.
United States	228,246	\$2,604	267,101	\$2,505
Australia	3,671,278	\$6,843	7,156,368	\$7,508
Austria-Hungary	820,298	9,227	739,608	7,743
Belgium	900,109	10,575	419,037	6,780
Egypt	586,959	5,485	1,344,245	13,135
France	2,124,703	20,619	1,101,492	10,911
Germany	30,745,850	332,479	25,904,174	295,567
Italy	169,720	1,757	231,190	2,273
Russia	2,018,145	22,138	708,961	9,616
United Kingdom	90,203,808	1,013,166	92,276,338	977,057
All other	46,622	466	68,303	681
Total	145,717,738	1,505,350	130,216,826	1,393,761

South Africa's purchases of foreign tanning materials are not important.

New Extraction Process.

A matter of no little interest is the recent invention of a method of tannin extraction from wattle bark. The method heretofore employed involved the use of leaching vats. The new method comprises a primary crushing of the bark by a Krojenski crusher. Following this treatment the bark is passed through a series of heavy-pressure bronze rollers. The important feature of this rolling is the moistening of the bark with warm water or with water and alcohol prior to its passage beneath the rolls.

Following a practical test of this method in the Johannesburg laboratories of the inventor, representative samples were taken of the green bark as used in the process and of the final liquor thus obtained. This liquid was found to have a specific gravity of 1.10 and was of a much better color than the liquids usually obtained by treating bark in leaching vats. It is claimed by the inventor that equally satisfactory results are obtained when dry or weathered bark is employed.

A company has been organized for the commercial utilization of the new process. It is necessary to add, however, that owing to the war the arrival of the necessary equipment has been delayed, though it is expected that the plant will be in operation within a year. In the meantime, interested persons are directed to communicate with Bilbrough & Frew, Marshall Square Buildings, Johannesburg, South Africa, who will be pleased to furnish such information as may be possible and appropriate.

The publication of a decree in the Official Gazette of Brazil, permitting the Texas Co. (South American) (Ltd.) to operate in that country, is announced in a dispatch from Consul General Gottschalk at Rio de Janeiro. This is the company that operates in Mexico as the Texas Oil Co. Its present purpose is to deal in illuminating oil and gasoline, but not in fuel oils.

TRADE NOTES FROM COSTA RICA.

[Consul Chester Donaldson, Port Limon, Sept. 25.]

Tin Receptacles Required for Shipments of Candy.

The candy imported into this district annually has a total valuation of about \$25,000. At least 80 per cent of the amount received is intended for the markets in the interior of the country. About 50 per cent of the imports come from England, 30 per cent from the United States, 10 per cent from Germany, and the remaining 10 per cent from France, Italy, and other countries. Candy for export to this district should be packed in tin cans or boxes, hermetically sealed. The hot, moist climate of this coast makes pasteboard useless, with the result that the candy spoils before it can be cleared from the customhouse and placed on sale.

Blank Books Shipped Largely from United States.

The importations of blank books received here, including supplies used to simplify accounts, have an annual value of about \$10,000, of which 50 per cent come from the United States, 24 per cent from Germany, 10 per cent from England, 7 per cent from Spain, and the balance from France and other countries. Most of the larger commercial houses use supplies required for simplified accounting systems in their daily transactions.

[Lists of importers of candy, blank books, and stationery at Port Limon may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 67116.]

FOREIGN RAILWAY EQUIPMENT DESCRIBED.

With the object of placing in convenient and accessible form before persons in this country who are interested in or responsible for railway materials, the United States Bureau of Standards, in connection with its investigation of failures of such material, has obtained, through the courtesy of the State Department, copies of specifications for railway material—rails, axles, wheels, and tires—used in several European countries. These specifications are given in full, together with a digest and discussion, in a forthcoming circular of information from the bureau. Available data concerning the types and weights of foreign railway equipment, together with those concerning derailments and accidents abroad, are included in the circular.

Copies of the publication will be furnished on application to the Bureau of Standards, Washington, D. C.

TRADE OPPORTUNITIES START PROMISING TRADE.

Commercial Agent E. C. Porter, of the New York branch of the Bureau, is apprised by an American manufacturing firm that it has just obtained fair-sized sample orders from Spain through the use of a foreign trade opportunity in COMMERCE REPORTS calling for electrical and hardware lines. It adds that the new connection seems very promising. The initial orders through trade opportunities are to be regarded as the entering wedge for gaining a large export trade.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Handbags and suit cases, No. 19000.—An American consular officer in the United Kingdom writes that a firm in his territory would like to receive catalogues, and price lists, in English currency, for women's handbags, and suit cases for both men and women, the former retailing from \$2.17 up to \$10.21 and the latter from \$7.30 to \$14.60, in all sizes from 20 to 28 inches. Both nickel and brass fittings are used, but nickel fittings are preferred. C. i. f. quotations are desired. The firm is accustomed to a 2½ per cent discount monthly.

Shoe, printer's, bookbinder's, and paper-box manufacturing supplies, No. 19001.—A commercial organization in the United States informs the Bureau that a man in Spain wishes the names and addresses of manufacturers of the following lines: Shoe-manufacturing supplies, printer's, bookbinder's, and paper-box manufacturing supplies. Correspondence should be in Spanish.

Laboratory supplies, No. 19002.—The Bureau is informed by an American consular officer in Siberia that a firm in his district desires the names and addresses of American manufacturers and exporters of visual teaching and laboratory accessories for schools, such as flasks, retorts, testing tubes, etc., for chemical study, physical apparatus for general mechanic, hydrostatic, optic, magnetic, and electric work. Catalogues and prices are requested. Correspondence should be in Russian.

Hosiery, No. 19003.—An American consular officer in France writes that a merchant in his district wishes to be placed in touch with American manufacturers of silk hosiery for women and children, with a view to buying these goods on a cash basis. Correspondence should be in French.

Jewelry, collar buttons, and pin novelties, No. 19004.—The Bureau is informed by an American consular officer in India that a man in his district has requested catalogues, price lists, and terms of sole agency for the sale of cheap jewelry, collar buttons, and pin novelties.

Hosiery, etc., No. 19005.—An American consular officer in Italy writes that a firm in his district, with three traveling men and a well-known clientele in Italy, the colonies, Malta, and Tunis, desires to get into touch with American manufacturers desiring a representative for Italy and the colonies, of silk socks and stockings, medium grades, for men and women; also shoe polishes. References are given. Correspondence should be in Italian or French.

Bentwood chairs, cigarettes, clocks and watches, etc., No. 19006.—The Bureau is informed by an American consular officer in Africa that a wholesale and retail merchant in his district desires to receive catalogues with prices and discounts on bentwood chairs, cigarettes, lamps, mirrors, padlocks, scissors and shears, spectacles, stationery, steel trunks, and watches and clocks. Only the cheaper grades of these articles are desired. Correspondence may be in English.

Balata, No. 19007.—The Bureau is in receipt of a letter from a firm in South America, which desires to be placed in touch with buyers of block balata. It states that it has a ton (2,240 pounds) or more to dispose of weekly. Payments would have to be made against shipping documents.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1030 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Navy Department supplies, No. 2748.—Sealed proposals will be received at the Bureau of Supplies and Accounts, Navy Department, Washington, D. C., until November 9, 1915, for furnishing the following material. Firms interested therein should make application to the Bureau of Supplies and Accounts, giving the schedule numbers desired: Schedule 8929, liner steel forgings; schedule 8930, library books; schedule 8931, cupro nickel shell bands; schedule 8932, 40-gallon steam jacketed kettles, and select white pine; and schedule 8933, cocoa, lemon extract, vanilla extract, split peas, and pickles. Bids will also be received until November 16, 1915, for the following: Schedule 8926, sheet metal bulletin boards; schedule 8924, furnishing and installing electric-driven freight elevator; schedule 8935, Roentgen-ray machines; schedule 8936, rolled phosphor bronze; schedule 8937, quadrant compensating davits; schedule 8938, burnishing and trimming lathe; and schedule 8942, steel pulleys. Bids will be received until November 23, 1915, for the following: Schedule 8927, gasoline; schedule 8928, gasoline and distillate; schedule 8943, rubber packings, wrought pipe, steel sheets, and screws; schedule 8944, bar brass, brass tubing and copper tubing; schedule 8945, buoy anchors, tin boxes, wooden boxes, wooden deck beam boxes, cork buoys, metal cases, and metallic jars; and schedule 8946, hoisting motor and controlling appliances, and ribbed steel floor plates. Bids will also be received until November 30, 1915, for the following: Schedule 8940, motors for aeroplanes; and schedule 8941, cloth sheet asbestos metallic packing, compressed fiber sheet asbestos packing, flax packing, sheet packing, rubber, cloth and wire insertion sheet packing, spiral gland packing, and Tucks packing.

Lard and ham, No. 2749.—Sealed proposals will be received at the office of the Depot Quartermaster, United States Army, 115-123 East Ontario Street, Chicago, Ill., at the office of the Depot Quartermaster, United States Army, Kansas City, Mo., or at the office of the Depot Quartermaster, United States Army, Omaha, Nebr., until November 5, 1915, for furnishing and delivering lard and ham.

Construction work, No. 2750.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., until November 16, 1915, for a new lookout gallery in the United States courthouse and post office at Dallas, Tex. Drawings and specifications may be had on application to the Washington office or at the office of the custodian of the site at Dallas.

Construction work, No. 2751.—Sealed proposals will be received at the Naval Station, Pearl Harbor, Hawaii, and at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until November 27, 1915, for constructing one reinforced concrete power house, one reinforced concrete operating building, and one wooden double quarters for chief operators, at the Naval Station, Pearl Harbor. Plans and specifications may be obtained on application to the Bureau of Yards and Docks, Navy Department, Washington, D. C., or to the commandant of the above-named naval station.

Docking and repairing lighthouse tender, No. 2752.—Sealed proposals will be received by the Lighthouse Inspector, Charleston, S. C., for docking and repairing the Lighthouse Tender *Mangrove*. Further information may be had on application to the above-named office.

Subsistence stores, No. 2753.—Sealed proposals will be received at the office of the Quartermaster, United States Army, 308 Gumbel Building, Kansas City, Mo., until November 2, 1915, for furnishing and delivering fish, corn meal, potatoes, prunes, evaporated apples and peaches, coffee, sugar, vinegar, pickles, salt and pepper, cinnamon, cloves, ginger, lard, butter, oleomargarine, sirup, bacon, cheese, ham, malted milk, oatmeal, preserves, and sausage.

NEW AMERICAN-CHINESE STEAMSHIP LINE.

Mr. Philip Manson, of New York, recently returned from China, where he concluded arrangements for the organization of the Pacific & Eastern Steamship Co. (Inc.), which will operate steamship services, under the American flag, between China, the Philippines, and the Pacific and Atlantic coasts of the United States. The company is a joint American and Chinese enterprise and has just been incorporated under the laws of the State of New York. It will commence business with a capital of \$2,000,000. Half of the capital has been subscribed by American and half by Chinese. The directorate consists of seven members, four Americans and three Chinese.

The American interests are represented by F. Mertens's Sons, of Cumberland, Md., and Washington, D. C. The Chinese interests are represented by Chinese capitalists in Shanghai and Canton. The president of the company is Mr. John Mitchell, jr., of the firm of F. Mertens's Sons. Mr. Mitchell is also president of the Washington and Southern Bank, of Washington, D. C. Mr. Philip Manson is managing director. The company will buy or charter steamers so that sailings may begin as soon as possible and will build new steamers to be delivered as quickly as possible. The principal office of the company in the United States is in New York; the principal office in China is in Shanghai.

MICROSTRUCTURAL CHANGES IN ANNEALED BRONZE.

The properties of cast steel may be greatly improved as a result of refining the grain by proper annealing. The changes occurring in cast brasses and bronzes upon annealing are by many metal workers regarded in the same light. A study has just been completed by the United States Bureau of Standards of the annealing of bronze, using the commercially important alloy zinc bronze (copper 88, tin 10, zinc 2) as a type. The results show that bronze is very different in its behavior from steel, and shows no recrystallization or grain refining unless it has been previously cold worked as by rolling or hammering.

Copies of this publication may be obtained by application to the Bureau of Standards, Washington, D. C.

SPANISH CANARY SEED AT LOWER PRICES.

[Consul Wilbur T. Gracey, Seville, Sept. 10.]

While canary seed is not one of the most important exports of the Seville consular district, which has always been famous for its exportations of cork, olives, and olive oil, yet the fact that the seed produced in this district is said to be the finest in the world and commands a higher price than any secured from other sources is worthy of attention.

England is the great market for Spanish canary seed, as it is for all seed of this nature from other countries. English market circulars usually quote prices on 14 qualities of birdseed. These quotations show that the finest qualities all come from Spain—the smaller and inferior grades from Cordoba and some northern districts, the finer from the Provinces of Seville and Cadiz.

Local dealers state that practically the entire export of canary seed from this country comes from the Seville consular district. The best products are from the tracts around the cities of Jerez de la Frontera and Lebrija. No official data are obtainable as to the extent of acreage planted in canary seed in this district, or the annual production, but one exporter estimates the annual production at between 4,000 and 5,000 tons. Some of this seed is used in Spain, but the bulk of it goes to England, and is regularly quoted on the Mark Lane market where, on account of its size and appearance, it always obtains a much higher price than the Moroccan, River Plate, or Turkish seed.

Canary Seed Classed as Luxury in War Time.

The trade at present is practically paralyzed. British importers are somewhat overstocked, and on account of the war and the fact that canary seed is considered in the nature of a luxury, there is not the same call for it in England and elsewhere as in normal times. Current prices here, which may be called nominal, are now low. The latest quotations are 34 to 36 pesetas silver per 100 kilos (\$6.24 to \$6.60 for 220.46 pounds). These figures are for the uncleaned seed, on the wagon, unpacked.

Formerly canary seed was shipped from this market in single jute bags, but owing to losses in transit, and through the influence of the British importers and their agents here, it has become customary to pack the seed in double jute bags, which are manufactured in Seville mills. Freights are high. Exporters of seed and other commodities state that the importers in the United States would get better rates by securing quotations from the agents of the lines in American ports.

Payment for seed is usually effected by letter of credit in Seville, drafts being drawn against such credits, and quotations are usually made on the basis of payment prior to shipment. Reductions are sometimes possible with firm counter offers, but with America would have to be made by cable. The use of delayed telegrams, known generally as "L. C. D." dispatches, is possible in this business. By this system half rates are charged for delayed messages in plain language. Prior to the war it was possible to make drafts against importing houses, but the banks now generally refuse to discount papers, although it is possible that some firms might be able to use sight drafts. Payment in Seville, however, is generally demanded, as in the case of olives and other such commodities exported from this city.

Prepared to Handle Orders from United States.

The address of a British exporter is forwarded. This exporter is prepared to handle orders direct from the United States and make quotations by mail or cable as directed.

The last statistics issued by the Spanish customs give the exportations of canary seed from Seville to Spanish ports as 1,013,104 pounds and to foreign ports as 2,465,525 pounds. It is understood that practically all of the latter amount was shipped to British ports. The closing of the British market and the general tendency toward lower prices offer an opportunity for American importers to buy Spanish seed direct rather than through British dealers.

[The name of an exporter of canary seed at Seville may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 67,178.]

CANADIAN GRAIN SHIPMENTS FOR 1914-15.

[Consul Henry P. Starrett, Fort William, Ontario, Sept. 30.]

For the purpose of statistical comparison, the Canadian grain crop year closes on August 31 each year. The Dominion Government Grain Commission has recently issued the following data relative to the grain shipments from the twin ports of Fort William and Port Arthur to eastern Canadian and American ports during the past crop year, in comparison with the figures for the previous year:

	1913-14	1914-15
	<i>Bushels.</i>	<i>Bushels.</i>
To Canadian ports.....	83,578,731	73,225,069
To American ports.....	93,447,488	27,848,221
To England (direct).....		121,481
Lost en route (wrecked).....	947,549	
Total shipments.....	187,973,768	101,194,801

During the latter year the total number of cargoes was 712, of which 617 were carried in Canadian vessels and 95 in American.

The figures for the grain crop of 1915-16 do not appear in the above statement, as the shipment of this season's grain out of terminal elevators had not commenced.

PORTUGAL'S BUDGET FOR CURRENT FISCAL YEAR.

[Consul General W. L. Lowrie, Lisbon, Sept. 7.]

Portugal has included in the appropriations for 1915-16 the sum of 1,050,000 escudos (about \$750,000 United States gold) for the cost of two submarines of wide radius of action, the total allotment to the Ministry of Marine being 3,600,000 escudos. The budget allowance for the Ministry of War is 20,000,000 escudos; Ministry of Foreign Affairs, 100,000 escudos; Ministry of Public Works, 900,000 escudos; Ministry of the Colonies, 5,400,000 escudos. At present exchange the escudo is worth 70 to 72 cents United States gold.

According to the budget, the receipts for the fiscal year are estimated at 78,043,630 escudos, of which 72,857,012 escudos is ordinary and 5,186,618 escudos extraordinary revenue. The ordinary and extraordinary expenses of the Government for 1915-16 are placed at 88,645,951 escudos.

COMMERCIAL AGENT TO CONFER WITH LUMBER DEALERS.

Commercial Agent F. H. Smith, of the Bureau of Foreign and Domestic Commerce, has just returned to the United States from an extensive trip to the Far East and Australia and New Zealand, where he has been investigating the possibilities of marketing increased quantities of American lumber. Considerable lumber from the United States is already used in those sections, and the problem confronting producers is the increasing of this trade rather than its introduction. Mr. Smith has made himself thoroughly familiar with the requirements of the markets and the obstacles still in the way of increased exportation from this country. He is now in Seattle, making his headquarters at the branch office of the Bureau in the Alaska Building, but expects to leave on November 1 for a trip to the principal centers of the lumber trade on the west coast to confer personally with lumber producers, lumber dealers, and officials of associations connected with the sale of west-coast lumber. He will be in and around Portland until November 5 or 6, in San Francisco and vicinity to about November 13, and in Spokane November 14. He will also stop at Chicago on his way to Washington, D. C., where he will report about November 18 or 19.

Dealers and others interested in the exporting of lumber can interview Mr. Smith at the offices of the Bureau in Seattle, San Francisco, and Chicago, and can communicate with him at the other places mentioned through the local chambers of commerce.

OTTAWA TO BUY STREET-CLEANING EQUIPMENT.

[Consul O. Gaylord Marsh, detailed as vice consul, Ottawa, Canada, Sept. 21.]

It is probable that experiments will be conducted by the city of Ottawa next year, with a view to purchasing vacuum street cleaners and automobile-pressure flushers. American manufacturers who may be interested should address the city engineer, Ottawa, Canada.

The city has 42 miles of pavement, mostly asphalt, which is cleaned daily under the supervision of the city engineering department. In the cleaning operations 45 sprinklers and 3 flushers of the air-pressure type are used. In addition, several pieces of old-style equipment are employed. No mechanical sweepers, street-car sprinklers, or automobile sprinklers or flushers are owned or used by the city. Ninety "white wings" are employed, and are provided with the usual wheel buckets, brushers, and scrapers.

During the winter months horse-drawn snow plows are used for removing surplus snow from sidewalks and from business streets not occupied by street car tracks. The snow is then packed by use of team-drawn levelers. On streets having car tracks, car sweepers are used for removing surplus snow, the leveling being done by street-car winged plows.

Most of the equipment now in use by the engineering department is manufactured in the city shops. Experiments with mechanical sweepers are reported to have been unsatisfactory.

Peat is being used as fertilizer in greater quantities in the United States—\$350,000 worth in 1914, against \$170,000 worth in 1913.

ZACATON GRASS FOR PAPER STOCK.

Attention is called to the possibilities of zacaton grass in the manufacture of paper in a new professional paper of the United States Department of Agriculture, Bulletin No. 309. Zacaton grass extends from California and Texas southward to the Argentine Andes. It grows most profusely, however, in the mountain regions east and west of the City of Mexico, where it is harvested for the sake of its roots. These are made into brushes of various sorts, and for this reason the zacaton plant is frequently known by the common English names of broomroot grass, wire grass, and rice-root grass. At the present time the tops of the plant are allowed to go to waste. It is from these that there is reason to believe that a satisfactory paper-making material may be developed.

An acre of grass should yield at least 3 tons of tops. The plant is a perennial one, the growth being almost entirely from self-sown seed. Unless checked by fire, cultivation, or the harvesting of the roots, the grass will soon cover a field solidly, and it is not uncommon to find many square miles densely covered with the growth. The range can be profitably gone over for roots every third year.

The Soda Process—A Good Printing Paper.

Laboratory tests of this grass conducted by the United States Department of Agriculture show that it can be chemically reduced to paper stock by the soda process more easily and with less expense than is necessary to reduce poplar wood. The same processes and methods which are employed for the manufacture of pulp from poplar wood are quite suitable for the treatment of zacaton, but in place of the wood-sawing, chipping, and screening machinery a grass duster is necessary.

The paper manufactured from the stock has proved as satisfactory in physical tests as a first-grade, machine-finished printing paper. It has, moreover, a very satisfactory appearance and feeling. For bleaching, however, the experiments showed that more bleaching powder was required than with poplar stock.

The percentage of air-dry fiber obtained from the zacaton grass appears to be somewhat less than that from poplar wood, but practically equal to that of esparto. Forty-three per cent of air-dry fiber was obtained in the Government experiments from air-dried grass, while the fiber yield from poplar wood ranges from 46 to 48 per cent.

No estimate of the cost of manufacture is made in the bulletin already mentioned. A rapid increase, however, in the demand for paper and the increasing likelihood that the raw material that is necessary for its manufacture will not be sufficient to meet this demand makes the subject worthy of further investigation by the trade. It has been estimated that the growth of wood in the United States is being removed at the rate of 36 cubic feet per acre each year, while the natural increase is at the rate of 12 cubic feet per acre. In other words, wood is being used three times as fast as it grows. The consequence is, of course, a continual increase in the price of raw material, and the desirability of finding some substitute is obvious.

Lime hydrating plants in the United States increased from 30 in 1906 to 82 in 1914, and their output from \$479,000 to \$2,240,000.

FRESH HALIBUT LANDED AT NORTH PACIFIC PORTS.

[Commercial Agent William B. Henderson, Seattle, Wash.]

Arrivals of fresh halibut at North Pacific ports during September, 1915, were as follows: By independent schooners at Seattle, 1,316,611 pounds; by company schooners at Seattle, 985,000 pounds; by regular steamers at Seattle, 298,300 pounds; arrivals at Oregon and Washington ports, 18,000 pounds; arrivals at Ketchikan, Alaska, 305,000 pounds; arrivals at Vancouver, B. C., 1,003,000 pounds; arrivals at Steveston, B. C., 467,000 pounds; arrivals at Prince Rupert, B. C., 2,090,000 pounds, making a total of 6,482,911 pounds.

The following table shows the Puget Sound halibut receipts by months for the first 9 months of 1915, as compared with 1914:

Month.	1914	1915	Month.	1914	1915
	<i>Pounds.</i>	<i>Pounds.</i>		<i>Pounds.</i>	<i>Pounds.</i>
January.....	2,400,250	1,228,150	July.....	3,255,000	3,058,100
February.....	2,321,700	2,634,300	August.....	4,306,950	2,290,400
March.....	3,497,850	2,721,400	September.....	3,752,425	2,509,911
April.....	4,039,570	2,463,670	Total.....	33,116,575	28,213,911
May.....	4,587,070	4,556,700			
June.....	4,724,000	3,151,700			

LABELING AMERICAN EXPORT GOODS.

[Vice Consul Gustave J. Barrett, Shanghai, China, Sept. 1.]

On account of the restrictions of certain of the governments engaged in the European war, local firms have in some cases found it necessary to certify to the country of origin or manufacture of foreign merchandise which they desire to reexport from China to other countries.

For the general purpose of simplifying commercial relations in this particular, it has been suggested by local merchants that so far as possible manufacturers in the United States appropriately mark or label their goods so they may readily be distinguished as of American origin or manufacture. It is thought that such marking might tend to protect American firms to some extent against trade-mark infringements, and it would apparently constitute an additional and effective form of advertising. Some firms have already adopted the slogan "Made in U. S. A.," which seems to have met with general approval by American commercial representatives in Shanghai.

RELATION OF EARTH RESISTANCE TO ELECTROLYSIS.

A paper on "Earth resistance and its relation to the electrolysis of underground structures," published by the United States Bureau of Standards, deals with the factors which influence the resistivity of the soil and with the effects of soil resistance on the leakage of currents from street railway lines using the rails as return conductors.

Three methods of determining the specific resistance of soil are given and the results of a large number of measurements are tabulated. The principal factors which influence soil resistance are described and their effects on the results of electrolysis surveys and on the escape of currents from street railway tracks are discussed.

Copies of this publication may be obtained by applying to the Bureau of Standards, Washington, D. C.

CONSTRUCTION WORK ABROAD.**CANADA.**

[Vice Consul Robert M. Newcomb, Victoria, British Columbia, Oct. 12.]

Construction Work on Vancouver Island.

Building and other construction work in the Victoria district has dwindled to small proportions. No private work of any magnitude has been undertaken since the outbreak of the war. Some large enterprises which were well under way during 1914 have been completed, but in the majority of cases the work has been dropped altogether and much money and labor wasted on preliminary work.

The Dominion Government will shortly call for tenders for wharf sheds on the local Government wharf at an approximate cost of \$250,000. The Provincial Government has voted money for construction work in this consular district as follows: Government building at Duncan, \$25,000; prison farm, Saanich, \$20,000; Provincial Normal School, Victoria (furnishings), \$8,000; roads, streets, bridges, and wharves at Esquimalt, \$36,000; at Nanaimo, \$9,000; at Saanich, \$5,500.

[The vice consul sent a list of proposed new work which involves expenditures of \$12,000 to \$1,000,000 for churches, industrial plants, apartments, etc.; also of 14 buildings under construction, which are to cost \$12,000 to \$2,000,000, together with the names of the owners, architects, and contractors. The lists may be had from the Bureau of Foreign and Domestic Commerce and its branch offices; refer to File 67625.]

CHINA.

[Consul General George B. Anderson, Hongkong, Sept. 11.]

Dredging Macao Harbor.

During the year 1912 the Government of Macao, the Portuguese colony at the mouth of the Pearl River opposite Hongkong, carried out a scheme for dredging a channel for river steamers entering the harbor of Macao, the work having been done by a firm of contractors of Hongkong, in line with the urgent demands of the trade of the port. Macao was the first foreign settlement in China and in the earlier days its roadstead was freely entered by oversea ships of the day. Later as ships engaged in the trade grew larger in average size and as silt from the river filled the harbor and channels entering it, practically no oversea ships have been able to enter and for a time it became difficult for the river steamers engaged in the trade between Macao and Canton and Hongkong to make the port. At that time a channel 4 miles long and 45 yards wide at the center of its sides was dredged as the minimum requirement of the port, the depth at the ebb of spring tides only allowing vessels drawing not to exceed 11 feet to enter.

Plans for further improving the port have been completed for some time, and within the past few months the Government of the colony has acquired a dredge boat at Singapore which, with two attendant tugboats, has arrived in Hongkong and is being overhauled preparatory to commencing a comprehensive and continuous dredging of the port with a view of not only increasing the present channel to a depth enabling the largest river boats to enter freely, but also eventually permitting the entrance of overseas shipping as in the earlier days of the port. The plan contemplates the immediate

widening and deepening of the channel constructed three years ago so as to accommodate vessels drawing more water and at the same time to permit freer movement of vessels now entering the port. It is anticipated that the work can be continued from year to year without further interruption.

[Consul General P. S. Heintzleman, Mukden, Sept. 22.]

Railway Construction in Manchuria.

The construction of the projected Ssuningkai-Chengchiatum railway will be started by the South Manchuria Railway Co. at the Ssuningkai end in the spring of 1916.

Permission has been granted by the Chinese authorities for building a light rail hand-car line between Ssuningkai and Maimaikai, about 8 miles in length. The chief of police of Maimaikai, the prefect, and the chairman of the commercial and agricultural guilds of Ssuningkai are among the founders of the company which is to operate the new enterprise, capitalized at \$20,000. It is planned to complete the construction of the line before the end of the present year.

[Consul General Edwin S. Cunningham, Hankow, Sept. 30.]

New Telephone Building.

This office recently transmitted plans and specifications for the construction of a telephone system for the Wuhan cities. [See Foreign Trade Opportunity No. 17819, in *COMMERCE REPORTS* for Aug. 9, 1915.] As a preliminary to the installation of the system tenders are being invited from the local building contractors for the erection of new premises for the Chinese Government telephone administration building, which is to be located in the British Concession, Hankow. Plans have been prepared by Atkinson & Dallas (Ltd.), Pao Shun Road, British Concession, Hankow, and it is understood that to-day is the limit for filing applications. As soon as the award of the contract is made the name and address of the contractor will be furnished to American firms represented in China which are likely to be interested, and also transmitted to Washington.

So far as it is able to ascertain, it is not likely that there will be required any considerable amount of foreign material, though there will be a small amount of timbers and iron for the reinforced concrete work. American firms represented in China handling these articles have been advised.

CHOSEN.

[Press extract from Consul General Ransford S. Miller, Seoul, Sept. 1.]

Gensan Harbor Works.

The commencement of the construction of the new harbor works at Gensan was celebrated on August 15. This enterprise, it is estimated, will cost the Government \$778,440, covering five consecutive years, beginning April last. On completion of the works two steamers of 3,000 tons each will be able to moor at the pier at the same time, and inside the breakwater the port will have an anchorage of some 98 acres in two divisions, one of which will be 21 feet deep and the other 24 feet deep. The railway will then be extended to the wharf. The plan includes the reclamation of 20 acres of the sea front.

Drainage in Seoul.

At a recent meeting of the Municipal Council of Seoul it was decided to commence the installation of a city drainage system. It is to be undertaken during the next fiscal year, the whole undertaking to be spread over a period of seven years, the estimated cost, \$500,000, to be met by a grant of \$200,000 from the central Government, \$50,000 from the Provincial Government, and by taxes on the inhabitants. This work when completed will add much to the attractiveness of Seoul as a city.

Irrigation Works.

The supplementary budget for the Government General of Chosen for the current fiscal year, as lately adopted by the Imperial Diet, carried \$20,000 for investigations into irrigation and riparian works. Mr. Mochiji, Director of the Bureau of Public Works, states that, with a view to laying down a fundamental scheme both for riparian and irrigation works, the authorities have decided to institute investigations into all the great rivers and their tributaries in this country, except the Yalu and Tumen. Three surveying corps have already been ordered to the Provinces for the purpose, and of the 13 main rivers to be investigated surveying work has been finished along the entire stream of the Chongchon and a greater portion of the Naktong.

It is impossible to carry out thorough investigation in any brief space of time, and this year only rough surveying work will be accomplished. It is well known that in the rainy season almost all rivers in Chosen are flooded, while 80 per cent of the rice fields of the country are provided with no irrigation facilities and have to depend entirely on wet weather for water. It is highly satisfactory that irrigation enterprises are of late being promoted in different places, but these works are necessarily local and the extent of country they serve is limited. It is also not impossible that, though some of these private irrigation works are fairly perfect and considerably assist a certain limited acreage of wet fields, their existence may be found detrimental to other fields or inconsistent with the whole irrigation system of the country, so it is urgent that the investigations started this year should be completed with the quickest possible despatch.

On the completion of the investigation it need scarcely be said that the plan thus laid down on the basis of their results will be carried out, but no decision has yet been reached as to whether it will be executed at State expense or not. Mr. Mochiji adds that his bureau is now drafting a complete set of regulations for irrigation and riparian works, as such are still lacking in Chosen.

INDIA.

[Consul Lucien Memminger, Madras, Sept. 13.]

Waterworks Construction in Southern India.

Supplementing the recent dispatch from this consulate on waterworks construction in southern India [see COMMERCE REPORTS for Oct. 19, 1915] additional information has been obtained in regard to other new enterprises as follows:

At Erode a railway junction in Madras Presidency on the South Indian Railway an appropriation of \$16,000 has been granted by the

Government for completing the water-supply scheme there already undertaken but which was postponed. Erode is a junction point for Trichinopoly and is growing in importance as a railroad town.

In British Cochín on the Malabar coast after several unsuccessful attempts to improve the water supply by deep boring, it has now been decided to use the 610 to 618 feet depth where there is a layer of fine sand. During experiments recently undertaken under instructions from the Government it has been found that the water at the new depth is fairly wholesome, and it is understood that a month's continual pumping will lead to an appreciable improvement in the quality of water. If the attempts prove successful, two other tube wells at the same depth will be sunk in the vicinity of the original boring in order to obtain a supply sufficient for the consumption of the whole of Cochín.

PHILIPPINES.

[Manila Daily Bulletin, Sept. 14.]

Many Towns Clamor for New Waterworks.

From all parts of the Philippine Islands requests are being received by the Bureau of Public Works for the installation of waterworks systems, and it is increasingly evident that the great importance of an adequate supply of pure water is realized to-day as never before.

There are but 12 municipalities in the Philippines which now can boast of modern water systems, but this number is large when it is remembered that the work of installation is in nearly all cases the fruit of a very few years. The bureau is even now at work on plans for placing six more municipalities in the waterworks class, and there are indications that they will be busy at similar work for years to come, so keen is the desire to get into line displayed by communities in various Provinces.

Adequate water supply is now being furnished to Manila, Cebu, Vigan, Zamboanga, Siquijor (Bohol), Mambajao (Misamis), Boac (Marinduque), and Coron (Palawan), and work is progressing rapidly on the waterworks system at Taal. The Vigan waterworks was completed at a cost of \$57,500, that at San Pablo cost \$42,500, at Taal \$35,000, at Boac \$4,000, and at Coron \$1,500.

The San Pablo waterworks, construction of which was commenced about a year ago, is now nearly finished. Work on this system has been greatly delayed by the fact that the pipe which was to have been laid in the 2-kilometer gap in the supply pipe line had to be jettisoned, thus making it necessary to wait for a further shipment. The source of the San Pablo system is a large spring located in the foothills, the capacity of which is 2,000,000 gallons for every 24 hours.

Funds are now available for the construction of the waterworks system at Loay, Bohol, and systems have already been proposed for Iloilo, Lucena, Calapan (Mindoro), Lipa (Batangas), and Carcar (Cebu). The waterworks system at Subic, Sorsogon, is now being built, and systems have already been designed for Santa Cruz, Marinduque, and Duero, Bohol. Waterworks for Baguio, and for Pagsanjan, Laguna, and Tubigon, Bohol, are now being studied.

The water flow for all the systems already constructed is conducted by means of the gravity system—with the exception of the Taal waterworks, where a pumping plant will be used, employing Diesel oil engines.

PORTO RICO.

[Harwood Hull, correspondent, San Juan, Oct. 20.]

Bonds for Public Improvements.

The city of San Juan has voted to levy a special tax of twenty-five hundredths of 1 per cent to retire \$1,700,000 public-improvement bonds which it is proposed to issue to provide funds for the improvements.

The bonds are to bear 5 per cent interest, to run 28 years, and are to be offered for sale in the United States. No definite arrangement has yet been made for the marketing of the bonds. The city has a debt limit considerably in excess of the bond issue, proceeds from which will also be used to liquidate all present obligations.

From the proceeds of the bonds it is proposed to make the following public improvements and expenditures:

To construct new water system and mechanical filtration plant to supply San Juan proper and three near-by towns.....	\$684, 286. 92
To construct sewers.....	300, 000. 00
To open, pave, and repave streets and roads and build sidewalks...	412, 000. 00
To erect a city garbage incinerator.....	50, 000. 00
To erect three public laundries.....	45, 000. 00
To repay bonds and loans already advanced for public improvements.....	114, 332. 04
To repay interest on bonds during first semester and other incidentals connected with bond issue.....	94, 381. 04
Total.....	1, 700, 000. 00

Besides the special tax, which is considered ample to take care of all interest and principal payments on the bonds, there will be an annual saving of \$25,000 following the installation of the new water system.

The bonds, aside from having a first lien on city funds, are guaranteed by the Government of Porto Rico, and all interest and principal payments are to be made by the treasurer of Porto Rico.

SOUTH AFRICA.

[Consul Edwin N. Gunsaulus, Johannesburg, Union of South Africa, Aug. 12.]

New Railway Line from Messina, Transvaal, to Delagoa Bay.

There has just been completed the section of the new railway line from Tzaneen to Zoekmakaar, marking an important development in the railways of the central Transvaal by affording a direct means of communication from the eastern to the northern railway lines, this section being the second constructed under an agreement with the Messina Copper Co., under which that company guarantees interest on the capital cost for a period of 10 years. The other railway section, constructed under the agreement, was the extension from Bandler Kop to Messina, which was opened over a year ago. By this new construction through connection has now been effected between Messina and Delagoa Bay, obviating the circuitous route via Pretoria, the distance saved being 262 miles. The estimated cost of the two sections constructed under the agreement was \$3,649,875, and the actual expenditure is said to be well within this amount.

Following are some of the more important particulars concerning this new railway line, as published: Length of line, 56 miles; permanent way material—rails, 6,015-section with steel sleepers; maxi-

mum grade, 1 in 50 (compensated); maximum curve, 7 chains radius; height above sea level, Tzaneen, 2,372 feet; Zoekmakaar, 3,846 feet; survey commenced, December, 1912; survey completed, May, 1913; construction commenced, July, 1913; construction completed, August, 1915.

The line, after leaving Tzaneen, traverses the well known and fertile valley of Duivel's Kloof, where a considerable extent of land is under cultivation, and in this district passes through, or adjacent to, the Tzaneen and Westphalia Estates. The following are the more important river crossings: Groot Letaba, Politsi, Ramadiepe, Koodoo, Middle Letaba.

A striking feature of the route is the severe and continuous ascent from the Middle Letaba River to the high veldt within a few miles of the junction, being a distance of 15 miles, the difference in level being approximately 1,425 feet.

VENEZUELA.

[Consul Homer Brett, La Guaira, Oct. 1.]

Road Building—Electric Light Enterprise.

Although road building in Venezuela is not proceeding as rapidly as it was before the war caused such a drop in revenues, work is being actively pushed on five main highways. These are the Carretera de Caracas a La Guaira, Dr. Leonardo Jimenez in charge; the Carretera de Maracay a Ocumare de la Costa, Don Benito Leon Velez in charge; that from Caracas to Guatire, Sr. Don Epifanio Bolza Davila, engineer; that from Villa de Cura to Calobozo, Don Julian Correa and the Carretera del Sur, in charge of Don Lorenzo Gonzalez Villasmil. All may be addressed in care of the Ministerio de Obras Publicas, Caracas.

Sr. J. M. Gonzalez Brito is organizing an electric-light company in Upata, State of Bolivar, and Don Pedro Izaguirre Izaguirre is forming a similar one in Guacara, State of Carabobo.

Telephone System—Paving and Abattoir.

Permission has been granted the Caribbean Petroleum Co. to erect a private telephone system connecting their offices and prospecting outfits.

In San Francisco de Macaire, Guarico, street-paving work has just been begun and a new city slaughterhouse has just been completed. Gen. E. H. Machado is in charge of all public construction work.

Aqueduct, Electric Plant, Sugar Central, Railway, and Theater.

Caracas papers announce that Dr. Luis E. Power is returning from Barquisimeto after having successfully completed a new city aqueduct there; that Don Pedro I. Diaz has gone to Barquisimeto as secretary of an electric plant to be installed; and that Dr. J. A. Tagliaferro, accompanied by an American lawyer and an American engineer, has gone to Valera, Zulia, on matters connected with the sugar central to be built and the railway extension to be made there.

The President of the State of Sucre has decreed the erection of a theater in Cumana. Dr. Rivas Matas is in charge.

[Consul Homer Brett, La Guaira, Oct. 12.]

Telephone and Electrical Developments.

Sr. Don Eugenio Sanchez Afanador of Ciudad Bolivar has been granted permission to erect a 17-mile private telephone line between Ciudad Bolivar and his three cattle ranches in the Heres district.

Sr. Don Antonio Jose Miralles of Guama, Distrito Sucre Yaracuy has been given a permit for a similar line 5 miles long.

Under direction of Gen. Julio Hidalgo, President of the State, plans are being made for an electric lighting plant in Turmero, Aragua.

TWO YEARS' EXPORTS OF COFFEE FROM BRAZIL.

[Willeman's Brazilian Review, Sept. 14.]

A comparison of the total exports of coffee from Brazil during the year ended July 31, 1915, covering the first 12 months of the European war, with the exports for the 12 months immediately preceding the war, shows a decrease of only 7.7 per cent, or 1,132,066 bags, with a total shipment of 13,401,515 bags. The United States continues as the chief purchaser of Brazilian coffee, the exports to this country being 5,880,619 bags, an increase of 62,991 bags, of which 46,000 were reexported to Havre. The exports from Brazil to France were second in importance, amounting to 1,808,815 bags, a decrease of 93,832 bags, or 4.9 per cent. The shipments of 1,933,373 bags to the Scandinavian countries show the remarkable increase of 489 per cent. The greater part of this was taken by Sweden alone, its imports of 1,346,839 bags being an increase of 1,100,988 bags, or 447 per cent, over those of the preceding year. Italy took 688,252 bags, an increase of 447,408, or 186 per cent. The shipments to Great Britain were 479,701 bags, an increase of 207,208 bags, or 76 per cent. No shipments were made to Germany, Austria, or Belgium, countries to which in the preceding year the aggregate exports were 3,431,506 bags.

Changing Markets Shown by Countries of Destination.

The following table shows the exports of coffee (in bags of 132 pounds each) from Brazil during the two years just ended. It furnishes an interesting comment on the change of markets brought about by the European war:

Country of destination.	Year ended July 31, 1914.	Year ended July 31, 1915.	Country of destination.	Year ended July 31, 1914.	Year ended July 31, 1915.
	<i>Bags.</i>	<i>Bags.</i>		<i>Bags.</i>	<i>Bags.</i>
United States.....	5,817,628	5,880,619	Algeria.....	72,758	49,423
France.....	1,902,647	1,808,815	Chile.....	26,684	100,000
Sweden.....	245,851	1,346,839	Gibraltar.....	12,200	14,100

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau and its branch offices.]

Optical glass, No. 19008.—An American consular officer in Russia reports that a firm in his district desires to establish connections with American manufacturers of optical glass. Specifications and further information may be had on application to the Bureau or its branch offices.

Boots and shoes, hosiery, etc., No. 19009.—The Bureau is informed by an American consular officer in East Africa that a firm in his district desires to receive catalogues, prices, etc., on blankets, boots and shoes, bed quilts, cutlery, candlesticks, carpenter tools, hosiery, ice-cream freezers, imitation jewelry, metal bedsteads, patent medicines, padlocks, perfumes, ready-made clothing, slates for school children, unbleached cotton cloth, and white shirting. Prices and discounts should be given for the cheaper qualities. Correspondence may be in English.

Machinery, No. 19010.—An American consular officer in France reports that a business man in his district is desirous of purchasing knitting machines for making silk stockings. He would like to receive catalogues and price lists with a view to buying on a cash basis.

Brooms, trunks, etc., No. 19011.—An American consular officer in Africa reports that a firm in his district wishes to receive catalogues with prices and discounts given on brooms, box openers, corkscrews, doormats, metal trunks, matches, metal bedsteads, meat mincers, pencil sharpeners, patent medicines, stencils and supplies, and rat traps. Only the cheaper qualities are wanted. Correspondence may be in English.

Supplies for iron and coal mines, and metallurgical works, No. 19012.—An American consular officer in Russia transmits the name of a firm which desires to obtain the agency of American manufacturers of supplies for iron and coal mines, and metallurgical works. References are given.

Cast iron pipes, No. 19013.—The bureau is informed by an American consular officer in Great Britain that a firm in his district desires to receive prices and full particulars from American manufacturers of cast iron pipes for sewers, spouts, and drains of all kinds.

Rubber stamp making materials, No. 19014.—An American consular officer in India reports that a firm in his district desires to be put in touch with American manufacturers of rubber stamp making materials.

Thread, buttons, etc., No. 19015.—A firm in Norway has informed an American consular officer that it wishes to hear from American exporters and dealers in shoemaker's thread, press buttons, safety pins, hair combs, elastic for hats, stockings and suspenders, metal buttons, and hat pins.

Sulphate of ammonia and sulphurous acid, No. 19016.—The bureau is informed by an American consular officer in the East Indies that a number of firms in his district desire to establish connections with American manufacturers of sulphate of ammonia and sulphurous acid, used in the manufacture of ice.

Stamped metal and wire novelties, No. 19017.—An American consular officer in India reports that a firm in his district desires to be supplied with catalogues, price lists, and terms of sole agency for the sale of stamped metal and wire novelties.

Crematory ovens, No. 19018.—An American consular officer in Spain writes that a man in his district desires to receive prices and terms on ovens for cremating animals. Catalogues may be in English or Spanish, the latter preferred. Correspondence may be in either language.

Hosiery, No. 19019.—The Bureau is informed by an American consular officer in Switzerland that a firm desires to establish commercial relations with American manufacturers of cotton, wool, real and imitation silk hosiery, for men and women, of the holeproof type. Prices should be quoted c. i. f. French ports. Correspondence may be in English, but preferred in French or German. Payments will be made upon receipt of goods. Reference is given.

General agency, No. 19020.—An American consular officer in France writes that a man in his district wishes to be placed in touch with American manufacturers and exporters of all lines of merchandise. He does not specify any particular line. Correspondence should be in French.

Machinery, No. 19021.—An American consular officer in Russia reports that a man in his district desires to make connections with American manufacturers of machinery for utilizing the refuse from leather parts, such as soap making from the tallow obtained when paring sheep and other hides. He would also like to receive catalogues and prices on wood-turning lathes for pencils and light wood-cutting machinery. Correspondence should be in the Russian language. Prices, weights, measurements, etc., should be stated in Russian equivalents.

Metal snap fasteners and shoes, No. 19022.—The Bureau is informed by an American consular officer in Italy that a firm in his district is in the market for metal snap fasteners for dresses, known as "boutone a ressorts," and leather shoes for women and children. Samples and quotations, c. i. f. destination, are desired. Correspondence should be in Italian.

Haberdashery and silk goods, No. 19023.—An American consular officer in Persia reports that a firm in his district desires to be put in touch with American dealers in haberdashery and silk goods. The firm desires to have goods made especially to suit the Persian market. Prices and samples, similar to a sample which may be examined at the Bureau or its branch offices, should be sent at once. (Refer to file No. 67619.) Correspondence should be in French.

Glass preserve jars, No. 19024.—An American consular officer in the United Kingdom reports that a firm in his district desires to receive quotations on glass jam jars, tie-over shape, two-pound size. Prices should be quoted c. i. f. destination.

Wearing apparel, No. 19025.—The Bureau is informed by an American consular officer in Switzerland that a firm in his district, manufacturing knitted sweaters and golf jackets for women, desires to establish connections with a manufacturer's agent for the sale of its goods in America. References are desired. Correspondence may be in English, but preferred in French or German.

Soap-making supplies, No. 19026.—An American consul in India transmits the name of a firm which desires to be put in touch with American manufacturers of soap-making materials.

Buttons, notions, cotton piece goods, toilet articles, etc., No. 19027.—An American consular officer in Russia reports that a firm in his district desires to correspond with American manufacturers and exporters of wooden, metal, bone, blood and pearl buttons; tapes and bands; pins and needles; sewing cotton; haberdashery and toilet articles; notions; cotton piece goods; stationery; and sewing machines.

Jute tissue, hosiery, sewing thread, etc., No. 19028.—An American consular officer in France writes that an importer in his district desires to be placed in direct communication with American manufacturers of tissue of jute, 2.07 yards wide; hosiery for women and children; sewing thread; gloves, leather and wool for women and children; corsets; letter paper; drapery for men and women; and nails, with a view to buying them on a cash basis.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

OPPORTUNITY FOR NEW COSTA RICA INDUSTRY.

[Consul C. Donaldson, Port Limon, Sept. 22.]

Arnotto, or annatto, as it is commonly called (*Bixa orellana*), grows wild and in abundance in the Port Limon district of Costa Rica, but no one here has ever attempted to develop this rich natural resource into an industry, and the trees have never been planted or cultivated, nor has the fruit ever been gathered for commercial purposes. Judging from its natural growth, there is no doubt that it could be cultivated and gathered with good profit.

An organization was formed in this city recently with the sole purpose of encouraging any and all the industries possible on this coast. The funds are used in purchasing seeds for any who desire to start new agricultural industries and to promote in other ways the natural industries and resources of the district. All inquiries regarding annatto should be addressed to Sr. Don Filadelfo Granados, Secretario de la Junta Agricola Industrial, Port Limon, Costa Rica.

[A review of annatto culture in Jamaica and of the production of the dye, used in coloring butter and cheese and in producing red and yellow tints for calico, silk, wool, skins, feathers, ivory, and bone, was published in Daily Consular and Trade Reports for June 1, 1908.]

GOLD RESERVE OF URUGUAYAN BANKS.

[Consul Herman L. Spahr, Montevideo, Sept. 20.]

According to the monthly statement just issued the average gold reserve of the banks of Uruguay in August was, in United States currency: Bank of the Republic, \$16,010,007; private banks, \$4,635,660; total \$20,645,667, against a total of \$20,241,691 in July. Moreover, the Bank of the Republic held in custody on the account of the private banks the sum of \$1,853,186 (in July \$1,911,587).

Shortage of Phosphate Rock in Japan.

In forwarding the names of three Kobe importers of phosphate rock, Vice Consul E. H. Dooman states that the vernacular press has called attention to the shortage of fertilizer materials in Japan, due to smaller imports and decreased production. The three addresses may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices; refer to file No. 67762.

"A new relation from Planck's Law" is the title of a publication just issued by the United States Bureau of Standards. Numerous displacement laws may be derived from the Planck relation representing the spectral distribution of the energy radiated by a black body. In the present paper a new displacement law is derived. Copies of this publication may be obtained by application to the Bureau of Standards, Washington, D. C.

BRAZIL NEEDS AMERICAN COTTON.

[Cablegram from American consulate general, Rio de Janeiro.]

The Brazilian market is open to American raw cotton, the native crop being reduced by drought, and factories have increased output. There is a movement toward suspending the import duties on American cotton for six months. It is suggested that cabled offers of prices and clear terms be sent, including cost, insurance, and freight, to Rio de Janeiro. Prices should be for 10-kilo (22.046 pounds) units. Quick action needed. 'Thirty days' sight against acceptable documents by National City Bank here would be favorable conditions. [The import duty on ginned raw cotton in Brazil is 0.400 milreis per kilo, which, including surtax and partial payment in gold, amounts at the present rate of Brazilian exchange to about \$0.064 per pound.]

CERTIFICATION OF LIFEBOAT MEN.

Department of Commerce Circular No. 267, dated October 22, 1915, designates "Deck officers of the vessels of the Lighthouse Service, Coast and Geodetic Survey, and Fisheries Service" to examine applicants for certificates as lifeboat men in accordance with the provisions of the seamen's act, approved March 4, 1915.

Assistants, aids, and other officers of the Coast and Geodetic Survey, who stand a bridge watch, may be designated by commanding officers, or by inspectors, an examining officer, and shall be considered "deck officers" within the meaning of the above circular.

The examination shall be a reasonable demonstration to prove to the satisfaction of the examining officer that the applicant has been trained in all operations connected with launching of lifeboats and the use of oars; that he is acquainted with the practical handling of the boats themselves; and, further, that he is capable of understanding and answering the orders relative to lifeboat service.

Quicksilver, worth in June, 1914, \$37.50 per flask of 75 pounds in San Francisco, is now quoted at \$90.

FURTHER IMPROVEMENTS AT ARCHANGEL.

[Commercial Attaché Henry D. Baker, Petrograd, Oct. 1.]

Information has been received of continued improvement in conditions at Archangel since the time of my visit there early in August. Notwithstanding increasing arrivals of steamers at Archangel, the goods are shipped out now within a reasonable time after they arrive, and considerable cotton and other merchandise that had accumulated there early this year has now found its way to interior destinations. Probably two-thirds of the previous accumulation of cotton has now left Archangel, while all cotton arriving since has apparently been subjected to no unusual delay.

There seems some good reason to think that when navigation opens at Archangel during the spring of 1916 this port will be even busier than it was this year and there will be no need of the recurrence of serious freight congestion. Great activity is being shown in preparing still further facilities at Archangel for handling freight, and the more promptly freight is shipped the more goods will enter Russia via Archangel.

Broad-Gauge Line to Archangel—Connections with Kola.

It is reported that very good progress has been made during the last month in railway improvements between Vologda and Archangel. It is said that by November 1, 1915, it will be possible to run broad-gauge cars from any part of Russia direct to Archangel, and that for half the distance from Vologda to Archangel the line will be double-tracked. The narrow-gauge line will be retained, so that it will still be possible to make use of the narrow-gauge equipment. Rapid progress is also being made on the line through Lapland between Kandalaksha and Kola, the former town at the extreme northwestern corner of the White Sea and the latter on an estuary from the Arctic Ocean in northern Lapland. It is expected that it will be possible to run cars over this line after January 1, 1916, so that Kola during the winter season can be substituted for Archangel as a port, there being no heavy ice here as at Archangel.

Three cargo ice breakers, one of 2,500-ton capacity and two of 500-ton capacity, will be put on the run for the winter season between Kandalaksha and Sorotskoe, the voyage probably taking about 24 hours each way. Owing to their limited capacity, the ice breakers will probably be reserved for freight urgently required by the Government. The railway southward from Sorotskoe is now practically completed, so that, with the exception of the distance to be traversed across the White Sea, Petrograd should have direct railway communication by January 1, 1916, all the way to Kola. Private freight arriving at Kola during the winter can probably be moved at least as far south as Kandalaksha by the railway now nearing completion, and from Kandalaksha it would probably be transported on sledges across the snow to Kayana, the nearest point on the northern Finnish railway system.

Railway to Connect Sorotskoe and Kotlas—Shipping at Archangel.

An important new railway project will probably be put under way shortly, to connect Sorotskoe on the White Sea with Kotlas, on the north Dvina River, the terminus of a branch line of the north Trans-

siberian Railway system from Vyatka, in northeastern Russia. This line would cross the railway from Archangel to Vologda, probably about half way. The construction of this railway would not only increase the accessibility of Archangel to all parts of Russia and Siberia, but also tend to relieve the strain on Archangel by diverting much of the export and import traffic to Sorotskoe and Kola, which in the winter time might handle all such traffic. There is no likelihood, however, of Archangel's losing much of its present importance in the summer time, as traffic via Archangel requires far less rail haul than would be necessary from northern Lapland.

About 600 steamers averaging 5,000 tons, have arrived at Archangel since navigation opened in the spring. The number of arrivals is showing a rapid rate of increase, and before the close of navigation will probably total 800 to 1,000. The rate of arrivals in 1916 is expected to show a large increase over that of this year. The increase in business for Archangel, however, is not by any means measured entirely by the number of arrivals. It must be considered that before the war a large number of the arrivals were of steamers in ballast or very lightly loaded, taking back timber, tar, etc., to England, whereas now many of them, especially those from the United States, arrive loaded to the gunwales with valuable cargoes. Moreover, the average tonnage of ships arriving at Archangel before the war was about 2,000, whereas now it is about 5,000. It is understood that about 35 steamers have arrived at Archangel from the United States during the season, of which 4 were of American nationality. A heavy export trade to England and France is being carried on, there being not only the customary export movement of timber and tar from the region immediately tributary to Archangel, but also largely increasing exports of butter and eggs before exported mainly through Baltic Sea ports.

Archangel has now become the most important outlet for the great surplus of grain produced in Russia, which was formerly exported chiefly from Black Sea and Baltic ports. Immense quantities of wheat have been shipped from Archangel, especially to France. A great deal of wheat has been shipped from Vladivostok also, but in furnishing the easiest and cheapest way for exporting wheat Archangel clearly surpasses Vladivostok.

Freight-Car Capacity—Freight Rates—Prospects for American Goods.

The broad-gauge cars, which by next month it will probably be possible to run between Vologda and Archangel and, in fact, from all parts of Russia and Siberia to Archangel, have a capacity of 14 tons of 2,240 pounds, as against 10 tons with the present gauge equipment. The increase will, of course, permit of a far heavier freight movement to and from Archangel. There should also be a great saving of time, because the necessity of transshipping freight to cars of different gauges at Vologda will be avoided.

At present the freight rates for inland-waterway transportation between Archangel and the interior districts of Russia are extremely high, owing to the general desire to get all possible freight moved before the water courses begin to freeze, the ice on these inland waterways usually starting to form about October 10. The present rate for shipping cotton from Archangel to Petrograd through the connecting water courses is about 1.50 rubles per pood (\$10.70 per

500-bale at the normal exchange rate of \$0.515 to the ruble); that is, when the cotton is shipped on small barges that can go through all the water courses without transshipment. The rate amounts to about 2.25 rubles per pood (\$16 per bale) when transshipment is required. It is stated, however, that if arrangements could be made now for shipping American cotton from Archangel to Petrograd next May, when navigation is reopened, and when there should be plenty of water free of ice on all the water courses, a rate of about 1 ruble per pood (\$7.15 per bale) could be obtained. By next spring, however, this rate may show a considerable advance if keen competition develops.

The favorable prospects for freight to be moved from Archangel to the interior of Russia during the 1916 season of navigation, without any serious congestion or delays, offer very promising openings for American manufacturers and cotton producers to get their merchandise into Russia and sell it in that country to great advantage. Owing to the difficulties of transportation since the war started, the stocks of ordinary merchandise in Russia have become extremely small and the prices of all imported articles very high. If ships were to arrive from the United States loaded with such articles as hardware, agricultural implements and machines, and a great variety of miscellaneous products such as previously came chiefly from Germany, the goods would doubtless be eagerly purchased at prices very satisfactory to sellers, and for cash on their arrival at such large centers as Petrograd and Moscow.

AMERICAN MOTOR PLOWS IN SCOTTISH CONTEST.

[Consul Rufus Fleming, Edinburgh, Oct. 14.]

In July last the Highland and Agricultural Society, Edinburgh, arranged for exhibition tests of motor-tillage implements to be held near Stirling on October 5 and 6. This consulate sent a cable dispatch to Washington announcing the tests and suggesting that American manufacturers be advised to communicate with the society. The cable dispatch was published in *COMMERCE REPORTS* on July 22, 1915. Four of the six machines which were entered for the trials are American tractors, the "Mogul," "Sandusky," "Overtime," and "Bull." The Syracuse Reversible Sulky Plow was also exhibited and tested. There was a large attendance of farmers and others from all parts of Scotland. The report of the official observers appointed by the Highland and Agriculture Society has not yet been issued.

LANGUAGE TEST FOR SEAMEN.

The following dispatch was, on October 29, 1915, sent to each collector of customs by the Secretary of Commerce:

No examination under language test is required by section 13 of the seamen's act or by the department regulations. If collector of customs is satisfied upon statement of master or otherwise that his crew fulfill requirement of section 13, it is sufficient. If collector thinks a muster is necessary or is required to have one made on complaint, then department circular 265 must be followed, it being specially noted that obedience to orders given by their officers in usual line of duty is the test required.

CITIES THROUGHOUT COUNTRY SEEK BRANCHES OF COMMERCE BUREAU.

"We must reach the markets of the world by the quickest route" is the cry that is being heard at Washington from all parts of the country. Local organizations of business men have found that the Bureau of Foreign and Domestic Commerce, Department of Commerce, is leading the way to that quickest route, and are seeking to affiliate with the Bureau. One after another the cities of the United States are making their desires known. The men who have goods to sell in each of these communities seek to share in the practical methods of reaching purchasers abroad that the Bureau has established.

"We want a branch office of the Bureau; if we can't have a branch office, how can we get a cooperative branch?" nearly two score cities have declared, and within a very short time 10 of these will have realized their wish, for 6 cooperative branches have already been launched and 4 more have nearly completed their plans for the launching.

The remaining 25 cities? All have asked for full information about conditions under which a branch can be established for their benefit. The circle of business boomers can not be completed in a day. It will take several days; most likely several weeks; in some cases several months; but the country has the world-wide-business desire, and has turned to this Bureau at the National Capital as the means of entering the international trade routes.

The movement has sprung up within a few months. The European war has hastened its development. Every cooperative branch of the Bureau of Foreign and Domestic Commerce that is established increases the force with which the main office can demonstrate to foreign countries the advantages of dealing with Americans. The Bureau welcomes the opportunity to offer its facilities to the men who are manufacturing goods in these widely scattered communities.

Those who applied for information have learned that the Bureau has much to offer through a cooperative branch that a strictly local organization can not give. All the details of trade opportunities abroad are quickly transmitted; confidential circulars are distributed; the telegraph brings practically instantaneous word of urgent needs of foreign buyers; inquiries are promptly answered; samples from agents in the field are exhibited; plans and specifications of new projects are shown; the publications of the Bureau are always to be obtained; every facility of the Washington office is available.

In short these offices perform the same service as the eight branch offices of the Bureau, but the number of the latter is limited and can not be increased at present. Each is the headquarters for one of the eight districts of the country, and has general supervision of the cooperative offices in its district. Chambers of commerce that establish cooperative branches furnish the man to take charge of the local work, give him any needed clerical assistance, agree to make certain reports, keep certain records, arrange for any visits that may be made by consuls, agents, or commercial attachés, and permit all citizens to have the benefits of the service.

An Australian Government laboratory for manufacturing serum and vaccine is being considered.

AMERICAN WORKS FOR BRITAIN.

[Glasgow Herald, Oct. 19.]

One of the results to be expected from the (British) duty on motor cars is the transfer from foreign countries of such parts of the work of manufacture as can be as well or better done in the United Kingdom. This was foretold when the tax was announced, and already the anticipations are being realized. The ——— Co. of America, who produce one of the most popular of the low-priced high-value machines on the market, have in contemplation the establishment of large works in this country, and a member of the American concern is on his way across to investigate the matter. The intention is to restrict work in the first instance to assembling, and in that work a very great saving should undoubtedly be effected, but there is no reason apparent why the scheme should not extend to complete manufacture. So far as assembling is concerned, it should be possible to do it at least as cheaply as in Detroit, where the demand on skilled labor must be overwhelming, while the freight charges would be less and the duty on the cost of assembling would be saved.

When the war ends there will be set free a large amount of suitable labor for which there will not be an immediate demand, the British factories having to change their equipment from that suitable for munitions manufacture to the tools, etc., employed in the manufacture of motor cars. When that time comes the ——— Company would be in a position to give employment, but it is hoped, should the scheme go on, to secure enough labor to make a start long before the war can finish, so far as can be judged at present. Since February last 50,000 cars have been made in the Detroit works of the company, a good many of them being assembled in the works of the British ——— Company (Limited) at Chelsea, London. It will be seen, then, that the new departure of the American concern has been led up to by their British representatives, but whereas the British company have been chiefly concerned about supplying the British market, it is anticipated that the new undertaking will take up the fulfilling of orders all over the world. There can be no doubt regarding the wisdom of the proposed step, even though the duty should in a few years be repealed. The saving in transportation, combined with the cheaper British labor, should justify it on its merits.

NEW STEAMSHIP LINE BETWEEN ENGLAND AND SPAIN.

[Consul Robertson Honey, Madrid, Oct. 2.]

Madrid newspapers of this date call attention to the new Intera Line of steamers touching at London, Hull, and Newcastle-on-Tyne, England; touching also at Bilbao, Santander, and Gijon, Spain. The ships will also make a port of call of Oporto, Portugal. The service was inaugurated by the sailing of the *Neytar* from Newcastle-on-Tyne on September 27. The agents of the line in Spain are Sres. Modesto Piñeiro y Cia., Santander, Spain.

The run of humpback salmon in Washington waters has been large. The United States Bureau of Fisheries, which has been taking eggs of that species at its stations in that State, reports prospects that the collections will meet all demands for the season.

BRITISH COLUMBIA ADVERTISES ITS TIMBER.

[Vice Consul G. C. Woodward, Vancouver, Oct. 20.]

The British Columbia Government is carrying on an extensive campaign to increase the export and Canadian sales of the timber products of the Province. Mr. H. R. McMillan, formerly head of the Forestry Department of this Province, now a representative of the Department of Trade and Commerce of Canada, recently completed a tour of Australia and New Zealand for this purpose. He is now on a similar trip to Great Britain.

Three pamphlets recently issued furnish data regarding the uses of the different timbers, the methods of manufacture, preservation, etc. This literature is sent to all available points. The placing of exhibits is another method of advertising used by the Provincial Government. An excellent representation of the timbers of the Province was shown recently at the annual fair at Toronto. Permanent exhibits have been placed in the Prairie Provinces, in Winnipeg, Manitoba, and other points farther west.

Exhibit of Woods Being Prepared for London.

An exhibit of British Columbia's native woods is being assembled, to be placed in the new British Columbia Government Building in London, England. The woods used are fir, cedar, hemlock, tamarac, and cottonwood from the coast districts and mountain pine, white pine, and larch from the interior. Some of the uses to which these woods are put are shown, such as piling (creosoted and natural), ship's planking, decking, car stock, silo lumber, ties (creosoted and natural), wood pipe, and paving blocks, etc. There are also specimens of lumber for building purposes and all kinds of exterior and interior trimmings, such as siding, shingles, flooring, doors and molding, and a number of panels to show the effect of the different finishes on various woods.

The Provincial Government reports that the logs scaled for July and August of this year amounted to 68,897,188 and 64,257,966 feet, respectively, the figures for the month of July being approximately 6,000,000 feet less than those of the corresponding month last year. The total for the first seven months of this year is 380,690,517, as compared with a total for the corresponding period in 1914 of 310,734,772.

With a steady, large production of logs, an increasing surplus is reported on hand. A month or so ago it was placed at 120,000,000 feet, but now it is estimated at between 140,000,000 and 150,000,000 feet. Sales of fir are reported as low as \$4. Quotations run from \$4.50 to \$6 and \$8. Cedar is placed at \$6, \$8.50, and \$12.50. The demand is not heavy.

During July the Provincial timber sales amounted to 5,472,154 feet, as compared with 10,100,857 feet of logs, 85,000 linear feet of piles and poles, and 1,234 cords of pulp wood, cordwood, etc, for the month of August.

Timber Insects' Destructive Work.

Officials of the entomological branch of the Department of Agriculture of Canada, who have been making investigations in this Province in connection with the destructive work of bark beetles, boring insects, etc., state that a vast amount of destruction in the yellow, white, and lodge-pole pine has occurred by outbreaks of bark

beetles in the country around Okanogan Lake, west to Princeton and Nicola, and to a lesser extent in the Kootenays. Considerable damage has also been done to the cedar growth on the coast by boring insects, rendering the trees unfit for the manufacture of shingles.

Investigations made in Stanley Park, Vancouver, show that bark beetles have attacked the spruce trees, causing considerable damage among the young growth. Defoliating caterpillars have also made great depredations among the hemlock trees, and several acres of dead trees were found on the north side of the park.

It is reported that an entirely new species of borer has been discovered, and that it is doing a great deal of damage in green cedar. It bores tunnels through the trunk one-quarter to 1-inch wide and about one-eighth of an inch deep, in many cases riddling the wood so that it is unfit for lumber or shingles.

The plant of the Shull Lumber & Shingle Co. (Ltd.), on the north arm of the Fraser River, a few miles below New Westminster, British Columbia, has just been completed, at an approximate cost of \$150,000. It recently made its initial shipment—three cars of shingles to Montana. The mill is one of the largest and most modern on the coast, and the machinery installed is of the latest design. It is owned and operated by Americans.

American Ship to Take Lumber to China.

The American sailing schooner *Hugh Hogan*, owned in Portland, Oreg., has been chartered recently by local agents to carry 600,000 feet of British Columbia lumber to Shanghai, China. It is stated that in former years a large percentage of the China lumber trade was handled by Pacific coast mills, but in later years the trade has been secured by Australian firms, owing to their close proximity to that market and their abundant supply of hardwoods. This is the first American sailing vessel chartered in this trade for a number of years.

The recent clearing of the Norwegian steamer *Admiralen* from Great Point Rapids, British Columbia, for New York, via the Panama Canal, with a 4,000,000 consignment of British Columbia shingles, was of particular interest to the trade, on account of the charter being direct between the British Columbia manufacturer and the purchaser, heretofore practically unknown in the British Columbia shingle trade as applying to American markets.

As showing the relative importance of lumber shipments to San Francisco from British Columbia, compared with those shipped from Puget Sound ports, for the nine months ended September 30, 1915, the following table may be of interest:

Districts.	Quantity for 9 months.
Oregon coast.....	<i>Feet.</i> 142,282,000
Columbia River.....	57,326,000
Willapa Harbor.....	24,075,000
Puget Sound.....	71,881,000
Grays Harbor.....	60,829,000
British Columbia.....	3,206,000
Northern shipments.....	368,129,000
Redwood.....	174,401,000
Total.....	542,530,000

Timber Products Exported to United States.

Timber products exported from British Columbia to the United States, invoiced through the consulate general at Vancouver, for the three quarters ended September 30, 1914 and 1915, were valued at \$4,021,635 and \$5,622,451, respectively.

The West Coast Lumberman gives the imports of shingles from Canada by the United States for the first six months of 1914 and 1915 at 530,296 and 768,686 thousand, respectively, which indicates that a large share was from British Columbia, inasmuch as the returns of this office show that for these two periods there were invoiced through it alone 303,584 and 574,605 thousand, respectively.

[Copies of three publications—"British Columbia timber," "British Columbia red-cedar shingles," and "How to finish British Columbia wood"—together with a reprint of a Canadian commerce report by Mr. H. R. MacMillan on the condition of the lumber market, will be loaned to interested persons on application to the Bureau of Foreign and Domestic Commerce. Refer to file No. 67968. Mr. MacMillan was formerly chief forester of British Columbia.]

MAGNETITE IRON-ORE DEPOSITS OF GORDON ISLAND.

[Consul David J. D. Myers, Punta Arenas, Chile, Aug. 28.]

There are forwarded herewith data on the iron-ore deposits of Gordon Island, which properties the owners offer for sale or exploitation. Comment on the position is considered unnecessary, as the island and Beagle Channel are shown on all maps of the region, which is sparsely populated and for the most part unexplored. Large steamers can enter the bay throughout the year. The company controlling the deposits is regularly constituted and duly registered, but has no capital to exploit the mines, not even to make a proper survey and tests of its holdings. Arrangements were being carried out to sell to a French concern when the war broke out, which brought negotiations to a close.

Although specific information is lacking on the possible quantities of ore obtainable from these deposits, it is believed to be worth the while of American concerns interested in securing such ore to go to some small expense in investigating same, due to the great ease with which the ore can be put aboard steamers in case it is found to exist in quantities sufficient to justify its exploitation. Correspondence should be conducted direct with the local representative, preferably in Spanish, the language of this port, although English may be used. Copies of correspondence might be sent with advantage to this consulate.

[A pen drawing of the location of the property offered, an analysis of the ore, and other information may be had upon application to the Bureau of Foreign and Domestic Commerce or its branch offices; refer to file No. 67120.]

GRAIN HARVEST IN DENMARK.

[Consul General E. D. Winslow, Copenhagen, Sept. 30.]

The yield of wheat in Denmark for the crop season just closed is estimated at 8,000,000 bushels, against an average yield for the past five years of 4,800,000 bushels; rye, 11,000,000 bushels, against an average yield of 15,000,000 bushels; barley, 21,000,000 bushels, compared with 18,000,000 bushels; oats, 45,000,000 bushels, compared with 46,000,000 bushels.

PROBLEM OF WOOL STORAGE.

[Consul Augustus E. Ingram, Bradford, England, Sept. 30.]

The congestion of wool at the London Docks is a matter that has been engaging considerable local attention. It is said that conditions resulting from the war have greatly increased the amount of wool sent to England from the colonies. Practically the whole of Germany's supply from Australia and New Zealand appears to have been diverted to this country, and according to an Australian estimate during the past seven months approximately 1,500,000 bales have been landed in the Port of London alone.

Much of the wool landed in London is for direct dispatch to Bradford by rail, and it has been suggested by the Government that action should be taken in the West Riding of Yorkshire to increase the storage accommodation on similar lines to that already done by the Port of London Authority in building several additional sheds. The Bradford Chamber of Commerce reports that some additional warehouses are now being utilized.

Many Interests Clash at Present.

The following extract from the Yorkshire Post gives the result of an interview with Mr. J. B. Broodbank, chairman of the dock and warehouse committee of the Port of London Authority. The details of the facilities offered by Manchester and the description of the cotton warehouses which could be utilized for wool are of considerable interest in this connection.

Much of the wool landed in London is for direct despatch to Bradford by rail. This wool might be diverted elsewhere. East-coast ports are not favored at present, and the congestion which still prevails at Liverpool puts that port out of the question. In these circumstances Manchester has come forward with suggestions that may help to relieve the situation.

Many interests clash at the present time. It is essential that ships occupying wharf space should be discharged as quickly as possible, but the work is very much hampered if the transit sheds are occupied as warehouses. The port authorities finding all their space filled up by an accumulation of goods are hindered in their work. The railway companies have their own peculiar embarrassments and have to be careful that neither the Port Authority on the one hand nor the trade on the other forces them into becoming warehousemen for the surplus wool. They are therefore limiting their acceptances of wool from the docks to the amount which each particular customer is able to take off their hands immediately.

The wool, however, must be stored somewhere. The port and railway authorities are urging Bradford to make a much greater provision of warehouse space than has hitherto been thought necessary, and it has even been suggested that a municipal storehouse should be provided [See COMMERCE REPORTS for Sept. 17, 1915, p. 133]. Bradford, on the other hand, contends that the times are abnormal and does not like the idea of embarking on a big scheme of warehouse building. Moreover, the provision of huge storehouses at Bradford would still leave difficulties with the railways, which would be liable to be inundated with wool traffic whenever there was a big arrival at the port and the ships were being discharged as rapidly as possible.

What Manchester Offers.

The Manchester proposal, which is being put forward by the Ship Canal Co. and Manchester Warehouses (Ltd.), is to provide a kind of reservoir or safety valve in the shape of big warehouses at the Manchester docks, to which the wool may be taken direct from the ship's hold and then drawn upon according to the requirements of the Bradford trade. In the course of a letter to the Bradford Chamber of Commerce on this subject, Mr. Marshall Stevens, chairman of the Port of Manchester Warehouses (Ltd.), says:

"If arrangements are made with us, we are prepared to provide all the storage accommodation necessary for next season's wool coming on through bill of

lading to Bradford. We have buildings now in course of construction the whole of which will be ready in a few weeks, with a capacity of something like 3,500,000 cubic feet. These buildings, of course, are not being erected for wool traffic, but principally for cotton and general merchandise. None of them, however, is allocated at the present time to particular traffic, and as much as is necessary can be set aside for wool, and if arrangements are made we can add to the accommodation almost indefinitely in time for your next season's requirements.

"We are not going to give the accommodation for wool unless it be to encourage direct imports to Manchester docks, and for this purpose the condition that we suggest is that those of your merchants requiring the accommodation should take a minimum quantity of space from us for a period of three years. We have looked at the rent charges for wool at London and find that it is not necessary for us to make charges of that nature. We will be satisfied with the same rental proportionately as we get for cotton, which would mean that for every 16 feet of cubic space occupied by wool we would require a rent of 1d. [2 cents] plus 10 per cent per week. This would easily be brought down to rates per bale for each particular class of wool as the consignments come forward here. The same thing applies to the charges for the labor operations necessary, and until a schedule has been agreed we will limit our charges to the cost of labor, materials, etc., plus 12½ per cent."

An Example from Cotton.

A member of our staff who paid a recent visit to Trafford Park was shown a large number of bales of Patagonian wool stored in one of the huge warehouses which have been erected this year. These warehouses, equipped with all modern electrical facilities for handling goods, are going up very rapidly on the Trafford Park estate, and the extent to which they are being taken advantage of for raw or semimanufactured goods of all kinds is remarkable. It is now quite an established thing in the cotton trade to store raw cotton in the docks until the mills can take delivery. There are on the Trafford Park estate now and in course of erection some of the finest stores for cotton in the world. Every detail has been carefully thought out from the point of view of fire prevention, and also that of easy handling. The degree of immunity from serious fire that has been attained is shown by the fire insurance rates, which are only one-fifth of the ordinary rates for cotton stored in warehouses. These great cotton "safes," as they are called, are very impressive—vast brick caverns, in which the bales are stacked by the electric overhead traveling cranes. The new safes now in course of erection are provided with a tank of water running the whole length of the central corridor. In case of fire the suction pipe of the fire engine would be put in the tank, and the water would afterwards be drawn back into the tank, thus avoiding damage to adjoining compartments by flooding, and giving economy of water. Ships' cargoes are unloaded into these safes, from which the mills draw a regular supply of the raw material as it is required. There is no intermediate carting, for the railway lines run along each of the warehouses, and the cotton is sent direct from the warehouse to the point of consumption with a minimum of handling.

It is this system which Manchester proposes to offer to the wool trade. When our representative was at Manchester, there were a large number of ships in dock, but there was room for a number more to get alongside without delay. All the dockside appliances at Manchester are of the most modern type, and the organization is such that ships can be discharged and the goods safely warehoused in the shortest possible time.

JAPANESE METEOROLOGICAL SIGNALS.

[Consul General Ransford S. Miller, Seoul, Chosen, Sept. 1.]

The Meteorological Observatory in Chemulpo (Jinsen) has lately decided to show to ships in the port the meteorological conditions of the day by means of signal flags. Flags showing the degree of the atmospheric pressure taken by the Meteorological Observatory at 10 a. m. every day are hoisted for 10 minutes on the signal post on Wolmi Island, in the harbor of Chemulpo, the signal used being in the international code. The Seoul Press, in reporting the above, adds that similar steps are to be taken in the near future at the ports of Fusan and Gensan and at other harbors in Chosen.

HONGKONG RICE CONTRACTS.

[Consul General George B. Anderson, Hongkong, Sept. 11.]

Considerable difficulty is arising in rice shipments from Hongkong to the United States and South Africa as a result of variations from samples and substitutions in quality of grain exported by some shippers. Certain shippers of the colony complain that they have lost business from American and other foreign customers by unfair competition which is more or less of a fraud on the American or other importer and a breaking away from established standards in the trade.

The situation can be explained best by an example. Reliable firms will furnish to American importers samples of certain grades of rice as recognized by the trade here and hold themselves ready to quote prices on demand for rice of the grades represented by the samples given. An American buyer will ask for prices from several firms on the basis of the samples submitted, and the price here in the open market for the grade ordered will be, say, \$5.25 per picul (133½ pounds). Some of the dealers competing in an unfair way will go to Chinese middlemen and secure a grade of rice by mixing the \$5.25 grade with inferior rice which can be had at a cost of, say, \$5.10 per picul. It will quote the price of \$5.10 for the grade of rice asked for by the American importer and will fill the order obtained at the lower price with the rice valued at only \$5.10 per picul.

This substitution of rice for the grade ordered involves so slight a departure from the standard ordered that it is seldom detected by the importer at the time, if ever, while the difference is great enough to secure the unfair competitor the business. This practice continues until in time the variation from the standard quality becomes great enough to be noticed and then, of course, there is trouble. In the meanwhile, firms of integrity who have maintained the standard upon which they have quoted current prices and who fill orders with grain of the quality sampled not only lose business, but lose prestige with American importers because of the seemingly higher prices quoted by them on the basis of samples submitted.

A Rice Exchange Needed—American Purchases.

There is great need in Hongkong of a Rice Exchange. The volume of business in the grain is large enough to justify such an organization on a large scale and with full machinery for establishing and maintaining quality standards and contract arrangements. The greater portion of the rice business of the port, however, is in the control of Chinese firms. These firms maintain more or less of an organization of their own, but it does not and the firms usually will not cooperate with foreign firms in foreign business. Foreign firms usually buy rice for export in the open market and there is little or no machinery for correcting abuses like that described. The substitution of lower grades of grain for standard grades sampled to the trade has been particularly prevalent in the trade with South Africa.

The export of rice to the United States so far this year has exceeded all previous records. Shipments up to August 31 alone amounted in value to \$1,337,661, as compared with a value of \$820,455 for the entire first nine months of 1914 and \$893,720 for the first

nine months of 1913 and \$802,030 for the first nine months of 1912. Shipments to the Philippines up to August 31 this year have been valued at \$2,047,898, compared with a value of \$577,321 for the first nine months of 1914 and of \$850,739 and \$3,313,708, respectively, for the first nine months of 1913 and the famine year of 1912.

SOUTH AMERICA AS A MARKET FOR PRUNES.

[Review of the River Plate, Sept. 17.]

There is apparently an opportunity for the American prune in South America. Approximately a quarter million dollars' worth of prunes are imported annually into South America under normal trade conditions, and of this the United States, the largest prune-producing country of the world, supplies only about 5 per cent. Argentina's importations of prunes in 1912, the latest normal year, amounted to over \$100,000, and those of Brazil to a like sum, though the exact figures for Brazil can not be stated, owing to the fact that the official statistics include certain other fruits with prunes in the total of dried fruits imported. Uruguay is also a considerable importer of prunes, and all these countries have in the past drawn their importations from France and the Balkan States, which are next to the United States in rank of world producers of prunes. They have also drawn large quantities from Germany, and as the imports from all these European prune-supplying areas are now either cut off or greatly reduced, the opportunity is open to the American growers, who can reach the South American market from the Pacific coast by way of the Panama Canal at much less expense than formerly. In the fiscal year 1913 the United States exported 118 million pounds of prunes, valued at \$6,656,000, of which only 196,000 pounds, valued at \$14,000, went to South America.

[The exports of prunes from the United States during the fiscal year 1914 amounted to 69,813,711 pounds, valued at \$4,662,546, of which 125,225 pounds, valued at \$10,957, went to South America.]

LIVE STOCK AND ANIMAL PRODUCTS IN SIAM.

[Vice Consul Carl C. Hansen, Bangkok, Siam, Aug. 28.]

According to Siamese official statistics the number of all domestic animals in the Kingdom on January 1, 1915, was 4,494,102, as compared with 4,330,926 on the corresponding date in 1914. The live stock in January, 1915, consisted of 4,640 elephants, 92,275 horses and ponies, 2,397,970 cows, oxen, and calves, and 1,999,217 buffaloes.

During the last fiscal year 35 horses and ponies, 396 sheep, 3 goats, and 3,860 pigs were imported into Siam, the horses coming from Australia, and the other animals from oriental ports. The only exports of live stock from Siam during 1914-15 consisted of 8,024 bullocks, valued at \$200,416, shipped to Singapore, and 3 horses.

Among the exports of animal products during the last fiscal twelve-months were: Bones, \$6,304; hides and skins, \$913,585; horns, \$37,631; and ivory, \$7,085. The only exports of animal products from Siam to the United States during 1914-15 were 77,016 pounds of hides, valued at \$10,563. On account of the prevalence of cattle disease in Siam every shipment of hides to the United States is thoroughly disinfected in the presence of a consular officer.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Pocket electrical lamps, hardware, etc., No. 19029.—A commercial organization in the United States transmits the name of a firm in France which desires quotations on pocket electrical lamps, hardware, and sanitary articles for surgeons and hospitals.

Cotton and woolen goods, No. 19030.—An American consular officer in India reports that a firm in his district desires to be placed in communication with American manufacturers of cotton and woolen goods, with a view to securing the representation of such manufacturers in India on a commission basis. Correspondence may be in English. Reference is given.

Leather hand bags and purses, No. 19031.—The Bureau is informed by an American consular officer in England that a firm of wholesale leather-goods dealers in his district desires to receive samples and quotations on gross lots of leather hand bags and purses for women. Various styles and sizes are wanted. Quotations should be made c. i. f. destination.

Machinery, No. 19032.—A business firm in the United States writes that one of its correspondents in the Far East desires the name of an American manufacturer of machinery and other apparatus necessary to install a plant for making desiccated coconut, known also as shredded coconut.

Garters, No. 19033.—An American consular officer in Switzerland writes that a firm in his district desires to represent an American manufacturer of garters. An exclusive agency for all Switzerland is wanted. It will represent the manufacturer on a commission basis or will purchase outright. Samples, with quotations c. i. f. French ports, are desired. Correspondence may be in English, but is preferred in French or German.

Dry goods, drugs, iron, and iron manufactures, No. 19034.—The Bureau is informed by an American consular officer in Siberia that a man in his district has requested the names and addresses of American firms dealing in dry goods and notions, drugs, iron, and iron manufactures. Correspondence may be in English. References are given.

Tubes for boilers, No. 19035.—An American consular officer in Italy reports that a firm in his district wishes immediate quotations on cold-drawn weldless steel tubes for boilers, galvanized externally. Specifications and further information may be had on application to the Bureau or its branch offices. Correspondence may be in English. Payments will be made against documents in Italy. Reference is given. (Refer to file No. 67664.)

Underwear, No. 19036.—An American consular officer in Switzerland writes that a firm in his district desires to establish connections with an American manufacturer of cotton and woolen underwear for men. Medium and ordinary qualities, an assortment of light colors, such as gray, white, etc., are wanted. Quotations should be made c. i. f. French ports. Correspondence may be in English, but is preferred in French or German.

General agency, No. 19037.—The Bureau is in receipt of a communication from an attorney in New York stating that a man in Paris desires to represent American manufacturers and exporters in France, Spain, Italy, and Switzerland. No particular line is mentioned.

Machinery, No. 19038.—An American consular officer in Spain reports that the Ministro de Fomento, Madrid, Spain, has been authorized to call for proposals to supply an excavating machine and a winch machine to drill artesian wells. Plans and specifications may be seen at the "Secretaria de la Junta Central de Repoblacion Interior," Casa de la Moneda, Plaza de Colon, Madrid, Spain. Proposals, in Spanish, will be received until November 3, 1915. The Bureau has no further information relative to this opportunity.

Machinery, No. 19039.—A commercial organization in the United States transmits the name of a man in Spain who desires to establish connections with American manufacturers of machines to cover wire with silk. A sample has been forwarded, which may be seen at the Bureau or its branch offices. (Refer to file No. 72.)

Toothbrushes, No. 19040.—An American consular officer in Central America reports that a firm in his district desires to communicate with manufacturers of cheap grades of toothbrushes, with a view to securing the agency for same.

Shoes, clothing, house fittings, furniture, etc., No. 19041.—The Bureau is informed by an American consular officer in Canada that a man desires to be put in touch with American manufacturers and exporters of boots and shoes for women, clothing, house fittings, furniture, hardware, etc. Reference is given.

Glassware, No. 19042.—A firm in the United Kingdom writes the Bureau that it desires to establish connections with American dealers in lamp glasses, oil and incandescent; ships' cone glasses; and gauge glasses.

Lard, oleo oil, and linseed meal and cakes, No. 19043.—A commercial agent of the Bureau in the United States writes that a representative of a firm in Holland is anxious to make agency connections with American manufacturers. The firm is particularly interested in oleo oil, oleo stock, neutral lard, linseed meal, and linseed cakes. American references will be furnished by the firm.

Hardware, tools, and steel products, No. 19044.—A commercial organization in the United States reports that a man in Spain desires to establish connections with American manufacturers of hardware, tools, and steel products. Correspondence should be in Spanish.

Bank notes and bank supplies, No. 19045.—An American consular officer in Venezuela reports that the promoters of a bank in his district would like to receive prices and samples of bank-note engraving; also catalogues and prices of bank supplies. Correspondence should be in Spanish.

Gristmills, irrigating pumps, and windmills, No. 19046.—An American consular officer in China states that an American in his district has informed him that there is a possible market for cheap gristmills, particularly mills constructed so as to use buffalo power. The man also states that he has received inquiries in regard to American irrigating pumps, windmills, looms, machinery for paper mills, and other machinery.

Tile dies, No. 19047.—The Bureau is informed by an American consular officer in India that a firm in his district desires to buy dies for tiles. References are given.

Brass strips, No. 19048.—An American consular officer in the United Kingdom reports that a man in his district desires to be placed in touch with American manufacturers of rolled brass strips, rolled polished brass strips, and rolled engraving brass strips, 6 to 18 inches wide, and from 12 to 20 feet long, suitable for use in making name plates, memorial brasses, stencils, and stamps and dies, etc. The gauge should be B. W. 8 to 22. Prices should be in British currency. References are given.

Leather for harness making, No. 19049.—A firm in Spain has informed an American consular officer in that country that it wishes to communicate with American manufacturers of leather suitable for use in making harness. Correspondence is preferred in Spanish.

Safes, No. 19050.—The Bureau is informed by an American consular officer in Venezuela that a firm in his district desires the exclusive agency for the sale of moderate-priced safes. Cash will be paid for all orders. Prices f. o. b. New York are desired. Correspondence should be in Spanish.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 403 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

ELECTRIC POWER FOR HOBART, TASMANIA.

[Consul W. A. Bickers, Hobart, Sept. 6.]

An agreement has been entered into between the hydroelectric department of the State of Tasmania and the city council of Hobart in regard to the supply of power for the city tramways and other purposes. The following items of the agreement show that electric power should be much cheaper here and there should be a very material increase in the demand for electrical material and supplies:

Power to be taken at the direct-current end of the Government switchboard at 1½ cents per unit (including switchboard operation) up to 1,500,000 units per annum; all units above 1,500,000 per annum at 1 cent per unit; this power to be used for all tramway purposes or for all consumers of power now supplied by the tramway department or additional consumers of power within the area marked on the attached plan of the city.

The council to pay a minimum revenue of \$23,111 per annum and to guarantee to meet the demand and to push the sale of electricity to the utmost within the said area.

The council to establish and maintain a showroom for motors and to establish a charge of sales scale for power, to be approved by the Government.

The Government also to have the right to supply current direct to all consumers of 500 horsepower and over.

The Government to undertake to reduce the rate quoted above as soon as it is commercially possible.

Augmented Market for American Machinery and Appliances.

The Government is also negotiating to purchase the plant and distributing system of the Hobart Gas Co., a private concern, which supplies gas and electricity throughout Hobart in competition with the municipally owned electric plant. It is thought that about \$500,000 will be involved in this transaction.

As this cheaper power will be available not later than April of next year, it is well that exporters of electrical goods should approach this market as soon as possible. American electrical machinery and appliances enjoy a very high reputation here, and are usually given preference when prices are right.

In ordinary times England, Germany, and the United States supply the bulk of the demand for electrical goods. The trade amounts to \$80,000 a year, oversea imports of electrical machines and appliances during 1913 being valued at \$61,390 and those of electrical materials at \$20,995. It is now becoming more difficult to obtain such goods in England unless purchasers are inclined to be exceptionally lenient in the matter of deliveries. Under these circumstances American firms will find here a developing market, with competition by no means so severe as formerly.

[A list of dealers in electrical goods in Hobart may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 67384.]

This year's production of sake, the Japanese national beverage, will represent a decrease from the total output of last year. This is due to the large stock held over from 1914. According to the Vice Minister for Finance, as quoted by the Peking Daily News, last year's output of sake amounted to 174,409,980 gallons, and the tax on it totaled \$35,856,000, the reduction this year amounting to 23,826,500 gallons, and the decrease in the total tax to \$4,980,000.

SWISS FEDERAL PURCHASING TRUST.

[American Minister P. A. Stovall, Berne, Sept. 29.]

While the details of the projected organization have not as yet been decided upon, the Swiss Council, in a sitting held September 22, approved the creation of a "trust" which will be known as the Société Suisses de Surveillance (Swiss Society of Surveillance), the letters S. S. S. being selected as its commercial designation. The society will be composed of 15 members, all of Swiss nationality, appointed by the Swiss Federal Council. It is expected that the directors will be well-known personages of character and standing, chosen from the various Cantons of German, French, and Italian language.

The primary purpose of the newly organized society is to secure the importation of the necessary supplies and materials which Switzerland requires both for home consumption and in order to continue its industries during the period of hostilities. The projected "trust" will exercise no control over the importation of metals. A separate syndicate, under Federal supervision, has been organized for this purpose.

Charges—Consignments to Trust.

The newly created Swiss Society has a nominal capital of 100,000 francs (\$19,300), which has been placed at its disposal by the Federal Council. The society is not intended to be a profit-making organization, and will not be permitted to engage in any commercial transaction on its own account. The charge imposed by the Netherlands Overseas Trust in Holland is one-eighth of 1 per cent of the invoice value of shipments. [Numerous references to the Netherlands Overseas Trust have appeared in COMMERCE REPORTS during the current year; see, among others, the issues for Jan. 2 (p. 6) and Sept. 11.] It is likely that a similar charge will be made by the Swiss Society and the proceeds devoted to the payment of current expenses and of a reasonable interest on the working capital advanced by the Confederation.

In order to secure uninterrupted sea passage on shipments to Switzerland, as well as free passage through the allied countries,

all such shipments, after this date, should be consigned to the S. S. S. by the consignor. In each case the consignee must secure, in advance, written authorization from the Society. It must be shown conclusively that the goods composing the shipments are intended for bona fide Swiss consumption and not for reexportation.

INTEREST IN GOLD FIELDS NEAR WINNIPEG.

Consul General Frederick M. Ryder, at Winnipeg, Manitoba, under date of October 9, reports that prospectors for gold, who have been locating claims in the Rice Lake district, 100 miles north of Winnipeg for the past year, have brought in samples which seem to indicate that the locality is rich in minerals. Claims are also being staked in the Gold Lake district, about 50 miles north of Rice Lake.

The strata extend from Cumberland Lake, northwest of La Pas, southeasterly into the Rainy River district. There is a gneissic formation, with seams of from 1 to 6 inches in width, showing tracings of gold, iron, barites, with some copper and silver.

The most practical means of reaching Rice Lake district is by small steamer from Winnipeg to the mouth of the Monogotogan River, which flows into Lake Winnipeg, about 100 miles from Winnipeg; from there it is possible to ascend the river in canoes about 50 miles to Ratroot Lake, and then overland, and from there portaging over rough country, a distance of about 12 miles to Rice Lake, thus making the transportation of machinery extremely difficult—even that of a portable nature for superficial development.

Practically all of the claims filed in the district have been staked for speculative purposes. Several prospectors and mining engineers from Boston and Minneapolis have gone up to the new gold fields and upon returning were reticent as to the prospects.

The Provincial Government is to make an effort to obtain the mineral rights from the Dominion Government, which owns all the minerals in the Province of Manitoba. According to the records, Manitoba has received upward of \$4,000 in fees for recording the 746 claims in good standing in the Rice and Gold Lake districts. These records show that \$260,000 has already been expended in the locality, 20 per cent of which has been for transportation.

FREIGHT RATE VIA PANAMA RAILWAY.

[Announcement of the Panama Canal, Washington office, Oct. 30.]

Referring to the memorandum issued by this office dated October 19, 1915, in reference to the establishment of classified rates for the transfer of freight across the Isthmus by the Panama Railroad, to become effective with the arrival of ships at the Panama Canal on and after November 1, 1915, and during such times as the canal may be closed to traffic, the Secretary of War has decided that in view of the many questions involved in changing from the \$3 flat rate to the classified rates, the flat rate will be temporarily continued under the conditions now in effect until he has had a full opportunity to thoroughly investigate the subject. The classified tariff heretofore approved to go into effect November 1 is therefore withdrawn, and the emergency \$3 flat rate covered by this office's memorandum dated October 8, 1915, will be continued until further notice.

INTRODUCTION OF TILEFISH A SUCCESS.

The results of the first two trips of the auxiliary schooner *Stranger*, landing tilefish at New York City, give evidence that the campaign of the United States Bureau of Fisheries to introduce that fish is a complete success. In the beginning some of the dealers expressed doubt whether the public would accept the fish in sufficient quantities to warrant the establishment of a regular fishery. However, the publicity campaign of the bureau has been effective and the fish are in demand with both dealers and public.

The first fare of 10,000 pounds reached New York late on October 21 and was put on the market early the next morning. Although the start was slow, the demand increased rapidly and by 3 o'clock the market was cleaned out, with orders unfilled. The second trip of 12,000 pounds docked on the morning of October 27 and despite the competition of an unusual amount of both cheap and fancy fish in the market the tilefish were taken by the dealers as fast as unloaded. All reports from those that have eaten the fish are good, and the dealers agree that a permanent demand is established.

The *Stranger* is now out on its third trip, this time with a camera man from one of the motion-picture companies along, so that pictures of the fish and fishing operations will soon be shown throughout the country.

The Bureau of Fisheries states that unless there should be a complete reversal of the results of fishing during the next two trips, it will be under no expense for fishing operations, and the fishermen will receive considerably more than what they regard as a reasonable return for their labor.

IMPORTS AND EXPORTS OF COPPER.

The imports of copper at the customs districts of New York, Massachusetts, Philadelphia, Maryland, Virginia, Galveston, New Orleans, San Francisco, Washington, and Michigan during the week ended October 23, 1915, were as follows: Ore, matte, and regulus (copper contents), 762,018 pounds, valued at \$111,586; pigs, ingots, etc., 1,652,307 pounds, valued at \$254,131. Cuba supplied 480,980 pounds of the ore, matte, and regulus and Canada 1,383,042 pounds of the pigs, ingots, etc.

The exports of domestic copper (pigs, ingots, etc.) during the week amounted to 15,229,219 pounds, valued at \$2,832,827, of which 5,341,186 pounds went to France, 4,356,064 pounds to Italy, 3,198,999 pounds to England, and 1,680,857 pounds to Russia.

SPAIN FIXES PRICE OF MERCURY.

[Consul Robertson Honey, Madrid, Oct. 7.]

The Spanish Government this day announces that the price of mercury sold by the lessees of the mines at Almaden shall be 385 pesetas per flask of 34.507 kilos. The Spanish Government is the owner of this property and the price fixed as above relates to transactions between the Government and the lessees. The figure is about \$1 per avoirdupois pound.

NEW ORLEANS BECOMES SPOT SISAL MARKET.

[Commercial Agent Edwin E. Judd, New Orleans, La., Oct. 21.]

A syndicate of New Orleans bankers yesterday announced the execution of a contract with the Henequen Growers Association of Yucatan for a loan of \$10,000,000 to be secured by warehouse receipts on sisal (henequen) stored by the association in the State-owned cotton terminal in this city. The negotiations have been going on for several months past, and the announcement of their successful culmination means the establishment in New Orleans of an important spot market for sisal. It also marks an important step forward by New Orleans bankers, who, chiefly through the heavy domestic demands upon them, have been rather reluctant to enter the foreign-loan field.

New Orleans has been the chief entry port for American imports of sisal for nearly a decade, the proportion moving through this port having risen from 13,202 tons out of a total of 100,301 tons imported in 1905 to 55,629 tons out of a total of 99,966 tons in 1910, and 95,331 tons out of a total of 185,764 tons in 1915. Heretofore this has been almost entirely a transit business, however, the fiber moving into the interior almost immediately. The Henequen Growers Association intends to market the product of the members direct to the consumer, and to this end will carry a stock valued at \$10,000,000 to \$15,000,000 in this city.

Steamer Service Arranged—Growers New Control Marketing.

The great State-owned cotton terminal [described in Daily Consular and Trade Reports for Mar. 19, 1914] now in operation makes it possible to store the sisal at a very moderate expense, and the warehouse receipts of this terminal are looked upon by banks as first-class security for loans. Steamship service between New Orleans and the sisal ports has been arranged, and it is planned to rush shipments to New Orleans as rapidly as possible.

This step on the part of the Yucatan sisal growers is the result of efforts which they have been making for several years to obtain more control of the marketing of their product. Some years ago the planters organized the Regulador del Mercado de Henequin, an association designed to support the selling price of sisal. The measures adopted by this association, while bringing some increase in the market price, did not fully satisfy the members, with the result that the present selling organization was decided on.

The general manager of the association is Mr. Julio Rendon, formerly general manager of the Yucatan railways. Associated with him in handling the negotiations were his brother, Dr. Victor A. Rendon, and Mr. Francisco R. Villavicencio, Mexican consul in New Orleans. Gen. Salvador Alvarado, Governor of Yucatan, has been one of the prime movers in the enterprise.

The run of blueback salmon in waters tributary to the Alaska stations of the United States Bureau of Fisheries has been declining for the past four years. The shortage at Afognak is attributed primarily to the presence of large deposits of volcanic ash as a result of the eruption of Mount Katmai in 1912. The increasing number of traps has affected Yes Bay and Yes Lake.

LIGHTHOUSE EMPLOYEES COMMENDED BY SECRETARY.

Secretary of Commerce Redfield commended several employees of the United States Bureau of Lighthouses during October for acts performed by them under circumstances in which lives or property were in danger. Assistance rendered disabled motor boats, fire fighting on a towboat, aid given to a blazing gasoline schooner, and rescues from drowning brought the several letter of recognition. These events occurred at points far apart, which were, respectively, in Wisconsin, Massachusetts, South Carolina, Illinois, North Carolina, Alaska, and New Jersey. The persons commended and the special acts recognized were:

Mr. Walter Ottosen, keeper, and Mr. Royal G. Petersen, second assistant keeper, Pilot Island Light Station, Wis., for assistance rendered on September 4, 1915, to a disabled motor boat with three persons aboard off Pilot Island, Wis.

Mr. Joseph B. McCabe, keeper, and Mr. Elnor C. Mott, assistant keeper, Deer Island Light Station, Mass., for assistance rendered on September 22 to the power boat *Madeline*, with four persons aboard, which had become disabled off Deer Island Light Station.

Capt. John P. Johnson, commanding the lighthouse tender *Cypress*, and the other officers of the tender, for assistance rendered on September 22 in aiding to extinguish a fire on the towboat *Henry Buck* in Charleston Harbor, S. C.

Mr. Severin M. Danielsen, keeper of Chicago Harbor Light Station, Ill., for assistance rendered on September 26, 1915, to five men who had difficulty in reaching the shore from the pier at the light station.

Mr. Isaac C. Meekins, assistant keeper of Croatan Light Station, N. C., for the rescue from drowning of Mr. Peter G. Gallop, keeper of the light station.

Capt. William E. Gregory, commanding the lighthouse tender *Kukui*, for assistance rendered by the *Kukui* on September 29 to the gasoline schooner *P. J. Abler*, which was on fire at Junenu, Alaska.

Mr. Alex Johnson, keeper of Ship John Shoal Light Station, N. J., for assistance rendered by him to a launch which was discovered to be in a disabled and leaky condition off Ship John Shoal Light Station, N. J.

DUNDEE'S TRADE WITH UNITED STATES.

[Consul E. Haldeman Dennison, Dundee, Scotland, Oct. 16.]

The value of the trade of Dundee with the United States and dependencies for the quarter ended September 30, 1915, was (inclusive of returned American goods) \$1,960,426, as compared with \$2,743,118 in the corresponding three months of last year. There was thus a considerable decrease, but as offsetting this it should be borne in mind that in the 1914 quarter there was one full month of the prewar period and that during August, 1914, there was a tremendous rush to ship goods ordered before the outbreak of hostilities.

The decrease extends throughout the list, the most notable being in jute bagging for cotton, of which in the September quarter of 1914 the value was \$297,837, whereas in the past quarter it had shrunk to \$74,112. Another big drop occurred in burlaps, which decreased from \$1,422,278 to \$1,002,610. The value of linen goods was \$359,738, as compared with \$423,100 in the corresponding quarter of 1914.

Porto Rico's share in the trade for the quarter just ended was \$25,190 (bags, \$15,838; other jute manufactures, \$9,352); Hawaii's, \$1,168 (whisky); and that of the Philippine Islands, \$2,402 (flax fabrics).

SOUTH AFRICA AS A BEEF-PRODUCING COUNTRY.

[Consul Edwin N. Gunnsalus, Johannesburg.]

It is confidently thought by many well-informed persons in South Africa that this country is destined to become one of the great beef-producing countries of the world. Under normal conditions there has been every reason to believe that South Africa would in time assume considerable prominence as a supplier of certain grades of beef for the European markets, but the conditions brought about by the war appear to be hastening the day when this expectation will be realized and that, as a result, this country may before very long become a keen competitor with Australia and Argentina in supplying the world's big markets with this commodity.

Owing to the extraordinary demand for beef, it is stated that the rise in prices has already enabled South African meat to obtain a footing in the London and other markets [see COMMERCE REPORTS for Aug. 20, 1915], and there are now indications that there will be a steady increase of these exports, provided South African producers pay due attention to market requirements.

Industry Will Require Time for Development.

There has of late been considerable newspaper and other discussion on the subject of the export of beef from South Africa, and Government experts have not been slow in giving expression to their views in regard to this trade. While it is held that this country can not expect to suddenly jump into prominence in the exportation of beef, it is felt that the steady growth of the beef industry in South Africa is assured, conditional on the proper efforts made to build up suitable herds of cattle, the establishment of the requisite packing plants, etc.

It is admittedly true that the class of animals marketed for beef in South Africa is unsuitable for the English market under normal conditions, although considerable improvement in quality has taken place within the past four or five years. Small shipments of prime beef from South Africa are now possible, but any extensive supply from this market would at present necessarily have to be of inferior grades, of which there is a large available surplus. It is said that the quality of meat this country can export is bringing in the London market fully twice as much as it does in Johannesburg, which is by far the biggest cattle and general produce market in South Africa.

Railway and Shipping Facilities Lacking.

In a thoughtful article on the beef-export question a local writer states:

Meat export can not be successful if the facilities for slaughtering, refrigerating, and transport by rail and sea are inadequate. However large the demand, no matter how attractive the market prices, and however able South African farmers may be to supply the demand, the industry could not be started on a large scale at once.

The South African Railway does not possess a sufficient number of refrigerator trucks. These will, of course, be put on the rails as soon as the Railway Department is assured of an adequate trade. Shipping presents a bigger difficulty, as it is extremely difficult to get space even at the high rates prevailing. As an opportunity for the establishment of what must become one of South Africa's greatest industries is so favorable, doubtless the Government will take steps to secure the provision of necessary facilities.

The industry is one that will benefit the country as a whole, and not one particular section.

AUSTRALIAN TRADE FAIR.

[Consul General J. I. Brittain, Sydney, Sept. 22.]

A trade fair to promote the sale of British goods and those of the allies was held in Sydney during the past 18 days under the auspices of the Sydney Chamber of Commerce.

One week during the fair was observed as "Australia week," at which time merchants were urged to make window displays wholly of Australian goods. The fair was largely in the interest of Australian manufacturers, although there were creditable exhibits of goods manufactured in the United Kingdom. There was a booth devoted to the products of France, such as toilet articles; a Belgian booth, where guns and firearms were exhibited; a Japanese booth, where glassware and surgical instruments and various other lines were displayed; and an Italian booth, where Italian wines were shown; but these exhibits were of minor importance compared with those of Australia.

There is a great tendency toward making Australia more of a manufacturing country and less dependent on foreign markets for manufactured goods. There is a feeling that the national resources of the Commonwealth should be developed to a greater extent. The two serious handicaps toward carrying out such projects are the distance from European markets and the high scale of wages in effect here. During "Australia week" one saw such signs as "We grow rich by utilizing our own resources;" "Support Australian interests and they will support you;" "More factories, more work, more wealth;" "By supplying our own wants we build up our nation."

HOLD-SPACE FOR AMERICAN COTTON.

[Extract from the Japan Chronicle for Sept. 17, transmitted by Consul George N. West, Kobe, Japan.]

At the final conference on Saturday between representatives of the Nippon Yusen Kaisha, Osaka Shosen Kaisha, and Toyo Kisen Kaisha on the one side and leading cotton merchants on the other, the much-discussed question of providing adequate tonnage for the importation of American cotton was settled for the time being, the Osaka Shosen Kaisha and Toyo Kisen Kaisha agreeing to place some extra steamers at the disposal of cotton merchants who approved the freight of 75 cents per 100 kin (100 kin=132.27 pounds) offered by the two steamship companies. As to the Nippon Yusen Kaisha, it was agreed between the parties that the company, being at the present moment unable to allot any extra steamers for the transportation of American cotton, should send two extra steamers in January and February next to Galveston for 50,000 bales of cotton to be brought to Japan via Panama, the freight to be fixed after further consideration by the Nippon Yusen.

On Wednesday the steamship company notified cotton traders that it was not prepared to undertake the transportation of American cotton via Panama at less than \$1.25 per 100 pounds—a figure which the merchants had previously claimed was too high. The cotton traders have, therefore, broken off negotiations with the Nippon Yusen Kaisha and have decided to take other steps to satisfy their requirements.

YEAR'S RECORD OF ITALIAN TOBACCO MONOPOLY.

[Consul William F. Kelley, Rome, Italy, Sept. 14.]

The Italian Government's tobacco monopoly is one of the most remunerative sources of revenue for the Kingdom. In the fiscal year ended June 30, 1914, the latest for which official figures are available, the total income from this source was \$67,511,852, an increase over the banner year 1912-13 of \$3,235,567. It exceeds the estimated income from this monopoly by \$3,435,852. The customs revenue on foreign manufactured tobacco imported into the Kingdom for the use of individuals amounted to \$26,441. Adding this to the revenue derived from the sale of tobacco, the total revenue from this monopoly amounts to \$67,538,294.

New regulations, established by decree of January 4, 1914, increased the prices of all tobacco, with the exception of snuff, by 40 per cent. There was a decrease in consumption of 1,847,982 pounds, and an increase in revenue of \$3,209,125. This increase in revenue is due partly to wider use of the better grades.

Receipts from Tobacco Industry for Year.

The receipts from the tobacco industry during the year amounted to \$446,166,874, of which the customs duties on private importations amounted to \$26,441; sales in Italy, \$444,438,056; exportation, \$1,016,881; sales to colonies and occupied territories, \$517,401; and sales on shipboard, \$168,093.

The revenue from sales in Italy was made up of the items: Cigars, cigarettes, pipe tobacco, and snuff, \$398,777,572; insecticides and extracts, \$45,660,484. Compared with the figures of the preceding year, there was a clear increase of \$3,033,135.

Among the regions where the greatest quantity of tobacco is consumed, Venice holds first place, with an annual per capita consumption of 39.255 ounces. The district of minimum consumption is Ascoli Piceno, with a per capita consumption of 8.50 ounces. The average consumption per capita throughout the Kingdom was 20.06 ounces, or a decrease of 1.87 ounces per capita, as compared with the preceding year, when the consumption per capita was 21.93 ounces. The per capita revenue from the monopoly throughout the Kingdom was \$4.07 as the maximum, and 76 cents as the minimum, the former in the Province of Leghorn, the latter in the Province of Sondrio.

Italian cultivation of tobacco has decreased in late years. During the year under consideration there were 173,571,086 plants in Italy, a decrease of 917,274 plants from the preceding year. The growers are subject to many rules and regulations. Permission to cultivate tobacco must be obtained from the Government, and the cultivation is under the control of the excise office. The tobacco so grown must be either sold to the Government at an appraised price or exported within three years.

Of the 23,456.7 long tons (long ton=2,240 pounds) of foreign-grown and manufactured tobacco for the year 1913-14, amounting in value to \$8,219,886, 16,242.6 tons were from the United States, 6,171.8 from the Orient, and 1,042.3 from various other countries.

Cause of Increased Imports from United States.

Increased importation of tobacco from the United States is due to its very good quality, and also to diminished cultivation of tobacco in

the Near East, where Italy previously purchased large quantities. The bulk of the importation from the United States into this Kingdom is composed of Virginia, Kentucky, and Maryland varieties. The purchase price of tobacco from the Orient was \$594.81 per long ton, as compared with \$533.68 for the preceding year.

The purchases of tobacco in the United States for the Italian Government are made directly by the Government agents stationed in New York.

The operation and maintenance of the many departments connected with this monopoly for the year 1913-14 cost \$17,578,927, compared with \$17,919,678 for 1912-13, an increase of \$340,751. Salaries of employees were increased by \$238,408, and new machinery for the factories cost \$91,619. Deducting operating expenses, purchase of foreign tobaccos, and overhead expenses from the gross sales of \$446,166,874, the monopoly gave a net revenue of \$51,796,712 to the Government for 1913-14. In the expenses are included the monopoly's contributions for the maintenance of the revenue service, frontier service, etc.

At the end of the fiscal year under review the value of the stock on hand was: Unmanufactured tobacco, \$17,765,312; manufactured tobacco, \$2,293,574; total, \$20,058,886.

MARKET FOR PHOTOGRAPHIC SUPPLIES IN PORTUGAL.

[Consul General W. L. Lowrie, Lisbon, Sept. 27.]

Portugal has been buying its supply of photographic apparatus and paper from England, France, and Germany. According to the latest statistics the annual importations are: Plates—from England, \$19,910; France, \$9,394; Germany, \$6,613; total, \$35,917. Paper—from England, \$14,919; France, \$5,720; Germany, \$3,966; total, \$24,605. Cameras—from Germany, \$17,182; France, \$5,954; England, \$3,054; total, \$26,190.

The type of camera most commonly in use is a folding camera made in Germany. The popular size is 9 by 12 centimeters (approximately 3½ by 4½ inches), which sells for \$20 to \$30. The English paper and plates known as "Imperial" are held in high esteem. American kodaks and films are on sale at the photographic supply houses throughout Portugal. The usual terms are 90 days, with 2 per cent discount for cash.

At the present moment dealers and photographers are not buying large stocks and are holding off for improved conditions. It is advisable, however, for American manufacturers to get in touch with the market, which may be a more attractive one later on.

[A list of the leading dealers in photographic supplies at Lisbon and Oporto may be had upon application to the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 67640.]

The large runs of chinook salmon that have appeared in the Columbia River during the past three years were again in evidence this season. It is believed by the United States Bureau of Fisheries that many of the eggs secured by the Little White and Big White salmon stations will be available for transfer to other stations for development.

RUSSIAN COTTON MARKET AND ACREAGE.

[Consul General John H. Snodgrass, Moscow, Sept. 18; from Trade and Industry Gazette for Aug. 22.]

On the Moscow cotton market prices have recently fallen considerably. First-quality Ferghana cotton is to be had at 28 or 28.50 rubles per pood (\$199.65 to \$203.21 per bale of 500 pounds), while not long ago prices were 30 or 31 rubles per pood (\$213.90 to \$221.03 per bale). It is true that these prices are almost nominal, as there has remained hardly any first-quality Ferghana cotton on the market. No doubt a considerable rôle is being played here by the undecided question of making a norm of prices and the uncertainty about the level on which these prices will be settled.

The factories do not dare to pay high prices on the eve of their being put down to a norm. Of not less importance, however, is the considerable augmentation of stock in hand in Moscow. In the last few days railway cars with cotton have been arriving at Moscow much more frequently than before. Cotton merchants, emphasizing this fact, state that prices are falling automatically in consequence of these arrivals on the market.

The factories, on the other hand, endeavor to buy in good time as much American cotton as possible. With this aim they have put a petition before the Minister of Finance, requesting him urgently to place foreign currency at their disposal. A favorable decision has been reached on this petition.

Another factor, contributing to the falling of prices, has been cotton from Khiva, which has just begun to come to Moscow. The quality of its fiber is as good as that of the highest sorts of Ferghana cotton. There were years when Khiva cotton was priced at about 50 kopecks per pood (\$0.36 per bale) higher than Ferghana first quality, but lately its quality has somewhat fallen off.

At present less business is being transacted on the Moscow market. There have been some transactions, chiefly in second and third qualities, of which there is still a sufficient quantity. There have also been transactions in cotton of the new crop, but without prices, as the extreme prices that will be fixed by the Moscow committee are not yet known. In general, one observes that there are buyers of new crop and sellers of the old one. There is still a great demand and need for Egyptian cotton.

Condition of Cotton Plantations in Transcaucasia.

According to information published by the statistical bureau of the Imperial Caucasian Society of Agriculture the sowing period has not been favorable this year in Transcaucasia. With a few exceptions there was heavy rainfall over the whole country during April and May. The weather was cold, the temperature sometimes falling below the freezing point. Especially on the Mugan newly cultivated lands have been spoiled by the flooding of enormous areas. The sowing period extended over nearly three months: April, May, and June. In several districts of the Erivan, Elisavetpol, Baku, and Tiflis Governments the sowing took place very late, and hardly anywhere was it done early.

Bad weather prevailed during nearly the whole spring. Cold in April destroyed a large quantity of early cotton sowings in many

districts. Nearly all the sowings made in the first half of April suffered from cold and frosts. Injurious insects were observed in all cotton-growing districts.

In the second half of June the condition of the plantations in the different Governments was as follows:

Governments.	Good.	Middling.	Bad.	Governments.	Good.	Middling.	Bad.
	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>		<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>
Erivan	27	54	19	Tiflis	0	23.2	66.7
Elisavetpol	26.5	54	9.5	Kutais	7.7	80.9	46.1
Baku	21.4	51.4	17.2				

Cotton Area Sown in 1915.

The area of cotton sowings in Transcaucasia was reduced this year by 10-15 to 50-80 per cent. The largest reductions took place in the districts of Surmalinsk, Etchmiadzin, Erivan, Aresh, Elisavetpol, Kazak, Bortchalinsk, and Tiflis. The fewest reductions have been in the districts of Nakhitchevan, Sharuro-Daralaghez, Zanzegursk, and Geogtchaisk. In the Shusha district the sown area was somewhat extended, because the cultivation of cotton suffered less there last year than in other places, and because the Moscow Commercial and Industrial Society supplied seed to the inhabitants and usually bought up the local cotton.

The following approximate figures are given for the area sown in Transcaucasia in 1915, compared with the average for the last four years: 1911-1914.

Governments.	Average.		Governments.	Average.	
	1911-1914	1915		1911-1914	1915
	<i>Acres.</i>	<i>Acres.</i>		<i>Acres.</i>	<i>Acres.</i>
Erivan	104,547	81,000	Kutais	6,701	1,750
Elisavetpol	137,516	97,000	Total	337,882	249,050
Baku	74,930	66,000			
Tiflis	14,152	4,300			

Under normal conditions the crop from an area of 259,000 to 262,000 acres can be about 108,000 bales of cotton fiber.

TASMANIA ORE COMPANY CONTRACTS FOR ELECTRICITY.

[Consul W. A. Bickers, Hobart, Aug. 31.]

The directors of the Complex Ores Co. (Ltd.) have contracted with the hydroelectric department of the State of Tasmania for the use of a large amount of electricity. This company was organized several years ago to treat zinciferous ores and manufacture carbides. As the process requires cheap power, the concern organized the Hydroelectric Power Co. here, but after spending a large amount of money on the construction of a power plant it was found that sufficient capital could not be secured to complete the work. The unfinished electric-power plant was therefore sold to the State of Tasmania and is now being completed by the State.

MANUFACTURE AND CONSUMPTION OF TOBACCO IN EGYPT.*(Consul Arthur Garrels, Alexandria, Sept. 7.)*

Tobacco as a raw material and in a manufactured state finds a place in Egyptian commerce and industry almost exclusively in the production and marketing of the Egyptian cigarette. The making of cigarettes in Egypt, which is primarily an agricultural country, is the only manufacturing industry of importance. Although Egypt is fitted both in climate and soil for the cultivation of tobacco, its entire supply of leaf tobacco comes from abroad. The growing of tobacco in Egypt is prohibited.

All manufactured tobacco from the United States and other countries having no special agreement with Egypt affecting tobacco, pays a duty in Egypt of 420 milliemes per kilo (\$0.95 per pound). Manufactured tobacco from countries having such special agreements is subject to a duty of only 400 milliemes per kilo (\$0.905 per pound).

Leaf tobacco from the United States and other countries of the first category pays an import duty of 320 milliemes per kilo (\$0.724 per pound), while imports from countries having special agreements are dutiable at 300 milliemes per kilo (\$0.68 per pound). Stemmed leaf is placed in the same category as manufactured tobacco. Leaf tobacco reexported in the shape of cigarettes is entitled to a drawback of 100 milliemes per kilo (\$0.225 per pound).

Imports and Exports—Manufacture Limited to Cigarettes.

Imports of leaf tobacco into Egypt during 1913 (figures for 1914, on account of the abnormal conditions imposed by the war, should not be used as a criterion for deductions) from various countries of origin were as follows:

Imported from—	Pounds.	Value.	Imported from—	Pounds.	Value.
Austria	227, 210	\$46, 287	Italy	545	875
Bulgaria	221, 315	50, 090	Roumania	16, 867	2, 280
China	146, 562	16, 592	Russia	4, 306, 497	1, 169, 696
United States	3, 128	205	Serbia	54, 848	7, 445
French Mediterranean possessions	19, 160	2, 625	Turkey	5, 794, 307	1, 967, 243
Greece	7, 235, 592	1, 801, 520	Total	13, 926, 040	5, 064, 048

Tobacco is smoked almost exclusively in the form of cigarettes and cigars. The manufacture of tobacco in Egypt is limited to cigarettes. Its extent may be judged by the imports of leaf tobacco. An approximation of the extent of the annual consumption may be obtained by making the necessary deductions from imports of leaf, exports of cigarettes, and imports of cigars and tobacco in other forms, as set forth in the following résumé for the year 1913:

Kinds of tobacco.	Pounds.	Value.
IMPORTS.		
Leaf tobacco	13, 026, 040	\$5, 064, 048
Cigars	155, 363	91, 803
All other tobacco	136, 362	66, 066
EXPORTS.		
Cigarettes	1, 068, 467	1, 570, 940

The limited field in Egypt for the sale of manufactured tobacco other than cigarettes would hardly warrant its manufacture there on any larger scale. The native smokes cigarettes and tombac. Tombac is a mixture of tobacco and other ingredients and is smoked in the water pipe. The local Greeks and Italians, of whom there are large colonies, smoke cigarettes and the cheaper grades of cigars. The higher grades of cigars and pipetobacco are smoked by the better class of Europeans.

AMERICAN TRAFFIC WITH GREENLAND.

American commercial interest in Greenland rests wholly in obtaining supplies of cryolite from there. The quarries at Ivigtut, at the southern extremity of the land, furnish nearly all the cryolite used in the world. Mining operations there were described in Daily Consular and Trade Reports for April 11, 1914. The United States is now importing greater quantities of this cryolite, its use being in manufacturing opaque glaze for enameling ironware (the imports of which from Europe are now cut off), and in fluxes for electrolytic aluminum and white Portland cement. Imports were only 36 tons in 1910 (when the price averaged \$65 per ton), but went up to 2,007 tons (average \$23.46 in 1911). Imports advanced steadily to 2,157 tons (average \$22 per ton) in the fiscal year 1914, and to 4,569 tons (average \$20) in the fiscal year ended June 30, 1915.

Cryolite seems to be the only article shipped from Greenland to the United States. Greenland sent to Denmark in 1913, \$486,000 worth of whale and seal oil; fox, seal, and other skins, eiderdown, and cryolite. The statistics of the United States do not show the shipment of any American goods to Greenland, but the 14,000 inhabitants of that country bought \$212,700 worth of merchandise in Denmark in 1913. The trade of Greenland is a State monopoly, directed by the Royal Danish Greenland Company of Copenhagen.

The villages of Greenland are Upernivik (said to be the world's most northern settlement), Godhavn (generally recognized as the capital), Egedesminde, Sukkertoppen, Christianshaab, Jakobshavn, Umanak, Godthaab, Frederikshaab, Julianshaab, and Ivigtut.

Regarding the scientific interest in Greenland the following from the last edition of the International Yearbook summarizes the present explorations and researches:

Apart from MacMillan's scientific work in the Cape York region, Rasmussen has continued his ethnographical and other researches in that district. He also made arrangements for his North-Polar expedition of 1915, when Cape York will be made the home station. Under the direction and inspiration of the efficient Greenland Commission, Denmark has continued its exploration of fauna, flora, ethnology, and geology of Greenland. A knowledge and appreciation of the value of such extended researches has been limited among other nations, owing to the text of the volumes of the "Meddeleiser" (the official publication) being in Danish. In 1914, however, under the editorship of W. Thalbitzer, there were compiled and correlated all available ethnographical data relative to the Ammassalik Eskimo, natives of the east coast. This volume appears in English, and is published in Copenhagen at the expense of the Carlsberg Fund. It treats of the environment, climate, material and intellectual culture, social life, beliefs, character, traits, hunting weapons, dress and ornament, toys, music, housekeeping, and social customs of the Ammassaliks. These natives practically pertain to the stone age period, which makes this memoir valuable to ethnologists.

FOREIGN TRADE OF ITALY FOR FIRST QUARTER.

[Consul William F. Kelley, Rome, Sept. 23.]

The following statistics for the first three months of 1915 have been compiled from official figures just made public by the Minister of Finance. They show the position of Italy in the world's markets on the eve of its entry into the European conflict, in May, 1915.

During the period under consideration the total value of merchandise imported into Italy was \$125,236,342; exports for the same period were \$120,604,158, excluding the import and export of precious metals. The total foreign trade amounted to \$245,840,500, as against \$287,031,033 for the corresponding period of 1914, a decrease of \$41,190,533. Imports decreased approximately \$37,963,000 and exports \$3,228,000.

The bulk of Italy's foreign trade for the period under consideration was with Austria-Hungary, Germany, Great Britain, France, Switzerland, the United States, and Argentina, and during this period 80 per cent of its foreign trade was carried on with them, as shown by the following comparative table. The remaining 20 per cent, not being pertinent to the present analysis, is omitted.

Countries.	Imports from.		Exports to.	
	First three months, 1914.	First three months, 1915.	First three months, 1914.	First three months, 1915.
United States.....	\$23,910,000	\$46,240,000	\$12,285,000	\$13,750,000
Argentina.....	270,000	7,797,000	7,742,000	4,342,000
Austria-Hungary.....	11,483,000	3,956,000	11,387,000	12,130,000
England.....	27,192,000	18,778,000	14,630,000	16,066,000
France.....	13,895,000	5,906,000	12,102,000	18,504,000
Germany.....	29,142,000	15,034,000	31,033,000	23,140,000
Switzerland.....	3,551,000	2,702,000	12,796,000	10,058,000
Total.....	109,443,000	100,412,000	102,034,000	98,654,000

From the foregoing it will be seen that imports from the United States nearly doubled. This is due principally to the increased importation of wheat, that item alone representing 84½ per cent of the excess of \$22,330,000 from the United States, and 40½ per cent of the total imports from that country.

The enormous increase in imports from Argentina is also due to large purchases of wheat and cereals.

The falling off in imports from Austria-Hungary during the period under consideration is due to smaller importations of wood pulp and embargoes on other articles that Italy formerly imported.

SHEFFIELD'S SALES TO UNITED STATES.

[Consul John M. Savage, Sheffield, England, Oct. 4.]

Sheffield's sales to the United States in the quarter ended September 30 last had a declared value of \$487,547. In the corresponding three months of 1914 the total was \$628,911. This 22 per cent decrease was distributed through all of the principal items entering into the trade, the cutlery invoiced at this consulate for shipment to the United States amounting to \$60,301, as against \$107,672 in the third quarter of 1914; electroplate and silverware, \$900, against \$10,973; horn, pearl, etc., \$11,809, against \$20,903; platinum, nil, against \$25,366; and steel and manufactures of, \$392,660, against \$446,202.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau and its branch offices.]

Hardware, No. 19051.—An American consular officer in Italy reports that a man in his district is in the market for nails, wire screens, and clamping bolts. Correspondence should be in Italian. Freight rates are desired with quotations.

Vulcanized fiber, No. 19052.—The Bureau has been informed by an American consular officer in Australia that a man in his district desires to communicate with American manufacturers or wholesale dealers in vulcanized fiber, similar to sample which may be examined at the Bureau or at its branch offices. (Refer to file No. 67775.)

Paper, No. 19053.—A commercial organization in the United States transmits the name of a firm in South America which desires to be put in touch with paper manufacturers. The firm is particularly interested in paper for daily papers and publications.

Timber and building materials, No. 19054.—An American consular officer in the Netherlands reports that a firm in that country desires to buy timber and building materials, to sell in Holland and colonies. The firm would pay cash against documents, with 2 per cent discount, or three months' time. References are given.

X-ray apparatuses and accessories, No. 19055.—An American consular officer in Spain writes that a man in his district wishes to communicate with American manufacturers of X-ray apparatuses and accessories. Correspondence should be in Spanish.

Forwarding, and warehouses, No. 19056.—A commercial bank in southern Russia writes the Bureau that it has enlarged its forwarding department and is now in a position to take care of all parcels for the southern part of Russia. The bank also states that it has large warehouses in which could be stored such goods as are purchased now and which it is impossible to have shipped at present.

Candle-making material, No. 19057.—An American consular officer in an insular possession reports that a man in his district desires samples and prices of raw material suitable for the manufacture of candles. He is especially interested in wax substitute and kindred imitations used in candle making. Samples may be examined at the Bureau or its branch offices. Correspondence should be in Portuguese, if possible. (Refer to file No. 67772.)

Machinery, electric lamps, etc., No. 19058.—A commercial organization in the United States transmits the name of a man in Spain who desires to establish connections with American manufacturers of sewing-machine supplies and needles; knitting-machine needles and accessories, electric lamps; and machinery. Correspondence should be in Spanish.

Leather, No. 19059.—An American consular officer in Holland reports that a firm in his district wishes to buy sole and soft leather for shoes. The firm proposes to pay cash, less 3 per cent, on receipt of the goods. Reference is given.

Phonograph records, No. 19060.—The Bureau is informed by an American consular officer in South America that a firm in his district wishes the agency for small phonograph records. Catalogues should be sent. Correspondence is preferred in Spanish or Italian, but English may be used. The firm will pay cash.

Sodium sulphate, or salt cake, No. 19061.—An American consular officer in Italy writes that a firm in his district desires to be placed in communication with American chemical manufacturers who produce sodium sulphate or salt cake.

Steel products, enameled ware, glassware, etc., No. 19062.—The Bureau is informed by an American consular officer in the Netherlands that a firm in that country wishes to correspond with American manufacturers of steel products; tools; axes; bars; plantation tools; small ironware, such as hooks, padlocks, and wire nails; axes; hatchets; flexible wire; galvanized wire; enameled ware; and glassware. References are given.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Heating and ventilating apparatus, No. 2754.—Sealed proposals will be received at the office of the Superintendent of Prisons, Department of Justice, Washington, D. C., until November 27, 1915, for furnishing and delivering at the United States Penitentiary, Atlanta, Ga., heating and ventilating apparatus for the west main cell wing. Copies of specifications and further information may be had on application to the above-named office.

Dredging, No. 2755.—Sealed proposals will be received by the Lighthouse Inspector, Buffalo, N. Y., for dredging slip at Buffalo Lighthouse Depot, South Pier, Buffalo Harbor, N. Y. Further information may be had on application to the above-named office.

Construction work, No. 2756.—Sealed proposals will be received at the United States Engineer Office, Customhouse, Memphis, Tenn., until November 6, 1915, for constructing about 90,000 cubic yards of earthwork. Further information may be had on application to the above-named office.

Panama Canal supplies, No. 2757.—Sealed proposals will be received at the office of the General Purchasing Officer of the Panama Canal, Washington, D. C., until November 10, 1915, for furnishing, by steamer, free of all charges, on dock at either Colon (Atlantic port) or Port of Ancon (Balboa, Canal Zone, Pacific port), Isthmus of Panama, steel window frames and doors, galvanized steel or iron, spring steel, steel drill rods, wire cable, wire, horseshoes, nails, boat spikes, nuts, bolts, turnbuckles, joining shackles, missing links, cable clips, reamers, twist drills, sheet copper, sheet brass, bronze bars, yellow metal, bronze wire, cloth, zinc plate, solder, lead pipe, pipe fittings, ferrules, foot valves, cocks, kitchen sinks, shovels, wheelbarrows, harness, basile leather, rubber tires, manila rope, oakum, and sandpaper. Circular No. 985.

Azimuth instruments, No. 2758.—Sealed proposals will be received at the office of the Chief of Ordnance, United States Army, Washington, D. C., until November 11, 1915, for furnishing and delivering f. o. b. contractor's works, Warner & Swasey azimuth instruments, model of 1910. Drawings may be examined at the Washington office.

Panama Canal supplies, No. 2759.—Sealed proposals will be received at the office of the general purchasing officer of the Panama Canal, Washington, D. C., until November 17, 1915, for furnishing, by steamer, free of all charges, on dock at either Colon (Atlantic port) or port of Ancon (Balboa, Canal Zone) (Pacific port), Isthmus of Panama, cast-iron keel blocks, cast-iron bilge-block slides, garbage incinerator, drill press, lathe, steel tubing, spring plates, nails, rivets, staples, pipe fittings, water-closets, sheet lead, holystones, currying brushes, plate glass, air-brake hose, leather, and lard oil. Circular No. 988.

Landscape gardening, No. 2760.—Sealed proposals will be received at the Office of the Supervising Architect, Treasury Department, Washington, D. C., until November 13, 1915, for planting trees, shrubs, etc., on the grounds of the Federal building at Steelton, Pa. Drawings and specifications may be had on application to the custodian of the building or at the Washington office.

Iron and steel scrap, No. 2761.—Sealed proposals will be received at the office of the General Purchasing Officer of the Panama Canal, Washington, D. C., until November 22, 1915, for the purchase of miscellaneous iron and steel scrap which is no longer needed. Circular No. 986.

Construction work, No. 2762.—Sealed proposals will be received at the Naval Station, Pearl Harbor, Hawaii, and at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until December 4, 1915, for constructing one reinforced concrete power house, one reinforced concrete operating building, and one wooden double quarters for chief operator at the Naval Station, Pearl Harbor. Plans and specifications may be obtained on application to the Bureau of Yards and Docks, Navy Department, Washington, D. C., or to the commandant of the above-named naval station.

EXPORTS FROM LONDON TO UNITED STATES.

The total value of the articles invoiced through the American consulate general at London, England, for the United States during October was \$11,645,565, compared with \$11,819,822 for September. The shipments of rubber were valued at \$3,000,720, against \$3,006,796 for September; precious stones, \$1,523,038, against \$1,077,214; wool, \$884,618, against \$563,503; hides, \$725,909, against \$689,806; and furs, \$676,756, against \$452,729.

CENTRAL AMERICA—WEST INDIES TRADE DIRECTORY.

The Bureau of Foreign and Domestic Commerce has just issued a "Trade Directory of Central America and the West Indies," presenting lists of merchants and importers, arranged by countries and cities and classes of business. The book, which contains 256 pages, has been prepared to meet a popular demand for such a publication, and the Bureau has aimed to make it of material assistance to American business houses in developing their trade with those countries. It is similar in scope to the trade directory of South America, which has been widely circulated by the Bureau. An interesting feature of the book is the use of descriptive material relating to each of the countries represented and to the principal cities, giving port statistics, chief products, imports and exports, mail and telegraph facilities, population, area, and any other facts that may be of interest to persons or companies aiming to extend their business relations into that part of the world.

A classification schedule affords the means of finding without delay lists of dealers interested in any particular commodity which is not of sufficient importance to be classified in alphabetical order in the trade lists. An additional convenience is the making of subclassifications, as in the case of "fresh and dried fruits," under which importers and exporters are given separately, and "furniture and fittings," a class which is divided into "general" and "office" furniture.

Copies of the directory may be obtained at 60 cents each from the Superintendent of Documents, Government Printing Office, Washington, D. C., or from the branch offices of the Bureau of Foreign and Domestic Commerce.

AMERICAN TRADE FOR LAST WEEK OF OCTOBER.

The imports, duties collected, and exports for the week ending October 30, 1915, at the 13 principal customs districts of the United States, handling 91 per cent of the total imports and exports, based on transactions in the month of August, 1915, follow:

Districts.	Imports.	Duties collected.	Exports.
Georgia (Savannah)	\$18, 173	\$591	\$1, 232, 666
Massachusetts (Boston)	4, 216, 549	239, 407	7, 115, 994
New York	17, 976, 977	2, 677, 424	48, 716, 715
Philadelphia	1, 391, 791	241, 939	3, 682, 889
Maryland (Baltimore)	446, 226	31, 841	2, 032, 389
Virginia (Norfolk)	61, 789	9, 275	676, 766
New Orleans	1, 266, 669	15, 933	3, 962, 621
Galveston	21, 917	1, 031	4, 662, 679
San Francisco	1, 634, 879	61, 743	1, 764, 975
Washington (Seattle)	2, 753, 276	19, 111	796, 788
Buffalo	1, 035, 479	57, 867	1, 739, 334
Chicago	784, 800	167, 303	103, 980
Michigan (Detroit)	735, 498	27, 482	3, 423, 345
Total	32, 334, 043	3, 540, 656	74, 670, 952

The cotton exported during the week ended October 30, 1915, at the 12 principal customs districts of the United States follows:

Districts.	Bales.	Districts.	Bales.
Georgia	10, 522	Virginia	
Massachusetts	183	Galveston	64, 431
Maryland		New Orleans	21, 563
New York	7, 627	San Francisco	
North Carolina	11, 604	Washington	11, 587
Philadelphia		Total	127, 587
South Carolina			

MARKET FOR CORN IN SAN LUIS POTOSI.

[Consul Wilbert L. Bonney, San Luis Potosi, Mexico, Oct. 25.]

Corn is now selling in San Luis Potosi for the equivalent of \$1.17 per bushel, United States currency, and there is an active demand at that price, and even at a higher figure. This consulate is informed that American corn can be delivered in Laredo, Tex., for \$0.75 per bushel, in car lots. If shipping facilities and guaranty of safe arrival could be secured there is a market in San Luis Potosi for several trainloads. Points between here and the border can also be supplied at a profit.

Money for the purchase of corn seems plentiful here, and every incoming car is immediately disposed of. There would be little difficulty in turning the local money into American exchange for payment for corn. The district to the south and west, whence supplies have been secured, has been drawn upon by Mexico City recently and the prices have risen above the American markets during the last month. Import duties upon corn were removed by decree of September 29, 1915.

Canadian imports of merchandise totaled \$417,272,203 during the 12 months ended September 30, 1915, compared with \$531,853,489 the year previous.

CHINA PLANS INDUSTRIAL PROGRESS.

[London and China Telegraph, Oct. 18.]

The Chinese Ministry of Agriculture and Commerce has decided to include an additional sum of \$15,000,000 in the budget estimates for the next year for the purpose of pushing the development of industrial and commercial undertakings. This sum is proposed to be apportioned as follows: (1) The establishment and equipment of a model industrial factory, \$6,000,000; (2) the establishment of various kinds of working depots for experimental purposes, \$1,000,000; (3) subsidies and rewards for the encouragement of industrial and commercial enterprises, mining operations, fishery, and cattle-breeding business, \$4,000,000; (4) initial expenses for the improvement of agricultural methods, \$3,000,000; (5) initial expenses for the improvement of products for export, \$500,000; (6) provision of funds for the training of experts in various branches of the industrial business. [These amounts represent silver currency, or about one-half the equivalent of United States gold.]

A Chinese merchant named Chow Wen-ching has petitioned the Ministry of Agriculture and Commerce for permission to establish a sugar refinery in Peking, to be conducted on foreign lines. It is said that the petition has been granted, and that the work of building will commence immediately.

BRITISH COLUMBIA FISHERIES YIELD FOR AUGUST.

[Vice Consul G. C. Woodward, Vancouver, Oct. 20.]

The value of the fishing catch of British Columbia for August, 1915, amounted to \$433,614 for the southern district, \$1,269,551 for the northern district, and \$193,115 for the Vancouver Island district, making a total of \$1,896,280, as compared with the production of \$1,898,528 for the corresponding month of the previous year, a decrease of \$2,248. The British Columbia production amounted to more than 50 per cent of the total Canadian production for that period.

The salmon taken in the southern district amounted to \$366,827 in value; in the northern district to \$1,136,191; in the Vancouver Island district to \$173,466—a total of \$1,676,484, compared with \$1,792,042 in the corresponding period of 1914.

PICKLING ONIONS FOR ENGLAND.

[From report of Canadian trade commissioner at Birmingham, England, Oct. 7.]

Over \$6,000,000 worth of onions are imported annually by the United Kingdom, among which are large quantities of small onions used by picklers. Consignments have arrived from Canada in past years, and sales could be considerably augmented if the smaller onions were selected for this market. The sizes in common demand range from 1 to 2 inches in diameter, and they are preferred unpeeled, in bags containing 100 pounds.

The British imports of onions during the year 1914-15 totaled \$7,403,865, of which Spain supplied \$4,627,520 worth; Egypt, \$1,049,160; Netherlands, \$972,110; France, \$105,000; Portugal, \$381,995; and the United States, \$85,205.

ARGENTINA TO BUILD GRAIN ELEVATORS.

[Consul General W. Henry Robertson, Buenos Aires, Sept. 29, supplementing report published Sept. 28.]

The President of Argentina sent a message to Congress on September 18 recommending the passage of a bill to authorize the Executive to contract for the construction of a system of grain elevators at such ports and railway terminals as may be considered advisable. The proposed law contains, briefly, the following provisions:

The number of elevators, their capacity, and their location would be determined by the Executive. The required funds would be furnished by an issue of Government bonds for 50,000,000 paper pesos (\$21,225,600 United States gold) at 5 per cent annual interest and amortization at 1 per cent annually. The Executive would be authorized to call for bids for the construction and working of the elevators, either for the whole system or for certain sections. All materials and machinery needed from abroad would be imported free of duty, and the elevators, with the land on which they were built, would be exempt from all national, provincial, and municipal taxes. All railway companies must agree to construct branch lines connecting their roads with the elevators and furnish proper facilities for carrying grain. Concessions would be granted to the exploiting companies, either local or foreign, for a term of 10 years, renewable for a like period. The Executive would be authorized to make direct contracts for the construction and maintenance of the elevators if satisfactory bids should not be offered or if the terms should be unacceptable. Any difficulties that might arise in connection with the work would be submitted to arbitration.

[According to the Oct. 1 issue of the Review of the River Plate, the regular session of the Argentine Congress closed Sept. 30 without the grain-elevator bill having been passed. The journal states that it is possible an extra session may be called, when the bill may be up for consideration.]

[Review of the River Plate, Oct. 1.]

Proposal of United States Capitalists.

Immediately following the recent presentation to the Argentine Congress of the Government's project for dealing with the grain-elevator problem, an important proposal was made to that body by Dr. Ricardo C. Aldao on behalf of a group of United States capitalists. [Mention of North American interest in the erection of grain elevators in Argentina was made in COMMERCE REPORTS for Aug. 24, 1915.]

The gist of this proposal is that instead of the Argentine Government paying for the construction of the elevators by means of a 5 per cent bond issue, the syndicate represented by Dr. Aldao would erect the elevators at its own cost, exploiting them thereafter on the basis of terms approved by the Government. At the end of 20 years the entire system would pass to the absolute ownership of the Argentine Government free of any claim. The syndicate asks in return that the Argentine Government should give its guaranty to an issue of 6,000,000 gold pesos [\$5,788,800] in 6 per cent debentures which the syndicate would place. Should the proposal be accepted, the syndicate is prepared to place 25,000,000 gold pesos [\$24,120,000] in Argentina for the exclusive purpose of financing the warrants which the company would issue in terms of the warrant law.

Location of Elevators.

The plan proposed by the syndicate involves the erection of three terminal elevators at the ports of Buenos Aires, Rosario, and Bahia Blanca, respectively, and of 150 rural elevators distributed at strategic points throughout the cereal zones of the Pampa Territory and the Provinces of Buenos Aires, Cordoba, Santa Fe, and Entre Rios.

The annual loss to the country through the lack of grain elevators is estimated at 70,000,000 paper pesos [\$29,715,800] by the Government, and this fact sufficiently emphasizes the urgency of the grain-elevator bill now before Congress.

TANNING MATERIALS OF MADAGASCAR.

[Consul James G. Carter, Tamatave, Aug. 23.]

The only tanning material produced in considerable quantity in Madagascar is red mangrove bark. During the past three or four years production has been declining, due to the scarcity of mangrove trees and the consequent closing of large forests to exploitation for a number of years, and, more recently, to transportation difficulties. The two French navigation companies now serving Madagascar always find sufficient freight of a higher class than bark, and consequently it is difficult to obtain shipping space for the latter.

The quantity of bark shipped in 1914 was only 11,406 metric tons, valued at \$132,087, compared with 21,938 tons, valued at \$283,050, in 1913. The maximum quantity shipped was in 1911, when 53,357 tons, valued at \$703,611, were exported. Inasmuch as this bark has not been worked normally during the past year or two, it is probable that important quantities are now obtainable, if a steady demand arises and if arrangements can be made for shipping the product. The only possible way seems to be to send ships to Madagascar in order to take on large cargoes of bark, but in view of the scarcity of available bottoms and the cheapness of the cargo this might be somewhat difficult.

[A list of Madagascar exporters of mangrove bark may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices by referring to file No. 67481. A description of the bark industry of the island appeared in Daily Consular and Trade Reports for Jan. 24, 1912.]

AMERICAN VACUUM CLEANERS IN CANADA.

[Consul Felix S. S. Johnson, Kingston, Ontario, Oct. 15.]

A noticeable feature of the furniture-store window displays in Kingston is the prominence given to vacuum cleaners of American make. With the interruption of supplies from elsewhere American manufacturers have succeeded in establishing their cleaners on a firm footing here. There are to-day a dozen or more business houses selling them, besides several persons acting as individual agents.

The outlook for this class of goods is encouraging. The demand is mostly for a moderate-priced, hand-operated machine retailing for \$12 to \$15, but there is a sale for more expensive ones also. This latter fact was well illustrated by the recent experience of the manager of a large hardware store who, by working with a selected list of the firm's customers, sold 20 cleaners after his corps of 13 clerks had declared the price (\$135) too high for the local trade.

BIG FALLING OFF IN TRADE OF MOMBASA.

(Consul Perry C. Hays, Mombasa, British East Africa, Sept. 2.)

Because of conditions created by the war, foreign commerce passing through the port of Mombasa has been greatly diminished. Imports decreased from \$5,992,854 during the first six months of 1914 to \$3,606,520 in the corresponding period of the present year. Exports fell from \$3,490,921 to \$2,123,856.

The quantity of goods imported bears a close relation to the value of the products exported. As the principal crop, cotton, has not found a ready market, the money ordinarily available for purchasing foreign merchandise has been reduced to a marked degree. The item of hides and skins, which ranks comparatively high in export values, underwent a decline from \$1,126,609 to \$447,993, because of the restricted foreign market. Embargoes on other articles have had an adverse influence on the export and import trade.

The Indian merchants here are manifesting greater interest in direct trade relations with American exporters, but they are confronted with difficulties in the matter of terms of credit and in the lack of adequate shipping facilities between the United States and the East African littoral. Until these handicaps can be overcome no great increase in the trade with America can be expected.

GOCARTS SENT ABROAD CARELESSLY PACKED.

(Consul Samuel H. Shank, Palermo, Italy, Sept. 2.)

There was careless packing in a shipment to this city from Ohio of six gocarts ordered from an American firm in December. The carts are made of wood, rattan, and steel, and each one was packed in a pasteboard box. They were shipped from New York April 8, by a steamer which stopped at a Spanish port and finally arrived at Naples July 7. There they were transshipped, and reached Palermo August 4. All were more or less damaged, but one was so broken that repairs were impossible, and it was returned to the company. This was a small shipment, and crating would have required little time or expenditure of money, but the company either did not care how its goods arrived or was too careless to consider the matter. Goods that were to travel by rail and ship for 5,000 miles, to be transferred from rail to boat, and from one ship to another, and then from the ship to the customhouse, were packed as if the transportation were from a store to a residence in the same city. Such packing not only costs the shipper money for repairs, but discourages the importer from giving future orders.

CONSULAR TRADE CONFERENCES.

Consul George S. Messersmith, of Fort Erie, Canada, reports that he will be in the United States on leave of absence from November 1, 1915, until January 1, 1916. During November his address will be Lewes, Del., and during the first three weeks of December he will be in Washington, D. C.

Canadian produce exported during the 12 months ended September 30, 1915, aggregated \$474,937,085, against \$424,057,093 for the preceding year.

AMERICAN TRADE WITH RUSSIA.

[Ambassador George T. Marye, Petrograd, July 3.]

There is at present a widespread desire in Russia for direct trade relations with the United States, the opinion strongly prevailing that there should be an elimination of all unnecessary handling of such trade through other countries. It is obvious that the profit on commercial transactions between Russia and the United States, both import and export, until the war broke out, accrued chiefly to intermediary European countries through which the goods passed. While it is undeniable that the services rendered by such firms may have been in many ways mutually convenient and advantageous to American and Russian interests, nevertheless the extra freight charges made necessary by sending the goods to an intermediary country instead of direct to Russia, and also the middlemen's commissions or profits, created such a burdensome extra cost as to result in a serious handicap to Russian-American trade. American firms that should have had not only an extremely large but a highly profitable trade with Russia have allowed the profits to be skimmed off their business and the business itself to be retarded in its development, simply because of being unwilling to do any business in Russia on a credit basis.

Comparative Effectiveness of Indirect and Direct Trade.

The chief articles of import into Russia in which trade has been checked and profits reduced, for both Russian and American firms, have included cotton, cottonseed oil, machine tools, boots and shoes, wood-working machinery, agricultural implements and machinery, automobiles, typewriters and other office appliances, and carbon paper. The only important lines in which American firms have seriously attempted to do a direct business in Russia are agricultural machinery and implements, and sewing machines. An American agricultural-implement concern maintains a large factory near Moscow where various parts can be manufactured, and has warehouses and business offices in every important agricultural center of Russia and Siberia. This company has furnished a splendid example of the advantage of assuming direct charge of its own business interests in this country. An American sewing-machine company has also made a signal success of direct business in Russia, selling many thousands of machines every year, mostly on credit, with a remarkably low percentage of loss.

Export Trade Indirect—Lack of Financial Facilities.

The principal articles of export (mostly indirect) from Russia to the United States have included hides, Russian linens, flax, wax, linseed, hemp, soya beans, sunflower seeds, buckwheat, and rags. American manufacturers in need of these raw materials from Russia have been obliged to pay considerably higher prices for them than they would have paid had they bought them direct in Russia. Even in eastern Siberia the export trade with the United States seemed to have been arranged largely through intermediaries.

These conditions were largely due to the absence of direct banking facilities between Russia and the United States. Not a single Russian bank has a branch in the United States nor has a single American bank a branch in Russia. It has never been the practice of

Russian banks to keep important balances with their American correspondents nor American banks with Russian banks. Such mutual balances as were maintained were only to meet drafts on letters of credit. Any large transactions involving the payment of considerable sums of money for goods purchased were carried on through banks of other nationalities. Thus there was practically no direct money exchange between Russia and the United States.

Moreover, not a single American security was quoted on any Russian stock exchange, nor were any Russian securities, even those of the Russian Government, listed or traded in on any of the American stock exchanges, notwithstanding that there might have been a special market for such securities among the large Russian population in the United States. Even the American dollar had to be quoted in Russia by computation as to its value in marks, francs, or pounds sterling.

American Ignorance of Russian Credit Conditions.

Another serious difficulty has been that American manufacturers have had no facilities for accurate study or knowledge of credit conditions in Russia, and the Russian business world has been largely a closed book to them. The chief American commercial agencies had no branches in Russia, and inquiries about Russian firms have had to be made through a European commercial agency that maintained branches in Petrograd, Moscow, Warsaw, and Odessa, and had agents in almost every city in the Russian Empire with 10,000 or more inhabitants.

Generally speaking, American firms have been able to obtain information as to credits only at great expense and after considerable delay. In consequence American manufacturers have felt obliged to insist, when dealing direct with Russian buyers, on cash with orders, as they have not liked to give credit to concerns about which they knew little or nothing. The Russian merchant, on the other hand, can not appreciate the motives of those who refuse him credit, and, as a rule, will not agree to pay cash unless it is impossible to get the necessary goods in any other way.

Russia's credit system is based principally on bills of exchange. Practically 90 per cent of goods bought by merchants are paid for in bills of exchange running from three to nine months, and this commercial paper is discounted by banks at 5 to 8 per cent per annum. It is a noteworthy fact that less than 1 per cent of bills so discounted go to protest, and one informant says that from personal experience on a turnover of about \$4,000,000 in four years his losses amounted to only \$27,500, in spite of the fact that he had 1,200 accounts on his books and sold his goods throughout European and Asiatic Russia.

Advantages of Russian-American Bank—Other Ways to Promote Trade.

The most important factor in promoting Russian-American trade would be the establishment of one or more Russian-American banking institutions which could facilitate money transactions and in many other ways encourage trade between the two countries. Such a bank could maintain a commercial department and promote direct purchases by American manufacturers of Russian raw materials. It could, for instance, inspect the goods, pay the Russian shippers against documents, and draw on the purchaser in the United States. It could also give information concerning credits in Russia to Amer-

ican manufacturers and exporters and look after their collections in Russia. Moreover, it could perform the important function of assisting American manufacturers to maintain stocks of goods in Russia by making advances on such stocks and arranging for payment of freight and duty on incoming goods. It would be of immense assistance to American-Russian trade if the larger American banks could arrange to establish, either individually or collectively, branches or agencies in Russia, and the great Russian banks could likewise do the same in the United States.

It would also seem advantageous to American trade interests if different groups or associations of American manufacturers and exporters would send special representatives to Russia to study the particular requirements of various lines of trade and make periodical reports dealing with credit conditions, etc. There should certainly be some arrangement for commercial agencies in Russia to give unbiased reports concerning credits to American manufacturers. Another important help for trade would be the promotion in the United States of the study of the Russian language to facilitate commercial transactions. Russian should be added to the curriculums of our leading universities.

SCARCITY OF SHIP MATERIAL IN JAPAN.

[Translated from Osaka Mainichi Shinbun for Sept. 21 by Vice Consul E. H. Dooman, Kobe.]

In the past, shipbuilding material has been supplied by Great Britain, Belgium, and Germany. As the last two countries are unable to export, we looked to England to supply the whole demand, but British manufacturers, after taking orders from within their own country, are unable to respond to other orders. Accordingly, we have had no other alternative but to import from the United States. The steel material supplied by the United States is quite different to that of Great Britain and Japan. While steel plates can be obtained there, the difficulty is that sections and other necessary material can not be gotten. Sections, evidently, can be supplied only by Great Britain.

Of the 31 vessels which were started this fiscal year and are to be completed by the end of the next fiscal year, 60 per cent of the orders for the necessary material has been delivered; of the remaining 40 per cent, a part is to be ordered in the United States, while the remainder must be taken up by the steel companies in this country. While these steel works are still taking orders, the price is very high.

MUNICIPAL FISH MARKET AT SYDNEY.

[Consul General J. L. Brittain, Sydney, Australia, Sept. 23.]

In order that the people of Sydney may derive the full benefit from fish caught by the recently purchased Government trawlers the municipality of Sydney has opened a fish market where the catch is disposed of at moderate prices to the public. [See *COMMERCE REPORTS* for June 5 and Oct. 9, 1915.] The windows at the market are specially constructed, being airtight and fitted with panes of glass in front, so that the space in which the fish are kept is insulated. From a refrigerator beneath a blast of cold air is constantly passing over the fish, which, it is stated, will keep fresh for several weeks.

EFFECT OF WAR ON TRADE CONDITIONS IN FOOCHOW.

[Consul Albert W. Pontius, Foochow, China; supplementing dispatch in **COMMERCE REPORTS** for Aug. 13, 1915.]

The Foochow trade in practically all articles manufactured by the European countries has been affected by the war. German manufactured goods having a good trade heretofore consisted of indigos, aniline dyes, broadcloth, window glass, and needles; Austria supplied needles and enameled ware, and Belgium, window glass. No goods from these three countries have been imported into Foochow since the beginning of the war. The local stocks of British manufactured goods, also, are now affected, the volume of importations having decreased to some extent. Those from Japan gained steadily as a result of the war, and in many instances the European article was being replaced, but the boycott soon changed this condition, and the Japanese manufactures lost heavily.

Since the report of June 15 was sent in, there has been a further advance in prices of from 5 to 10 per cent. Insufficiency of supplies and the low exchange were responsible. The local merchants who purchase their wares in Shanghai and Hongkong are granted 30 and 60 days' credit after delivery of the goods. The terms of credit now in force among the local merchants are 90 to 120 days after delivery of goods.

Goods Purchased in Shanghai or Hongkong.

Practically all of the foreign goods imported locally are purchased in Shanghai or Hongkong. Before the war direct orders with foreign countries were placed through the local foreign firms. American manufacturers are not represented locally. The representative of a prominent American watch-manufacturing firm recently made his first visit to the port, and experienced no difficulty in obtaining big orders. There is an urgent demand for the following articles, the present stocks commanding high prices, which are here given in Mexican dollars. According to the United States Treasury circular of October 1, 1915, the Mexican dollar is equivalent to \$0.384 in United States currency.

Aniline dyes.—The cheaper grades are put up in 9-ounce tins, and present stocks are selling at \$1.50 to \$3.60. Normal prices for the cheaper grades of dyes ranged from 25 cents to \$1 per tin. The better grade of dye is put up in 1-catty tin boxes (1½ pounds) and is sold at from \$6 to \$9 per box. One grade of dye, in the red color only, is put up in 1½-pound tin boxes and sells for \$8.50 per box. Normal prices for the better grades of dyes ranged from \$1 to \$1.50 per tin. The present stocks are almost exhausted.

Artificial indigo.—The price of this commodity has now advanced to \$220 per barrel.

Wire nails.—Half inch to inch in length, packed in kegs of 100 pounds, these are now selling at \$14 per keg. One to two inch length, packed also in kegs of 100 pounds, sell at \$8 per keg.

Woolen broadcloth.—Goods 72 inches by 30 yards are selling at \$3 per yard. Black is much needed.

Black sateen or venetian.—Goods 30 inches by 60 yards are selling at 65 cents per yard.

Farmer sateen or lasting.—Goods 30 inches by 60 yards are selling at 54 cents per yard.

Blankets.—Red color: Wool, 2 by 2½ yards, 7 pounds weight, selling at \$10 per pair.

Window glass.—The stocks of the various smaller sizes of window glass are almost exhausted. The price has now advanced to \$15 per box. The glass is packed 75, 51, 31, and 24 panes to the box, in sizes 12 by 16, 14 by 20, 18 by 26, and 20 by 30 inches, respectively.

CHOSEN TO HAVE INDUSTRIAL EXHIBITION.

[Extract from Seoul Press, Sept. 9, by Consul General Ransford S. Miller.]

The opening of the Chosen Industrial Competitive Exhibition, which is to be held in observance of the fifth anniversary of the present administrative system, is near at hand. Products have been gathered from all parts of the peninsula for display in Kyongpok Palace grounds at Seoul. There are also plans and statistics relating to productive industry, education, sanitation, engineering works, communications, etc.

An extensive portion of the palace grounds has been utilized, covering approximately 60 acres. Important palace buildings have been repaired to be used as showrooms, but all the minor buildings have been pulled down and in their place new buildings have been erected as show rooms. The aggregate area of the buildings to be used for the exhibition is approximately 21,000 square yards.

Part of the exhibition ground near Kyonghoi Lu has been allotted for setting up salesrooms, refreshment buffets, and entertainment halls. This section has been placed under the management of the Seoul Citizens' Association for Supporting the Exhibition. It will be open day and night, giving free admittance to visitors.

The showrooms comprise five main halls, three special, one machinery building, and some minor buildings. Hall No. 1 contains exhibits relating to agriculture, colonization, forestry, mining, fishing, and technical industry. Hall No. 2 contains rooms for exhibits concerning works undertaken with the extraordinary imperial donation funds, education, engineering work and communications, economy, sanitation, and charity works, and police and prison affairs. Shinsei Kwau or Provincial Hall contains exhibits showing the progress and results of various works undertaken by different provinces during the past five years. Paintings, works of sculpture and embroidery, lacquer work, and other articles of art produced by contemporary artists and artisans, as well as objects of fine art produced in preceding ages, are shown in the art hall. Articles for reference produced in the motherland and foreign countries are shown in the reference hall.

The three special buildings have been provided by the Railway Bureau, the Forestry Undertakings Station, and the Oriental Development Co. The machinery building contains various kinds of motors and specimens of machinery for mining, weaving, making nets, printing, etc. In addition, there are cattle, poultry, and pig sheds, and galleries of some of the palace buildings have been used for showing agricultural implements, exhibits by the Red Cross Society, and photographic works.

THE CINNAMON TRADE OF CEYLON.

An article on the history, botany, cultivation and commerce of cinnamon appears in the Indian (official) Trade Journal. It states that the plant [*Cinnamomum zeylanicum*] is indigenous to the moist parts of Ceylon, up to altitudes of 3,000 feet. Varieties of the plant also occur in India, Burma, Java, and the Malay Peninsula. It is an evergreen tree of bushy, spreading habit, attaining a height of 20 to 40 feet. The Singhalese name of the plant is kurundu, and several varieties are recognized, many of which are actually distinct species.

The plant will grow in any ordinary good soil where the rainfall and temperature are adequate. The best-flavored bark is produced on poor white sandy soil, where the temperature averages about 85°, and there is an average rainfall of about 1 inch for every degree per annum. Cutting commences during the heavy rains in May and June, and again in November and December. At this period the sap is in active circulation, and the sticks peel freely.

Export Figures.

Up to 1840 the annual output of bark from Ceylon was about 500,000 pounds. In 1842 competition from Java commenced, and the exports from Ceylon were reduced to about 120,000 pounds, but in 1844 the abolition of export duties brought up the amount to over 1,000,000 pounds. In the last 10 years the exports of quill bark have ranged between about 2,500,000 and 3,500,000 pounds.

In the calendar year 1912 Ceylon's exports of chips amounted to 2,349,944 pounds, and of quills 3,594,930 pounds; in 1913, the corresponding figures were 1,950,438 pounds and 3,278,093 pounds; and in 1914 (up to December 21), the shipments of chips totaled 1,410,784 pounds, and of quills 2,207,941 pounds. Germany is the principal buyer, taking in 1912, 606,142 pounds of chips and 995,213 pounds of quills; in 1913, 428,100 pounds of chips and 1,138,934 pounds of quills. Data for 1914 are not at hand.

According to the same authority (Ceylon Chamber of Commerce), the United States took in 1912—chips, 86,688 pounds; quills, 697,250 pounds; in 1913—chips, 42,560 pounds; quills 359,795 pounds. American (official) figures for the fiscal year ended June 30, 1914, show that the United States imported for consumption 303,967 pounds of unground cinnamon and chips, and 225 pounds of the ground; in the fiscal year 1915, 534,692 pounds of unground cinnamon and chips, and 361 pounds of the ground; the origin of these imports, however, is not indicated.

Four Grades of Quills.

Twenty or thirty years ago the periodic sales of cinnamon bark would include 5,000 to 8,000 bales of Ceylon bark, which would bring 18 to 73 cents per pound. Within recent years, however, the quality of cinnamon bark has fallen off, there being much more woody bark than formerly, and this is not easily disposed of. Quill bark is usually graded into four qualities, of which the best "plantation firsts" consists of the finest and thinnest quills, which are usually packed on the outside of the bundles, while "fourths" consists of coarse, thick, and broken quills. When cinnamon bark is sold "to arrive" the buyer purchases on "usual assortment" terms, in bales of 100 pounds each, which indicates that he will receive 20 pounds of plantation

firsts, 50 pounds of seconds, 20 pounds of thirds, and 4 pounds of fourths. A fair amount of the bark imported by Germany, Holland, and Great Britain is used for distilling purposes, the English distilled oils being especially esteemed.

MUNICIPAL LOANS ON MERCANTILE COLLATERAL.

[Consul W. F. Kelley, Rome, Italy, Sept. 21.]

In view of the extraordinary commercial and industrial conditions at present obtaining in Italy, several of the larger cities are studying ways and means of aiding the industries situated within their limits in order to avoid fluctuations between intense activity and comparative idleness of the manufacturing plants. Suggestions have been made to form municipal guaranty companies to make loans on stored products, whether raw material, partly manufactured, or finished goods.

A system of granting loans on stored goods has long been in practice in Italy, and is regulated by the provisions of the Italian commercial code. In ordinary times a merchant can easily obtain loans from banks and capitalists up to about 75 per cent of the value of the merchandise offered as collateral, and the mortgages on such goods have heretofore frequently been used as commercial paper, being transferable by indorsement.

Under present conditions, however, the money markets are close and conservative, and merchants or manufacturers find it difficult to obtain loans at a reasonable rate of interest. It is therefore under such conditions that certain municipalities are deliberating on the advisability of coming to the aid of local industry by making loans under the laws and regulations heretofore obtaining, and there is little doubt that some such form of support will shortly be organized in the larger commercial and industrial centers of Italy.

REVIVAL OF JAPANESE SULPHUR INDUSTRY.

[Extract from Japan Advertiser of Sept. 23 by Consul General George H. Scidmore, Yokohama.]

The export of sulphur from Japan has for years been on the decline, and quotations have fallen, some of the sulphur mines of small standing having even been compelled to stop working. But since the war broke out the demand in the foreign market has improved, and quotations have gradually risen. The export this year up to the end of August was 27,948,607 pounds, valued at \$203,048, showing an increase of 4,638,451 pounds or \$20,003, compared with the figures for the corresponding period of last year. The destinations have in the past been the United States and Australia in the main, with Canada and India coming next, only quite an insignificant amount being shipped to Europe. Since the war, however, the European supply to oriental countries has been stopped, and the demand in Europe itself has increased. Therefore, Japanese sulphur has now to meet an increased demand in the Orient and America and also in Europe. The prospects of this trade are, therefore, very promising, and it is expected that the volume of trade will soon become as big as it was several years ago when the sulphur trade was on the high tide of prosperity.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Nails, chains, soap, blankets, etc., No. 19063.—An American consular officer in the Netherlands reports that a firm in his district desires to correspond with American manufacturers of copper sheeting, copper composition tacks, various kinds of nails, barbed wire, corrugated galvanized sheets, chains, wire gauze for blinds, spades, knives, hatchets, matches, canned goods, soap, galvanized buckets, tools, padlocks, trunks, kerosene lamps, looking glasses, oils and colors, boat and stationary motors, sporting guns, ammunition, choppers, hoes, rakes, manila and hemp rope, twines and cotton, lines, sail cloth, leather belts, wire rope, sailors' trousers, blankets, and towels. The firm wishes to buy on its own account.

Surgical instruments, No. 19064.—The Bureau is informed by an American consular officer in Spain that a man in that country desires to communicate with American manufacturers of surgical instruments and laboratory apparatuses. Correspondence should be in Spanish.

Lace, No. 19065.—An American consular officer in Italy writes that a man in his district desires to act as purchasing agent for American importers of lace. Correspondence should be in Italian.

Five and ten cent store goods, No. 19066.—An American consular officer in Australia reports that a man in that country desires to correspond directly with wholesale firms handling lines of 5 and 10 cent store goods. The man desires to pay cash against documents.

Flooring, fancy wrapping and box paper, No. 19067.—A business man in France has informed an American consular officer of that country that he desires to enter into relations with American manufacturers of rubber imitation flooring and fancy wrapping and box paper. A prospectus, with illustrations of the flooring desired, as well as price lists of the wrapping and box paper, may be examined at the Bureau or its branch offices. Samples have been forwarded and as soon as received they may likewise be examined at the Bureau or its branch offices. Correspondence may be in English. (Refer to file No. 67643.)

Oregon pine, No. 19068.—An American consular officer in French Indo-China reports that a business man in that country desires to represent dealers in Oregon pine. Prices and full information should be supplied. Correspondence should be in French.

Chemical and laboratory glassware, meat mincers, etc., No. 19069.—The Bureau is informed by an American consular officer in Canada that a firm desires to obtain prices on chemical and laboratory glassware, meat mincers of special design, cotton and linen webbing, special brass eyelets, and enameled steel wire.

Explosives and portable store houses for ammunition, No. 19070.—An American consular officer in South America reports a possible market for the sale of explosives and portable ammunition store houses. Full information may be had on application to the Bureau or its branch offices.

Ice-making machinery, No. 19071.—An American consular officer in India writes that a firm in his district expects to install a 10-ton ammonia process ice-making plant to make 112-pound blocks, using liquid fuel-oil engine power, and desires to receive literature and prices from American manufacturers, including quotations on soluble essences for aerated waters, citric acid, tartaric acid, ether, sulphuric acid, and ammonia. Correspondence may be in English. Reference is given.

Jute and linen bags, No. 19072.—A broker and commission merchant in Russia writes the Bureau that he would like to secure an agency for the sale of new jute or linen bags for flour and grain. He states several million bags could be sold in his district. Correspondence should be in French or Russian. References are given.

Building materials, stoves, steel ceilings, etc., No. 19073.—An American consular officer in Africa reports that a man in his district desires to secure agencies from American manufacturers of building materials, stoves, steel ceilings, bath and lavatory installations, etc. Correspondence may be in English.

- Steel gates for regulating dam*, No. 19074.—The Department of Public Works, Ottawa, Canada, will receive tenders until November 10, 1915, for steel gates for regulating a dam in the French River, Ontario. Plans and form of contract may be seen, and specifications and forms of tender may be obtained on application to the offices of the District Engineers, Confederation Life Building, Toronto, and Shaughnessy Building, Montreal, Canada, and at the Department of Public Works, Ottawa. The Bureau has no further information relative to this opportunity.
- Soap*, No. 19075.—A business firm in the West Indies desires to communicate with manufacturers of unscented white soap in bars. The firm desires to import such soap, remelt it, and then have it colored and perfumed.
- Umbrellas*, No. 19076.—An American consular officer in Brazil reports that a firm in his district desires to establish connections with American manufacturers of umbrellas. A sample frame of the umbrella desired may be examined at the Bureau or its branch offices. (Refer to file No. 68560.) The frames should be light.
- Wearing apparel and rubber goods*, No. 19077.—A business man in Holland writes the Bureau of Foreign and Domestic Commerce that he desires to establish connections with manufacturers of knitted underwear, hosiery, shirts, collars, elastic cord, and rubber pharmaceutical goods. He states that he sells on a straight commission basis to the retail trade. References are given.
- Dairy machinery*, No. 19078.—A request has been received by the Bureau from a man in an insular possession who desires to be put in communication with American manufacturers of dairy machinery. Correspondence should be in Spanish.
- Distillers and maltsters*, No. 19079.—A firm in Canada requests to be furnished with a list of the distillers and maltsters in the United States.
- Glass and porcelain ware*, No. 19080.—An American consular officer in Brazil reports that a firm in his district desires to receive catalogues and price lists from American manufacturers of glass and porcelain ware. Correspondence should be in Portuguese.
- Furs and horsehair*, No. 19081.—The commercial attaché of the Department of Commerce in Russia writes that a firm in that country desires to obtain the agency of American firms dealing in furs and horsehair.
- Dry goods, hosiery, and underwear*, No. 19082.—The commercial agent in charge of the branch office of the Bureau in New York City reports that a man who expects to leave soon for Cuba as a representative of several American firms is anxious to represent other lines, especially dry goods, hosiery, and underwear. References are given.
- General agency*, No. 19083.—A firm in the United States writes the Bureau that its agent in Argentina is in the market for any merchandise, excepting machinery or made-up garments for men and women, and desires to receive prices and discounts. He expects to buy for his own account, and can furnish references, or his bills can be discounted in New York.
- Wood fiber*, No. 19084.—A business firm in the United Kingdom desires to establish connections with American manufacturers of wood fiber (wood wool) and also ropes made from this fiber.
- Textiles*, No. 19085.—A request has been received by the Bureau from a European firm which desires to be put in touch with American manufacturers of textiles for women; also fancy articles such as bags, etc.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 406 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 222 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

NIPPON YUSEN KAISHA EXTENDING SERVICE.

[Extract from Japan Daily Mail, Sept. 17, forwarded by Consul General George H. Scidmore, Yokohama.]

The Nippon Yusen Kaisha is reported to have been admitted to the New York Shipping Conference. The company has run a round-the-world service since the present war broke out, by dispatching extra European liners to either New York or Galveston on their homeward voyages through the Panama Canal. On admittance into the New York Shipping Conference, the service will be made a permanent fortnightly one, though it is open to doubt whether it can be maintained without suffering any degree of inconvenience on the restoration of peace, when, the restraint on the shipping of the belligerent powers being removed, trade will have to be hotly contested.

Tramp-ship owners' eagerness to acquire new vessels shows no sign of cooling down, but, on the contrary, seems to be steadily enhanced. for, it is reported, more ships, besides all that have been reported previously, have been ordered by them from different yards here. The Osaka Iron Works has lately received orders for four vessels of 3,200 tons each from some of the biggest tramp owners. Even the Uraga yard has received orders for five boats recently. Work now in hand at the various plants is reported to amount to more than 50 large boats.

Cotton Importers and Shipping Companies Disagree.

This booming may be said to be largely responsible for the reported break in cotton rate negotiations between cotton importers and shipping companies. According to a report from Osaka, the negotiations which have been maintained for some time past have suddenly been brought to a standstill on account of the Nippon Yusen Kaisha's refusal to come down to the level proposed by cotton importers, declaring that at any point below \$0.0094 per pound no consignment of cotton can be accepted, though if importers accept its terms 50,000 bales may be carried from Galveston. On the receipt of this reply from the Nippon Yusen Kaisha cotton importers resolved to cut off relations with the company, as far as the cotton-shipment question is concerned.

[Extract from Japan Chronicle, Sept. 7.]

Aims to Monopolize San Francisco Service.

The Toyo Kisen Kaisha has recently purchased a steamer of 4,000 tons. It has now chartered the *Jimmu Maru*, 7,300 tons, and the *Kengon Maru VIII*, 7,650 tons. It is, according to The Asahi (Osaka), also conducting negotiations with the Kishimoto and the Tatsuma Kisen Kaisha with a view to chartering the *Tairen Maru*, 6,000 tons, of the former and the *Keishin Maru*, 6,500 tons, belonging to the latter. The *Asama Maru*, 6,750 tons, of the Toa Koshi, is also expected to be chartered by the Toyo Kisen Kaisha. It is obvious, states The Asahi, that these steamers will be placed on the American run, the Toyo Kisen Kaisha apparently aiming at the monopolization of the San Francisco service.

The 1,619,649 tons of glass sand produced in the United States last year had a value of \$1,568,030.

RESULTS OF FOREIGN TRADE OPPORTUNITIES.

A business man in New York writes that he has received an order for 9 motorcycles and has established an agency in the Netherlands as a result of foreign trade opportunity No. 17615, which was published in **COMMERCE REPORTS** on July 26, 1915. He also states that as a result of another foreign trade opportunity he sold 5,000 barrels of potatoes and formed a valuable connection in Buenos Aires, Argentina.

JAPANESE LINES GAIN IN BRITISH COLUMBIA TRAFFIC.

[Vice Consul R. M. Newcomb, Victoria, B. C., Oct. 22.]

On account of the war, many steamships have been withdrawn from the service of this port. As a result, deep-sea tonnage became scarce and much more freight was offered to the Japanese and the few American lines, which still maintain their regular schedules, than they could carry. Ocean rates have advanced to such an extent that shippers often find it unprofitable to sell their products, even at a good price.

The American lines are now withdrawing their vessels, which forces the bulk of the Oriental tonnage to use Japanese lines. The Nippon Yusen Kaisha and Osaka Shosen Kaisha are the only steamship lines now maintaining regular service to the Orient from British Columbia. These Japanese lines are greatly benefiting from the present situation.

Vessels in Panama Canal Service.

In the Panama Canal service more than half of the tonnage is carried by companies maintaining regular service via the canal. There are six such regular lines at present. Four touch at British Columbia ports. They are:

Alfred Holt & Co., operators of the Blue Funnel Line—a monthly service between Great Britain and Kingston, Jamaica; San Francisco, Victoria, Vancouver, and Seattle.

The Maple Leaf Line—a service from New York to Victoria and Vancouver, then to San Francisco, from that port to Swansea and

Avonmouth, and returning to New York, with a vessel sailing from each port about every six weeks.

The East Asiatic Co.—a vessel every fourth week from Copenhagen, by way of Gothenburg, Christiania, and Genoa to Los Angeles, San Francisco, Puget Sound, and British Columbia ports, a vessel returning every fourth week on the same route.

The Johnson Line—a vessel from Scandinavian ports to North Pacific ports at intervals of 60 days.

REDUCED PURCHASES FROM NOTTINGHAM.

[Consul C. M. Hitch, Nottingham, England, Oct. 16.]

American orders for Nottingham goods have been reduced for cotton laces, yarn, and curtains, but heavy for nets, upholstery fabrics and Levers lace machines, as will appear from the following chief items of declared export for the quarters ended September 30, 1914 and 1915:

Articles.	1914	1915	Articles.	1914	1915
Cotton laces	\$981,431	\$735,576	Cotton yarn	\$150,662	\$108,430
Cotton nets	590,581	605,266	Upholstery fabrics		11,638
Silk nets	28,640	173,194	All other	401,224	291,562
Curtains	59,007	34,012	Total	2,396,175	2,112,422
Levers machines	7,022	44,689			
Pickled sheepskins	180,608	108,051			

Shipments from Nottingham to the Philippines aggregated \$12,569 for the September 30, 1915, quarter, compared with only \$3,959 in the like period last year. One of the new items was a steam traction engine valued at \$2,170.

Exports to the United States as declared through the Leicester consular agency for the past quarter dropped to \$53,606 from \$141,463 in the similar three months in 1914. This decrease is mainly due to the embargo on wool and leather and their manufactured products, and also to local manufacturers working on Government contracts.

There was an unusual increase in the amount of American goods returned from Leicester (\$110,382 for the quarter, against \$18,406 last year). This was caused by the failure to find a market for a large consignment of inferior leather, and the return of a large quantity of steel stampings which were to have been finished by the Leicester branch of an American firm of razor manufacturers, but, owing to a shortage in labor, they were returned in unpacked condition.

North Yakima, Wash., which in 1910 had a population of 14,082, has shown an activity in furnishing jobs for applicants much greater than that of many larger communities, according to the September report of the Bureau of Immigration of the United States Department of Labor. During that month the sub-branch office at North Yakima received 320 applications for help from employers calling for 1,157 persons. It received 1,893 applications for employment, referred 1,156 persons to employment, and reported 1,155 actually employed. The number actually employed in New York City through the bureau during that month was 260 and in Chicago 2,411.

AMERICANS BUY NORTH CAROLINA ALUMINUM PLANT.

The transfer of a large American aluminum plant from foreign to American ownership is announced in press reports from Charlotte, N. C. French interests were active throughout the greater part of 1914 in pushing extensive operations at the Narrows of Yadkin River, near Whitney and Badin, Stanley County, N. C., but as a result of the European war the development of the property stopped and was expected to be at a standstill for an indefinite period. In buying the plant the Aluminum Co. of America, with headquarters at Pittsburgh, Pa., announces that the development work will be resumed, and that the plans of the original designers will be carried out with only slight modifications.

In its last report on the aluminum industry the United States Geological Survey stated that the work that the Southern Aluminum Co. had in progress at Badin and Whitney consisted of a hydro-electric installation of great size for the generation of electric power, an electrolytic plant of large capacity for the production of metallic aluminum, works for the purification of alumina, an electrode factory, and the homes and other buildings necessary for the well-being of the large number of employees engaged in an important undertaking of this kind.

It was early in 1913 that a contract was let for a concrete dam and power house, for tunnels, and for the grading of the electrolytic plant sites. The plans provide for a dam 220 feet high, 1,300 feet long, 160 feet thick at the base, and 20 feet at the crest. Swinging as the arc of a circle of 1,600 feet radius, its construction involves the use of from 550,000 to 600,000 cubic yards of concrete. This great dam will store water to generate from 20,000 to 70,000 kilowatts, according to water stage, and will form a pond of 5,000 acres. With the reservoir full, the river will be held in check for 5 miles along its course, and the old granite Whitney dam will be entirely submerged.

Before the work on this plant was stopped by the war, there were 2,500 men employed on the construction. After production commences, it has been estimated the number required will be between 1,200 and 1,500.

The Aluminum Co. of America has plants at Maryville, Tenn., and Massena, N. Y., and has also acquired interests at Edgewater, N. J.

The growing importance of this metal is shown by the figures relating to exports for the last fiscal year. During the 12 months ended June 30, 1915, the exports of aluminum and its manufactures were valued at \$3,245,799, compared with \$1,101,920 in the preceding year, and with \$1,046,915 in the year ending with June, 1913.

AMERICANS TO OPERATE CANADIAN LEAD MINE.

[Consul Felix S. S. Johnson, Kingston, Ontario, Oct. 9.]

It is announced by an Ottawa journal that certain lead mines near Kingston have been sold to New York interests, and it is understood that the mines will shortly be started up. They are said to be in shape for turning out lead in 30 days. Work was suspended at the mines about two years ago.

RUBBER TRADE OF EAST INDIES AND THE STRAITS.

[Consul B. S. Raldden, Batavia, Java, Sept. 6.]

The United States bought 36 times as much plantation rubber from Java in the first half of 1915 as in the corresponding 6 months of 1914, and became this island's best customer. The Netherlands took only a little more than half as much and fell to third place; while Great Britain occupied second place in both semesters, as the following table shows:

Exported to—	January-June, 1914.				January-June, 1915.			
	Ficus.	Hevea.	Ceara.	Total.*	Ficus.	Hevea.	Ceara.	Total.*

* Includes Castilloa rubber not shown to the extent of 55,130 pounds (32,875 pounds to the Netherlands, 19,520 to Great Britain, and 2,735 to Germany) in the first half of 1914 and 58,473 pounds (2,288 pounds to the Netherlands and 56,190 to Great Britain) in January-June, 1915.

Shipments from Sumatra East Coast.

Exports of plantation rubber from Belawan, Deli (Sumatra East Coast) in the first half of the current year amounted to 5,584,777 pounds, a figure 75 per cent in excess of the total for the corresponding months of 1914. Of this gain 1,117,659 pounds can be credited to the United States, as that country made no purchases from the East Coast during January-June, 1914; Great Britain took 2,738,600 pounds more, and the Netherlands 13,308 pounds more. Offsetting these increases were declines totaling 1,472,093 pounds, so that the net gain for the half-year was 2,397,474 pounds. The distribution of these cargoes was:

[Compiled in the Bureau of Foreign and Domestic Commerce.]

Exports from Ceylon, Dutch East Indies, and Straits Settlements.

The figures presented below have been taken from the official returns of the respective countries and represent the total exports during the calendar years named. The quantities are stated in hundredweights of 112 pounds for Ceylon, kilos of 2.2046 pounds for the Dutch East Indies, and piculs of 133.33 pounds for the Straits Settlements; the values in rupees, equivalent to 32.443 cents U. S. gold;

in guilders, equivalent to 40.2 cents; and in Straits Settlements dollars, equivalent to 56.78 cents.

	Quantity.	Value.		Quantity.	Value.

* Year 1913.

RUBBER SHIPMENTS FROM AMAZON VALLEY.

[Consul George H. Pickrell, Para, Brazil, Oct. 8.]

Exports of Amazon Valley crude rubber to the United States during September were 78 per cent greater than in the corresponding month of last year; exports to Europe were about 8 per cent less. Each of the four grades of rubber sent to the United States showed gains over September, 1914, but only in "fine" was there any increase in the cargoes to Europe. By ports the month's shipments were:

Exported from—	Fine.	Medium.	Coarse.	Caucho.	Total.
	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>	<i>Pounds.</i>

MACHINE SAVES LABOR IN PREDICTING TIDES.

Special Publication No. 32 of the United States Coast and Geodetic Survey, just published, contains an illustrated description of the survey's tide-predicting machine, No. 2, which is now being used for the prediction of the high and low tides published in the annual tide tables of that bureau. The machine replaces the smaller Ferrel machine that had been used previously for this purpose. The newer machine is about 11 feet long, 2 feet wide, and 6 feet high, and weighs approximately 2,500 pounds. A heavy iron base supports a number of large upright brass plates. These in turn support a system of shafts, gearing, dials, and sliding frames to which are attached a series of pulleys. A slender chain on each side of the machine connects all of the pulleys and transmits the resultant motion to a system of dials and pointers on the face of the machine, where the time and height of each successive high and low water is directly indicated.

Before beginning the predictions for any station, the cranks on the sides are set in accordance with certain quantities known as harmonic constants obtained from tides previously observed at the same station. The tide is assumed to be composed of many elementary components, each of which is due to some motion of the moon or of the sun, including the changes in phase, declination and parallax of these bodies. The machine will take account of 37 such components or elementary tides, combining them into the more complex tide that actually occurs in nature.

The machine, having been set with the harmonic constants representing the components to be used, is operated by turning a hand crank which sets in motion the small component cranks, sliding frames, and pulleys. On the face of the machine, time pointers pass rapidly around dials indicating successive intervals of time, a height pointer oscillates back and forth over a circular dial indicating the corresponding height of the tide, and a fountain pen, rising and falling, traces upon a roll of paper a tide curve that graphically represents the actual rise and fall of the tide. At the time of high and low waters the machine is automatically stopped by an electromagnet, and the operator copies the time and height indicated by the dials directly in the form that is to be sent to the printing office.

To set the machine, predict, and tabulate the high and low waters for a year at any station require from 10 to 15 hours. To perform the same calculations without the use of the machine would probably require not less than six months of time for one computer.

Copies of Special Publication No. 32, of the Coast and Geodetic Survey, may be obtained at 20 cents each from the Superintendent of Documents, Government Printing Office, Washington, D. C.

Correction.

In line 26 of the article on Russian cotton market and acreage, which appeared in *COMMERCE REPORTS* for November 2, 1915, "\$0.36 per bale" should be "\$3.65 per bale."

ACTIVITY IN CANADIAN BEET-SUGAR FACTORIES.

[Consul Fred C. Slater, Sarnia, Ontario, Oct. 28.]

Much interest has been manifested in the Canadian sugar-beet industry during the past year. Sarnia and vicinity is practically the only territory where sugar beets are raised in the Dominion at this time. The factory heretofore operating at Raymond, Alberta, has discontinued active operations, I am informed. The chief difficulty there appears to be the disinclination of the farmers to produce the necessary beets. In this section of Ontario there are and for some time past have been only two beet-sugar factories; viz, the Dominion Sugar Co. at Wallaceburg, with a daily capacity of 900 tons of beets, and its Berlin branch factory, with a daily capacity of 700 tons.

Much raw sugar has heretofore been imported from Germany and refined at the Wallaceburg plant, but this necessarily ceased with the advent of the European war. The cutting off of the product from that source and the additional duty which the Government placed upon sugar has had an exhilarating effect upon this industry. In July, 1914, just at the outbreak of the war, sugar in Sarnia was selling to the dealer at \$4.56 per 100 pounds. Since then it has risen from time to time until it reached \$6.76 in September, 1915, and at present stands at \$6.16.

I have received an unofficial report that the two factories above named during the last year have made a net income of 21 per cent. Heretofore the flat rate paid the farmers for beets was \$4.50 per ton; this year it has been raised to \$5. Notwithstanding this additional 50 cents per ton paid the farmer, I am informed that the rise in sugar has increased the receipts of the two factories above named by something like \$240,000 during the past year.

New Factories About to be Built.

In consequence of the conditions thus stated, a sugar factory is about to be built at Chatham, some 60 miles to the south of here. Its estimated capacity is to be 1,000 tons of beets per day, while negotiations are rapidly assuming shape for another factory at Petrolia, 18 miles to the southeast, with a capacity of 800 tons per day. I am informed that the machinery for this plant will be obtained from a defunct plant across the line in Michigan.

Climatic and soil conditions are excellent for sugar-beet production in this portion of Ontario, and doubtless beet-sugar factories will multiply and expand with the increase of population and consequent sugar consumption of the country. The most serious drawback is to induce the farmer to raise the sufficient quantity of beets. He is perfectly in accord with the idea, as it pays him well and, if anything, proves helpful to his land. But the farmer is handicapped in not being always able to obtain the necessary help. The work of beet culture is more or less distasteful to the average native laborer. Hence he is obliged largely to depend on foreign labor or plant only such area as he and his family can tend incident to other farm duties. Belgians and Russians have proved the most satisfactory help in this connection, and I am satisfied the factory managers anticipate being able to secure a greater sufficiency of this class of labor at the cessation of the present world war.

ARGENTINA-UNITED STATES WIRELESS CONCESSION.

[Consul General W. Henry Robertson, Buenos Aires, Sept. 27.]

The Federal Holdings Co. of New York has been granted a concession for the construction of a high-power wireless station in Argentina, near Buenos Aires, for communication with a station to be erected at New York. The Review, of the River Plate, states that the company obtaining the concession owns the Poulsen patent rights in the Americas, and that it is proposed to employ this system for the new wireless service. It is also stated that the stations are likely to be in operation within 18 months.

The concession is for 30 years from the time the plans are approved. The company will be required to conform to any future regulations which may be established governing activities of this class, as well as to those now existing. The tariffs are to be subject to approval by the executive power. The rate between Argentina and the United States, it is required, shall be lower than two thirds of the telegraphic tariffs in force. State radiograms and those of authorized national representatives are to be accorded preference and to be charged 50 per cent of the ordinary tariff. The company is to transmit, free of charge, the official radiograms of the Government and of its agents in foreign countries, and meteorological information in less than 10 words between the national observatories which maintain communication with the company. When such messages exceed 10 words, the company will charge the regular rates.

The right is reserved to impose the requirement that all of the employees shall be Argentine citizens. The operators must have Argentine diplomas identical with those required of operators on vessels flying the Argentine flag. The company undertakes to give facilities to the technical staff of the Navy, when authorized by the Ministry of Marine, to practice at this station. It is declared that the present authorization does not imply the granting to the company of the monopoly of radiographic communication in the country or any special privilege.

EFFECTIVE CONSULAR WORK IN SPAIN.

[Consul Robertson Honey, Madrid, Spain, Sept. 13.]

Forty-four new permanent American agencies have been established in Madrid as the result of the activities of this consulate during the past 14 months, and much new business has been opened up. Detailed information as to the amount of business transacted is not available in all instances, but data furnished by some of the importers showed purchases of \$950,000 worth of American electrical supplies, \$1,200,000 worth of machinery, 10,000 fountain pens, 6 tons American hops, 3 tons copper wire (order placed for 3,500 tons), 150 typewriters, 55 automobiles, 5 motor trucks, 120 cameras and 20,000 photograph cards, 34,000 tons of coal, 40,000 tons of wheat, and \$81,000 worth of aeroplanes.

One of this consulate's reports that was published in **COMMERCE REPORTS** brought over 1,000 letters to the Madrid importer and resulted in business amounting to \$125,000. Many negotiations have fallen through on account of insistence of the American exporter for cash against documents, which is contrary to the long-established trade custom as to credits in this district.

WOODWORKING INDUSTRY AT ANTUNG.

[Consul John K. Davis, Antung, China, Sept. 16.]

Although Antung is the shipping point for practically all of the timber cut in the Yalu and Hun River basins it has never possessed any large woodworking industries and has only four medium-sized sawmills. This is remarkable in view of the fact that among the rafts floated down the Yalu, which are principally made up of pine logs, there are a large number of hardwood logs suitable for cabinet work. These, owing to the lack of demand such as would be caused by the existence of local woodworking plants, are sold at practically the same price as ordinary pine logs; in fact, owing to the greater difficulty of working with the harder woods and the poor temper of the steel in the local carpenters' cutting tools there is actually a preference for pine rather than oak when offered at the same price.

Realizing the opportunity for developing the business of this port, offered by introducing woodworking industries, the Japanese consul has established an industrial school in the Japanese Settlement where expert woodworkers from Tokyo are demonstrating the uses to which the various Yalu hardwoods may be put in cabinet work. The results achieved are very interesting, as they prove conclusively the suitability of the Yalu woods for use in the manufacture of fine furniture and of small boxes, penholders, etc. The beautiful finishes obtained on such woods as bird's-eye maple and walnut are fully equal to the product of a fine furniture manufacturer in the United States.

At present this industrial school is more or less in the experimental stage, but the Japanese consul hopes to enlarge it and is sanguine of ultimately obtaining good results.

SCHEDULE OF CALIFORNIA-HAWAII STEAMERS.

[Commercial Agent E. G. Babbitt, San Francisco, Oct. 25.]

The Great Northern Pacific Steamship Co. has made public its schedule between California ports and the Hawaiian Islands, which it intends putting into effect on November 26. The sailings so far announced are:

Ports.	Trip No.				
	1	2	3	4	5
WESTBOUND.					
Leave San Francisco.....	4 p. m.	Nov. 26	Dec. 16	Jan. 1	Jan. 25
Arrive San Pedro.....	10 a. m.	Nov. 27	Dec. 17	Jan. 6	Jan. 26
Leave San Pedro.....	4 p. m.	Nov. 27	Dec. 17	Jan. 6	Jan. 26
Arrive Hilo.....	9 a. m.	Dec. 2	Dec. 22	Jan. 11	Jan. 31
Leave Hilo.....	Midnight.	Dec. 2	Dec. 22	Jan. 11	Jan. 31
Arrive Honolulu.....	10 a. m.	Dec. 3	Dec. 23	Jan. 12	Feb. 1
EASTBOUND.					
Leave Honolulu.....	11 p. m.	Dec. 6	Dec. 26	Jan. 15	Feb. 4
Arrive San Francisco.....	11 a. m.	Dec. 11	Dec. 31	Jan. 20	Feb. 9

This service will be carried on by the *Great Northern*. When the steamer reaches the islands on its February 14 trip it will remain in Honolulu one week on account of the Mid-Pacific Exposition and Carnival that will then be in progress in that city.

TRADE MESSENGERS FROM NATIONS GATHERING IN UNITED STATES.

More than 20 nations are represented by visitors to the United States who are now making their headquarters at the branch offices of the Bureau of Foreign and Domestic Commerce and who are seeking new trade relations.

Many of these men are members of foreign firms which are preparing to make purchases here. Others are representatives of big commercial houses and offer unusual facilities for our manufacturers to establish agencies abroad. Their earnest efforts to meet us halfway in producing a greater volume of trade with their respective countries are making easier the progress of American commerce in this year of opportunity.

Some of these advance agents of business are not confining their efforts to any one section of this country, for reports from the several branch offices of the Bureau furnish details of tours which take in several of the principal commercial centers.

Because of the foreign visitors flocking here, the Bureau is dealing directly with buyers as well as sellers, and bringing both classes of business men together so effectively that there are results—purchases of American goods and the making of contracts for agencies in other countries.

One example serves to illustrate the character of these important developments. An agent from abroad who has been introduced to firms in the United States by one of the branch offices of the Bureau represents both a wealthy landowner in Central America, who is interested in numerous development projects, and a large commission merchant who operates throughout Central America and down the west coast of South America, with an elaborate selling organization. Heretofore the commission merchant has represented only the large European manufacturers, but they are shut out of the market by the war and he has decided to push American goods.

Other interests represented are located in Australia, Russia, Italy, Argentina, Spain, India, China, Canada, Japan, South Africa, Bulgaria, New Zealand, Brazil, and several other countries. Each week during the present fall has added to the number.

There is wide variety in the classes of goods sought, including machinery, leather, clothing, the numerous lines making up the stock of a department store, textile products of all sorts, tools, and many other American manufactures. Two visitors from Russia have nearly completed the organization of a cooperative sales agency for promoting Russian interests. Their efforts were materially assisted by the Bureau of Foreign and Domestic Commerce. At one of the branch offices a meeting to launch the project was attended by 50 manufacturers.

The visit of the Bulgarian representatives last summer is an important incident in foreign trade development, as that country has rarely ever made an active canvass for American goods.

In all the negotiations that have been conducted and in those now in progress the Bureau has earnestly extended its cooperation. Its introductions, the agents report, have facilitated the transaction of business, because of the great confidence shown by business men here in the foreign representatives so introduced.

IMPORTS OF SMOKERS' ARTICLES INTO LATIN AMERICA.

The following table shows the imports of smoking pipes, cigar and cigarette holders, and other smokers' articles into some of the Latin American countries during the latest year for which official statistics are available, also the value of the imports from the principal countries supplying the trade:

[Argentine peso=96.5 cents; Chilean peso=36.5 cents; Brazilian paper milreis, 1912,=32.44½ cents.]

	Total.	United States.	Germany.	Austria-Hungary.	France.	Italy.	United Kingdom.
ARGENTINA.							
Smoking pipes:	<i>Pesos.</i>	<i>Pesos.</i>	<i>Pesos.</i>	<i>Pesos.</i>	<i>Pesos.</i>	<i>Pesos.</i>	<i>Pesos.</i>

1912.....	9,331	500	4,750		510	1,245	2,457

The imports of pipes and cigarette holders of different kinds into Peru during 1913 were valued at about \$1,800, of which Germany supplied the larger portion. The imports into Venezuela during the year ended June 30, 1914, were valued at only 1,427 bolivars (\$275).

Capital invested in manufactures at Atlantic City, N. J., according to the preliminary statement for 1915 from the United States Bureau of the Census, has increased from \$4,242,000 to \$7,650,000 during the five years since the last census, a gain of 80.3 per cent. There is a considerable increase in other items relating to manufactures. In the order of their importance from the percentage standpoint these are: Salaries, 93.6 per cent; primary horsepower, 46.7; value added by manufacture, 38.4; value of products, 31.3; wages, 27.9; wage earners, 26.3; and materials, 24.3 per cent.

USE OF ELECTRICAL SUPPLIES AT TSINGTAU.

[Consul Willys R. Peck, Tsingtau, China, Sept. 13.]

When Tsingtau was occupied by the Japanese and British forces on November 7, 1914, the military authorities took over the electric-light works. No purchases of supplies were permitted except from the Government. This monopoly has been continued, and stocks are replenished by public tender.

There are two dynamos of 170 kilowatts capacity, and one of 410, while a third, of 1,000 kilowatts, is being ordered from Japan to provide for extension of the service to the suburbs. The works employ a staff of about 103 men and the monthly receipts from sale of current are about \$2,500.

The fixed charge per lamp ranges from 41 cents per month for a 10-candlepower lamp to \$1.85 for one of 400 candlepower. The charge per kilowatt ranges from 9 cents for a total consumption per month of less than 50 kilowatts to half that rate when more than 400 are consumed. There are also minimum charges per number of lamps for each subscriber. Current for motors is charged for on a sliding scale, ranging from \$2.68 per month per horsepower to \$2.16. Rent must be paid for meters, as all of them belong to the Government.

Two Electric-Light Plants Maintained.

Two electric-light plants are located at Syfang and the Hungshan coal mines, respectively, the former in the Shantung Railway's car shops, and the latter in the railway's mines. The dynamos in Tsingtau supply alternating current with a frequency of 50 and a voltage of 120.

There are no firms in Tsingtau dealing exclusively in electrical apparatus. The Government purchases supplies through public tender. A quantity of American lamps were purchased recently. Several hundred meters, it is rumored, will be advertised for shortly, but the short period elapsing between the public invitation for tenders and the date when they must be handed in—generally three weeks or a month—allows time only for local bids. The time allowed for delivery generally makes it necessary that goods supplied shall be taken from stocks in the Orient.

Japanese Goods Receive Preference.

The general understanding is that in Government purchases Japanese goods shall receive the preference, other considerations being equal, but the officer in charge of purchases of electrical materials expresses a lively desire that as much competition shall be developed as possible, especially as it is conceded that in certain lines foreign markets must be entered.

The field for the use of electrically driven machinery in Tsingtau in normal times is to be found in cotton presses, wool cleaning and packing machinery, egg-products factories, a hat factory, etc., but at the present time these concerns are not running and their number at all times has been restricted, thus limiting the demand. Except for the railway car shops and the Government shipyard, there are no large metal-working factories.

EXPORTS OF CEDRATS FROM GREECE A NEW MOVEMENT.

[Vice Consul C. M. Corafa, Athens, Sept. 28.]

Present conditions have made the port of Piræus for the first time an important shipping center for cedrats, which formerly reached consumers through various foreign ports.

The cedrat is a citrus fruit used by orthodox Hebrews at the celebration of the Feast of Tents, following Atonement Day, and plays an important part in the ceremonies. Owing to the increasing difficulty with which good specimens are procured, the closing of certain former sources of supply, and the high prices demanded, much attention has been given to the Grecian cedrat.

The tree itself is a variety of the *Citrus medica*, bearing a large fruit, not acid, and having a high and agreeable perfume. The tree is about the same size as the Mandarin orange. The greatest care is necessary for the proper development of the cedrat fruit from the time of blooming to the moment of picking, which takes place about the last of July. After the bud has appeared, all surrounding thorns are removed from the branch, even the nearest leaves are removed, and the young fruit is wrapped loosely in flax lint, lest it be marred by a scratch or blemish. For religious purposes it is of the greatest importance that the fruit be perfectly smooth and without excrescence. The stamens are an important part in the sentimental value of the fruit and must be preserved intact. When mature the cedrat is packed carefully in individual compartments of a specially constructed box, each tiny compartment lined with flax lint, in which condition it is ready for the buyer.

Cedrat groves are located on slopes where the winter winds are cut off by protecting peaks and where the temperature does not go too low, for the slightest frost withers the stamens, rendering the fruit no longer suitable for religious purposes, and its value drops to the common quotation ranging between 3 and 5 cents apiece, while the perfect fruit retails for from \$0.60 to \$2 each.

The use of the cedrat in religious celebrations dates, according to tradition, from a period near the Babylonian captivity, and its use is zealously adhered to by orthodox Hebrews in various parts of the world. Each member of the congregation is supposed to possess on the ceremonial day at least one perfect specimen of the fruit, without fleck or blemish, and retaining the stamen.

Until the outbreak of the present war, Trieste was the greatest cedrat market of this section of the world, but the closing of that port has shifted the market center to Piræus, whence a large export is developing from the increased production which has taken place in the cedrat groves in the districts of Parga and Chimera in northern Epirus, on account of the blockade of the Syrian coast, whence a large amount of the crop was formerly sent to Trieste.

Competent ecclesiastical authorities pronounce the Chimera cedrats, grown in New Greece, to be the best in the world for religious purposes, the excellence of which variety is said to be due to a secret process of cultivation, which is jealously guarded by its fortunate possessors.

Two shipments of cedrats were made from this district recently, totaling 3,793.99 pounds, valued at \$2,480.10, indicating the very high prices brought by this fruit.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau and its branch offices.]

Barley, No. 19086.—An American consular officer in northern Africa reports that a man in his district desires to communicate with American exporters of barley who are able to make cargo quotations in Italian lire, c. i. f. destination, on telegraphic inquiry, with 48 to 72 hours option. Correspondence may be in English. Samples should be sent with first letter.

Cotton machinery, No. 19087.—The Bureau is informed by an American consular officer in Russia that a man in his district desires to represent American manufacturers of cotton machinery. Correspondence may be in English.

General agency, No. 19088.—An American consular officer in Brazil writes that a man in his district desires to sell on commission for American firms, men's furnishings, hardware, electrical lamps, dentists' supplies, toilet articles, shoes, office supplies, printing paper, food supplies, etc. Catalogues and samples should be sent. Reference is given.

Underwear and hosiery, No. 19089.—An American consular officer in the United Kingdom reports that a manufacturers' agent in his district desires to act in that capacity for an American manufacturer of women's underclothing, children's outfitting, and other dry goods. Reference is given.

Optical supplies, No. 19090.—An American consular officer in India transmits the name of a firm in that country which desires to establish connections with American manufacturers of lenses, frames, and cases.

Ice boxes, No. 19091.—An American consular officer in a Mediterranean port writes that a firm in his district is in the market for ice boxes or small refrigerators of the simplest type and of rather cheap construction, at a price which will enable the firm to retail them for not over \$15.

Dairy machinery and appliances, No. 19092.—An American consular officer in India transmits the name of a firm which desires to be placed in touch with American manufacturers of dairy machinery and appliances.

Cotton, yarn, dry goods, umbrellas, etc., No. 19093.—The Bureau is informed by an American consular officer in China that a firm in his district desires to establish connections with American exporters of raw cotton, cotton yarn, cotton piece goods, silk trimmings, ribbons and laces, underwear, umbrellas and umbrella parts, and kerosene oil lamps, lamp globes and shades. Correspondence may be in English or German.

Wagons and carts, No. 19094.—An American consular officer in South America reports a possible market in his district for wagons and carts for drayage purposes. Catalogues showing cuts and prices should be sent, particularly of the low-bed type. Correspondence may be in English but Portuguese is preferred.

Knife-cleaning machine, No. 19095.—A man in the United Kingdom writes the Bureau that he wishes to establish connections with an American firm which will purchase or undertake to promote the sale of a knife-cleaning machine. An illustration of the machine has been forwarded and may be examined at the Bureau or its branch offices. (Refer to file No. 73.)

Coal, No. 19096.—An American consular officer in Brazil reports that a firm in his district desires prices for charter shipments, f. o. b. New York or other water points, on coal. Statements of analyses should be sent.

Zinc plates, pyrolusite, and graphite, No. 19097.—A business man in Norway desires to communicate with American manufacturers and exporters of zinc plates, No. 12, 0.65 mm. thick; No. 7, 0.35 mm. thick, or No. 6, 0.3 mm. thick; corrugated zinc plates for use on washboards, No. 7, plates to be 1 by 2½ meters; pyrolusite containing 90 to 95 per cent oxygen; and pulverized graphite, free from iron and other particles. Quotations are desired c. i. f. destination.

Brass tubes, No. 19098.—An inquiry has been received by the Bureau from Argentina for quotations on 400 brass tubes, 0.035 millimeter internal and 0.080 millimeter external dimensions, 2.60 meters long. Quotations should be made f. o. b. New York or other water points.

- Electrical goods*, No. 19099.—The commercial attaché of the Department of Commerce in China writes that a firm in that country desires to establish connections with American manufacturers of electrical wires, fixtures, batteries, and lamps of the cheaper class.
- Automobiles*, No. 19100.—One of the commercial attachés of the Department of Commerce reports a possible market for 200 automobile trucks in Spain.
- Parquet flooring*, No. 19101.—A business firm in the United States transmits the name of a firm in Argentina which desires to be put in touch with American manufacturers of parquet flooring. Samples should be sent by parcels post, with quotations f. o. b. New York.
- General agency*, No. 19102.—A man in Spain writes the Bureau that he desires to establish commercial relations with American firms with a view to representing them in that country.
- Surgical and medical instruments and apparatuses*, No. 19103.—A firm in Russia requests the names of American firms manufacturing or dealing in physical, surgical, and medical instruments and apparatuses, instruments and utensils for chemical laboratories, instruments for geodesy and drawing, spectacles, glasses, and frames for spectacles. Correspondence should be in Russian.
- General agency*, No. 19104.—The commercial attaché of the Department of Commerce in England transmits the name of a man who desires to communicate with American firms interested in establishing importing agencies in Europe. The man does not specify any particular line.
- Windlasses and winches*, No. 19105.—An American consular officer in Canada reports that a firm in his district desires to receive catalogues and price lists from American manufacturers and exporters of windlasses and winches.
- Bones*, No. 19106.—The Bureau is informed by an American consular officer in France that a firm in his district is in the market for the purchase of large quantities of bones for the manufacture of buttons, glue, and fertilizer. The firm desires to pay about \$25.00, c. i. f. destination.
- Electric torches*, No. 19107.—An American consular officer in the United Kingdom reports that a firm in his district is desirous of importing electric torches, particularly vulcanized torches complete with cup and lens, sizes 1½ inches by 5 inches, 1½ inches by 6½ inches, and 1½ inches by 8½ inches. Descriptive literature should be sent with quotations.
- Glass and bottles*, No. 19108.—The commercial attaché of the Department of Commerce in France transmits the name of a man who desires to establish connections with American manufacturers of glass bottles and glass of all kinds.
- Drugs, pharmaceutical, surgical, and medical supplies*, No. 19109.—An American consular officer in India writes that a man in his district desires to communicate with American firms dealing in drugs, pharmaceutical, surgical, and medical appliances and supplies.
- Agricultural machinery*, No. 19110.—The Bureau is informed by an American consular officer in France that a man in his district desires to represent American manufacturers of agricultural machinery.
- Textiles*, No. 19111.—An American consular officer in South Africa transmits the name of a manufacturers' agent who desires to represent American manufacturers of cotton dress goods, hosiery, household linens and cotton goods, cottonades and cotton duck. Correspondence, as well as catalogues and price lists, may be in English.
- Chemicals*, No. 19112.—An American consular officer in Switzerland reports that a man in his district desires to communicate with American firms who are in a position to deliver benzol, aniline, phenol, salicylic acid, acetic acid, bismuth, borax, zenzo naphthol, iodine, methylalcohol, cocaine, and atrophine. Reference is given. Correspondence may be in English.

TEXTILE-MANUFACTURING COMPANIES IN RUSSIA.

[Consul General John H. Snodgrass, Moscow, Sept. 13.]

An article in the industrial press calls attention to the fact that the shares of Russian textile-manufacturing enterprises are mostly in firm hands. Until recently the influence of banks in these concerns was small, and their paper values (stocks) circulated only in a limited number on Russian stock exchanges. The official bulletin of the Petrograd Stock Exchange contains the names of shares of textile-manufacturing enterprises, the aggregate capital of which amounts to 93,300,000 rubles (\$48,000,000), against 82,900,000 rubles (\$43,000,000) on January 1, 1913. Thus the capital of 23 textile-manufacturing companies quoted on the Petrograd Stock Exchange has augmented by 10,400,000 rubles (\$5,400,000) in more than two and a half years, and during this time no shares of new companies have been added to the stock exchange quotation list. The capital of concerns in other industrial lines has grown rapidly, especially those in which the banks and the stock exchanges are interested.

Of the 23 textile-manufacturing concerns, the stocks of which are quoted on the Petrograd Exchange, 14, with a capital of \$29,700,000, are in the Petrograd district; 4, with a capital of \$11,200,000, are in Poland; 3, with a capital of \$4,900,000, are in the Moscow district; 1, with a capital of \$1,200,000, is in Reval; and 1, with a capital of \$1,000,000, is in Saratof.

In 1914 no business was transacted in the shares of 16 of these enterprises, and there were very small transactions in shares of the other 7, though textile-manufacturing concerns are among the most profitable in Russia.

HYDROELECTRIC DEVELOPMENT ABROAD.

American consular officers in various foreign countries have, during the past year, submitted exhaustive reviews of the hydroelectric development and the outlook for augmented sales of electrical materials and supplies in their respective districts. A few of these articles have been published in *COMMERCE REPORTS*, but the series is so extensive that publication of all the reports submitted was impracticable.

For this reason the Bureau of Foreign and Domestic Commerce arranged to place the unpublished manuscripts in the industrial centers of the United States, where they could be inspected by manufacturers and exporters, and two sets of these manuscripts have already been distributed in this way. Additional reports have since been received from consular officers, and these, known as Hydro-electrical Series No. 3, will be made available to interested firms in the same manner.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 308 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

CHINESE GOVERNMENT THANKS AMERICAN OFFICIALS.

The Chinese Minister at Washington has conveyed to the Department of State the thanks of his Government for the courtesies and attentions shown by American officials to the members of the Honorary Commercial Commission of China during its recent visit to the United States.

[The visit of this commission last spring attracted much attention, and many notices concerning it—its membership, itinerary, etc.—appeared in *COMMERCE REPORTS* at the time. Later the secretary of the commission wrote to the Bureau of Foreign and Domestic Commerce (see *COMMERCE REPORTS* for Sept. 8, 1915), voicing an enthusiastic opinion regarding the outlook for augmented trade between the two Republics as an outcome of the commission's tour.]

COLOMBIAN OFFICIALS TO STUDY AMERICAN SCHOOLS.

The Minister of Colombia, at Washington, has informed the Department of Commerce that Senores Don Antonia Borda C. and Don Juan A. Montoya B. have been appointed by the Colombian Government as its special agents to study agricultural and commercial institutions in the United States.

FLOOD DAMAGE IN MEXICAN STATE.

[Consul A. J. Lespinasse, Frontera, Tabasco, Oct. 15.]

A violent gale, accompanied by torrential rains, visited the State of Tabasco on October 8, causing the rivers to overflow their banks and inundate the surrounding country. It is feared that the damage to banana plantations will be unusually heavy, as many of the plantations have been under water for three to five days. Unless the flood recedes rapidly and the weather becomes cooler the plants will rot and the fruit become unmarketable. It is now roughly estimated that the decrease in banana production will be 50 per cent up to March, 1916; if no further damage occurs in the meantime, production should gradually return to normal after that date.

The loss of human lives has been small, but suffering among the Indian farmers will be keen, as they have lost all their crops and many of them are homeless. The loss of cattle will be high, many having died from starvation and exposure, while others were carried away by the swollen streams and drowned.

IMPROVED CONDITIONS IN THE COTTON BELT.

[Prepared in the Atlanta office of the Bureau of Foreign and Domestic Commerce, Oct. 22.]

Considering the depressed conditions prevailing throughout the cotton belt in the fall of 1914 and spring of 1915, occasioned by the impossibility of moving last year's record cotton crop, the return to prosperity which the South is now enjoying is truly remarkable. Cotton is moving, the farmers are receiving double the price paid them last year, and cotton experts state that the cost of production has been lowered to such an extent that the grower's profit now approximates \$50 per bale. The price of cotton a year ago made it impossible for planters to clear off their indebtedness for fertilizer and other supplies, but the more satisfactory price now prevailing has afforded them considerable relief in this respect. The campaign for diversification of crops resulted in some good, as many fields that heretofore produced only cotton, this year yielded a good supply of truck.

Last year at this time many cotton mills were on short time, but conditions have so far adjusted themselves that most of them are continually busy and some are running overtime. Optimistic of future business, many mills are making extensive purchases of machinery and equipment. A southern representative of one of the large manufacturers of textile machinery recently stated that cotton-machinery builders have done bigger business this year than in any year since 1907. Again, one of the largest jobbers of hardware and mill supplies in the South is responsible for the statement that during the past two weeks he has handled more equipment and mill supplies than in any two months since the first of the year.

Building and Industrial Activity—Bank Clearances.

Building operations are on the increase. Comparing September, 1915, with the corresponding month of 1914, statistics show that improvement in this industry has been general. Among the southern cities Atlanta made the largest gain for the period stated—281 per cent.

The iron and steel foundries are all busy with both domestic and foreign orders.

Hosiery manufacturers throughout the South are doing a tremendous business. Numbers of them state that they are sold far ahead, or, as one important company expresses it, "too far oversold to entertain any further orders until July next or perhaps later." Another company made the statement that it was not interested in further orders, as it had more than it could handle.

The bank clearings for Atlanta for the week ending October 8, 1915, which may be taken as indicative of improved financial conditions throughout the cotton belt, showed an increase of nearly 5 per cent over the clearings for the corresponding week of 1914, which is a gain of nearly \$1,000,000 a day for each day of the week.

A boiler which is described as a "tubeless rapid steam generator," employing oil as fuel, is the subject of a circular, with accompanying blue-print diagram and illustrations, which has been forwarded by Commercial Attaché A. H. Baldwin at London. The descriptive material will be loaned upon application to the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 799.

LARGER MARKETS FOR AMERICAN LINOLEUM AND OILCLOTH.

American manufacturers of lineoleums and oilcloth, whose annual product doubled in a decade—from \$11,403,000 in 1899 to \$23,339,000 in 1909—now have unusual opportunities for the sale of their goods. Imports of this class have fallen off more than one-half, while exports have increased nearly one-half in the first eight months of the current year in comparison with the corresponding period of 1914. These facts are disclosed by statements published by the Bureau of Foreign and Domestic Commerce in the August "Summary of Foreign Commerce."

Usually our imports of lineoleum and oilcloth are double in value our exports of that class, but the balance of trade in this commodity has now shifted to the export side. For recent periods the comparative imports and exports have stood as follows:

Calendar year.	Imports.	Exports.
1905.....	\$1,457,000	\$263,000
1910.....	2,016,000	526,000
1914.....	1,740,000	615,000
1915 (8 months).....	588,000	628,000

Our present rate of exportation of lineoleum and oilcloth is thus about \$1,000,000 per annum, or far below the annual sales of the United Kingdom and Germany.

In normal years the United Kingdom's exports of lineoleum and oilcloth have averaged about \$12,000,000 per annum, and of that amount she has been sending from \$1,000,000 to \$1,500,000 worth to the United States. The remainder has gone chiefly to Europe, although shipments are recorded to all grand divisions. Prior to the war Germany was selling us more than \$500,000 worth annually and sending goodly amounts to South America and other sections, her total exports of these articles approximating \$5,000,000 a year.

American exports of oilcloth and lineoleum, while relatively small, are finding their way to all parts of the world. The largest outlets have been Canada, England, Cuba, Australia, and the Philippine Islands. Other promising fields are Argentina, India, and various countries of Central and South America and the nonmanufacturing countries of Europe. Detailed information regarding the amount sent to each country is published in table 5, "Exports of domestic merchandise, 1910-1914," sold by the Superintendent of Documents, Washington, D. C., and by branch offices of the Bureau of Foreign and Domestic Commerce located at New York, Boston, Chicago, St. Louis, New Orleans, Atlanta, San Francisco, and Seattle for the nominal sum of 35 cents. Table 3, containing sources of our imported oilcloth, is likewise sold for 30 cents.

That South America has resumed her normal demand for agricultural implements from the United States is shown by recent export statistics. Large consignments of iron and steel have also been shipped lately to South America, while the exports of tin plate from the United States to South America during the summer of 1915 show an enormous increase over those of last year for the corresponding period.

POSSIBILITIES FOR AMERICAN-MADE DEWAR FLASKS.

There appears to be no good reason why American manufacturers of vacuum glassware should not extend their line to include Dewar vacuum flasks, which are extensively used for scientific purposes in this country. The Bureau of Standards requires annually a considerable number of these flasks, which have always had to be imported specially; other scientific bureaus of the United States Government are large users thereof, and schools, colleges, and other laboratories throughout the country form a market.

Dewar flasks are similar to thermos bottles and others of like form, which are at present made with entire success in this country. Those most used in scientific work are larger than thermos bottles, and there is more of a demand for spherical flasks, while most thermos bottles are cylindrical; otherwise there is no distinction between the two lines of products.

A comparison of prices of the imported flasks, even free of duty, with the commercial schedule of prices of thermos bottles of the same size warrants the belief that a permanent business in this line could be established in the United States that would not have to yield to foreign competition upon the resumption of normal trade conditions.

The Bureau of Standards stands ready to furnish to any American manufacturer who may be interested more detailed specifications concerning Dewar vacuum flasks, and it is willing to place a trial order with one or more firms if a suitable price arrangement can be made.

PRINCE RUPERT'S BIG DRY DOCK TESTED.

[Vice Consul Irving N. Linnell, Prince Rupert, British Columbia, Oct. 7.]

The official test of the dry dock and ship-repair plant at Prince Rupert has been made, and it has been pronounced ready for work. This plant was built by the Grand Trunk Pacific Railway, and was projected by the late President Charles M. Hays, of that company.

The completed plant consists of a 20,000-ton floating dry dock, the second largest on this continent; carpenter shop; shipbuilding shed and launching platform; machine shop; boiler and blacksmith shop, and foundry. There is also a concrete power house, with boilers of 2,400 horsepower, and two 1,000-kilowatt turbo-generators, together with an air compressor having a capacity of 1,500 cubic feet per minute.

The floating dry dock is made up of three parts, which will fit together in any combination, or may be operated separately and at the same time. By a special link-and-pin device, any pontoon is easily removable for examination or repair.

A steel derrick, capable of lifting 50 tons, is installed for the purpose of handling heavy lifts into and out of ships, and is used as well for handling heavy commercial freight for the railway. Traveling cranes are installed in all the shops as well as in the power house.

Consul John A. Gamon reports that on the basis of the rate of exchange at Puerto Cortes during September the value of the Honduran silver peso was 35.5 cents gold, representing a premium of 181.69.

ANCIENT HAWAIIAN TAPA DESIGNS REVIVED.

[A. P. Taylor, correspondent, Honolulu, Oct. 8.]

The art of making fiber cloth, as practiced by the Hawaiians up to the period when the New England missionaries arrived in the Hawaiian Islands—1820—is now almost a lost art, and except for a large, but exceedingly rare collection on display behind glass at the Bishop Museum, Honolulu, Hawaiian tapas are now regarded as expensive relics.

Tapas still continue to come into the market from Samoa and from Tahiti, and are bought by travelers as Hawaiian tapas. As a matter of fact, tapa fiber cloth is no longer made in Hawaii.

In ancient days Hawaiians made their tapas from wood fiber which, with water added, was reduced to a pulp. To make it into cloth, the water was squeezed from the pulpy mass, which was then placed upon smooth logs and beaten with specially prepared sticks. In this way the mass was gradually worked out into large thin sheets, and when dry was of the consistency of papyrus or smooth, stiff paper.

The Hawaiians carved designs on heavy wood sticks, and with pigment secured from sea mosses, ground ochre, and plants, the designs were stamped into the wet fiber. These designs were somewhat crude, but quite effective. After the arrival of the missionaries some of the designs were copied from gingham and calico cloths brought from New England. Tapas were used not only as clothing but as bedspreads. When piled 6, 7, and 10 deep they formed an extremely comfortable couch.

An American girl, born in Hawaii, who recently finished four years' work at an American college, where she studied under one of the foremost teachers of design, has created a new handicraft in the use of tapa designs which were secured from the Bishop Museum. The work consists of cutting the designs in relief out of wood, and with these "tools" she produces her pictures in harmonious coloring on various fabrics. White chiffon has been found a very good medium. So far, fabrics turned out are head and shoulder scarfs for women. Many attempts have been made to preserve the tapa designs, but never before in women's apparel.

CHRISTMAS CRACKERS FOR CHINESE.

[Vice Consul A. E. Carleton, Hongkong, Oct. 2.]

Although the time is limited in which to introduce on the Hongkong market for this year's holiday trade bonbons or Christmas crackers, it will, no doubt, pay American manufacturers to keep in touch with the Hongkong importers. Although the requirements of the European population are not great, there seems to be an increasing interest on the part of the Chinese for this line of goods. At present these table crackers are being supplied by British firms almost entirely, and local dealers report that the prices have been increased considerably. For the Hongkong trade the qualities which are deemed to be the most popular are those retailing for \$0.65, \$1, and \$1.25 gold per dozen. The more expensive kinds would find no sale locally. The British product contains miniature presents, knick-knacks, verses, and the like.

[A list of Hongking importing firms may be had from the Bureau of Foreign and Domestic Commerce, Washington.]

MARKETING THE NEW SOYA BEAN CROP IN MANCHURIA.

[Consul A. A. Williamson, Dairen, Manchuria, China, Oct. 7.]

New soya beans are beginning to appear on the market at various places in the interior of Manchuria and appear to be of average quality on the whole. While some beans, grown on lower ground, are inferior, there are also good-quality beans grown on the uplands.

While no figures on which to base an estimate of acreage or production are yet to be had, the consensus of opinion is that the crop will be an average one or even below average. [For discussion of last year's crop see Supplement to COMMERCE REPORTS No. 52b, June 2, 1915.]

The big rice harvest in Japan, which has so lowered the income of farmers as to affect their purchasing power, has, along with other factors, kept down bean prices. The stocks held over in the interior from last season were exceptionally large, and the heavy rains have damaged these old beans so much that they are practically lost.

Cooperative Selling—Fall Shipments.

At Kaiyuan a produce dealers' association and trust company has been formed, modeled after that at Dairen. Kaiyuan is a promising bean center. It is likely that an exchange will be established at Changchun also.

North Manchuria beans, which are considered superior to those grown in South Manchuria, have been brought to Dairen in considerable quantities both by train and by steamer; but the late spring and excessive rainfall (much of the country was flooded from time to time) have doubtless decreased these crops considerably, it being estimated that the reduction amounts to about 20 per cent. This applies equally to other crops, such as kaoliang, millet, barley, and wheat. The ravages of insect pests were also greater than usual.

Nevertheless the export of beans to Europe, notably Holland, has kept up remarkably, considering conditions there. These shipments have to be covered by documents guaranteeing their ultimate consumption in order to avoid capture at sea by belligerent cruisers.

At present the local trade is depressed, as Japan, the principal market, is suffering from overproduction of rice, as noted above, and European markets are not what they were, despite some shipments that have gone there. A few mills have begun work, but only in a small way. One of the largest was driven to making peanut oil during the summer.

More Crushing Mills.

The experimental mill built by the South Manchuria Railway Co. at Dairen, which uses the chemical extraction process, has been sold to Messrs. Suzuki & Co., of Kobe, the seller stipulating that the purchaser should enlarge the mill to double its capacity. Suzuki & Co. will spend about 200,000 yen (about \$100,000) on the mill; but it is said the railway will aid the new owners financially. The fatty acid factory attached to the mill will also be operated by Suzuki & Co. This firm intends to establish two more mills, using the same benzine extraction process, at Kobe and Moji, in all probability. The fatty acid and glycerine factory is only used when the price of bean oil is too low for profit.

The purchase of this mill by a private company is interesting, as it was understood that it had not proved profitable. Perhaps it is thought that by enlarging the capacity profits would mount up so as to make the venture pay.

Nevertheless it may be said of practically all the mills in Manchuria that they pay very little in comparison with other investments. It is doubtful if much more capital will be invested in this business except, possibly, as a subsidiary enterprise, such as that of Lever Bros. (of England), near Kobe. This firm uses the oil obtained by its extraction mill for soap making, and the enterprise appears to be paying.

ANOTHER CANADIAN TRANSCONTINENTAL LINE.

[Vice Consul G. C. Woodward, Vancouver, B. C., Canada, Oct. 21.]

With the arrival in Vancouver on October 19, 1915, of the first through train over the Canadian Northern Railway, another Canadian transcontinental railway connected the Atlantic with the Pacific, making three all-Canadian lines in operation and increasing the opportunities for the growth and development of British Columbia.

This company now has in operation over 10,000 miles of railroad, or slightly less than the Canadian Pacific Railway, which has a mileage of over 11,000.

Tenders have recently been asked by the Canadian Northern Railway for constructing temporary freight sheds and a passenger station on that portion of False Creek, already filled in by the company, to serve for the accommodation of passenger and freight trains pending the construction of the proposed million dollar terminals on this site.

The company has already reclaimed 64 acres of False Creek tide flats, placed 2,000,000 yards of fill in the creek, and it is estimated that it will require a further fill of 3,250,000 yards to complete the entire reclamation scheme necessary for building the permanent terminals.

SHIPS FOR THE TRANSPACIFIC TRADE.

[Vice Consul A. E. Carleton, Hongkong, China, Oct. 2.]

If the present congestion of cargo throughout the Far East continues, the Toyo Kisen Kaisha, it is officially stated, is in a position to add several other ships. The Java-Pacific Co., a new line managed by the Java-China-Japan Line, will run one boat per month from Batavia, via Hongkong and other ports, to San Francisco, adding more ships if warranted. The *Empress of Japan*, the Canadian Pacific liner, will leave Hongkong for Vancouver the first week in November.

The Bank Line Co., again enters the trans-Pacific freight trade in November with one boat, adding others later.

A British India firm has opened in Detroit a bank credit of £10,000 (\$48,665) to be used in the purchase of plows of a special type and probably a brick-making plant, which were brought to its attention by Consul James Oliver Laing, of Karachi.

CONFECTIONERY TRADE OF COSTA RICA.

[Consul Samuel T. Lee, San José, Sept. 29.]

As a rule the dealers of San Jose buy their hard, mixed, and crystallized candies through New York commission houses (which receive $2\frac{1}{2}$ per cent commission on cash purchases and generally 5 per cent on time trading), but the retailers of chocolate candies customarily import direct from the factory in small amounts.

The stock lines of American hard candies have been known in this market for years, and the goods are simply ordered as wanted. This class of goods comes in 5-pound screw-top cans, and costs about 11 cents United States currency per pound, less 5 per cent for cash. The labels are printed in the English language, but the cans sent to this market bear an additional label printed in Spanish, which is simply pasted over the original label. All candies pay an import duty of $10\frac{1}{2}$ cents (United States) per pound gross weight. Package goods are not imported for the reason that duties are assessed by gross weight, and pail goods are entirely out of the question.

Chocolates Bought Direct—Keeping Qualities.

American chocolates of the very best grades are sold in greatest quantity during the holiday season, though two firms handle them throughout the entire year. These candies are ordered in small lots, as the climate forbids keeping them for any length of time. The American chocolates are sent with labels in English and are consumed mostly by foreigners.

Two important American chocolate manufacturers are now using 1-pound air-tight cans, which retail for the equivalent of \$1.25. Other American manufacturers continue sending their chocolates in cardboard boxes, much to their prejudice, when the goods can not be sold and eaten at once. As noted, this class of goods is almost always bought direct from the factory, and is invariably retailed by the one who imports it. The leading importer of American chocolates buys direct from the makers for cash and receives a 5 per cent discount.

Unquestionably the higher grades of American chocolates are far superior to all others in this market, but the problem of so making them that they will keep for a longer period must be mastered. Certain brands of Italian and English chocolates will keep throughout the year, as they are made up dry and hard, but as a confection they can not compare with the fresh American goods.

Climate Must Be Reckoned With.

The temperature at San Jose seldom rises above 85° F., but merchandise is distributed from this point to the lowlands, where the heat and dampness are such that only certain classes of candy properly packed can stand the test. Then, too, all imported candies reaching San Juan must pass through the hot weather of the sea-level part of the journey.

The best packing for the hard, mixed, and crystallized candies is the 5-pound can with a screw top. The ideal package for chocolates is a very thin, air-tight tin box ($\frac{1}{2}$ and 1 pound sizes) that can be opened by tearing the tin lid off with the fingers only, and this plain

tin box should be placed inside the regular container bearing the manufacturers' name and usual trade-mark.

[The addresses of San Jose importers of confectionery may be had from the Bureau of Foreign and Domestic Commerce or its branch offices; refer to file No. 67399.]

STEEL PRODUCED DIRECT FROM ORE.

[Consul Felix S. S. Johnson, Kingston, Ontario, Canada, Sept. 7.]

Especial interest attaches to the electric smelter at Belleville, in the Kingston consular district, because of the production there of steel of all grades, including tool steel, direct from the ore. An unusual feature of the process is the use of a preheater that utilizes the heat from the waste gases produced during the smelting of the ore.

The preheater consists of two wrought-iron pipes 8 feet long, increasing regularly in diameter from 14 to 18 inches, to allow the charge to slide easily down the heated portion. These pipes are inclosed in the preheater stack, which has firebrick linings and baffle plates with openings arranged in such a manner that the heated gases circulate about the preheater pipes.

No Waste of Electrodes—Enlargements Planned.

The furnace is charged from the upper floor into the preheater, the charge consisting of iron ore, limestone, and charcoal, crushed to pass through a 1-inch mesh. The furnace is operated on a two-phase current, the transformers being connected by what is known as the Scot connection. The electrodes are 3 inches in diameter, threaded so that they can pass down continuously, and are used up entirely, there being practically no loss from short ends.

The plant was in operation for about two months, and demonstrated that steel can be made in this manner directly from ore containing 7.5 per cent of titanium. A quantity of high-carbon steel was made, the ingots being perfectly sound and free from blowholes. The company intends to erect shortly a 3-ton furnace, with a view to making high-carbon tool steel and steel castings.

REVIVAL OF ANTIMONY MINING IN JAPAN.

[Extract from Japan Chronicle of Sept. 21, by Consul General George H. Seidmore, Yokohama.]

Before the war antimony mining in Japan was neglected, owing to the cheapness of imported Chinese sulphide of antimony. The European hostilities, however, sent up the market tremendously—from about 2.621 cents per pound to about 15.725 cents per pound now ruling. This has naturally acted as a great impetus to antimony mining in this country, and the mines at Ichinogawa, Fujinogawa, and Tatsugawa have all been considerably extended, yet their present output aggregates only about 50 tons a month. This quantity is only a fraction of the monthly consumption in Japan, which ranges between 450 and 500 tons. It is regretted that though there is thus still a great deficit for domestic requirements it is impossible for the above-mentioned mines, now controlled by small capitalists, to be extended with the necessary rapidity.

FUR SALES AT NIZHNI FAIR.

[Consul General John H. Snodgrass, Moscow, Sept. 15.]

A Moscow business man who yearly attends the Nizhni Novgorod fair submitted the following report of the market for 1915:

The course of this year's fair was brisk, taking the war into consideration. The demand for certain articles in England and the United States influenced the fair, and the prices for such articles rose considerably in comparison with prices before the fair. In comparison with former years, however, the fair was somewhat dull and inactive. Many of the buyers were absent, and the majority of the goods were either not dispatched to the fair or were delayed in delivery on account of the congestion of traffic.

Astrakhan, Badgers, Colt Skins, Ermine, and Marmot.

The exportation of astrakhans being prohibited and the principal buyers from Germany being absent, these goods remained unsold. For domestic purposes astrakhan lining was bought at \$6.18 to \$7.73. Raw astrakhans have been bought by the manufacturers up to \$0.18 per pair, and raw Moie were bought up to \$0.77 per skin. On account of a considerable demand for badgers for England, many parcels of good quality were bought at 1.35 to 1.40 rubles (\$0.70 to \$0.72) per skin. Colt skins were neglected, but a few parcels were sold to Russian glove makers up to 1.30 rubles (\$0.67) per skin. At the beginning of the fair there was a fair demand for ermines. At the finish, however, the demand relaxed and prices fell off. Good Berezovsky goods fetched \$1.24 to \$1.13 per skin, Petchersky up to \$0.88, Archangel goods up to \$0.82, Tomsky up to \$0.82, and west Russian goods up to \$0.67; best Ishimsky were not on the market. Kolinsky was neglected; only a few parcels were bought for speculation at \$0.62. Marmots also were neglected, and only at the finish of the fair was there some interest in these goods. However, no transactions have been concluded, as the main parcels are lying in Moscow. It is possible that in the near future some big transactions will take place. There was no demand for martens.

Persian Lamb, Red Fox, and Sables.

Before the fair commenced the Russian dealers bought best raw Persian lamb skins up to \$39 to \$41 for 10 skins and at the beginning of the fair disposed of these goods at a good profit, so that they were obliged to buy new goods. However, on account of the main parcels being delayed on the way, there was a scarcity of these goods, and prices went up, so that for best goods up to \$59 was paid. However, the dealers could not sell these goods at a profit, and therefore at the end of the fair prices went down. Doubtless in the late autumn prices will be the same as before the Nizhni fair. Owing to the permission just received, Persian lamb skins may be forwarded to England, but not direct to America, and this might later on result in some purchases for America. At the fair, however, only a few parcels were bought for the United States. There was a large demand for red fox, especially for the best grades. The light goods, however, as Mongolian, Semipalatinsky, and Karaganka, were quite neglected. West Russian foxes fetched up to \$4.10 each, central Russian foxes up to \$7.20, east Russian up to \$7.70, Tobolsky up to \$8.20, Finnish up to \$8.75 and \$0.25, Yakutsky up to \$11.30, and Kamtchatsky up to \$13.90. Sables were much in demand.

Squirrel Skins, Linings, and Tails.

There was a very brisk demand for squirrel skins, and almost all parcels in stock were cleared. Russian backs fetched up to \$0.135 each, Zavodsky fetched up to \$0.145, Russian squirrel skins fetched up to \$0.175, and Lensky skins up to \$0.21 each. Kargopolsky 6 rows back and belly linings combined fetched up to \$16.50; the same linings, 7 rows, fetched up to \$18.50. Selenia belly linings fetched from \$1.90 to \$2.35. Obsky belly linings sold up to \$4.65; Altaisky up to \$5.65; Nertchinsky up to \$6.20, and Grudzovy up to \$5.40. Seven-row squirrel back linings fetched up to \$28.30; 8-row back linings up to \$43.80, and 12-row back linings up to \$64.35 per lining. Only a few parcels of raw squirrel skins were sold. At the beginning of the fair the owners would not sell squirrel tails under \$2.85 per pound. At the end, however, they offered the goods at \$2.50, but there were no buyers.

White Fox, Hares, Wolves, etc.

White fox was in brisk demand, about 8,000 foxes being sold. Yenisseisky goods fetched up to \$14.95 per skin; Surgutsky up to \$12.85; Obdorsky up to \$11.35; Petchersky up to \$13.40; and Yakutsky up to \$14.95.

There was a very brisk demand for white hares, dressed. At the finish of the fair for the furs of the best manufacture up to \$0.33 was paid. Wolves were very much in demand and fetched up to \$5.15 per skin. No transactions took place in lynx or wolverines. Only a few parcels of calfskins were bought for speculation up to \$0.33 per pound. Many parcels of horsehair did not arrive in time. Parcels were bought at \$0.50 to \$0.57 per pound. Cowhides were much in demand and only a few were for sale. The best goods fetched up to \$0.30 per pound. Horsehides sold up to \$5.40 per skin. The business with raw bristles has not been cleared up, and prices have not taken definite shape.

VENDING AND WEIGHING MACHINES IN CANADA.

[Consul O. Gaylord Marsh, detailed as vice consul, Ottawa, Oct. 19.]

Ordinary slot machines are used to quite an extent in this consular district. Those observed are for vending candies, chewing gums, peanuts, matches, stamps, sanitary drinking cups, and for weighing. Many of these machines are of American manufacture, and offer a commendable illustration of adaptability to the requirements of a foreign market, the machines having to be constructed to receive Canadian coins, which differ in size from American coins.

In some cases business men purchase and install machines at their places of business, while in other cases manufacturers of candies, chewing gums, etc., loan machines to business men to facilitate the sale of their manufactures.

Slot machines appear to be used here to a less extent than in the United States, and but few of the more novel machines appear to have been installed. It is not possible to state just what the prospects are for introducing machines in this market of types differing from those now in use, but it may reasonably be assumed that there is a prospect for all suitable machines, as that which attracts and appeals to the American is apt to attract and appeal to the Canadian.

ELECTRICAL DEVELOPMENT IN INDIA.

[Consul Lucien Memminger, Madras, Sept. 14.]

There are several important electric power plants in operation in southern India and a number of schemes for further development are being pushed forward despite temporary dislocation of trade and industry caused by the war. If these new plants are built, much new machinery will be required, and possibly some will be sought from the United States, though at present little is brought direct from that country.

The most important electrical enterprise in this region for industrial purposes is that in the native State of Mysore, where the Cauvery Electric Power Works at Sivasamudram has a station capacity of 16,700 horsepower and transmits power 92 miles at 35,000 volts to the Kolar gold fields. A further 5,000 horsepower is about to be installed. Five gold mines in the Kolar fields are supplied with electricity from these works, and have thus been enabled to do without steam power altogether. The company also furnishes electric light to near-by settlements, notably to Mysore town, with 68,000 inhabitants, the native capital of Mysore State. In connection with this enterprise the Mysore Government employs an American chief engineer.

Association of Business Enterprises.

In Madras, the third largest city in India, and the foremost in southern India, there is a very modern electric plant operated by the General Electric Co. (Ltd.), India, which is a branch of the General Electric Co. (Ltd.), of London, Witton, Manchester, and Birmingham, England. The local company is in turn associated with the Madras Electric Supply Corporation of this city, which is incorporated in England. Amalgamated with these two concerns is the Madras Electric Tramway Co., which operates about 25 miles of street car lines in Madras. It will thus be seen that the power plant of the General Electric Co. at Madras is one of importance. The company is in fact now increasing its capacity, and has about completed a new plant for furnishing alternating current power to the suburbs. This will be three-phased current, of 50 cycles at 225 volts. Until now the company has had only direct current, the voltage usually used for motors being 225 volts. Very little of the power furnished by this plant is used for manufacturing purposes, as there are few factories in the vicinity of Madras employing electricity. The principal uses, therefore, are for lighting purposes, for the street car system, and for the operation of electric fans. Power is sold at fairly cheap rates, cost of manufacturing being decreased by use of Indian coal. Practically all houses of Europeans are now lit by electricity, as also are the houses of well-to-do natives. Electric fans are very generally used in European residences and offices, and are rapidly supplanting native "punkahs." The power plant furnishes current daily to at least 8,000 fans.

Prospective Carrying Out of Enterprises.

Among hydroelectric schemes which seem likely of realization is that at Coimbatore, in Madras Presidency, where it is proposed to make use of the Siruvani River for power purposes in furnishing electricity to the mills of that section and to the important railway towns of Trichinopoly and Madura. The chief engineer of the

Madras Government went recently to make an investigation of the feasibility of this scheme and is expected soon to render a report.

At Ootacamund, the summer capital of the Madras Government, which is reputed to be one of the finest hill stations in India, there is no electric power plant, but it is proposed to use neighboring waterfalls for this purpose. In Cochin on the Malabar coast investigations are being made as to the possibility of obtaining power for electricity from waterfalls in the Cochin Hills, and in Travancore there are also investigations. No railways in India have adopted electric traction, but it is said that several schemes are being considered by the Indian State-owned railways.

Sales Arrangements.

It will be noted from the foregoing that the possibility of making sales of electrical supplies at present is confined practically to the large enterprises already established and which are in fact to some extent operated from head offices in London.

However, in view of the future possibilities it is believed that the local market is worth cultivating and as neither of the large power companies mentioned actually sell supplies, American manufacturers desiring to bring their goods to the attention of local dealers might find it worth while to correspond with any of the firms whose names are given on the list forwarded. This would be of use as regards future development rather than for immediate orders for it is doubtful if much new business can be obtained at present. Names given on the list are those of European firms that have been established for some time and whose head offices in most cases are in London. The credit of these firms is considered good. Reasonable credit terms are extended. Most of the connections formed in Madras by American manufacturers are on an agency basis. After references have been exchanged, etc., and goods ordered, they are received on consignment, and after the sales have been completed the net proceeds are remitted to the American exporter, less the commission agreed upon. This commission would vary from 2½ to 10 per cent, according to the line of goods concerned and the amount of business that could be transacted.

[The list mentioned by the consul may be had from the Bureau of Foreign and Domestic Commerce; refer to file 67791. Attention is also called to the complete list of electrical plants in India, which will be found in the recent Handbook of India, for sale at \$1 by the Superintendent of Documents, Washington, D. C., and by the district offices of the Bureau of Foreign and Domestic Commerce.]

SACKS MADE OF PAPER COMPETE WITH JUTE.

[Consul Thomas W. Voetter, Antofagasta, Chile, Sept. 23.]

The warp and woof of the fabric of a sack that is now being used to some extent to ship ores from Antofagasta are made of strips of paper doubled or twisted, in combination with a small quantity of some short vegetable fiber. These sacks come from Germany and have competed with the jute sacks brought from India. Before the war sacks sold for about 14 cents each, but are now worth about 24.3 cents each. The scarcity of vessels to bring jute sacks from India is the cause of the rise in price.

It is stated that these paper sacks will stand hard usage and be available for several shipments before wearing out. Their use is just beginning here.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Snap fasteners, No. 19113.—An American consular officer in China writes that a firm in his district desires to receive samples, catalogues, and price lists of snap fasteners used in the manufacture of women's clothing. The firm also desires information regarding the machinery used for making such fasteners. Samples of the fasteners now used by the firm may be examined at the Bureau or its branch offices. (Refer to file No. 67983.)

Plated ware, art metal work, glassware, toys, etc., No. 19114.—The Bureau is informed by an American consular officer in Spain that a man in his district is interested in the importation of plated ware, art metal work, glassware, toys, etc. Correspondence and catalogues should be in Spanish. The man will pay cash on arrival of goods at destination.

Wire cloth, cordage and twines, sandpaper, and window glass, No. 19115.—An American consular officer in South Africa transmits the name of a firm which desires to represent American manufacturers of wire cloth, cordage and twine, sandpaper, and window glass. Correspondence, as well as literature and price lists, may be in English.

Picture-frame moldings, No. 19116.—An American consular officer in the United Kingdom reports that a man in his district desires to communicate with American manufacturers of picture-frame moldings.

Toilet articles, No. 19117.—The Bureau is informed by an American consular officer in Switzerland that a man in his district desires to make direct connections with American manufacturers and exporters of toilet articles. Samples, together with quotations c. i. f. French ports, are desired. References are given. Correspondence may be in English.

Cotton waste, No. 19118.—An American consular officer in an insular possession reports that a firm in his district is in the market for cotton waste. The firm is prepared to pay cash against shipping documents in New York. Samples and prices are wanted at once.

Translations, No. 19119.—An American consular officer in India reports that a firm in his district desires to communicate with American firms interested in having letters translated into the different dialects of India. The firm states that it has facilities for distributing circulars, etc., throughout India.

Ice-making and refrigerating plant, No. 19120.—The Municipal Council of the city of Johannesburg, Union of South Africa, invites tenders until December 30, 1915, for the supply and erection of an ice-making and refrigerating plant for the Municipal Abattoirs, Johannesburg. It is estimated that the plant will cost about \$37,500. Local representation is not absolutely necessary. Tenders should be addressed to the Town Clerk, Municipal Offices, Johannesburg, Transvaal. Copies of the specifications may be examined at the Bureau or its branch offices. (Refer to File No. 67984.)

Glass and hypodermic syringes, No. 19121.—An American consular officer in England reports that a man in his district desires to import glass syringes, hypodermic glass syringes for hospital use, glass tubes for serums and drugs, and other surgical glassware. Descriptive catalogues and price lists are desired. Reference is given.

Sugar, No. 19122.—An American consular officer in Switzerland writes that a firm in that country desires cable quotations from American manufacturers for sugar in lumps, crystallized, in cones, and small squares. Customary American terms and conditions will be accepted. Prices should be given c. i. f. French port. Samples are desired. Correspondence may be in English.

Coal and coke, No. 19123.—The Bureau is informed by an American consular officer in Spain that a man in his district is interested in the importation of American coal for steamers, coke, and coal for gas. The man states that he can use at present 2,000 tons of steam coal, 200 tons of coke, and 500 tons of gas coal. Correspondence should be in Spanish.

Hardware and toys, No. 19124.—An American consular officer in India reports that a man in his district desires to communicate with American manufacturers interested in establishing an agency for hardware and toys.

Razors, No. 19125.—An American consular officer in South Africa reports that a firm in his district desires to communicate with American manufacturers of ordinary and safety razors. Catalogues and, if possible, samples should be sent. Correspondence may be in English. Reference is given.

General agency, No. 19126.—A business man in Switzerland wishes to act as representative of American firms interested in exporting goods to Switzerland. References are given. The man does not specify any particular line.

Chemicals, electrical supplies, and mining machinery, No. 19127.—The Bureau is informed that a man in Spain desires to represent American dealers in commercial chemicals, electrical supplies, and mining machinery.

Groceries, cotton and knit goods, shoes, hardware, etc., No. 19128.—An American consular officer in South America reports that a firm in his district desires to represent American manufacturers and exporters of preserves, rice, potatoes, dried and fresh fruits, beans, cottonseed oil, peanuts, eggs, cotton and knit goods, hosiery, shoes of all kinds, fine leathers for making shoes, hardware, glass, enamel and porcelain ware, etc. References are given.

Brick machinery, No. 19129.—An American consular officer in England reports that only two replies to Foreign Trade Opportunity No. 18075 have been received, one being an offer of a pulverizer and the other a machine for making sand-lime bricks. The firm wants a machine to make bricks from material ground from a hard quartz, to deliver two bricks at a time on iron plates. The bricks must not receive a greater pressure than 40 to 50 pounds.

Pianos, cotton and woolen goods, etc., No. 19130.—A firm in South Africa desires to represent American manufacturers of pianos, woolen goods, hosiery, prints, calicoes, linens, cottons, worsteds, serges, linings, and general supplies for tailoring work, as well as buttons, canvas, and duck. The firm will act as agent, on a commission basis, and will supply references on request.

Minerals and ores, No. 19131.—An American consular officer in India reports that a man in his district desires to communicate with American dealers in pink and black marble, gypsum, selenite, felspar white, felspar red, mica, soapstone, asbestos, black schist, kaolin, calcite, cobaltiferous wad, red oxide of iron, yellow oxide of iron, chalk, alkaline earth, garnet and bituminous limestone. The man can also supply any quantities of kapok, cotton and silk, bristles and crushed bones.

Coconut-oil machinery, caustic soda, textiles, etc., No. 19132.—The representative of an enterprise in the Philippine Islands, who is now in the United States, desires to obtain full information concerning the manufacture of coconut oil and the necessary machinery, with a view to placing an order for the complete equipment of a copra-crushing establishment which will have an initial daily output of 15 to 30 barrels of oil. He wants apparatus for crushing the copra and refining and handling the oil, as well as the necessary power plant. The company which he represents is interested in machinery for desiccating copra, for making butter and soap, and for manufacturing coir matting. The man also wishes to purchase at once for a firm in the Philippines 50 tons of caustic soda. He is interested in handkerchiefs, socks, underwear, ties, towels, caps, and enameled ware. The cheaper grades of these latter goods, such as carried by 5 and 10 cent stores, are required.

Automobiles, No. 19133.—An American consular officer in Spain reports that a man in that country wishes to represent American exporters of automobiles ranging in prices from \$1,000 to \$2,500. Payments will be made cash against documents.

Laundry machinery, No. 19134.—A business man in the United States writes that the director of a hotel in Russia is in the market for American laundry machinery.

Wool, cotton, and linen goods, No. 19135.—An American consular officer in Sweden reports that a man in his district desires to communicate with American manufacturers and exporters of wool, cotton, and linen goods.

MARKET FOR PIANOS IN BURMA.

[Consul Maxwell K. Moorhead, Rangoon, Aug. 30.]

The imports of pianos into Burma by sea during each of the three years ended March 31, from 1913 to 1915, according to official customs figures at Rangoon, were:

Countries.	1912-13		1913-14		1914-15	
	Number.	Value.	Number.	Value.	Number.	Value.
United Kingdom.....	28	\$3,540	24	\$3,290	17	\$5,980
Germany.....	22	3,310	20	3,490	16	2,750
Austria.....	35	6,130	25	3,760	7	1,070
United States.....	1	340	1	160
Other countries.....	6	760	3	410	2	240
Total.....	92	14,080	70	10,910	53	10,200

These figures do not represent the total imports into Burma for the reason that a considerable number of pianos are purchased through musical houses in Calcutta. One of the principal dealers in Rangoon has estimated that at least 100 new pianos are sold annually in Burma.

The trade has been controlled by German and Austrian manufacturers, who have taken the trouble to make their pianos suitable for this very hot and damp climate. German and Austrian pianos have been considered superior by the local trade. Now that importations from Germany and Austria have been stopped American manufacturers should get a share of the large Indian trade.

Special Requirements Because of Climate.

The leading piano dealers in Burma, at the request of this consulate, have furnished a statement of the requirements in manufacture, in order to make pianos salable in Burma. They say:

The special features of manufacture of pianos suitable for and calculated to withstand the extremes and peculiarities of the varying climatic conditions which are obtaining here must embody the following: (a) Case work must be of solid wood throughout, of one piece (preferably mahogany, which has proved itself most suitable), and must be screwed throughout as well as glued, and should be further secured by brass corners. (b) Action must be riveted where possible, and in other parts stitched with silk, so as to make it as little as possible dependent on glue, and made extra free in the centers. (c) Iron frame to be cast in one piece. (d) Keys should be covered with fine celluloid, screwed over the front of the key in one piece, and screwed both ends. The sound-board ribs must be screwed at close intervals.

These precautionary measures seem incomprehensible to those manufacturers who have had no experience in the trying nature of our climate.

Then again, the terms we have enjoyed, namely, six months credit from both English and German houses, is a factor of no small importance to us. If you are in a position to obtain for us from American manufacturers all these facilities as to manufacture and terms, on hearing from you to this effect we shall be happy to foster and build up a connection for American products as we have been instrumental in doing for others whose goods we have handled.

If American manufacturers will carry out these suggestions as to manufacture, and will grant more liberal terms of credit, there is no doubt that a large trade could be created in India and throughout all tropical countries.

[Further facts regarding the imports of pianos and other musical instruments into India are given in the recent publication of the Bureau of Foreign and Domestic Commerce, "British India, with Notes on Ceylon, Afghanistan, and Tibet" (Special Consular Reports No. 72), which may be obtained at \$1 per copy from the Superintendent of Documents, Government Printing Office, Washington, D. C., or from the branch offices of the Bureau.]

NORWEGIAN DEFENSE COMMISSIONER TO VISIT HERE.

[American Minister A. G. Schmedeman, Christiania, Oct. 16.]

A communication has been received, under date of the 15 instant, from the Royal Norwegian Department for Foreign Affairs, announcing that Mr. Johan Mölbach-Thellefsen has been appointed the special commissioner of the Norwegian Government (Department of Defense), and intends to proceed shortly to the United States for the purpose of making purchases and placing orders.

RESULTS OF TRIANGULATION WORK PUBLISHED.

Positions of 369 triangulation stations in West Virginia, Ohio, Kentucky, Indiana, Illinois, and Missouri are given by the United States Coast and Geodetic Survey, in Special Publication No. 30, which has just been issued. The work forms part of a transcontinental triangulation from the Atlantic to the Pacific.

The geographic positions, on the North American datum, of all stations in the area covered, are given, together with all available descriptions of these points.

Aside from its scientific interest, the volume has a large practical value, as it offers to the engineer and map maker a large number of points determined trigonometrically and correlated on one geodetic datum. These stations or points are a part of a framework, composed of the connected triangulation of the country, from which the State, county, or private surveyor may extend triangulation of a lower grade for the control of detailed work.

Copies of the publication may be obtained by interested persons on application to the Division of Publications, Department of Commerce, Washington, D. C.

METAL GOODS MARKET IN JAPAN.

[Extract from Japan Advertiser of Oct. 6, by Consul General George H. Scidmore, Yokohama.]

Regarding the recent tendency of the quotations for iron goods, it is reported that the day after the outbreak of war last year quotations rose by over 75 per cent. But means of importation have proved easier than expected, and quotations recently fell to such an extent that they were higher than those prior to the war by only 30 or 40 per cent. Quite recently, however, quotations have shown a tendency to rise, owing to the impossibility of obtaining supplies from Germany and Belgium and the embargo on iron goods enforced in England. Moreover, prices in the British and American markets are also gradually rising. These causes, together with the increase in freight rates, have now caused quotations on the home market to be higher by over 100 per cent than prior to the war. Another reason for this rise is that all the output from Japan's iron mines is being consumed for munitions of war, and the shortage of supply for house-building or shipbuilding materials is keenly felt.

The following comparative table shows the prices of various iron and other metal goods in September this year and July last year and the percentage of increase:

	July, 1914.	Sept., 1915.	Percentage of increase.
Pig iron (100 pounds)	\$0.93	\$1.06	12.2
Iron rods (100 pounds)	1.48	2.70	95.5
Iron pipe (1 inch diameter, 1 foot length)0498	.0772	55
Copper (100 pounds)	22.88	28.18	22.4
Electrolytic copper (100 pounds)	25.80	31.01	20
Lead (100 pounds)	4.67	5.30	13.6
Zinc iron wires (100 pounds)	2.44	4.09	67.9
Zinc iron plate (6 feet) corrugated3337	.5229	56.6
Zinc iron plate (plain) No. 303784	.6325	60.8
Iron nails (100 pounds)	2.35	4.33	84.1
Horseshoe nails (100 pounds)	5.98	9.33	56.3

TRIPOLI NEEDS BARLEY AND COTTONSEED OIL.

[Consul W. Roderick Dorsey, Tripoli, Libya, Sept. 24.]

In view of the price at which barley is being sold at wholesale by the municipality of Tripoli (\$1.17 a bushel), it is believed that, notwithstanding the high exchange, the American article could be handled here at a good profit. Importers are being interested in the possibility of direct business.

Cottonseed oil offers another opening. Native olive oil does not reach this market freely, and the demand for this substitute has increased. It is said to be mixed with the product of Italian olives to suit the native palate. Supplies have been arriving regularly from the United States through the Genoese agent of a well-known mill.

There has been a general augmentation of food values in Tripoli, and the municipal counsel has, from time to time, issued proclamations establishing prices. A recent order (Sept. 11) fixes new limits for certain articles.

[A very full review of the food situation in Tripoli, with details of price fluctuations, has been received from Consul Dorsey, and may be examined by application to the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 67958.]

ATTEMPT TO MEET SHIPPING DEMANDS AT ADEN.

[Vice Consul Arthur G. Watson, Aden, Arabia, Sept. 30.]

It is probable that the bulk of the accumulation of skins and hides, intended for the United States, which has been lying at Aden awaiting shipment since the end of May, will shortly be cleaned up. Since the end of August increased space has been arriving at Aden, and several merchants have shipped practically all their stocks. It is difficult to say positively whether the congestion will actually be relieved, but the indications point that way. It looks as if conditions similar to those of last year may prevail, with sufficient regular space to take away accumulations until February or early March, but after that time, in the opinion of many persons, space will be scarce for several months.

Opportunities for shipments of coffee have been more freely offered, as it is classed as "clean" cargo, but at times shippers of coffee have been severely felt the shortage of shipping facilities.

The Italian lines are accepting freight for New York only, transshipment at Naples, at \$45.42 per ton for skins and hides and \$25.95 for coffee. The British lines are charging \$32.44 per ton for skins and hides to American ports and \$19.46 for coffee, with transshipment at London. The British India agents, the greatest carriers from Aden, have been instructed not to accept any cargo for America, owing to the difficulty in obtaining space from London and the possibility of increases in freights from London to American ports. Their agents at Aden are, however, accepting cargo for American ports at the rates mentioned, obtaining from the shippers letters to the effect that any increase in transshipment or on carrying freight will be borne by the shipper.

Secretary to Attaché at Petrograd to be Chosen.

A private secretary to the American commercial attaché in Petrograd, Russia, will soon be appointed. The duties call for a knowledge of the Russian language, stenography, and typewriting. The Bureau of Foreign and Domestic Commerce desires that its appointee should be as well equipped in every way as possible, and will conduct a competitive examination for the position, which pays a salary of \$1,500 per annum and traveling expenses. The best of references will be required of all candidates to be considered. Application should be made to the Bureau of Foreign and Domestic Commerce, Washington, D. C., stating education and knowledge of foreign languages.

COMBINATIONS OF GERMAN PACKERS OF CANNED GOODS.

[Consul Talbot J. Albert, Brunswick, Germany, Oct. 13.]

The Brunswick Landeszeitung of October 13, 1915, reports that a combination of the German Packers of Canned Goods is being formed to regulate their relations with the large distributing houses. The object will be to regulate prices, which has become necessary on account of market fluctuations, and also to obtain better terms of payment from the distributing houses. A central station for purchasing raw goods will be established.

FOREIGN COMMERCE OF UNITED STATES FOR SEPTEMBER.

The usual monthly statement of the foreign trade of the United States has just been completed by the Bureau of Foreign and Domestic Commerce, Department of Commerce. The imports and exports by great groups during the month of September and the nine months ending with September are presented in the following statement:

Groups.	Month of September—		9 months ending September—	
	1914	1915	1914	1915
IMPORTS.				
Crude materials for use in manufacturing	\$45,375,279	\$59,183,718	\$481,608,714	\$494,652,398
Foodstuffs in crude condition and food animals	16,345,219	22,043,141	175,470,569	169,230,328
Foodstuffs partly or wholly manufactured	27,164,332	18,641,718	208,363,992	224,083,155
Manufactures for further use in manufacturing	18,912,281	26,639,083	217,409,142	190,457,773
Manufactures ready for consumption	30,017,536	23,101,113	314,512,045	214,197,493
Miscellaneous	1,574,134	1,621,253	12,611,412	9,446,649
Total imports	139,710,611	151,235,026	1,410,071,874	1,302,004,786
EXPORTS.				
Crude materials for use in manufacturing	18,344,571	43,677,599	358,759,342	418,763,536
Foodstuffs in crude condition and food animals	41,560,104	32,740,584	170,045,871	321,558,241
Foodstuffs partly or wholly manufactured	26,760,785	44,479,716	197,446,280	449,550,978
Manufactures for further use in manufacturing	21,107,243	42,369,753	261,889,499	328,107,485
Manufactures ready for consumption	44,038,877	122,380,820	465,971,402	875,723,761
Miscellaneous	1,029,812	10,100,264	5,363,443	96,261,163
Total domestic exports	153,201,322	285,648,216	1,449,075,729	2,490,274,164
Foreign merchandise exported	2,870,941	5,028,526	27,326,070	42,211,003
Total exports	156,072,333	300,676,822	1,476,401,809	2,532,485,167

MARACAIBO'S SEPTEMBER COFFEE EXPORTS.

[Consul G. K. Donald, Maracaibo, Venezuela, Oct. 6.]

Exports of coffee from Maracaibo during September, 1915, were: For New York, 33,263 bags; for Amsterdam, 5,100 bags; for Marseille, 2,000 bags; for Genoa, 1,599 bags; total, 41,962 bags, compared with 58,008 bags for September, 1914, a falling off of 16,046 bags.

The average for September during the 10 years from 1905 to 1914 was 38,430 bags, so that this year the total was 3,532 bags above the average.

Entrances of coffee for September, 1915, amounted to 51,527 bags, containing 5,951,625 pounds, compared with 27,166 bags, containing 3,087,275 pounds, in September, 1914. The total entered from January 1 to September 30, 1915, was 493,974 bags, containing 56,607,200 pounds, compared with 446,781 bags, containing 50,382,025 pounds, in the corresponding period of 1914.

CONSULAR TRADE CONFERENCES.

Consul William J. Grace, of Aden, Arabia, now in the United States on leave of absence until about December 15, 1915, states that his home address will be 233 Stuyvesant Avenue, Brooklyn, N. Y., and that his address for trade conferences will be the Association of the Bar of the City of New York, New York City.

FINAL FORECAST OF THE JUTE CROP.

[Consul General James A. Smith, Calcutta, India, Sept. 22.]

The Department of Agriculture of Bengal has published the final forecast of the jute crop of 1915, showing the acreage and estimated outturn. Although the season has not been unfavorable, so far as the distribution and the rainfall are concerned, except in some parts of Bengal, the crop has been greatly damaged by flooding in certain districts. The final figures of acreage and production for the three Provinces, for this year and last year, are:

Province.	Acres.		Bales.	
	1914	1915	1914	1915
Bengal:				
Western	467,199	325,858	1,337,698	1,051,399
Northern	855,511	601,814	2,734,433	1,975,539
Eastern	1,540,194	1,188,798	5,235,887	3,479,128
Cooch Behar	44,413	27,566	135,537	72,335
Bihar and Orissa	330,120	188,090	670,787	692,873
Assam	111,000	75,400	307,463	157,459
Total	3,358,737	2,377,316	10,531,505	7,428,733

* Including Nepal.

[A dispatch, printed in *COMMERCE REPORTS* for Oct. 12, 1915, from Dundee, Scotland, gave similar acreage and outturn, although there was a slight difference in the total number of acres under cultivation. The present report gives the figures by separate Provinces. Other dispatches on the jute crop were published in *COMMERCE REPORTS* for Aug. 23, Aug. 30, and Oct. 9, 1915.]

LOWER PRICES AT AMSTERDAM TOBACCO SALES.

[Consul Frank W. Mahin, Amsterdam, Netherlands, Oct. 15.]

Twelve public sales of tobacco have been held in Amsterdam this year. There were 246,543 packages of Sumatra sold, at an average price of \$0.336 per pound, compared with 251,689 packages, at an average price of \$0.47 per pound, at the corresponding sales in 1914. At the same sales 14,942 packages of Borneo brought an average price of \$0.218 per pound this year, against 14,026 packages at an average of \$0.245 in 1914.

The lower prices this year were due to inferior quality, on the whole, but dealers say that American buyers paid about the same prices as last year, because they took the best qualities. It is noteworthy that the prices for the 12 sales this year are much below the average quoted in a report from this consulate covering the first five sales, published in *COMMERCE REPORTS* for June 18, 1915. A prominent dealer explains that every year the tendency is to buy the best qualities at the first sales.

German buyers were formerly an element of strong competition.

Consul Henry M. Wolcott, at Habana, reports that a \$15,000 company has been formed in the American citrus fruit growing colony at La Gloria, Oriente Province, Cuba, for manufacturing citric acid from limes.

BETTER RESULTS POSSIBLE WITH BRAZILIAN COAL.

[American Ambassador Edwin V. Morgan, Rio de Janeiro, Brazil, Sept. 15.]

The present scarcity of foreign coal in Brazil, resulting from the partial suspension of the importation of coal from England which the European war caused, has drawn the attention of Brazilian mineralogists to the national supply of that commodity. Dr. Orville A. Derby, Director of the Federal Geological and Mineralogical Service, contributed, on September 12, to the *Jornal do Comercio* of this city, an interesting article on Brazilian coal.

Dr. Derby refers to the exhaustive report upon the subject that was made a few years ago by Dr. I. C. White, and calls attention to the relative lack of interest aroused by the portion of that report relating to national coal heavily charged with gas. It is Dr. Derby's opinion that as a result of washing and the manufacture of national coal into briquets, the latter can be used effectively in locomotive engines and not confined, as at present, to stationary machines. He says in his discussion:

Brazilian commerce has at hand a means of making a ton of national coal equal to three times itself, and nearly a ton and a half of the best imported coal which it at present consumes. It is simply a question of substituting gas machines for its steam machines, fed by national coal. This is an industrial revolution which is rapidly taking place in countries which produce a superior quality of coal and in which, too, its economic and political importance are much less than will be the case in Brazil when, as must inevitably occur, it becomes effective here. Would it not be well for Brazilian industrial and public powers to hasten the advent of this revolution?

Use of Briquets in Locomotives.

By the substitution of gas machines, in which successful experiments have been made for furnaces, the question of the use of inferior coal will be settled. Locomotives, however, must continue to use furnaces, but not necessarily with the present method, which is prejudicial to the value of national coal. Recent reports from the United States show the success of the experiments which have been made there with the system of injecting coal reduced to fine powder into the furnaces of the locomotives, and state that the management of the Central Railway of Brazil is preparing to try that system. If, as there is every reason to expect, it is proven that national coal can be used on railways with the strict selection resulting from washing and briquets which is now considered necessary, a new horizon will be opened for the use of national coal and for the economic future of the country.

I would add that this system does not involve, as does that of gas, the substitution of other machines and fixtures, but only a few alterations analogous to those necessary for the substitution of liquid for solid combustibles.

[COMMERCE REPORTS, in its issues of Apr. 24, June 23, and July 24, presented in detail the factors entering into the coal situation in Brazil and other tropical countries.]

CIGAR FACTORY IN PANAMA.

[Consul General Alban G. Snyder, Panama City, Oct. 12.]

An American capitalist in this city has just opened a cigar factory in Panama. He intends at present to manufacture only Habana cigars for sale on the Canal Zone and to ships using the canal, and is importing pure Cuban tobacco direct from Habana for this purpose.

[The address of the manufacturer may be had from the Bureau of Foreign and Domestic Commerce; refer to file 67,736.]

JAPAN'S NEW TRADE IN LINEN AND HEMP CLOTH.

[Extract from Japan Times, Sept. 18, forwarded by Consul General George H. Scidmore, Yokohama.]

The war has opened a new trade for Japan in the form of linen and hemp-cloth exports. Japan's hemp industry has recently progressed so rapidly, having been stimulated by the success of flax growing in Hokkaido, that when the war began the time was ripe for the opening of trade with the outside countries.

England was the greatest supplier of hemp cloth and linen before the war, but now that the war has cut off the supply of raw material, she can not carry on the line so actively as before, while Russia, though she is one of the greatest producers of flax and hemp, can not turn over cloth, her workmen being too unskilled to increase the supply of cloth. Accordingly all buyers, in which, curiously enough, those two countries are now included, have turned to this country for the increasing supply of cloth.

England has recently placed great orders with Japanese mills, and some of them are already filled; hemp yarn and cloth to the amount of \$74,700 and \$249,000, respectively, are a recent shipment to Great Britain. Prices in England being markedly dearer than in this country, Japanese millers are blessed with unexpectedly large margins of profit.

Russia and the Dutch Indies have also placed big orders with mills here, but so far many of them have been declined on account of the comparatively small extent of production in mills here. The season's crop of flax in Hokkaido is said to be very favorable.

PROPOSE PERMANENT NETHERLANDS EXHIBIT.

A permanent exhibition of the products of the Netherlands in San Francisco has been proposed by the Holland-American Chamber of Commerce of that city as a means of furthering trade between the Pacific coast of the United States and that European country. Commercial Agent E. G. Babbitt, representing the Bureau of Foreign and Domestic Commerce in San Francisco, reports that the Holland-American Chamber of Commerce has undertaken to interest the Netherlands firms now exhibiting at the Panama-Pacific International Exposition in the project of opening a permanent showroom in San Francisco after the close of the exposition for the display of various articles and for the purpose of furnishing trade information. It has been proposed that such an office should be opened before January 1, 1916.

LIFE INSURANCE AMONG THE CHINESE .

[Consul G. C. Hanson, Swatow, China, Sept. 18.]

During August, 1915, an Englishman and a Dane, agents of the China Mutual Life Insurance Co. (Ltd.) (British), traveled through this part of Kwangtung Province from Chaochowfu to Hing-ning via Kaying soliciting insurance among the Chinese. All the large towns were visited en route, and the results of the canvassing are reported to have been surprisingly successful.

AUSTRALIAN RAILWAYS TO BE ELECTRIFIED.

[Consul General J. I. Brittain, Sydney, Sept. 18.]

At the present time two schemes for electrifying certain existing lines of urban and suburban railways are engaging the attention of the local transportation departments. The railway service known as the North Shore line, running from Milson's Point (the traffic center immediately opposite the city proper) to Hornsby (13 miles away on the main line from Sydney to the north) is about to be electrified. Already a tunnel under the harbor for carrying the necessary supply cable is being driven, and but for an unexpected interruption, due to a fault in the rock, would have been nearly completed by this time. The idea is to supply power for this service from the existing generating station at White Bay on the Sydney side of the harbor. The work is being carried out by the Railway Department of the New South Wales Government.

The second project is much more extensive in conception and is only awaiting the passing of an enabling bill, now in the State Parliament, before being started. The subjoined outline of the proposed improvements has been furnished to this consulate general by an official of the public works department, Mr. J. J. C. Bradfield, who is chief engineer of metropolitan railway construction and is in full charge of the preliminary arrangements. Mr. Bradfield recently visited the United States, and it is interesting to know that his experiences there undoubtedly paved the way for considerable American business in connection with the forthcoming enterprise. Mr. Bradfield says:

Work to Be Undertaken.

The electric railways about to be undertaken in the metropolitan area of Sydney include: (a) The immediate electrification of the inner zone suburban railways, comprising 64 route miles or 200 track miles, and in the near future the electrification of the outer zone suburban railways radiating some 36 miles from Sydney, an additional length of 200 track miles. (b) The construction of a 16-mile, double-track loop railway around the city of Sydney. (c) The construction of double-track railways to the eastern, western, and northern suburbs, connecting with the existing railways and with the city railway—a length of 37 miles of single track.

The ruling grades will be about $3\frac{1}{2}$ per cent with the load and $2\frac{1}{2}$ per cent against the load, while the sharpest curve is $11\frac{1}{2}^\circ$ radius. All platforms will be 520 feet long, and will be placed in shallow subways; access will be generally by steps. Power will be supplied from overhead wires to the train motors at 1,500 volts.

The railways to the northern and western suburbs necessitate long-span cantilever bridges across the harbor, without piers in the fairway; the bridge to North Sydney to be 1,600 feet center span, accommodating 4 lines of railway, a main roadway 35 feet wide, a motor roadway 18 feet wide, and a footway 15 feet wide. The bridge to Balmain to be 1,350 feet center span, accommodating two lines of railway and the same roadways and footways. The clear headway for shipping under the bridges to be 170 feet at high water.

Estimated Cost.

The total cost of the scheme is approximately £20,000,000 (\$97,330,000). An act authorizing the expenditure of £6,400,000 (\$31,145,600) is now before Parliament.

The construction of the city railway and portions of the eastern and western suburban railways are to be put in hand and carried out by Messrs. Norton Griffiths on a percentage basis, the Public Works Department supplying plant and material.

[A plan giving the location of the proposed railways and a bird's-eye view showing the city railway and the location of the harbor

bridges may be examined at the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 67724. Mention of the proposed change to electric traction on these railways was made in **COMMERCE REPORTS** for Mar. 10, 1915.]

PICTURE POST CARDS IN PORTUGAL.

[Consul General W. L. Lowrie, Lisbon, Aug. 26.]

Portugal annually buys from other countries more than 1,000,000 post cards a year, and at present stocks are very low. The best selling cards are those with figures and landscapes. At Christmas and New Year's, the shops display large assortments of holiday cards with more or less appropriate scenes and greetings in French, English, or German. Although snow is never seen in Lisbon, holiday cards displaying houses and trees buried in snow are quite common and seem to be in demand. Dealers state that the best sellers would be appropriate Christmas or New Year's designs, with words in Portuguese.

The usual size of post cards is $3\frac{1}{2}$ by $5\frac{1}{2}$ inches and they are packed for shipment in pasteboard boxes. The Portuguese tariff assesses a duty on post cards of 1 escudo per kilo (about 32 cents per pound at present exchange). If imported direct from the United States the duty is 60 centavos (20 cents per pound); if imported via England, the full duty is collected. Under ordinary circumstances, importers expect three to six months' credit, but now they would pay cash against documents.

[A list of the leading post-card dealers in Lisbon and Oporto may be had, upon request, from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 66212.]

YORKSHIRE SCHOOLS TO REDUCE COST OF SUPPLIES.

[Consul Homer M. Byington, Leeds, England, Oct. 4.]

The West Riding Education Committee on September 29, 1915, considered and finally voted to adopt a proposal from the elementary subcommittee regarding the establishment of a central store to supply books, stationery, and apparatus to elementary schools, the stationery also to be supplied to other departments of the county council. The new method will make it possible to split up the schedule of goods supplied, which is a very complex one, containing upward of 500 items, in such a way as to enable publishers, manufacturers, and dealers in goods of different kinds to tender for direct supply of these items and at the same time to decrease the cost of distribution to schools.

The annual cost of the store is estimated as follows: Staff, \$3,099; carriage, postage, and packing materials, \$3,990; rates, taxes, fuel, light, cleaning, etc., \$632; annual working cost to cover payments made earlier than under the present system, \$875; total, \$8,599.10. The subcommittee has estimates showing that in the supply of books, stationery, etc., to elementary schools alone, it will be possible to effect savings to the extent of more than \$2,433.25 per annum beyond the expenses indicated.

IRON DEPOSITS OF BRAZIL.

[Consul General A. L. M. Gottschalk, Rio de Janeiro, Sept. 1.]

Although geographically nearly as large as the United States and in many places highly mineralized, Brazil is almost unexploited as a mining proposition. The mining laws of the country have recently been remodeled in a manner that provides a decided step toward modernization and practical applicability, but this legislation will not overcome the lack of transportation facilities from the interior and the high cost of freights and of labor, which have hitherto been obstacles sufficient to keep the truly great mineral resources of the Republic almost untouched. [An analysis of the new mining law referred to may be examined at the Bureau of Foreign and Domestic Commerce or its branch offices; ask for file No. 60286.]

Of Brazil's iron ores, the hematites are in Minas Geraes, Matto Grosso, Goyaz, and Bahia; the magnetites (some titaniferous) in São Paulo, Parana, Santa Catharina, and Rio Grande do Sul. The most important deposits by far are those of the State of Minas Geraes.

Extent of Deposits—Railways.

Through the central part of Minas Geraes extends the Serra de Espinhaço in a northerly-southerly direction. In this range of mountains are found nearly all of the mineral deposits of the State. The great iron area seems really to be within a well-defined rectangle, 56 miles long by 37 miles wide, with Burnier on the south side, Sabara on the north side, and Santa Barbara and Marianna on the east. In addition to the ores within this rectangle, scattered deposits extend northerly toward Diamantina, so that the high-grade iron-bearing formations probably occupy an area of some 2,200 square miles. If the lower-grade deposits are also considered, the area will be doubled in extent.

Three railroads either tap or are projected to tap this district. The most important is the Government-owned line (the Central Railway, which enters the iron area near its southwestern limit at Burnier and extends northward to Sabara. It also has branches extending from Burnier to Marianna and from Sabara to Santa Barbara. From Rio de Janeiro, the nearest seaport, to Burnier is about 370 miles, and to this point the road is broad gauge (5.25 feet), while from Burnier to the other points the road is reduced in gauge to 3.28 feet. Another railroad, the English-owned Leopoldina, does not enter this main rectangle, but is built to tap the deposits at Itabirra de Matto Dentro, north of the rectangle. Its seaport is also Rio de Janeiro, and the distance from Rio to Itabirra is about 390 miles. Still another railroad, French owned, is partially constructed to operate between the seaport Victoria and Itabirra de Matto Dentro, a distance also of about 390 miles.

Classification of Ores—Probable Tonnage.

The ores may be classified as follows:

I. Bedded ores.—(a) Very thick, bedded, massive, hematite, including the dense, hard blue and the fine and coarse specular varieties and martite. Beds are up to 300 feet in width and a mile in length. (b) Thin bedded laminated hematite, fine grained or crystalline, hard and soft. Beds not so wide as (a), but have great length.

II. Fragmental ores.—(a) Canga, a conglomerate of hematite pebbles cemented together with limonite. (b) Extensive beds of hematite "float" (rubble). (c) Sand ore; "float" mixed with sands in river bottoms and elsewhere.

III. Secondary ores, carbonates, etc.

The important ores commercially are the bedded hematites, both thick and thin, the Canga conglomerates, and the rubble ores.

In order to give some idea of the extent of the deposits, the Serviço Geológico do Brazil selected nine of the largest and entirely exposed deposits and computed the cubic contents of each separately. These are of the bedded (highest grade) type, and are not assumed to have an extension below the surface of the surrounding country. On this basis they gave an estimated tonnage of 988,000,000. Dr. Orville Derby, the director of the Geological Service of Brazil, thinks this figure can conservatively be doubled, which tonnage about equals the total reserve of the Lake Superior ores to-day.

In addition to the above-estimated tonnage, which includes the highest grade ore only, there are known to exist millions of tons of the lower grade Canga and rubble ores. One deposit of rubble is estimated to contain 20,000,000 tons, while the Canga ores, running higher than 50 per cent iron, would perhaps total 1,710,000,000 tons.

FAR EAST GAINS LARGE EXPORT TRADE IN TOYS.

[Extract from Japan Advertiser, Sept. 15, forwarded by Consul General George H. Seldmore, Yokohama.]

The progress of Japan's export trade in toys has been remarkable since the war broke out, especially in England and Australia. The export of toys to England was \$326,050 up to the end of July this year, while the amount for the corresponding period of last year was only \$131,748. The export to Australia in the same period this year was \$100,447, compared with \$25,408 last year. The only setback was in the export to China, probably because of the boycott that prevailed, in May, June, and July, but in August there was an export of \$138,159, or three times as large as the amount in August of last year. Thus there is undoubted indication that the trade with China is increasing.

Because of the remarkable increase in August, the amount of export to China up to the end of that month this year reached \$1,129,973, showing an increase of \$264,393 compared with the amount in the corresponding period of last year. The prospects of trade in this line with other Oriental countries are also very promising.

CARELESS PACKING OF AMERICAN PLASTER.

Failure to follow instructions as to the quality of bags, paper lining, and method of closing resulted in so heavy a loss on a recent shipment of American calcined plaster to Australia that the purchasers, who had anticipated placing substantial future orders, are much discouraged. Consul General Brittain's report on the subject (which describes the condition in which the shipment reached Sydney) and a sample of the paper lining of the bags may be inspected at the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 67652.

BRITISH RAILWAYS ADOPT FIREPROOFING PROCESS.

[Consul Charles A. Holder, London, England, Sept. 29.]

The "oxylene" fireproofing process is owned by a London company. The London & Northwestern Railway, the Midland, and several other British railways, as well as the Metropolitan district and the London Electric Railways of London, have for some years past made a practice of sending to the "oxylene" works a part of the wood used in the construction of their passenger cars. This practice has increased lately, owing to the fact that the Board of Trade recommended a year or so ago that the woodwork of railway carriages should be rendered noninflammable in view of the numerous fire disasters on railways.

The London & Northwestern Railway has been sending to the fireproofing plant the wood to be used in constructing cars, but in view of the economy that would result by the saving in freight and in time as well, it has decided to install a plant for using the "oxylene" process under license and royalty to the company at the Wolverton works. The plant, which will shortly be finished, is capable of fireproofing approximately 150,000 cubic feet (the equivalent of 1,800,000 feet of board measure) of wood per annum, taking the various woods used in carriage building, such as mahogany, pine, deal, teak, white-wood, and maple into consideration.

Equipment of Plant Now Under Construction.

The plant consists of two 50-foot cylinders, each 6½ feet in diameter, together with the necessary pressure, vacuum, and circulating pumps; mixing, main, and subsidiary tanks; one boiler of 140 horsepower; a truck for conveying the timber into the cylinders; pipes, fittings, traverse table, steam winch, and dry-kiln machinery. The dry-kiln machinery consists of a fan, heater, and condenser, with a 20-horsepower motor.

The cost of the plant is to be about \$72,998. It is being constructed under the direct supervision of the fireproofing concern. Other railways, it is stated by the company, are concluding arrangements for the erection of similar plants in their carriage-building works.

[A circular describing the process employed for fireproofing purposes, with photographs taken at the plant of the company, will be loaned on application to the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 67527.]

GERMAN CANAL PROJECT.

[Consul Harry G. Seltzer, Breslau, Oct. 4.]

Plans for a direct waterway between Leipzig and Berlin, via Eilenberg, Luckenwalde, and Potsdam, are now under consideration. At the same time the old plans for a canal from the Elbe across the Elster to Senftenberg and Cottbus and for the Oder-Spree Canal are again being taken up.

The extraordinary growth and importance of the Niederlausitz industries require better and cheaper transportation facilities between the large cities. The various chambers of commerce in the Niederlausitz district and in Potsdam are encouraging these projects by offering both material and means to complete them. The magistrates of the cities concerned have also promised financial assistance.

GOVERNMENT AND FARMERS COOPERATE TO FATTEN POULTRY.

[Consul General Frederick M. Byder, Winnipeg, Manitoba, Canada, Oct. 20.]

The prices realized for dressed poultry at country points in the West have been very low, with the result that little interest has been taken in poultry raising. There are several reasons for these low prices, chief of which is the fact that farm-dressed poultry is seldom properly killed and bled and, consequently, does not keep well even in cold storage. Knowing this, dealers have refused to handle the poultry except on a substantial margin of profit.

The Manitoba Department of Agriculture has opened a new department, known as "The Farmers' Cooperative Fattening Station," at the Manitoba Agricultural College. The station will be operated on a strictly cooperative basis; the farmers joining the movement will ship their stock to the station, where Government employees will attend to the fattening and marketing, the actual cost only to be charged for the service. This amount will be deducted from the market price, the balance forwarded to the farmer, who must furnish his own coops for transportation to the poultry department in Winnipeg. About 18 days will be consumed in the fattening process, on which basis the returns should be in the hands of the farmer about four weeks after shipment.

Another Province Inaugurates Similar System.

The Saskatchewan Department of Agriculture has inaugurated a similar system, in conjunction with the poultry husbandry division of the Saskatchewan College of Agriculture, and arranged to operate a poultry demonstration car over certain railway lines. A baggage car is being fitted up as a poultry receiving and killing station; a 6 weeks' itinerary, providing for 1-day visits to 34 selected towns, has been arranged, and farmers or others having poultry to dispose of are invited to bring the birds alive to the car when it visits their town.

Experts from the poultry husbandry division accompany the car and will receive, grade, and kill the birds and assist the producers with the plucking. When the fowls have been properly killed and graded, a representative of the cooperative organization branch of the Department of Agriculture will take delivery and make advance payments at prices in accord with their quality. When the birds have been cooled, they will be packed in boxes holding 12 birds each and placed in cold storage until conditions are favorable for marketing. When all of the birds have been disposed of, a final payment will be made to the producer, remitting every cent realized from the sale of his birds less the cost of boxes, transportation, and storage.

Through these practical demonstrations it is hoped the poultry producers, who will have an opportunity to assist, as well as watch, the experts in the operations of killing and dressing, will acquire much more information than could be imparted through lectures or other methods usually adopted, while the cooperative marketing end of the project should eliminate much waste and insure a remunerative cash market.

About 10 cars of pomegranates will be shipped east this season from Porterville, Cal., says the California Fruit News.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

- Bottles**, No. 19136.—A business man in the United Kingdom writes that he would like to communicate with American firms which are in a position to make quotations, up to 5,000 gross, on 10 and 20 ounce bottles for ale and stout.
- Roller bearings**, No. 19137.—A man in the United States writes that a friend of his in South America desires to communicate with American manufacturers of roller bearings.
- Hosiery, handkerchiefs, and haberdashery**, No. 19138.—An American consular officer in Sweden reports that a man in his district desires to communicate with American manufacturers of hosiery, handkerchiefs, and haberdashery.
- Cravats**, No. 19139.—The Bureau is informed by an American consular officer in France, that a man in his district desires to establish connections with American manufacturers of cravats of all kinds. Catalogues and price lists should be sent. Correspondence may be in English.
- Boot and shoe laces, machinery for making, etc.**, No. 19140.—An American consular officer in the United Kingdom reports that a firm in his district desires to communicate with American manufacturers of all kinds of boot and shoe laces, metal ends for shoe laces, and the machinery for making boot and shoe laces.
- Leather, electrical material, etc.**, No. 19141.—A business firm in the United States writes that a firm in Portugal desires to represent American exporters of shoe leather, gloss leather, and box calf. The firm also desires to represent American manufacturers of cartridges for hunting and to represent or buy for its own account electrical material. Reference is given. Correspondence should be in Portuguese.
- Beer**, No. 19142.—An American consul in the Far East reports that a firm in his district is in the market for a cheap beer for Chinese. The beer must not cost more than \$3.40 to \$3.65, c. i. f. destination, for 4 dozen quarts or 6 dozen pints, the former preferred.
- Snap fasteners**, No. 19143.—The Bureau is informed by an American consular officer in Italy that a man in his district desires to communicate with American manufacturers or exporters of black and white snap fasteners for use in making women's wearing apparel. Samples, with full particulars as to prices for small orders and in larger quantities, terms, etc., are desired. Samples of the fasteners now used by the man may be examined at the Bureau or its branch offices. (Refer to file No. 68129.)
- Railroad material, steel structural material, etc.**, No. 19144.—An American consular officer in Argentina reports that a firm in his district desires to secure the representation of American manufacturers of narrow-gauge (Decauville) railway material, steel structural material, concrete mixing machines, steel cables and wire rope, brass trimmings and cabins for passenger elevators, derricks, cranes, excavating machinery, etc. Correspondence may be in Spanish or English. References are given.
- Cuff buttons and combs**, No. 19145.—The Bureau is informed by an American consular officer in Canada that a firm in his district desires to communicate with American manufacturers and exporters of cuff buttons of all kinds and rubber and celluloid combs. Reference is given.
- General agency**, No. 19146.—An American consular officer in Venezuela reports that a man in his district has announced his intention of beginning a general commission and manufacturers' agent business on January 1, 1916, and desires to communicate with exporters in the United States who desire to extend their business in that country. Correspondence may be in Spanish or English. No particular line is mentioned.
- Electrical goods**, No. 19147.—An American consular officer in Denmark writes that a man in his district desires to represent American manufacturers of electrical goods. References are given. Correspondence may be in English.

- Lactic acid**, No. 19148.—An American consular officer in the United Kingdom reports that a man in his district desires to receive samples and quotations on lactic acid in bulk.
- Cotton**, No. 19149.—The Bureau is informed by an American consular officer in Venezuela that a man in his district desires to communicate with cotton exporters in the Gulf States. Correspondence may be in English or Spanish.
- Pocketknives and household articles**, No. 19150.—An American consular officer in Canada writes that a firm in his district desires to secure quotations from American manufacturers and exporters of pocketknives and household articles. Reference is given.
- Sweet wines**, No. 19151.—An American consular officer in the Far East transmits the names of two firms which are interested in sweet wines.
- Steel bridges and bridge timbers**, No. 19152.—An American consular officer reports that tenders will be received until December 7, 1915, by Robert W. Hunt & Co., 2200 Insurance Exchange, Chicago, Ill., and West Street Building, New York, N. Y., for the construction of steel bridges and the furnishing of bridge timbers for the Hankow-Canton Railway, China. Copies of the drawings and specifications may be examined at the Bureau or its branch offices. (Refer to files Nos. 67587 and 68110.)
- Florida sponges**, No. 19153.—An American consular officer in Germany desires to communicate with American exporters of Florida sponges.
- Rennet powder and cheese coloring**, No. 19154.—The Bureau is informed by an American consular officer in Argentina that a firm in his district desires to receive quotations on rennet powder and coloring materials used in the manufacture of cheese. References are given. Correspondence should be in Spanish.
- Paper, postal cards, drawing materials, etc.**, No. 19155.—An American consular officer in Brazil reports that a man in his district desires to import printing, news, wrapping, colored, silk, and other kinds of paper; postal cards and drawing materials; and office supplies. The firm also desires to represent American manufacturers of printing machinery and type. References are given.
- Corrugated iron and iron pipes**, No. 19156.—An American consular officer in Italy writes that a firm in his district desires to receive quotations, c. i. f. destination, on corrugated iron; black iron, galvanized pipes, $\frac{3}{4}$ -inch to 2 inches; and iron pipe used in the manufacture of iron bedsteads, $\frac{3}{4}$ -inch to $1\frac{1}{4}$ inches. The firm is prepared to pay cash.
- Window and plate glass**, No. 19157.—The Bureau is informed by an American consular officer in England that a firm in his district desires to receive immediate quotations for window and plate glass, approximately 50 to 60 inches long by 30 to 40 inches wide, with a view to purchasing large quantities. Reference is given.
- Cotton yarns and coal pitch**, No. 19158.—An American consular officer in Argentina reports that a firm in his district desires to receive samples and quotations, c. i. f. destination, from American exporters on 5,000 kilos, count 1/24, black cotton yarn and 5,000 kilos, count 1/30, of the same quality. The yarn is to be dyed diamond black or a fast sulphur color. Quotations are also desired on light yarns, count 2/20 English on warps, one end of each warp to be crossed 1 by 1, and the other end of same to be crossed 10 by 10 thread. All yarns must be packed in bales very tightly pressed, the cubic dimensions of each bale to be about 0.685 m³. Both gross and net weight of each bale must be stated in the invoice, together with the cubic measurements, in meters, of each bale. Payment will be made against documents on arrival of merchandise. Quotations are also desired, c. i. f. destination, on coal pitch. References are given. Correspondence may be in Spanish or English. Samples of the yarns desired may be examined at the Bureau or its branch offices. (Refer to file No. 68105.)

The new 2,500,000-bushel Government grain elevator at Calgary, Canada, is accessible to three railways.

GERMAN EXPOSITION FOR CARE OF WOUNDED.

[Consul Harry G. Seltzer, Breslau, Sept. 4.]

The "exposition for the care of war cripples and invalids" that is being held in Breslau under the auspices of the local branch of the Red Cross Society is in the nature of a traveling exposition. It was first held in Berlin, after which the exhibits were taken to Dresden, Budapest, Magdeburg, and Cassel (and are to be sent to other cities), always under the management of the various Red Cross branches and the patronage of H. R. H. the Duchess of Saxony-Meiningen.

The exposition itself is divided into nine groups: (1) Sanitary service for the field forces; (2) sanitary service for the Imperial Navy; (3) fight against infectious diseases in war; (4) use of X rays in the sanitary service in war; (5) the problems of the dentist in war; (6) the technical side in the care of wounded; (7) care of war cripples; (8) the sanitary service in war (general, the various institutions, equipment of nurses, etc.); and (9) historical survey on the sanitary service of all times. This last group especially shows what progress has been made in this line; there are demonstrating pictures, surgical instruments, artificial limbs, and other relics from ancient times down to the Napoleonic and Prussian wars. A special section is devoted to the work of the Breslau branch of the Red Cross.

[The complete report from which the foregoing extracts were taken and a booklet in German fully describing the exposition will be loaned to those interested by the Bureau of Foreign and Domestic Commerce, Washington. Refer to file No. 67549a.]

GAS CONSUMPTION IN LEEDS.

[Consul Homer M. Byington, Leeds, England, Oct. 4.]

According to the report of the Leeds Corporation Gas Committee for the year ended June 30, 1915, the consumption of gas amounted to 2,970,185,227 cubic feet, which was an increase of 5.2 per cent over the preceding year. Coal and cannell were consumed to the extent of 260,482 tons, or an increase of 5.5 per cent. Gas sold, including gas used on the works, gas-holder stations, etc., totaled 2,728,166,093 cubic feet, an increase of 5.7 per cent.

AGRICULTURAL CREDITS IN BERMUDA.

[Consul Carl R. Loop, Hamilton, Oct. 7.]

The Governor of Bermuda is about to appoint a commission with instructions to make a comprehensive report on the applicability of agricultural cooperation and credit system to local farming, and the House of Assembly has voted an appropriation to defray the expenses of the commission.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

REDUCTION OF DUTY ON FLOUR IN SPAIN.

[Telegram from American consul general, Barcelona, received Nov. 3, 1915.]

The duty on wheat imported into Spain has been fixed for the present at 2 pesetas per 100 kilos and the duty on wheat flour at 5 pesetas for 100 kilos (peseta, \$0.193; kilo, 2.2046 pounds). [Frequent changes have been made in the import duties levied on wheat and flour since the outbreak of the war, the amount of duty to be imposed being determined by the domestic price of these commodities, as stated in Foreign Tariff Notes No. 16, p. 91.]

ADDITIONS TO BRITISH EMBARGO LIST.

[Telegram from American consulate general, London, Nov. 4, 1915.]

Additional articles, exportation of which to all destinations is prohibited, are the following: Aluminum and its alloys and manufactures thereof (formerly prohibited except to British possessions), cinchona bark, quinine and its salts, metal cylinders, such as those for compressed oxygen or hydrogen.

The list of articles, exportation of which is prohibited to all countries in Europe and on the Mediterranean and Black Seas other than France, Russia, except through Baltic ports, Italy, Spain, and Portugal, is extended as follows:

Arrowroot; creosote and creosote oils, including blast-furnace oil but not including wood-tar oil (which may be exported only to British possessions and protectorates); cloth of all kinds of wool or hair (except khaki woolen cloth, which is under absolute embargo). The former item from this list, "Herrings, cured or salted," etc., is replaced by the item "Fish of all kinds, whether cured, salted, or fresh."

From the list of goods which may be exported only to British possessions and protectorates the following items are deleted: Blast-furnace oil, except creosote and creosote oil; woolen and worsted cloth suitable for uniforms, not including women's dress stuffs or cloth with pattern.

GOVERNMENT BACKS AMERICAN FUR INDUSTRY.

The United States is the largest producer of raw sealskins in the world. It is also the largest consumer of finished seal furs. This would seem to make it natural that it should sell its own sealskins and dress and dye its own furs. It never has, however. We have in the past sent our raw sealskins to London. We have paid London for dressing and dyeing them, and we have brought them back, paying duty on them on their return and the incidental charges due to double transportation. This added 52 per cent to the price of the raw skins, so that the fur laid down in America, ready to be made up into garments, costs over one-half more than it did when it was purchased as a raw skin.

The Department of Commerce took the first step to end this two years ago, when the sale of the raw sealskins took place for the first time in this country. It was a success. Better prices were had than the foreign ones. The Government got more and it cost the Government less. Last year there was no sale because there was no market, and Congress authorized withholding the same. On October 21, 1915, a second sale of Government fur skins, this time fox skins, was made in this country with even greater success. There were buyers from many foreign lands, and the prices were higher than ever before obtained. Meanwhile the department has been planning to establish the best-known method of dyeing and dressing raw sealskins in this country in order that the whole process from beginning to end might be American. This it has now succeeded in doing.

Acting after advice of the Attorney General, the Department has made a contract for a limited term for the sale at auction to all buyers who may come of its production of sealskins. A consideration of this contract is that the best process of dyeing and dressing seal furs known to the trade shall be promptly established in this country. This is done at this time to prevent the deterioration of something like 8,000 skins which the Government has now in cold storage, but means the permanent establishment of the new industry in the United States. It is expected that it will return a greater profit to the Government on the sale of its skins while at the same time so reducing the expenses incidental to the dyeing and dressing that the finished fur will be sold at a lower cost to the American consumer than heretofore.

OLIVE CROP SHORTAGE IN SOUTHERN FRANCE.

[Consul William Dulany Hunter, Nice, Oct. 8.]

Careful inquiry shows that the outlook for next spring's olive crop in this district is unsatisfactory, conditions having remained the same as reported in COMMERCE REPORTS for September 30, 1915.

Prices for olive oil are high and, due to the unfavorable outlook for next spring's crop, have a tendency to increase.

Operations with the dog salmon in waters tributary to Hood Canal, Puget Sound, have been conducted by the United States Bureau of Fisheries at the Brinnon, Duckabush, and Quilcene stations, and with the improved facilities which have been provided at those stations it is expected that the collections of eggs of the dog salmon will be greater than heretofore.

TEAK IN SIAM AND INDO-CHINA.

The Bureau of Foreign and Domestic Commerce has just published, in pamphlet form, an account of the teak-market situation in two of the countries of southeastern Asia. The detailed information contained in it was gathered by Commercial Agent Franklin H. Smith during the course of his investigations into the lumber markets of the Far East and Australasia.

Teak is one of the most valuable and interesting of woods. Teak logs when first cut will not float. It is strongly and characteristically scented, of oily texture, and the surface feels greasy to the touch. The oil is considered to resist the entrance of water into the wood and to prevent the wood becoming water-soaked after it has once been thoroughly seasoned. Teak darkens with age, and finally after a number of years becomes almost black.

The principal use of teak is in shipbuilding, especially for decking and as backing for armor plate. Its durability and lack of corrosive effect on steel make it particularly suitable for the latter purpose. Teak has been used to some extent for gun carriages, but is not now considered well adapted for that purpose, on account of its splitting too readily. In India it is used for all purposes in house and ship building, for bridges, railway sleepers, furniture, shingles, etc. It is also used for carving, the Burmese carved teak wood being especially noted.

Mr. Smith's booklet, entitled "Teak in Siam and Indo-China," is No. 108 in the Special Agents Series. It discusses the various grades and prices of the wood and the methods obtaining in the industry, and presents statistics of exports from both the countries visited. Five cents is the price of this publication, obtainable from the Superintendent of Documents, Washington, D. C.

RAILROAD RATES ACROSS ISTHMUS OF PANAMA.

A memorandum has been issued by the Washington office of the Panama Canal, giving additional information as to rates for the transfer of freight across the Isthmus by the Panama Railroad. The statement, which is signed by Maj. F. C. Boggs, Corps of Engineers, United States Army, chief of office, is:

Referring to the memorandum issued by this office dated October 30, 1915, relative to rates for the transfer of freight across the Isthmus by the Panama Railroad, in which it was stated that the \$3 flat rate would be temporarily continued under the conditions then in effect, it is noted that these conditions are fully set forth in Panama Railroad Circular No. 167, dated October 20, 1915, the effective period of this circular having been extended by direction of the Secretary of War until further notice.

Under the terms of this circular steamers have the option of availing either of the \$3 flat rate or of the classified rates described in Circular No. 167, above mentioned. This circular was published in Canal Record No. 10, vol. 9, dated October 27, 1915, and copies of the circular may be obtained from the Panama Railroad Company, 24 State Street, New York, N. Y., to which company all inquiries regarding the above-mentioned rates or as to other questions relating to the transfer of cargo should be addressed; or, if desired, such inquiries may be addressed to the Governor of the Panama Canal, Balboa Heights, Canal Zone.

Certain dyestuffs in Canada have risen 1,500 per cent over the prewar value, says the Dominion Government Labor Gazette.

ACAPULCO LOSES PACIFIC MAIL AFTER HALF CENTURY.

[Consul Clement S. Edwards, Acapulco, Mexico, Oct. 4.]

The Pacific Mail Steamship Co. has discontinued its agency at Acapulco, and its vessels have ceased touching here, with the exception of an occasional visit for the purpose of bringing instructions to the agent who is engaged in disposing of the company's property.

For half a century Acapulco had been the chief port of call between San Francisco and Panama for the steamers of this company. All the vessels touched here, chiefly for the purpose of taking coal and water. Large supplies of coal were constantly maintained, and the company owned its own wells and operated its own water lighters. It also had an important agency here and owned considerable property, including the agency building, a water plant, a workshop, a large warehouse, water boat, two tugboats, a number of lighters, etc. The agency was one of the chief factors in the commercial life of the town and gave regular employment to a considerable number of men.

The wells and water boat have been purchased by the firm of Hudson & Billings, who will continue the business of supplying water to visiting vessels. Several local merchants have organized a company under the name of Compañía de Alijos de Acapulco, Sociedad Cooperativa, to engage in the lighterage business. The company has already purchased two lighters and is preparing to submit a proposition for the purchase of all the remaining property, including the tugboats and nine other lighters. It may include in the proposition the purchase of the agency building.

Several New Companies Venture into Field.

With the passing of the service here of the Pacific Mail Steamship Co., several new companies are venturing into the field. Three of them have vessels making Acapulco and other ports along the west coast. Two are under American registry, and the other flies the British flag.

The Mexican National Trading Co., a California corporation, has two vessels (steam schooners, formerly in the lumber trade) under charter, and plying between San Francisco and Salina Cruz. These vessels are the *San Ramon*, net tonnage 592 and licensed to carry 60 passengers, and the *Fairhaven*, 457 net tonnage, with no passenger accommodations.

Another company, known as the South Sea Navigation Co., has under charter three steam schooners of about 500 net tonnage each. They are the *Fort Bragg*, *Coaster*, and the *O. M. Clark*. These vessels ply between San Francisco and Corinto, touching at all intermediate ports.

The Northern Navigations Co. is operating two vessels of its own, the *Citriana* and the *British Empire*, the latter plying between Mazatlan and Salina Cruz, and the former between San Francisco and Salina Cruz and way ports. These vessels fly the British flag, and are engaged principally as freighters.

Implement firms at Regina, Saskatchewan, have been very busy this fall. Harvesting and thrashing machinery has been in great demand.

PUGET SOUND LINE TO FRANCE PROPOSED.

A direct steamship line between Puget Sound and France is proposed by a French consular representative on the Pacific coast. He is holding frequent conferences with business men whom he has interested in the project through the branch office of the Bureau of Foreign and Domestic Commerce, in Seattle. In making his canvass of the territory he has been afforded special facilities by the Bureau, and his conclusion is that with proper shipping facilities, there would be an excellent market in France for the lumber and timber products of the Pacific Northwest.

Reports received by the Bureau from Seattle indicate that there are interest and enthusiasm throughout that district in favor of a great shipping boom. Men who are acting for responsible transportation companies have been in consultation with the Bureau's branch office, several going from Portland to Seattle for the purpose, and business men have been holding meetings with the object of advancing the interests of the port.

Extensive port improvements have already been made, and there is existing traffic from that district to the Orient. The city has been making an insistent demand, however, for more ships, and the West coast of South America and Central America receive special attention. Portland companies have informed the Bureau that a line covering that route could be maintained by handling lumber chiefly, and also carry Pacific coast products generally. A personal visit has been made by Mr. John Barrett, director of the Pan American Union, to encourage these efforts.

Seattle's interest in shipping during the present fall has already resulted in two publications, Terminal Facilities of the North Pacific Ports, and Pacific Exporters, while a periodical devoted to the same general subject is about to be issued.

Numerous letters have been received from business men by the Bureau of Foreign and Domestic Commerce, commending the efforts made through its branch office to develop the foreign commerce of this Pacific coast region.

INCREASED PRODUCTION OF STEEL IN GERMANY.

[Weekly Report of American Association of Commerce and Trade, Berlin, Oct. 9.]

Germany's steel production made a further increase during August amounting to 1,157,692 tons of 2,204.6 pounds against 1,138,651 tons in July, although in the latter month there was one additional workday. This is the largest output since the beginning of the war. [Figures of production since July, 1914, were given in COMMERCE REPORTS for Sept. 11, 1915.] The average daily output in August was 44,527 tons, as compared with 42,172 tons in July. The quantities of the different grades produced in the last two months were:

Grade.	July, 1915.	August, 1915.	Grade.	July, 1915.	August, 1915.
	<i>Tons.</i>	<i>Tons.</i>		<i>Tons.</i>	<i>Tons.</i>
Thomas	563,683	653,352	Steel castings	15,904	19,345
Bessemer	13,285	14,931	Crucible	8,555	8,720
Basic Siemens-Martin	455,778	468,047	Electro	12,046	12,643
Siemens-Martin	23,473	28,721			
Basic steel castings	45,888	41,927	Total	1,138,651	1,157,692

COTTON CONSUMPTION ON THE CONTINENT.

[Erwin W. Thompson, commercial attaché, The Hague, Netherlands, Oct. 4, 1915.]

Statistics of the amount of cotton consumed on the Continent during the war are not to be taken too literally. Changing currents of trade, with much unusual transshipment, make confusion, so that comparisons with the movements of previous years can not be made with certainty. The whole question is affected by the changing and unknown condition of stocks on hand just previous to and during the war, and by the fact that some countries are not now publishing the statistics of imports and exports.

Sources of Supply—Employment of Spindles.

Although Continental mills normally draw 20 to 30 per cent of their supply from non-American sources (India, Egypt, and elsewhere), political and physical difficulties have reduced that supply until it is nearly correct to base the present estimate of consumption except in the case of Russia, which produces about one-half of its own requirements, on the North American supply.

The number of consuming spindles is known with accuracy for each country, as well as the normal consumption per spindle; but at this time there are great abnormalities, due in some instances to scarcity of labor, in some to scarcity of raw material, and in some to both of these conditions combined, and all of these tend toward a reduced output. In other cases mills are beginning to spin coarser counts and some mills are running 20 hours per day instead of 10. Both of these conditions tend to increase the consumption of cotton per spindle. While the maximum efficiency of a mill is attained when spinning the counts of yarn for which it was originally designed, yet considerable latitude may be allowed. Under the stress of war orders, which mostly require coarse counts, many mills are changing from fine to coarse yarn, and while perhaps not working under the best conditions and producing the best quality of yarns, are still making a greater outturn. By running the preparatory machinery night and day and the spinning spindles on coarser counts than usual during the daytime only, it would be possible in many mills to double the consumption, so that instead of requiring about 100 pounds per spindle per year, they might be made to use 200 pounds. There is nothing certain about the resultant of these two opposite tendencies, for it is difficult to ascertain the facts in the belligerent countries. Thus an attempt to check up the net imports by the consumption must not be expected to yield accurate results.

Continental Cotton Mills and Consumption of Cotton.

The following table gives some estimates of the movement of cotton (bales of 500 pounds each) on the Continent for the past three years:

	Number of spinning spindles.	12 months ended June 30—		
		1913	1914	1915
		<i>Bales.</i>	<i>Bales.</i>	<i>Bales.</i>
Austria-Hungary.....	4,950,000			
Estimated consumption.....		537,000	512,000	300,000

Other sources		2,293,958	2,112,482	1,712,621

Austrian and German Supplies—French and Russian Mills.

Austrian and German mills were able to operate on their accumulated stocks from the beginning of the war until January, 1915, at which time important quantities of cotton began to arrive from the United States. From January to April, 1915, about 200,000 bales were received in the port of Bremen, directly from the United States. In addition to these direct shipments, it is estimated that during the cotton season about 1,300,000 bales have reached Germany by indirect shipment through other ports.

Most of the French mills are in the occupied territory and these, as a whole, are said to be running at about 20 per cent capacity. The present consumption of all the French mills taken together is estimated at 40 per cent of normal. The imports, however, are more than 60 per cent of normal, so that the stocks of cotton must be accumulating or the surplus cotton is being used for military purposes.

A detailed statement of the Russian mills, by localities, as shown in the table, indicates that less than 20 per cent of the consuming capacity of Russian mills is in Poland, which is the only district now greatly affected by the war. It is reported that most of the mills in

the other districts are running double time, and that the consumption of all Russian mills taken together amounts to about 50 per cent more than normal.

Continental Mill Consumption of Cotton and Supplies.

The total continental mill consumption for 1914-15 is put at 5,730,000 bales of 500 pounds each, which is 1,767,500 bales less than the year before. Direct imports from the United States were 4,017,379 bales, which is 1,367,639 bales less than the previous year. Cotton derived from other sources than direct importation from the United States is 1,712,621 bales in 1914-15, against 2,112,482 in the previous year. Deducting the Russian crop of 900,000 bales, there remains 812,621 bales in 1914-15 derived from still other sources. Very little cotton could be received from Egypt or India, so this difference must be largely made up from the depletion of stocks. These calculations and estimates leave out of account the unknown factor of cotton used for gunpowder and other explosives.

LAWS OF STATES ON SCHOOLHOUSE SANITATION.

Forty States of the Union have taken some legal action toward safeguarding the sanitation of public-school buildings, according to a bulletin on "Schoolhouse sanitation," just issued by the Bureau of Education of the United States Department of the Interior. "Probably nine-tenths of the existing regulation of this sort has come within the past decade," declares the bulletin. "Each State profits by the experience of 47 others. A law passed in one extreme of the country to-day is copied next month or next year by a State 2,000 or 3,000 miles distant."

Thirty-eight States have some legal provision regarding the school site, according to the bulletin. Nearly all of these provisions are State wide in their application and are mandatory in character. These provisions include the proximity of "nuisances," availability of the site, and size of the site. Nineteen States have laws prohibiting the location of school buildings within a specified distance from places where liquor is sold, from gambling houses, houses of prostitution, and noisy or smoky factories.

Thirty of the States have sought to regulate the water supply of the public school. "The revolt against the common drinking cup," says the bulletin, "has come within the past five years. Kansas was the pioneer, but other States followed rapidly, so that now half of the entire number have either a law or a regulation regarding drinking cups."

Some form of protection against fire and panic is found in 36 States. Blanket regulations, or the power to make such regulations, exist in 12 States. General or special construction with a view to fire prevention is dealt with in 10 States. Less than half the States, according to the bulletin, have any legal word on ventilation. In the matter of cleaning and disinfecting, slightly more than one-fourth of the States have regulations which control conditions to any degree outside the districts themselves. Some of the laws and regulations are almost model; others are wholly inadequate. A few State boards of health have done notable work in this particular. Special cleaning and disinfecting follow in seven States immediately upon discovery in any school of any of a certain class of diseases.

OFFICIALS SEIZE IMITATIONS OF WELL-KNOWN PREPARATIONS.

Several shipments of worthless imitation drug products have been seized by the officials in charge of the enforcement of the Foods and Drugs Act. Itinerant peddlers are selling to drug stores large quantities of preparations made up and labeled in imitation of high-priced patent medicines of foreign origin. Only small quantities of the genuine medicines have been imported since the war began, causing a great increase in prices. Unscrupulous manufacturers are attempting to reap a harvest by substituting for the genuine medicines cheap chemicals with no medicinal value whatever. In order to make it difficult to trace these preparations to the parties responsible for their manufacture they are not usually distributed through the regular channels of commerce, but are peddled about to drug stores by itinerants, who make immediate delivery at the time of sale.

A preparation put up in imitation of "neosalvarsan," a medicine which has largely displaced the preparation known as 606 in the treatment of syphilis, is being distributed to drug stores in this manner. A sample labeled "Neosalvarsan," which was recently examined by the department, was found to be nothing more than salt colored with a coal-tar dye, none of the genuine neosalvarsan whatever being present. The label on this product was an exact reproduction of the genuine imported neosalvarsan, or it was an original container refilled with the imitation article.

Fraud Held to be Particularly Flagrant.

This fraud is held to be particularly flagrant, according to the medical experts of the department, not alone because a worthless preparation is sold for a high price, but mainly because neosalvarsan is usually administered by injection directly into the blood of the syphilitic patient. The cheap substitute is not only worthless in the treatment of this disease, but when injected directly into the blood might work considerable injury.

Other preparations which are peddled to druggists and purport to be acetylsalicylic acid, commonly known as aspirin, a medicine of foreign origin regularly prescribed by many physicians for certain ailments, have been seized by the officials in charge of the enforcement of the Food and Drugs Act, because an analysis showed that the products were worthless imitations.

Owing to the manner in which these preparations are peddled about, it is difficult to trace the interstate shipment of any of them, and in cases where there has been no interstate shipment, the Federal Food and Drugs Act has no jurisdiction. On information furnished by the Federal authorities, some of these imitation goods have been seized by city officials who had authority under State laws to proceed when there had been no interstate shipment.

A revival in hemp growing is reported from Kentucky. This year's crop is estimated at 8,000,000 pounds, against 1,600,000 last year and 6,500,000 in 1909. Wisconsin also increased its acreage. New machinery invented for harvesting and spreading the straw has proved successful.

POISONS USED IN THE RUBBER INDUSTRY.

Rubber manufacture involves the use of numerous poisonous substances, of which lead salts, antimony pentasulphide, aniline oil, carbon disulphide, and carbon tetrachloride are the most dangerous. The operations involving exposure to these poisons, however, employ but a small proportion of the large number of workers. No women and very few boys are engaged in such operations. A lesser danger is found in the use of coal-tar benzol and of various petroleum products, such as naphtha, benzine, etc. A considerable number of the workers, including women and boys, are exposed to the fumes of these compounds. These facts are brought out in an investigation by Dr. Alice Hamilton, of the industrial poisons used in the rubber industry, the results of which have just been published as Bulletin 179 of the Bureau of Labor Statistics of the Department of Labor.

While it was impossible to get complete data as to the frequency of industrial poisoning in the rubber industry, records were secured of no less than 66 cases of lead poisoning which occurred in 1914 among the rubber workers in the United States. Cases were also found of naphtha poisoning, and of poisoning from carbon disulphide, carbon tetrachloride, and aniline oil.

The dangerous nature of some of the compounds used in the rubber industry is not as yet commonly known, so that cases of industrial poisoning may occur without being recognized as such and ascribed to their true cause. Also, in the case of some of the compounds, the symptoms of poisoning may be obscure or may not develop until some time after the exposure has taken place, so that again the resulting harm may not be ascribed to its true cause.

The investigation on which the bureau's report is based covered 35 rubber factories, located in 15 cities or towns in 9 States. Practically every branch of the rubber industry was included among the activities of these factories. As there are many trade secrets in the manufacture of rubber articles, it was impossible to make the investigation as complete as was desired.

It is possible to equip and manage a rubber factory so that exposure to the various industrial poisons will be reduced to an insignificant minimum or wholly eliminated. Relatively little, however, seems to have been done in this direction.

PEANUT ROASTERS FOR BRAZIL.

[Consul A. T. Haeberle, Pernambuco, Oct. 2.]

This consulate has been requested to obtain catalogues and export prices of peanut roasters for street use. It is possible that a demand for this article can be created. Boiled peanuts are sold in large quantities by boys in the streets. It is possible that the roasted peanut will be preferred after this mode of preparation is known to the people.

Firms interested in exporting this article should give full details as to prices, description, and terms. Language desired, Portuguese.

A Bermuda firm has placed an order for picture molding in the United States, as the result of information supplied by Consul Carl R. Loop, of Hamilton.

SPANISH ORANGE CROP BACKWARD.

[Consul Claude I. Dawson, Valencia, Oct. 15.]

The rains ordinarily expected in September and early October did not materialize in the Valencia orange district; hence the fruit has not developed as well as had been hoped and the proportion of large sizes will probably be lower than was anticipated a month ago. The weather has also been warmer than usual at this time of year. At this writing cool nights are looked for to impart color to oranges, but in this respect also hopes have been disappointed. On the whole the crop is somewhat backward.

[Consul Wilbur T. Gracey, Seville, Oct. 12.]

Orange Crop Prospects in Andalusia.

The general outlook for the orange crop in Spain, especially in the region covered by the Seville consular district, has changed considerably since previous reports from that office.

The region covered by that district comprises the Provinces of Seville, Cordoba, Cadiz, Badajoz, Huelva, and Caceres, all of which provinces produce oranges to a certain extent, though Seville is practically the only province which exports in large quantities. The oranges produced here are usually of the sour variety, the exports going generally to England for the production of marmalade, the Seville sour oranges being especially suitable for preserving.

At the beginning of September growers reported that conditions were normal, the trees had been benefited by the heavy rains of the preceding winter and a medium crop was expected, as the trees had flowered satisfactorily. The fruit, however, does not seem to have grown satisfactorily, owing to excessive heat during the summer months and the lack of usual autumn rains, and experts now state that it is evident that the crop this season will not nearly equal that of last year in quantity, as there is a partial failure in some districts and, generally, the trees are not so well loaded with fruit as last year.

The demand from the United Kingdom is large and growers are asking 2 reals (at present rate of exchange, 9.4 cents United States currency) more per hundred oranges than in June and July, 1915, which represents an additional cost of about 2.25 pesetas (42.3 cents) per half chest.

At the beginning of August quotations were approximately 9 pesetas (at exchange of that date, equal to \$1.68) per half chest; they rose continually until at the beginning of October they stood at 11 pesetas (\$2.07) and are at present quoted at 12 pesetas (\$2.26), and in the opinion of one of the largest exporters "the whole production may be said to have been sold, although there are always a few small lots unsold. As these form only a small fraction of the crop they need not be considered."

Oranges in Seville are packed in cases containing approximately 480. The crop is picked during the latter part of November and December, the first shipments being usually made the first week in the latter month.

The present year's crop will be sound in quality, so it is stated, but will probably not be more than half the quantity of the 1914-15 season. No statistics are available of the actual production.

HIGH FREIGHTS ADVANCE COAL PRICES IN NORWAY.

[Consul Maurice P. Dunlap, Stavanger, Oct. 18.]

Although the coal consumption of the Stavanger district has not changed materially since the war began, general business has never before reached such proportions as at present, and the price of coal has advanced along with those of other commodities. The bulk of the coal used here is English steamer coal, and the price of the best Newcastle steamer coal is now 42 crowns (\$11.26 in U. S. currency) per ton. Before the war the consumer paid only 20 crowns (\$5.36) per ton. House coal, which comes generally from the Firth of Forth, Scotland, costs about one quarter less than steamer, and has advanced in about the same proportion. The rise is due mainly to the freight, which has advanced since July, 1914, from \$1.10 per ton to \$3.65.

Coal delivered f. o. b. in England has, however, also advanced in cost. Before the war the best Newcastle ranged from about \$3 to \$3.41. Now it is quoted f. o. b. Blyth at \$4.75. Nearly all the coal used here is "D. C. B." coal (Davison, Cowpen, and Bothal)—the standard kinds from Newcastle and Blyth. Best Newcastle smalls, f. o. b. Blyth, is now quoted at \$2.92.

License Required—Inquiries About American Coal.

Some uncertainty is felt here in certain quarters regarding the coal situation. Great Britain now requires a special license for every cargo of coal shipped to Stavanger. It may be said, however, that larger stocks of coal have been laid in this year than usual because of unsettled conditions.

Inquiries have been made at the consulate regarding the possibility of getting American coal, and considerable interest was shown at first. The interest subsided, however, when prices received from America ranged about \$4.80 higher than English prices, c. i. f. No coal has been ordered from America.

There are no electric cranes here to aid in unloading coal to the private docks, although one was recently ordered from Christiania for the public quay. Perhaps 200 tons per day can be unloaded with the present facilities.

Coal and coke imported to Stavanger during 1914 amounted to 89,613 metric tons from England and 5 metric tons from Germany, a total of 89,618 metric tons (metric ton=2,204.62 pounds).

[Lists of dealers in coal in the Stavanger district may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 68301.]

The Ontario Hydro-Electric Commission has completed a survey for a Government power house on the Smeaton farm, between Queenston Heights and Niagara Falls. Plans for the power station have been in preparation. The use of surplus waters from the Welland Canal is projected, carrying the water to the generating station through a canal running from Chippawa Creek. Extended articles on this Canadian plant were published in **COMMERCE REPORTS** for September 1 and September 21, 1915.

Lumbermen in Ontario and Quebec are receiving many United States inquiries for birch and spruce.

NEW LABOR LAW OF PORTUGAL.

[Consul General W. L. Lowrie, Lisbon, Sept. 1.]

A 10-hour day (of which two hours are reserved for meals) in mercantile establishments and barber shops; 7 hours in banks and business offices; 10 hours in the industries, except (1) in shops or works under the immediate supervision of the State or of administrative corporations, (2) in underground work of the mining industries, and (3) in establishments and shops where, for industrial purposes, insalubrious or poisonous materials are made or used, in which cases 8 hours constitute the working day; 10 hours in the home industries; special regulations regarding the hours and employment of women and minors; these are among the provisions of the new labor law of Portugal. Other sections provide for inspection of premises, limit the amount of night work and of overtime, specify the rate of pay for overtime, and touch upon the legality of labor contracts in force at the date of the promulgation of the law.

Considerable difficulty has been experienced in the adjustment of business affairs to the altered conditions, but the general opinion seems to be that the results will be satisfactory.

[A copy of the full text of the law will be loaned to those interested by the Bureau of Foreign and Domestic Commerce, Washington; refer to file No. 66213.]

MOTION PICTURES IN COLOMBIA.

[Consular Agent Harold B. Meyerheim, Medellin, Aug. 16; see also **COMMERCE REPORTS** for May 6 and July 3, 1915.]

Medellin's 60,000 population has, in the past, supported three motion-picture theaters—the Circo Espana, the Circo Apolo, and the Circo Olimpia. The last named is the only cinematograph showing high-grade photoplays, it having a contract for Italian films. However, owing to the war, this theater has now suspended its entertainments, and the other two are giving mixed programs, combining varieties with films, three times a week and charging 10 to 25 cents admission.

American films have not so far proved a success. The local audiences are very exciting and require good acting, high-grade comedy, or tragic and exciting dramas. As the "floating population" is very small, programs are changed constantly; only the most successful films can be shown more than once. The Spanish language is used exclusively for explanations.

A local company controls the supply of electric current and has a fixed charge for theater lighting. The current is alternating, but direct current can be had if required.

WATERWORKS PROPOSAL BY AMERICAN FIRM.

[Consul Herman L. Spahr, Montevideo, Uruguay, Sept. 20.]

Officers of an American contracting company are at Salto, Uruguay, a city of about 30,000 inhabitants, making the necessary investigations in order to submit a proposal for putting in a waterworks system with intake from the Uruguay River at Salto Chico. Plans that were prepared in part in 1910 for the same purpose are, it is understood, being made the basis of the present survey.

MODERN METHODS OF BANK OF CHINA.

[Commercial Attache Julian H. Arnold, Peking.]

The adoption of modern methods by Chinese banks is of very recent date, but so rapid has been the progress of the leading native exponent of Western methods—the Bank of China—that its Shanghai branch is said to be second only to the Hongkong & Shanghai Bank in that city. The Bank of China, whose capital of \$10,000,000 Mexican (about \$5,000,000 United States gold) was subscribed by the Chinese Government, is under the control of four directors appointed by the Central Government, but in reality is managed by the governor. In Peking there are two departments—the head offices for the whole of China and the Peking branch; in all, there are 92 branches and subbranches.

The bank allows 2 per cent a year on current accounts in Peking, but this rate varies in the different branches, depending on local conditions, as much as $2\frac{1}{2}$ per cent being allowed in some places. Its usual rate on what, in foreign practice, would be known as commercial overdrafts is 8 to 9 per cent, but most of the commercial loan business is done on a little different basis, the loan being made in each individual case upon a rate and security suitable to that particular case. The bank has adopted modern Western methods of keeping its books, using Arabic figures exclusively, and all writing in connection with keeping the accounts, etc., is done with foreign writing implements. This practice obtains throughout the branches.

Most of the small dealers in Peking do their banking business with the "old-style" banks, with which they have had connections for many years. They make their deposits in these banks, receiving interest (two-tenths of 1 per cent a month) on current accounts, and also receiving loans from time to time to aid them in their business. For small short-time loans from 2 to $2\frac{1}{2}$ per cent a month interest is exacted. Loans at these rates are also made to farmers with the coming year's crops as security, but as a rule loans at these high rates are not accompanied by what would be considered good security, so that much risk is involved in connection with them. The old-style banks still make use of a brush in entering the accounts, which are kept in Chinese fashion.

SICILIAN LEMON CROP OF 1915.

[Consul Samuel H. Shank, Palermo, Italy, Oct. 12.]

There are two crops of lemons yearly gathered in Sicily, the winter and summer crop, the latter known as "verdelli." The winter crop, gathered from December to May, was a medium one this year and the quality was good. The verdelli crop was also good and above the normal in quantity.

Lemons shipped to the United States from January 1 to October 1, 1914, totaled 2,086,004 boxes (300 lemons to the box), while up to October 1, 1915, the amount was only 1,387,547 boxes.

Production has constantly been greater than the consumption, and consequently prices have not kept up. Prices in September ranged from 9 to 12 lire (at the depreciated rate prevailing about \$1.50 to \$2) per thousand, while in September, 1914, the price was \$3 to \$3.50.

The good weather which prevailed during the late summer and early autumn makes the prospects for the next lemon crop good both as to quality and quantity.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Motors for rowboats, No. 19150.—An American consular officer in India transmits the name of a firm in his district which desires to receive quotations on rowboat motors and terms of sole agency.

Medical supplies, No. 19160.—An American consular officer in Russia reports that one of the county councils in his district desires to communicate with American firms dealing in medical supplies. Catalogues, price lists, and terms of delivery should be sent.

Wearing apparel, No. 19161.—A business firm in the United States writes that its agent in Central America is in the market for general lines of gloves, stockings, novelties, and wearing apparel for women. The man will pay cash.

Paper, No. 19162.—A firm in France desires to communicate with American manufacturers of newspaper, 47/48 grams to the square meter; wrapping paper, including cellulose, parchmented, brown, or in colors; muslin paper, unbleached, white, or in colors; and genuine sulphurized papers. Samples and quotations, f. o. b. or c. i. f. destination, are desired immediately. Correspondence should be in French.

Caustic soda, etc., No. 19163.—An American consular officer in Norway reports that there is an inquiry for quotations on caustic soda and other articles needed in the soap industry, such as potash, lye, soda ash, and ammonia alkali. References furnished. Terms cash. Correspondence may be in English.

Enamel ware, underwear, etc., No. 19164.—The bureau is informed that an Australian representative is in this country for the purpose of establishing commercial relations with American exporters of enamel ware, underwear, hosiery, and dress materials for women. Further particulars may be obtained from the Bureau or its branch offices.

Bathroom equipment, No. 19165.—An American consular officer in China submits a list of commission houses interested in bathroom equipment. Names may be obtained from the Bureau or its branch offices.

Carpets and oilcloth, No. 19166.—The Department of Commerce is in receipt of a letter from a business man in Greece stating that he desires to represent American manufacturers and exporters of carpets and oilcloth of all kinds for delivery f. o. b. factory or c. i. f. Piraeus. Catalogues and full information should be sent.

Crackers, No. 19167.—A consular officer in China reports that there is a possible market for Christmas crackers in his district.

Sewing machines, umbrella handles, etc., No. 19168.—A report from an American consular officer in the Netherlands states that a company desires to purchase sewing machines, umbrella handles, and fly catchers, and would also like to act as agent for American manufacturers of jackets and similar goods. Terms 30 or 60 days, with 2 per cent, when buying or acting as agents. Correspondence may be in English, German, or French.

Wire, No. 19169.—An American consular officer in the United Kingdom transmits the names and addresses of firms in his district which deal in coil wire.

Drugs and pharmaceutical products, No. 19170.—An importer in Switzerland informs an American consular officer that he desires to represent, on a commission basis, firms dealing in drugs and pharmaceutical products, making payments "for goods sold" at the end of each month, and later on, to purchase outright. Samples and prices c. i. f. French port are requested. References given. Correspondence may be in English.

Dry batteries, No. 19171.—An American consular officer in Norway reports that a firm in his district wishes to correspond with exporters and dealers in dry batteries for electric pocket lamps.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Concrete pavement, No. 2763.—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until December 4, 1915, for concrete pavement at the Navy Aeronautic Station, Pensacola, Fla. Plans and specifications may be obtained on application to the Bureau of Yards and Docks or to the commandant of the naval station named.

Dental cabinet, No. 2764.—Sealed proposals will be received at the Medical Supply Depot, United States Army, Fort Mason, San Francisco, Cal., until November 11, 1915, for furnishing and delivering at warehouse "D," Fort Mason, pressed steel aseptic dental cabinet.

Construction work, No. 2765.—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., and at the naval station, Cavite, P. I., until January 4, 1916, for a power house and an operating building of reinforced concrete and steel construction; and three quarters of wood construction for commanding officer, married operators, and bachelor operators at the naval station, Cavite, P. I. Plans and specifications may be obtained on application to the Bureau of Yards and Docks or to the commandant of the naval station named.

Dredging, No. 2766.—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until November 27, 1915, for dredging at the Navy Yard, Norfolk, Va. Plans and specifications may be obtained on application to the Bureau of Yards and Docks or to the commandant of the navy yard named.

Construction work, No. 2767.—Sealed proposals will be received at the office of the Supervising Architect, Treasury Department, Washington, D. C., for the construction complete, including mechanical equipment and approaches, of the United States post office at Greenwich, Conn. Drawings and specifications may be obtained on application to the Washington office or to the custodian of the site at Greenwich.

Construction work, No. 2768.—Sealed proposals will be received at the Bureau of Yards and Docks, Navy Department, Washington, D. C., until November 27, 1915, for the construction of an extension to the pulping and poaching house at the Naval Proving Grounds, Indianhead, Md. Plans and specifications may be obtained on application to the Bureau of Yards and Docks.

Lumber, No. 2769.—Sealed proposals for furnishing and delivering at Sault Ste. Marie, Mich., about 110,000 feet b. m. of white oak timber will be received at the United States Engineer's Office, 337 Federal Building, Detroit, Mich., until December 15, 1915. Information on application.

X-ray plates, No. 2770.—Sealed proposals will be received until November 12, 1915, for furnishing and delivering at the Medical Supply Depot, 543 Greenwich Street, New York, N. Y., 646 dozen X-ray plates of various sizes.

Field guns, gun carriages, etc., No. 2771.—Sealed proposals will be received until November 25, 1915, at the office of the Chief of Ordnance, United States Army, Washington, D. C., for furnishing and delivering f. o. b. contractor's works the following articles: Field guns, gun carriages, and gun-carriage limbers. Drawings, records, specifications, and other information may be seen in the office of the Chief of Ordnance, United States Army, and copies thereof can be made at the expense of the bidder, provided that they are not removed from the city of Washington and are returned within 24 hours.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 308 United States Customhouse; Seattle, 923 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

COMMERCE REPORTS

DAILY CONSULAR AND TRADE REPORTS
ISSUED DAILY BY THE BUREAU OF FOREIGN AND DOMESTIC COMMERCE
DEPARTMENT OF COMMERCE

For sale by the Superintendent of Documents, Washington, D. C., at \$2.50 per year

No. 263 Washington, D. C., Tuesday, November 9 1915

SWISS FEDERAL PURCHASING TRUST.

The Department of State has been informed by the Swiss Legation in Washington that while the Swiss Society of Surveillance has been agreed upon by the allies, as stated in **COMMERCE REPORTS** for November 2, 1915, the organization of the society has not yet been completed, and therefore until further notice shipments to Switzerland should be made as heretofore. Commercial interests will be informed through **COMMERCE REPORTS** as soon as the organization of the society is completed and ready to receive consignments.

EMBARGO ON KID SKINS IN FRENCH COLONIES.

[Telegram from American Consul General, Paris, Nov. 4, 1915.]

A ministerial decree of November 3, 1915, abrogates the permission granted April 23, 1915, for the exportation of kid skins, raw and prepared, from French colonies to allied countries and to the United States. Tunis and Morocco were not included in the list of colonies from which exportation was prohibited by the order of April 23.

BRITISH NOTICE CONCERNING WHEAT CARGOES.

[Cablegram from American Consulate General, London.]

The British Government Board of Trade announces that vessels loading by December 15, 1915, with wheat from an American Atlantic port shall be exempt from requisition on arrival in a United Kingdom port and free to start another voyage not necessarily North Atlantic after discharge cargo.

An apparently steady South African trade in American glass has resulted from a "Trade Opportunity" forwarded by Consul E. A. Wakefield, of Port Elizabeth.

NEW LINES BETWEEN UNITED STATES AND MEXICO.

[Vice Consul Thomas H. Bevan, Tampico, Mexico, Oct. 22.]

Steamer Service for Tampico and Beaumont.

The Gulf Export and Transportation Co. has established a regular freight and passenger service between Beaumont, Tex., and Tampico, Mexico. The company has purchased the steamship *Pilot*, formerly the United States revenue cutter *Alexander Hamilton*, and renamed it *Keechi*, together with three seagoing barges, which will be towed by the *Keechi*. The company has fitted the steamer up with accommodations to carry about 20 passengers and plans to maintain a 10-day schedule between Tampico and Beaumont. The *Keechi* has cargo space for 200 tons and the barges 600 tons each.

The principal freight from the United States to Mexico will be lumber and general cargo. Owing to the quick service, there will be little difficulty in getting a return cargo for the United States. In order to avoid unnecessary delays the steamer will tow one barge at a time, while the two others are at their destinations being loaded and discharged.

[Consul Claude E. Guyant, Ensenada, Mexico, Oct. 26.]

San Diego-Ensenada Company Formed in California.

A new company, known as the San Diego-Ensenada Steamship Co., is being incorporated in California for the purpose of engaging in freight and passenger traffic between San Diego, Cal., and the Pacific ports of Lower California. The new company is financed by residents of San Diego and Ensenada, and will have a capitalization of \$25,000, partially paid up. It is the intention of the company to purchase at once, at some Pacific port, a vessel of between 100 and 200 tons, and to acquire other boats in the future, if traffic warrants.

Regular steamer service between Ensenada and San Diego ceased with the sinking of the Mexican steamer *Victoria*, off San Diego last spring. Since that time this coast has been served by irregular voyages of a 14-ton gasoline schooner, which has been charging \$7.50 for passage and \$5 per ton for freight between Ensenada and San Diego, a distance of 70 miles. The new line will probably charge \$5 for passengers and \$3 a ton for freight, and will make a voyage every 5 days.

Light passenger and freight traffic prevailed all summer. South-bound cargoes have averaged about 60 tons per month, and north-bound only about 10 tons. About 40 passengers each way have been carried per month. This town and district, however, are only awaiting better conditions to become very active in industry and commerce, especially in mining and ranching, and it is with a view to being prepared to handle the inevitable increase in traffic that this new steamship line is being organized.

CONSULAR TRADE CONFERENCES.

Consul Lester Maynard, of Amoy, China, states that he will be in the United States on leave of absence until about December 31, 1915, and that his address will be care of the Department of State, Washington, D. C.

The leave of absence of Consul Willys R. Peck, of Tsingtau, China, having been extended he will be in Washington, D. C., from about December 1, 1915, to January 31, 1916.

CONDITION OF EGYPTIAN COTTON CROP.

[Consul Arthur Garreis, Alexandria, Oct. 4; data taken from Bulletin of Alexandria General Produce Association for September, 1915.]

Lower Egypt.—Weather conditions generally favorable during the first half of the month, latter cooler; the fogs usually prevalent during this period were absent this year. Boll worm and pink boll worm ravages quite considerable, some parts more affected than others. First picking, everywhere under way, is 15 days in advance of usual time. Results are variable. Some districts show slightly better yields than last year, while others are inferior. Second picking will be below the average, and indications point to a minimum third-picking yield. Gin returns vary and, on the whole, appear inferior to last season.

Upper Egypt and Fyoun.—Weather, with the exception of two or three days, was rather cool, but generally favorable. Light fogs of no importance were evident at the beginning of the month. With the exception of the parasite attacks indicated last month no further boll or pink boll worm were in evidence.

COTTON GINNED, IMPORTED, AND EXPORTED.

According to a preliminary report issued by the United States Bureau of Census, the number of bales of cotton ginned from the growth of 1915 prior to November 1, 1915, was 7,384,871 (counting round as half bales), compared with 9,826,912 bales for the corresponding period in 1914, and 8,830,396 bales in 1913. Round bales in 1915 amounted to 69,204 against 23,182 in 1914 and 61,577 in 1913. The number of sea-island bales included is 55,358 for 1915, 43,115 for 1914, and 42,804 for 1913. The distribution of the sea-island cotton for 1915, by States, is Florida, 17,841; Georgia, 36,141; and South Carolina, 1,376.

The statistics for 1915 are subject to slight corrections when checked against the individual returns of the ginneries being transmitted by mail. The corrected statistics of the quantity of cotton ginned this season prior to October 18 are 5,710,824 bales.

Domestic cotton exported during October, 1915, was 673,059 running bales, and foreign cotton imported, 13,506 equivalent 500-pound bales.

RESULTS OF FOREIGN TRADE OPPORTUNITY SERVICE.

[Commercial Agent George W. Doonan, St. Louis, Mo., Nov. 3.]

Mr. George W. Doonan, Commercial Agent, who is in charge of the Bureau's branch office in St. Louis, reports that he is in receipt of advice from a manufacturer of railway supplies in that city to the effect that the manufacturer has secured orders in South America for railroad lamps, lenses, benders, and tinware from four different firms. The information relative to the openings was secured through "Foreign Trade Opportunities" and lists of dealers supplied by the St. Louis office. The manufacturer states that these are all initial orders, and it is expected that they will lead to a very nice export business.

IMPORTS AND EXPORTS BY COUNTRIES.

Details showing the value of merchandise imported from and exported to each of the principal countries during September and the 9 months ended with September, 1915, compared with corresponding periods of the preceding year, have been completed by the Bureau of Foreign and Domestic Commerce of the Department of Commerce, as follows:

HUDDERSFIELD TO HAVE GREAT DYE WORKS.

[Consul Franklin D. Hale, Huddersfield, England, Oct. 15.]

After carefully considering a number of locations the directors of British Dyes (Ltd.) have decided to establish their works for the production of synthetic dyes at Huddersfield. The purpose of this company is to manufacture dyes on such an extensive scale as to make the dye users of this country independent of foreign supplies. [See COMMERCE REPORTS for Jan. 7 and Feb. 18, 1915.] The site selected is a 450-acre tract in the valley of the Colne River adjacent to the works (formerly belonging to Read Holliday & Sons) taken over by British Dyes a few months ago.

It is estimated now that the new works will eventually employ 10,000 adults, which means an added population to the city of probably 35,000 people. The great problem for the municipality will be to house so large a number of people. The borough council, the chamber of commerce, and prominent citizens have this matter seriously under consideration at the present time.

DECREASED LEEDS EXPORTS TO THE UNITED STATES.

[Consul Homer M. Byington, Leeds, England, Oct. 18.]

The declared exports to the United States through the Leeds consulate for the quarter ended September 30, 1915, amounted to \$218,440, as compared with \$565,941 for the corresponding quarter of 1914. The total exports for the 9 months ended September 30, 1915, were \$611,289, as compared with \$1,788,350 in 1914. The decrease may be held to be due to conditions which are a direct result of the war.

PLANS OF GRADUATE SCHOOL OF AGRICULTURE.

The Bureau of Education, Department of the Interior, announces that the seventh biennial session of the Graduate School of the Association of American Agricultural Colleges and Experiment Stations will be held at the Massachusetts Agricultural College July 3 to 28, 1916. Three courses to receive special attention are: (1) Factors of growth of plants and animals; (2) fundamental problems of intensive agriculture, including agronomy, horticulture, and dairy husbandry; (3) agricultural economic and rural sociology. The last-mentioned course is to be especially emphasized. In addition to the courses given in the graduate school are others given in the regular summer school conducted by the college.

Previous sessions of the graduate school were held in Ohio State University in 1902; University of Illinois, 1906; Cornell University, 1908; Iowa State College, 1910; Michigan Agricultural College, 1912; and University of Missouri, 1914.

The school is in session for four weeks. During that time courses are given on various phases of advanced agricultural science, agricultural economics, and rural sociology. Each course consists of 20 lectures and 20 seminars and is usually divided into four distinct parts given in the four different weeks of the school and each by a specialist in his subject. Many prominent and learned men have been members of the faculties—Zuntz, Hall, Von Tscharmak, Ewart, Russell, Marshall, and Darbshire, from European countries. Mendel, McDougal, Castle, Duggar, Riddle, Sherman, Carver, East, and Harris, from institutions not primarily agricultural in purpose, have been included also. In addition to these nearly all of the men in agricultural colleges in the United States known as specialists on various phases of agricultural work have taken part.

WORK ON LIGHTHOUSE BUREAU'S NEW VESSELS.

Four light vessels and six tenders for the work of the United States Bureau of Lighthouses were under construction or projected during the month of October. The report on the status of the new vessels, made November 4, gave the various stages of completion reached on these craft. The tender *Fern* has been accepted from the contractors and final payment made.

The tender *Rose*, being built at Seattle, Wash., is about 65 per cent completed, and Light Vessels No. 101 and No. 102, at Wilmington, Del., are, respectively, 45 and 47 per cent completed. The tender *Cedar* at Long Beach, Cal., has reached the 10 per cent stage, and the tender *Palmetto*, at Jacksonville, Fla., 1 per cent.

For Light Vessel No. 99, relief boat on the Great Lakes, the balance of the appropriation, about \$58,000, is available, and plans are being prepared. For Light Vessel No. 100, an appropriation of \$130,000 is available, and a preliminary study has been made.

In providing a tender for the engineer of the sixth district, the balance of the appropriation, about \$26,881, is to be used for the purchase of a suitable vessel to replace the tender *Gardenia*. Bids have been received to be opened November 10. The tender *Aster*, for the eighth district, was authorized by the act of March 3, 1915, but no appropriation is as yet available.

WIDE VARIETY OF FOREIGN INQUIRIES.

An example of the wide variety of queries that the Bureau of Foreign and Domestic Commerce is constantly receiving is furnished by an inquiry about campaign buttons in a Latin-American country. A manufacturer in the United States is to make the buttons, and has asked the Bureau, through one of its branch offices, what the rates of duty are on this class of goods in the country to which they are to be sent.

A steady stream of letters to the Bureau bring questions about foreign tariff rates in various Central and South American countries, about railroad fares, economic conditions, markets for specific products, and innumerable other subjects related to trade, especially the trade of the Latin Republics to the south. American merchants are seeking in many ways to capture the attention of that section of the world on its "shopping tours."

An inquiry which involves the study of railroad fares for various points in practically all the South American countries means considerable research by the Bureau, but it furnishes the information as promptly as possible. Another correspondent desires information about the varieties and quantities of fruit to be found among the products of South America, and the particular locations of the varieties. In this instance also the Bureau gives careful attention to the task of delving for the required facts.

Some manufacturers call for information which, as a rule, will have to be obtained from the agents of the Bureau of Foreign and Domestic Commerce in the field. One firm asks about the market for gas tips for open-flame gas jets. Another, which makes Babbitt metal bearings, would like to know what chance there is of selling antifriction bearings in South America.

The Bureau has been asked to explain the triangular method of settling trade balances between South America and the United States by way of Europe, and the amounts involved. Persons interested in foreign trade also take up other economic questions. In fact, variety characterizes each day's mail of the Bureau, and South America is receiving special attention. The same mail that brought the query about campaign buttons contained a letter from a manufacturer who desired information about rates of duty on cabinet files to be shipped to a Latin American country.

All these communications are receiving the careful attention of the Bureau, and the Government officials find in them pleasing evidence of broader efforts to extend American trade.

CHILE'S ESTIMATED BUDGET DEFICIT.

[Consul General L. J. Keena, Valparaiso, Oct. 5; all sums stated in United States gold.]

The Chilean Minister of Finance, in a recent report to the Budget Committee, stated that it now appears that the deficit for the year 1915, which in October, 1914, was estimated as high as \$16,000,000, would not exceed \$4,550,000. The revenues for the year are estimated as totaling \$47,880,000, with \$22,400,000 cash on hand December 31, 1914. The total expenses of the Government in 1915 are now placed at \$74,650,000, on which basis the deficit to be met at the end of this year would be \$4,370,000, or \$1,810,000 less than the deficit for the last prewar year (1913).

GREEK DEMAND FOR AMERICAN CAMERA SUPPLIES.

[Vice Consul George P. Waller, Jr., Athens, Sept. 15.]

The Greek market for photographic goods, until the beginning of the present war, was abundantly supplied. Cameras were obtained for the most part from American, German, and British firms in the order named, while chemicals, plates, and papers came largely from German firms.

As Greece is now practically cut off from the German market photographic chemicals, especially of the rodinal class of developers, are much in demand, and American-made chemicals seem to have an excellent opportunity to supplant the German products. The path has already been made smooth for the greater use of American preparations by the introduction in the last few years of the extremely ingenious tank for daylight development of films, manufactured by an American firm and requiring for its proper use American chemicals, which need only the addition of water before use.

There is a brisk market for American films, although this article, by reason of its very excellence, does not always yield as good photographs as do films of less speed. The dazzling sunlight, together with the high actinic value of the very blue, usually unclouded, skies prevailing for the greater part of the year in Greece requires that the lens of a camera be stopped down to an aperture which would in northern Europe mean hopeless underexposure for ordinary films. An enterprising manufacturer would find a good market for a much slower film, which he might advertise as being prepared expressly for tropical, seaside, or oriental use, with fixed-focus hand cameras adjusted to American conditions. These instruments might then be successfully used in Greece or other lands where similar conditions prevail without changing the stops or speed of the shutter.

New Source for Miniature Cameras Sought.

The films most in demand here are the familiar post-card sizes. The eight-exposure films for waistcoat-pocket cameras, $1\frac{1}{2}$ by $2\frac{1}{4}$ inches, are also greatly in demand, as the closing of the German market has reduced the sale of the miniature cameras of German manufacture. As these cameras are frequently not made in standard sizes, they may be profitably replaced by a miniature camera of American manufacture which may be equipped to enlarge the tiny negatives to any reasonable size. This little camera, well known in the United States, sells at retail in Greece for \$8.70. Equipped with the better lens mentioned it costs \$17.95. There is also a small camera of English manufacture on the market, somewhat similar to the instrument mentioned, but taking a slightly smaller picture. This is not very popular, however, although it retails for about \$1.55 less than the American article.

An American camera has been placed on sale here recently for amateur use. Instead of films it uses ferrotype plates, the old-fashioned "tintype," enabling the operator to expose, develop, and finish a photograph by daylight in from two to three minutes. Sales of this type are very small.

The introduction of extremely simple and compact enlarging apparatus of American production has in turn created an active market for bromide printing paper, which is extremely sensitive to light and

has heretofore not been in general use by amateurs, owing to the delicacy requisite to its proper manipulation.

Window Displays of American Goods.

American firms now supplying the Grecian market advertise widely and the principal depots carry excellent window displays of the goods. Correspondence with prospective customers should be in Greek or French, and it is suggested that advertising matter and labels be printed in French and that all measurements be given in metric units.

The prices of photographic materials of American manufacture have not advanced in Greece on account of the war. American films sell for exactly the same price as in the United States, although cameras generally cost more. A popular hand camera, representative of a type selling for \$2 in America, costs the equivalent of \$3.20 here, while the waistcoat-pocket instrument, which in America retails for \$6, costs only a few cents less than the equivalent of \$9 in Greece. Printing paper of the "gaslight" type is sold under a name long since obsolete in America, to meet German competition, at an equal price, while the regular brands are sold under their American names at no advance upon the English and American price.

Although one may frequently find foreign cameras apparently equal to the American products and selling at a lower price, the majority of Greek amateurs seem to prefer the American products, which were the pioneers in their field and are still well in the lead wherever the prime photographic factors of simplicity, durability, and quality are considered. Until the last few months there has been no direct exportation of photographic goods from America to Greece. Alexandria, Egypt, was the headquarters of the trade for this part of the world, and American orders were handled through that general agency.

[A list of large dealers in photographic supplies in Athens may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 67016.]

GLASGOW CLEANSING DEPARTMENT'S REPORT.

[Consul John N. McCunn, Glasgow, Scotland, Sept. 16.]

During the departmental year 1914-15 of the cleansing department of the Glasgow Corporation the total weight of food rejected as unfit for human consumption amounted to about 123 tons (ton = 2,240 pounds). This comprised eggs, cheese, fish, tinned meat, fruit, and vegetables. The eggs alone weighed 63 tons 8½ hundredweight, which means that considerably over 1,000,000 eggs were found unsound.

The revenue derived from waste materials taken from the city refuse was \$17,037. The cost of working the department amounted to \$750,511, as against \$672,180 for 1913-14, an increase of \$78,331, or \$10,209 more than the estimate. The total quantity of refuse dealt with was 416,276 tons, and the cost of collecting it, exclusive of harbor material, was \$273,224, an increase of about 12 cents per ton over the preceding year.

Produce sold from the estates owned by the corporation realized \$12,185. The remainder, valued at \$28,337, was used in the cleansing stables and other departments in the city or on their farms.

SOURCES OF BAGS FOR SOUTH AMERICAN PRODUCTS.

[Consul Homer Brett, La Guaira, Venezuela, Oct. 7.]

This country exports annually from 1,500,000 to 1,800,000 sacks of coffee and cocoa, and also uses many sacks as containers for dividivi, mangrove bark, pearl shell, and other products. The importation of sacks, however, is limited, as the tariff favors the import of jute cloth rather than of sacks. In the fiscal year ended June 30, 1914, such importations were: Empty sacks, 288,523 pounds, valued at \$11,854; sacks of canvas or hemp, 91,801 pounds, worth \$12,103; and jute cloth, known as "Crudo No. 3," 486,694 pounds, valued at \$378,776.

On ordinary fabrics, to be employed for sacks or for wrapping, made of hemp, jute, or analogous fibers, pure or mixed with cotton, not bleached by chemicals, though having bands or squares of color, the customs duties and surtaxes amount to \$3.42 per 100 pounds gross weight, provided that the semisum of threads does not exceed 6 in a square of 5 millimeters (0.197 inch). Similar fabrics bleached chemically or having more than 6 threads per 5 millimeters, and made sacks are dutiable at \$10.27 per 100 pounds. Used sacks in general are also dutiable at \$3.42 per 100 pounds, and used sacks brought in for use in the exportation of dividivi, mangrove bark, and mother-of-pearl shell are admitted free.

Sacks for coffee and cocoa are made to hold 100 or 110 pounds; each one requires 2½ meters of material (Crudo No. 3), and weighs 2½ pounds, the present cost in La Guaira being 40 cents each. At present all bagging is credited to Great Britain in the import statistics, but it is not known whether it is the product of Scotch or of Calcutta mills.

A list of dealers and importers is appended.

[Consul Herbert R. Wright, Puerto Cabello, Venezuela, Sept. 28.]

Exporters Manufacture Their Own Bags.

During 1914 there were 309,405 bags used for the exportation of coffee, cocoa, and coconuts. These were made here, as no bags are imported. During the same period 737,856 pounds of burlap cloth, valued at \$88,830.17, were imported from the following countries: United Kingdom, 714,575 pounds, valued at \$83,063; Germany, 17,685 pounds, valued at \$5,065; Netherlands, 5,696 pounds, valued at \$701.

This cloth sells here for \$0.193 United States currency per yard, and it takes about 1½ yards for a bag, each exporter making his own.

[Consul George E. Chamberlin, Georgetown, British Guiana, Sept. 29.]

Used for Sugar and Rice in British Guiana.

Jute or burlap bags are used extensively in this consular district, in the sugar and rice industries. The sugar bags are of a size to hold 250 pounds, and the rice bags 180 pounds.

The chief sources of supply have been the British East Indies and the United Kingdom, and the annual consumption is from 1,250,000 to 1,500,000 bags. The imports by countries for 1913, the latest available statistics, were: British East Indies, 60,155 dozen bags, valued at \$99,468; United Kingdom, 34,263 dozen, \$47,725; British West Indies, 4,228 dozen, \$4,789; United States, 1,708 dozen, \$2,290;

Dutch Guiana, 9 dozen, \$7; total, 100,363 dozen, valued at \$154,279. The present price of these bags is from 19 to 20 cents each, c. i. f. Georgetown.

[Lists of firms interested in jute or burlap bags in Georgetown, British Guiana, Puerto Cabello, La Guaira, Caracas, Carupano, and Ciudad Bolivar, Venezuela, may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 67,834.]

MODEL PUBLIC BATHS IN ENGLISH CITY.

[Consul J. E. Armstrong, Jr., Bristol, Sept. 29.]

Erection has been commenced of buildings for the Bristol North District Baths. There will be a series of slipper baths, a large swimming bath, and a laundry department; the portion to be carried out at present includes the swimming bath, boiler house, and laundry.

There are to be 8 first-class and 10 second-class slipper baths, and 18 Kane's needle and shower baths for men, as well as 8 slipper baths and a like number of Kane's baths for women. The establishment is to be up to date on plans prepared in the office of the City Engineer, Bristol.

The swimming bath will be in a large hall 100 by 54 feet, the bath water area being 75 by 30 feet. The pool will be of cement concrete, lined with asphalt and faced with white glazed bricks, and the gangways paved with corrugated paving tiles. The 51 collapsible dressing boxes may be folded against the wall to give additional accommodation for the public at swimming entertainments. There will be four exits communicating with the street, and four staircases leading from the galleries.

Connected with the swimming bath are two competitors' rooms each 15 by 16½ feet, a club room 17 by 15½ feet, two dressing rooms, and kitchen. There will be a shed for bicycles and marshaling the swimming classes. A foot bath 10 by 8 feet for ablution before entering the swimming pool is included. There are also the usual lavatories, attendant's office, and shower bath.

In addition to windows the building will be lighted the full length of the roof, and air purification will be accelerated with electric fans. A patent filtration, aeration, and reheating plant will be capable of changing the water in the bath at the rate of 12,000 gallons per hour.

EARLY RISE IN BOHEMIAN GLASS PRICES.

[Consul Wallace J. Yeung, Carlsbad, Bohemia, Austria, Oct. 9.]

Within the near future there will be a general increase in the price of Bohemian glass products, it is forecasted. This increase will take effect probably about November 1. In the higher grade decorated and engraved goods the increase will average 25 per cent.

This is due to the greatly increased cost of the raw materials. It is also expected that the price of quartz sand will advance, since previously the Bohemian glass manufacturers bought either Austrian or German sand and at present there is an embargo upon the exportation of this sand from Germany, and the Austrian sand trade therefore has an increased demand, with a market free from foreign competition.

No increase in wages in the glass trade is at present anticipated.

LAKE CARRIERS ORDER MEN TO NOTE CHANGES IN LAW.

The following letter from the vice president and general manager of the Anchor Line to the captains of the company's vessels is printed for the information of the public. The Mutual Transit Co. takes the same commendable attitude:

ANCHOR LINE, Buffalo, N. Y., October 19, 1915.

To all Captains:

A circular letter sent out by the Lake Carriers' Association to their captains covers the point so fully in regard to the position that we want you to take in reference to the seamen's bill, effective November 4, 1915, that we inclose a copy for your guidance. We propose to carry out the provisions of this bill to the best of our ability, and we want you to study each section of the bill which we inclose. Our steamers will be recertificated as of November 4, and from present indications we will have to carry one more oiler and three additional coal passers on our larger type of boats, and possibly three on the smaller type, although we are in hopes that the crew will only be increased by two coal passers and one oiler on the smaller type. The above applies to our freight boats. The additional crew required on our passenger boats has not yet been decided upon by the inspectors. Your attention is called to section 8 of the seamen's act reading as follows:

"The seamen shall not be shipped to work alternately in the fireroom and on deck, nor shall those shipped for deck duty be allowed to work in the fireroom or vice versa;

The purpose of this part of section 8 was to stop the practice of having men employed on deck to work in the coal bunkers or fireroom, and to be called from this duty to work on deck. In certificating a steamer upon which it is necessary to have men, in addition to the firemen, for the purpose of passing coal or doing other necessary fireroom work, such necessary men will be designated on the certificate as coal passers, and sailors of a sufficient number will be designated for deck duty. This means, as you will see, that the duties of the men designated as coal passers must be confined entirely to the fire hold and engineer's department, and they will not be allowed to take up any deck service, except in cases of peril or extraordinary conditions in which the safety of your ship demands that you call upon your entire crew to save ship, crew, or cargo.

On the other hand, the duties of men designated as sailors on the certificate of inspection will be confined to deck work, and they will not be allowed to take part in any of the engine or fireroom departments.

Post yourself in regard to the payment of wages to your seamen. They are entitled to receive, on demand, one-half part of wages then earned at any of our ports of call. You can always arrange to get the money for them through our different port agents. Provided, however, such a demand shall not be made before the expiration of or oftener than once in five days.

From this you must know that I want you to do your very best to comply with the law so as to get through the balance of this season. During the winter, if we are running, we can then call our captains and engineers together and discuss the bill more intelligently, after we see how it works out for a month.

I want your attitude toward the inspectors to be that of trying to comply to the best of your ability. If you do this, we are assured that there will be no trouble in the enforcement of the law.

I want to call your attention, on account of the great number of boats now in operation, to the necessity on your part of the greatest care and caution in navigating your boat night and day, and absolutely complying with the rules of the road, and be more than careful in fog. There is more danger now of collisions than ever before. Bad weather is coming on and I want you to realize that above everything else we are interested in the safety and lives of our men. Second, the protection of our own property is only possible by eternal vigilance on your part and the part of your officers in navigating your ship. I appreciate the feeling in your mind of getting around just as quickly as you can on account of the high grain rates, etc., and we want you to do your best. But I want you to realize that we want you to err on the side of safety. Keep in close touch, before leaving port, with the weather bureau; find out what the forecast is going to be, then use your own good judgment. When conditions are favorable and everything is all right, clear sailing, if you find you can make port a little quicker by burning a little more coal, take this matter up with your engineer, and again use your own good judgment, if by so doing good results will be accomplished. We want to always give our westbound and eastbound freight good dispatch, but we won't want to take any chances in doing so; that is, never take a chance to make time; that is not what I consider careful, safe navigation, or proper care of your men and your boat. I want your record to be above reproach, and we want the world at large to know that the Anchor Line has safe, careful navigators who are impressed with the fact that they have the lives and safety of their crews always before them and are doing everything in their power to protect the interests entrusted to them.

Your attention is also especially called to that part of the law reading as follows:

"While such vessel is in a safe harbor no seaman shall be required to do any unnecessary work on Sundays or the following-named days: New Year's Day, Fourth of July, Labor Day, Thanksgiving Day, and Christmas Day; but this shall not prevent the dispatch of a vessel on regular schedule or when ready to proceed on her voyage. And at all times while such vessel is in a safe harbor, nine hours, inclusive of the anchor watch, shall constitute a day's work. Whenever the master of any vessel shall fail to comply with this section, the seamen shall be entitled to discharge from such vessel and to receive the wages earned." Yours, truly,

J. C. EVANS, Vice President and General Manager.

British Columbia shingle mills are experiencing a lively demand from the United States.

RESTRICTION OF EGG-PRODUCT TRADE IN CHINA.

[Consul General Edwin S. Cunningham, Hankow, Sept. 27.]

There has been an unusual demand in the Hankow district for egg products, resulting in unusually high prices. Egg-yolk powder soluble in cold water is the highest priced; its supply is extremely limited as the only desiccated egg factory with equipment for manufacturing this article is owned by a German firm whose facilities for export shipments are practically cut off.

Dry albumen, which is extensively exported, is manufactured by all egg-product factories. Egg albumen has advanced rapidly in price. One firm informs this office that at the end of May quotations were made for delivery in New York at 42 cents gold per pound; at the beginning of July it had risen to 44 cents per pound; at the end of August it had risen to 48 cents; while to-day the quotation is 56 cents per pound, without actual business, as there is no available stock ready for delivery.

There has been an unusual demand for egg products in the United States during the last few months, and the local market has been so short that the demand could not be filled. One American firm which usually purchased some 80,000 pounds per annum is practically unable to procure any part of this quantity at terms on which the business will prove profitable.

There may be a number of causes contributing to the high price of albumen throughout the world, but so far as the local market is concerned the shortage is largely accounted for by the fact that many plants here and at other places in China are owned by the Germans, who, finding it impossible to obtain shipping facilities in Japanese and British bottoms (which nationalities control the entire trans-oceanic shipping from the Chinese coast), have closed down, thus reducing the manufactured output so materially as to enhance its price.

PARCEL SERVICE FROM SHANGHAI TO MANCHURIA.

[Extract from Manchuria Daily News of Oct. 8, by Consul A. A. Williamson, Dairen, Japanese Leased Territory.]

On the through railway and steamer goods service of the South Manchuria Railway and its Dairen-Shanghai steamer route, parcels have hitherto been treated as ordinary goods to no small inconvenience of the consignors and consignees. The railway has now opened a parcel service with through traffic stations at Liaoyang, Mukden, Tiehling, Kaiyuan, Ssuningkai, Kungchuling, Changchun, Yingkou, Port Arthur, and Antung. The through parcel business will be transacted also at the Shanghai branch of the railway wharf office and Seitou (Tsingtau) branch.

The parcels for transportation by the new service must be less than 4 cubic feet or 150 kin in weight per package. Among special parcel goods may be included newspapers, magazine, etc., and treasures (valuables).

As in the case of ordinary through goods, the customs procedures at Dairen may be undertaken by the station master, Dairen, at the request of the owners on presentation of a written request authorizing him to act on their behalf in the matter.

USE OF CALIFORNIA WINES IN FRANCE DISCUSSED.

[Consul Clarence Carrigan, Nantes, France, Oct. 8.]

The quantity of wine produced in the western Provinces of France this year will be exceedingly small. It is reported that the vintage is only one-tenth of what was expected. In fact, since 1854 no season has been as poor as this one in the quantity of wine produced, although the quality is probably good. The failure is due principally to mildew, which attacked the vines at the blossoming time, as a result of excessive rains and fog. It is currently said that the vines have suffered so from mildew that the vintage for 1916 will probably be affected.

It is an interesting fact that vines of American origin, known as "Noah," were the only plants not damaged by mildew. Probably half the wine growers of this region are supplied with these vines. American plants should now be in large demand. This year the "Noah" vines have yielded 30 barriques (barrique=238 quarts) to the hectare (2½ acres). The wine is white, ordinary, and of strong quality. It is kept for one year before use or it is mixed with other wines. In ordinary seasons it sells for 15 to 18 francs (\$2.90 to \$3.47) per barrique. This year the price for the same quantity is 100 francs (\$19.30).

Remarkable Apple Crop—Cider Prices to be Low.

In contrast to the poor vintage is the remarkable apple crop of this section, which will hold the price of cider at a low figure, though the demand will be very large. Cider is used here in large quantities throughout the winter. The Departments of Morbihan, Cotes-du-Nord, and Loire-Inferieure have had record apple crops this year. Cider is sold as low as 10 francs per hectoliter (\$1.93 per 26 gallons) at the point of departure.

The Department of Vendee produces annually some 7,925,114 gallons of ordinary white wine. The red wines are insignificant.

Practically no wine is produced in the Departments of Finistere and Cotes-du-Nord. The cider industry is important.

Fifty thousand hectares of ground (123,552 acres) are planted in vineyards in the Department of Indre-et-Loire. There is an annual production of over 42,000,000 gallons of wine, of which some 1,320,000 gallons are of fine quality.

There are 30,000 hectares (74,131 acres) of ground planted in the Department of Loire-Inferieure, nine-tenths of which are given to white wines. The usual annual production is about 800,000 hectoliters (21,133,637 gallons).

In the Department of Morbihan a comparatively small area is planted to vineyards. There is a white wine of mediocre quality and the red wines are insignificant. The annual production is about 50,000 hectoliters (1,320,852 gallons).

In the Maine-et-Loire Department both red and white wines of good quality are produced, though the white wines are especially known. The mean annual production amounts to 1,500,000 hectoliters (39,625,570 gallons). Notable are the Saumur wines, which are well known in America, and also the "Coulée de Seran."

Practically No Wines to be Shipped out of District.

In ordinary years the Muscadets of this region are largely consumed in Brittany. The "Folle Blanche" commands a large market

in Paris. The wines of Anjou are exported to a certain extent to England, while the sparkling wines of Saumur are principally given to the American trade. It is expected that practically no wines will be shipped out of the district this year, as the yield is hardly enough to satisfy the local demand.

Large quantities of wine, red and white, are imported into this part of France from Algeria, even in ordinary years. This year the importation is enormous, and the selling prices are more than double what they were in 1906. Importations from Algeria have steadily increased during the past 30 years.

The possibility of introducing American wines in this market is of special interest. California wines are practically unknown here, as the local production is usually sufficient to satisfy the demand, and the prices of the American wines have been considered prohibitive. This year, however, in view of the present vintage, these wines might command a sale. Qualities similar to the French wines would be desired. It would be difficult to judge from this side whether prices could be made interesting to the trade of this district.

Prices Now Quoted in France for Wines.

Saumur wines sold in 1914 for 1,000 francs per metric ton (\$193 per 238 gallons). The present price is 30 per cent above this figure. Muscadet, the price of which formerly ranged from 270 to 280 francs (\$52.11 to \$54.04) sold in 1914 for 500 francs (\$96.50) per metric ton. The present price is 50 per cent higher than this last figure. The white wine known as the "Folle Blanche" sold in 1914 as low as 100 francs (\$19.30) per metric ton. The present price is 400 francs (\$77.20).

The Bourgueils, Chinon, and Azay-le-Rideau are red wines. The Bourgueils, a light, highly flavored wine, ordinarily sells at from 300 to 500 francs (\$57.90 to \$96.50) per metric ton (238 gallons). The Chinon is a stronger wine, which sells at a slightly lower figure, while the Azay-le-Rideau is a wine of small importance, with a flavor of raspberry. Among white wines are the Vouvray—a sweet wine, highly flavored, selling all the way from 300 to 1,000 francs (\$57.90 to \$193) per metric ton—and the Coteaux de St. Cyr and Montlouis wines of inferior quality. The wines mentioned are well known throughout France, especially at Paris, where the Vouvray and Bourgueils are very popular.

During the quarter ended September 30 the American consulate at Edinburgh, Scotland, was instrumental in obtaining business connections for American manufacturers and exporters with jobbers and agents in that city handling asbestos specialties, motor plows, cotton twine, adding and calculating machines, and metal novelties.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau or its branch offices.]

Kitchen ranges, No. 19172.—An American consular officer in China reports that a real estate company desires illustrated catalogues, prices, terms, etc., on American kitchen ranges with hot-water attachments.

Sewing machines, sugar machinery, etc., No. 19173.—A report from an American consular officer in Venezuela states that a man desires to be placed in communication with manufacturers of sewing machines, sugar machinery, portable typewriters to retail at \$50, and small marine engines, with a view to acting as sole agent. Correspondence may be in Spanish or English.

Worsted yarn, No. 19174.—A Norwegian manufacturer of cloth and quilts desires to correspond with American manufacturers of worsted yarn. References furnished. Correspondence may be in English.

Wearing apparel and textiles, No. 19175.—A firm in the Netherlands informs an American consular officer that it wishes to represent manufacturers of hosiery, underwear, corsets, blouses, woolen cloth, and flannels. References furnished. Correspondence may be in English.

Cut glass, No. 19176.—A report from an American consular officer in the Far East states that there is a demand for catalogues, prices, etc., for cut glass of a medium-priced quality, such as bonbon and similar dishes. Quotations c. i. f. Hongkong only.

Machinery, No. 19177.—A commercial attaché of the Department of Commerce reports that a representative of extensive plantations in the Dutch East Indies is in the market for machinery for roasting coffee, drying tea, and preparing crude rubber for the market.

Telephone wire, No. 19178.—A telephone company in Norway wishes to buy 3,000 kgs. (6,613.86 pounds) of silicium bronze wire; the diameter of the wire should be 1.3 mm. (0.051181 inch), with 40 per cent minimum conductivity and 70 kgs. (154.3234 pounds) minimum breaking strain per square mm. (0.03937 inch), the wire being according to British post office specifications. Correspondence in English. Definite terms are wanted.

Machinery, No. 19179.—Supplementing Confidential Circular No. 752 an American consular officer in South Africa reports that he has not had satisfactory responses to his request for catalogues for machinery for making straw envelopes for bottles. Interested American firms should give prompt attention to this opportunity.

Automobile magazines and gasoline, No. 19180.—A firm in Norway has informed an American consular officer that it desires to receive sample copies of magazines publishing articles on electric automobiles and gasoline with a view to subscribing for such magazines.

Railway equipment, etc., No. 19181.—A commercial attaché of the Department of Commerce reports that a banker in the Netherlands, having special facilities for trading with the Colonies, desires to represent American manufacturers of railway equipment, agricultural implements, builders' tools, tools for making shoes, office furniture, and file cases.

Graphite and leaded tin, No. 19182.—A report from an American consular officer in Norway states that a firm in that country desires quotations on several thousand tons of graphite and several hundred tons of American leaded tin.

Sponges, No. 19183.—It is stated that there is a possible market for sponges in China, and interested exporters may obtain names of druggists and chemists from the Bureau or its branch offices.

Hosiery, gloves, etc., No. 19184.—A report from an American consular officer states that a firm in the Netherlands wishes to represent manufacturers of hosiery, gloves, underwear, cotton dress goods, etc., on a commission basis.

AMENDMENT TO EXEMPTION OF WHEAT CARGOES.

[Cablegram from American consulate general, London.]

In a further statement regarding the freedom from requisition of vessels with wheat, action on which was mentioned in a previous cable, the British Government Board of Trade gives an amendment to the exemption, which now applies only to those vessels shown to the satisfaction of the Admiralty to have been "fixed" before noon, November fifth.

[The word "fixed" in this cablegram refers to the contract or charter of such vessels as would be considered exempt from requisition by the British Government. This amendment, when incorporated with the statement from London, published in *COMMERCE REPORTS* November 9, provides that vessels, for which the contract or charter was signed before noon of November 5, and which load by December 15, with wheat from an American Atlantic port, shall be exempt from requisition on arrival in a United Kingdom port, and free to start another voyage, not necessarily North Atlantic, after the cargo is discharged.]

TO STUDY AMERICAN AGRICULTURE AND COMMERCE.

The Government of Colombia has appointed two special official agents to study agricultural and commercial institutions in the United States. The selection of Senores Don Antonio Borda C. and Don Juan A. Montoya B. for this official visit has been announced by the Minister of Colombia in this country, who states that his Government desires to strengthen all possible ties with the United States.

ADDITIONS TO NETHERLANDS EMBARGO LIST.

[Telegram from American consul general, Rotterdam, Nov. 5, 1915.]

The following products have been added to the Netherlands embargo list: Tinplate waste; vegetables, dried and preserved; iron and steel rods; tool steel; cottonseed, coconut, sesame, soya, and peanut oils; cocoa butter and all edible fats, except margarine for use as butter substitute; coins of nickel and copper; beehives; flax; egg albumen and yolks, liquid or powdered, and products thereof; beech-nuts; linseed oil.

AIDS TO NAVIGATION ON THE GREAT LAKES.

Notices regarding the winter discontinuance of aids to navigation on the Great Lakes have been issued by the Bureau of Lighthouses. These directions governing such aids in the eleventh district sent out from the inspector's office at Detroit, Mich., show that, in several instances, the closing of certain light stations will be followed by the use of lights to be shown for periods of 14 to 17 days.

The Lighthouse Service has already received from Mr. William Livingstone, president of the Lake Carriers' Association, a letter requesting the continuance of aids to navigation in the district to as late a date as possible consistent with safety to life and property. This letter, in stating the special conditions existing this year, presented these facts and accompanying requests:

Owing to the unprecedented demand which has suddenly sprung up within the last 30 or 40 days for grain tonnage, and the rapid increase in rates—at present the highest that have been paid for over 10 years—all the available tonnage on the Lakes has been put in commission. Tonnage has been put in commission the last 60 days that has not been in commission for two years or over owing to the depressed condition of affairs on the Great Lakes. Freight rates are now the highest on record, with not tonnage enough to go around.

On account of this sudden revival and the high rates prevailing the result will unquestionably be that this fall owners will be desirous of running as late in the season as they possibly can. This will naturally cause urgent requests for maintaining aids to navigation that do not jeopardize life in any way as late as weather conditions will possibly permit.

Isolated lighthouses, where conditions might suddenly arise that there might be danger in getting the keepers off, of course, could not be considered, as their safety would have to be and should be the first consideration. But, outside of such cases, requests and demands for continuance of aids are sure to be very urgent.

I therefore thought I would suggest the advisability of taking the matter up with the Bureau of Lighthouses and see if some arrangement can not be made to continue aids to navigation as late as is consistently possible, so that whatever arrangements might be necessary could be made in advance.

It is of the utmost importance that as much of the enormous crops of the Northwest should be moved by the close of navigation as is possible, as it will be impossible for the rail lines to meet all the demands made upon them for some time to come. And the importance of this to our farmers throughout the Northwest and the business interests of the whole country at large, which are coincident, would be difficult to estimate.

In forwarding the data for notices to mariners from the Detroit office, the inspector calls attention to the fact that somewhat similar notices have been issued by the Canadian Government. The various points at which the winter changes are made by the United States Lighthouse Service are as follows:

Michigan, Indiana, Illinois, and Wisconsin—Straits of Mackinac, Lake Michigan, and Green Bay.—The lights and fog signals at the following-named stations will be discontinued for the winter, at sunrise, December 10-20, 1915: St. Helena Light Station, December 10; White Shoal Light Station, December 10; Ile Aux Galets Light Station, December 10; Beaver Island Light Station, December 20; South Fox Island Light Station, December 10; Pottawatomie Light Station, December 20; St. Martin Island Light Station, December 10; Squaw Island Light Station, December 10.

All coast lights and fog signals on east side of Lake Michigan north of North Manitou Island, and all coast lights and fog signals on west side of Lake Michigan and Green Bay north of Cana Island, will be discontinued for the winter at the close of navigation, except Pilot Island Light Station, Plum Island Range Light Station, Poverty Island Light Station, and Seul Cholez Pointe Light Station.

All of the Sturgeon Bay lights, Sherwood Point Light Station, Green Island Light Station, Chambers Island Light Station, and Menominee Pierhead Light Station will be closed on the last trip of the car ferry.

Green Bay Harbor Entrance, Sturgeon Bay, and Oconto Harbor.—The iron buoys, including gas buoys, will be removed for the winter between November 20 and 25, 1915, and their stations marked by wooden spars similarly colored and numbered.

Lake Michigan, northwest end, and Green Bay.—The iron buoys, except gas buoys, will be removed between November 20 and 25, 1915, and their stations marked by wooden spars similarly colored and numbered. The gas buoys will be removed between November 25 and December 5, 1915, and their stations marked by wooden spars similarly colored and numbered.

Lake Michigan, northeast end, and Straits of Mackinac.—The iron buoys, except gas buoys, will be removed between November 20 and 25, 1915, and their stations marked by wooden spars similarly colored and numbered. The gas buoys will be removed between November 25 and December 5, 1915, and their stations marked by wooden spars similarly colored and numbered.

Lake Michigan, south end.—The iron buoys, including gas buoys, will be removed about December 12, 1915, and their stations marked by wooden spars similarly colored and numbered.

Michigan, Wisconsin, and Minnesota.—Lake Huron and Lake Superior and connecting waters.—Aids to navigation to be discontinued for the winter season, 1915:

Detroit River.—All gas buoys in East and West Bar Point Channels, excepting East Channel Gas Buoys, 2, and Bar Point West Channel Gas Buoy, 1, and Livingstone Channel Gas Buoys, 8A, 13A, 12A, and 17A to be withdrawn about December 5.

Detroit River, Lake St. Clair, and St. Clair River.—All gas buoys in these waters, with the exception of those noted above, to be withdrawn about December 10.

Lake Huron.—Poe Reef and Martins Reef Light Vessels will be withdrawn from their stations and Spectacle Reef Light Station will be discontinued about December 5. Lake Huron and Bar Point Light Vessels will be withdrawn about December 1. All gas buoys in Lake Huron, Saginaw Bay, and Straits of Mackinac will be withdrawn between November 12 and 25.

St. Marys River.—All gas buoys will be withdrawn after November 28. The more important buoys will be retained until the latest practicable date.

Lake Superior.—All gas buoys will be withdrawn about December 1. Granite Island, Stannard Rock, and Manitou Light Stations to be closed about December 3. Passage Island and Rock of Ages Light Stations to be closed about December 12. Outer Island Light Station to be closed about December 14. All other Apostle Island Light Stations will be closed about between December 5 and 10. The dates given above will be adhered to as closely as is consistent with existing conditions at the time. The lights at leading shore stations will be in commission until all through navigation has ceased.

Michigan—Lake Michigan, north side—Squaw Island Light Station—Temporary light.—Upon closing the station for winter, December 10, 1915, a flashing red light of 70 candlepower will be shown from pedestal on deck of lantern for a period of about 14 days. Light will show a flash every 2.5 seconds, flash 1.1 seconds duration. Dark sector of 93°, covering island and shoals, from 296° to 29°.

Michigan—Lake Michigan—Straits of Mackinac—Aux Galets Light Station—Temporary light.—Upon closing the station for winter, December 10, 1915, a fixed white light of 220 candlepower will be shown from lens in tower for a period of about 15 days.

Michigan—Lake Michigan—Straits of Mackinac—White Shoal Light Station—Temporary light.—Upon closing the station for the winter, December 10, 1915, a flashing white light of about 160 candlepower will be shown from top of lantern dome for a period of about 17 days. Light will show a flash every 3 seconds, flash 0.3 second duration.

Limited Purchasing in Paraguay.

Consul S. H. Wiley reports from Asuncion under date of October 4 that the commercial inactivity and scarcity of gold currency at present in Paraguay limits trade to the bare necessities.

IMPORTS AND EXPORTS OF COPPER.

The imports and exports of copper at the customs districts of New York, Massachusetts, Philadelphia, Maryland, Virginia, Galveston, New Orleans, San Francisco, Washington, and Michigan, during the week ended October 30, 1915, follow:

IMPORTS.

Countries.	Ore, matte, and regulus (copper contents).		Pigs, ingots, bars, plates, and old, etc.

NEW MORATORIUM DECREE IN RUSSIA.

[Consul North Winship, Petrograd, Sept. 29.]

By an Imperial decree of September 20, 1915, all promissory notes executed in Russia before July 23, 1915, on which payment is due within the following Governments and districts, can not be protested or sued upon for six months from the date on which the note falls due: Governments of Vilna, Grodno, Kovno, Courland, and Livonia—all in the consular district of Riga; the Government of Minsk and the districts of Vladimir-Volinsk, Dubno, Kovel, Kremenetz, Lutsk, Ostroga, Rovno, and Staro-Konstantinof of the Volinsk Government; the districts of Kamenetz-Podolsk and Proskurov of the Podolsk Government—all in the consular district of Warsaw.

The same decree empowers the Minister of Finance, at his discretion, to extend the effect of the decree to other Governments and districts in the Empire, and to increase the length of time for which the decree is active.

Consul E. A. Wakefield reports that American transformers have been installed in the new addition to the municipal electric-light plant at Port Elizabeth, South Africa.

TRADE DURING FIRST WEEK IN NOVEMBER.

The imports, duties collected, and exports for the week ending November 6, 1915, at the 13 principal customs districts of the United States, handling 91 per cent of total imports and exports, based on transactions in the month of August, 1915, are as follow:

Districts.	Imports.	Duties collected.	Exports.
Georgia (Savannah).....	\$11,969	87	\$506,490
Massachusetts (Boston).....	2,134,033	194,439	1,361,324
New York.....	21,117,583	3,432,367	42,249,223
Philadelphia.....	689,223	103,845	2,524,161
Maryland (Baltimore).....	264,493	10,936	1,501,800
Virginia (Norfolk).....	90,061	32,483	698,023
New Orleans.....	811,078	26,269	3,107,490
Galveston.....	25,010	806	4,223,849
San Francisco.....	2,246,753	120,870	1,431,963
Washington (Seattle).....	542,153	19,323	1,781,166
Buffalo.....	1,104,717	41,578	1,408,916
Chicago.....	494,311	112,663	5,242
Michigan (Detroit).....	692,529	39,109	3,367,153
Total.....	30,273,913	4,240,694	64,286,785

The amount of cotton exported during the week ending November 6, 1915, at the 12 principal customs districts of the United States follows:

Districts.	Bales.	Districts.	Bales.
Georgia.....	3,327	Virginia.....	
Massachusetts.....	243	Galveston.....	40,208
Maryland.....	1,177	New Orleans.....	21,279
New York.....	19,085	San Francisco.....	847
North Carolina.....	6,005	Washington.....	3,866
Philadelphia.....	500		
South Carolina.....	7,450	Total.....	112,932

VESSELS ADMITTED TO AMERICAN REGISTRY.

During the week ended November 6, 1915, there was admitted to American registry under the act of August 18, 1914, by the Bureau of Navigation, one vessel, the steamer *Edna*, 1,783 gross tons, formerly the Mexican steamer *Mazatlan*, now owned by Sudden & Christenson (Inc.), of San Francisco, Cal. The total admitted for the period from July 1 to November 6, 1915, was 20 vessels of 50,865 gross tons.

Under the Repaired-Wreck Act of February 24, 1915, the following vessels have been admitted to American registry: Steamer *Moldegaard*, of 2,852 gross tons, owned by the Bull-Insular Steamship Co., of Wilmington, Del., formerly the British steamer *Moldegaard*; steamer *Elizabeth Weems*, of 1,186 gross tons, owned by the Baltimore & Carolina Steamship Co., Baltimore, Md., formerly the Norwegian steamer *Anita*; and the schooner-barge *Coastwise*, 1,432 gross tons, owned by George R. Dilkes, of Philadelphia, Pa., formerly the Italian bark *Rosalia D'Ali*.

Aluminum foil, formerly imported, is now produced in New Jersey. It partly replaces tin foil for wrapping chocolate, tobacco, and tea.

CONSTRUCTION WORK ABROAD.**CHILE.**

[Consul General L. J. Keena, Valparaiso, Oct. 5.]

Telephone Company to Place Lines Underground.

The Chile Telephone Co. is to begin work within a few months on changing its system of wires in Valparaiso from an overhead to an underground system. At present all of the telephone wires in Valparaiso are overhead wires. In laying the wires underground care will be taken to follow the lines of streets not paved with asphalt. The general manager for Chile of the Chile Telephone Co. is Mr. William Johnston, Calle San Martin 50, Santiago. The local manager is Señor Ernesto Varas, Avenida del Brazil 54, Valparaiso. The head offices of the company are at 42 Old Broad Street, London, E. C.

Railway Budget of 1915.

The administrative council of the Chilean State Railways have advised the Minister of Finance that the difference between the total actual and necessary expenses of the roads, and the allowance made them under the budget for 1915, will be only about \$690,000 United States currency. This amount must be made to cover all extraordinary and unforeseen expenses incurred by the State Railways during the year.

The income of the State Railways for the current year is estimated at about \$14,600,000 United States currency.

CHINA.

[Consul John F. Jewell, Chefoo, Sept. 29.]

The Proposed Chefoo-Weihsien Railway.

In spite of all that has been said and written in regard to the proposed Chefoo-Weihsien Railway, it now may be truthfully stated that there is no prospect that its construction will be undertaken in the immediate future. Financial and political conditions in China at present indicate that the much discussed railway has been indefinitely deferred.

[Consul John F. Jewell, Sept. 30.]

Chefoo Breakwater and Harbor Improvement.

After many years of discussion and many unnecessary delays work is now in progress on the Chefoo breakwater. The Chefoo Harbor Improvement Commission awarded the contract to the only serious tenderer, the Netherlands Harbor Works Co., of Amsterdam and Shanghai.

The work is to be completed within four years, or by July, 1919, at a contract price of 2,677,000 haikwan taels (gold, \$1,638,324), and will make the harbor of Chefoo rank among the 10 largest harbors of its kind in the world.

The eastern breakwater will shelter ships from the prevailing northeast waves, which have heretofore made it impossible to work cargo on an average of 33 days every year. There is to be a western mole in connection with the shore, with a quay as wall, where, as opportunity requires, piers may be constructed to accommodate as many as 16 ships.

The sheltered section is to be dredged to a depth of 21½ to 26½ feet at low water, but at present that is not to be undertaken. Not until the breakwater itself is completed will the harbor proper be touched.

The foundation of the breakwater is to be of rubble which will be dumped into the channel 30 feet deep now being dredged, while the upper part is to be of blocks of masonry in cement mortar, each block of about 32 tons weight.

By presidential decree, all the materials to be used in the construction of this work have been exempted from taxation. It is believed that these works will do much toward increasing the import and export trade of the port, but it remains to be seen what effect the opening of the new port of Lungkow and the indefinite postponement of the construction of the Chefoo-Weihsien Railway will have on the future of Chefoo.

One copy of the contract for this work is forwarded [and may be seen on application to the Bureau of Foreign and Domestic Commerce. Refer to file No. 68192].

GREECE.

[Consul General Alexander W. Weddell, Athens, Sept. 30.]

Government Extends Time for Bids on Water and Sewage Works.

In the international competition that was announced by the Greek Government for a water supply and sewage system for the cities of Athens and Piræus, although bids were to have been opened under date of August 31/13 September, 1915, announcement is now made by the Greek Ministries of the Interior, of Finance, and Communications that bids for this work will be received up to December 17/30, 1915. These will be opened three days later—December 20, 1915/2 January, 1916. [A reference to this construction work was published in Daily Consular and Trade Reports of Dec. 26, 1914.]

A copy of the Official Gazette of September 11/24, 1915, setting forth the conditions under which bids will be received, is forwarded [and will be loaned on application to the Bureau of Foreign and Domestic Commerce or its branch offices. Refer to file No. 67933.]. It will be seen that the conditions are essentially those set forth in the original call.

The enormous increase in the price of materials which has taken place in the past year seems to have been ignored by the Greek Government in the preparation of this invitation for offers, and it is seriously questioned if, in its present shape, the matter is one that would be attractive to American firms.

NETHERLANDS.

[Consul Frank W. Mahin, Amsterdam, Oct. 13.]

Bank Enlargement—Railway Station Improvements.

Plans for a large addition to the Bank of the Netherlands in this city will soon be under execution. They involve the razing of several houses adjacent to the bank.

Important extensions and improvements of the Central Railroad Station and its approaches in Amsterdam will soon be commenced. Additions to the station will be made, new and larger viaducts over

streets and canals will be constructed, and the present double track will be widened to four tracks from the station to the city limits.

New First-Class Hotel.

Several years ago a project was initiated for a new first-class hotel in Amsterdam. It was nearing fruition when the war broke out and checked the movement. However, it has been decided finally to proceed with the work, and ground has now been broken for the foundations of the hotel (which will cover about 2,500 square yards) on the open square opposite the Royal Palace. The ground is taken on a long lease at a rental of 44,000 florins (\$17,688) a year. The capital stock of the hotel company is 1,500,000 florins (\$603,000), which is twice that of the hotel with the largest capital now operating in Amsterdam.

As planned at present, the building will be five stories in height—the general maximum in Amsterdam. It will have 119 bedrooms, a ball room, a large restaurant on the first floor overlooking the square, and the usual reception, reading, and private dining rooms. On the side facing Warmoes Street there will be several stores on the ground floor.

PHILIPPINES.

[Manila Daily Bulletin, Sept. 30.]

Contract Awarded for Erecting New Sugar Mill.

The contract for the sugar central to be erected from Government funds at Isabela, Occidental Negros, was yesterday awarded by the Central Sugar Board to Fawcett, Preston & Co. (Ltd.), of Liverpool, England, represented by Warner, Barnes & Co. The amount involved is approximately \$1,200,000. The mill must be ready for operation on December 15, 1916. To see that the company carries out the terms of its contract at the shops in England, Dr. Herstein, collector of customs, will probably leave within a few weeks for Liverpool.

The action of the Central Sugar Board in awarding the contract to a foreign concern disposes of any opportunity to consider American bids for this important work. On August 13 the site upon which the central should be located was selected, and proposals for the erection of this large and important plant were called for, the bidders being given only until September 15 to get sugar-machinery experts from the United States, go over the specifications, the location, and the various other conditions of the proposals, and to submit their bids. As it would take more than the allotted time to bring competent men here to do this, there were no bids for American machinery, and, although the matter was protested by the American representatives before the bids were opened, the board has undoubtedly concluded it could not consider their protests.

New Pier for Zamboanga.

The acting director of public works announced yesterday that the construction work on the new concrete pier at the port of Zamboanga is to be begun within the next few days, under the supervision of H. F. Cameron, the department engineer for Mindanao and Sulu. The project involves an expenditure of about \$22,500 and will be of great benefit to the commercial development of the southern port.

SIAM.

[Vice Consul Carl C. Hansen, Bangkok, Sept. 8.]

Hospital Ward.

The Siam Red Cross Society has accepted the tender of a local firm for the construction of another ward in the compound of the Chulalongkorn Memorial Hospital at Bangkok. The building will be constructed of brick and ferroconcrete in two stories, at a cost of about \$39,000 gold, including electric-light installation, and is to be completed in 10 months from date. The contract was awarded to the Bangkok Dock Co. (Ltd.). Address: Bangkok, Siam. Correspondence in English.

SOUTH AFRICA.

[Consul E. A. Wakefield, Port Elizabeth, Sept. 15.]

Installation of Sewer Construction.

The city council of Port Elizabeth has decided to undertake the installation of a complete sewerage system. The plan provides for 56 miles of main drainage pipe and 50 miles of branch connections. The main drain pipes and sewerage appliances are estimated to cost \$1,572,000. Property owners benefiting will largely pay for the cost of sewer connections, but the municipality will spend \$350,000 in laying pipes up to the property frontage.

[Further details of the proposed sewer construction, and of the prospects for American firms to compete for the equipment, may be had from the Bureau of Foreign and Domestic Commerce or its branches. Refer to file 68082.]

SWANSEA COAL TRADE FOR SEPTEMBER.

[Consul William L. Jenkins, detailed as vice consul, Swansea, Wales, Oct. 13.]

The exports of coal and coke from Swansea for September, 1915, amounted to 356,143 long tons (long ton equals 2,240 pounds), as compared with 211,798 tons and 388,229 tons for the corresponding months in 1914 and 1913, respectively. Amounts of patent fuel exported for the same periods were 74,859, 51,448, and 86,112 tons, respectively. The total exports of coal and coke for the first nine months of the present year were 2,888,957 tons, as compared with 2,808,166 tons in 1914 and 3,376,513 tons in 1913. The total amounts for patent fuel were 595,783, 636,683, and 732,090 tons.

The principal concern among Welsh colliery owners is the scarcity of tonnage. Of late, colliery stoppages have been numerous, especially since the withdrawal of the Greek steamers.

NEW PACIFIC SERVICE TO START NEXT MONTH.

[Extract from Japan Chronicle, Oct. 1, forwarded by Consul General George H. Seidmore, Yokohama.]

The Java-China-Japan Line will establish a regular service once a month between Batavia, Samarang, Soerabaya, Macassar, Manila, Hongkong, Kobe, Yokohama, and San Francisco. According to the Asahi (Osaka), the necessary arrangements for connection with the Southern Pacific Railway have been made, and the first steamer on the new service will leave Batavia December 15.

[An announcement that this new line would serve Batavia, Hongkong, and San Francisco was made in COMMERCE REPORTS for Nov. 5, 1915.]

PUBLIC ROAD IMPROVEMENT IN CANADA.

[Consul G. R. Taggart, Cornwall, Ontario, Oct. 14.]

Much interest is being shown hereabouts, especially by farmers and automobilists, in the forthcoming modern stone highway, to cost \$600,000, from Ottawa, Canada, south 60 miles to the international St. Lawrence River boundary.

This road will, it is said, be built as a memorial to the late Hon. J. P. Whitney, Premier of Ontario. Mr. Whitney was from 1882 to 1890 (when this consulate was a commercial agency with headquarters at Morrisburg, Ontario) American vice commercial agent.¹

As in the United States, the question of Federal aid in the construction of "metalled" (stone, gravel, slag, etc.) roads often arises, but so far the Government at Ottawa has no direct connection with highway improvement. Analogous, however, to State aid in road improvement, the Ontario provincial government at Toronto is now authorized by recent legislation, not only to advise and direct the construction and maintenance of permanent highways, but also to contribute toward the cost.

What the Province of Ontario is Doing.

A Department of Highways has been created at Toronto (effective Jan. 1, 1916), with a deputy minister in charge under the Minister of Public Works and Highways, providing for the appointment of an office force, engineers, etc. The Government program aims at benefiting three classes of roads, namely, township roads, county or market roads, and long stretches of main highways.

For township roads the provincial aid consists, not in helping to pay for the construction, but in encouragement and advice toward efficient township organization. The main part of such township encouragement is the payment by the Province of 25 per cent of the salary for 3 years of a township road overseer up to \$600 per year.

County or market roads consist of a system of roads meant to accommodate the greater part of the market travel in the county. The provincial government grants toward a county road system are 40 per cent of the cost of construction (said grant not to exceed \$4,000 a mile) and 20 per cent of the cost of maintenance. The balance of the cost of construction comes from the proceeds of bonds or of taxation. Roads must be built in accordance with the regulations of the Ontario Department of Public Highways. The construction of such a system of county roads may be authorized by two-thirds majority of a county council (called in the United States, sometimes, county commissioners, or board of chosen freeholders), representing at least one-half of the equalized assessment of the county; or, failing to receive a two-thirds majority of the county council, said county road construction may be carried by a simple majority of the county council, and confirmed by a majority vote of the taxpayers.

Main Highways.

A still longer system of improved highways would consist of roads running through more than one county. Such a system may be

¹ The Department of State, at Washington, in the reorganization of the Consular Service in 1900 abolished the positions of commercial agents.

properly called main highways. Toward the construction and maintenance of main highways the same assistance (40 per cent and 20 per cent) may be (when the legislation becomes effective on January 1, 1916) granted by the provincial government. The balance of the construction cost and the maintenance cost are assessed on the various municipalities served by the highway. A start may be made on main highway construction by a petition of three-fourths of the municipalities interested. When, in the opinion of the Ontario lieutenant governor in council, it is in the public interest to build such a main highway a board of trustees of five members are appointed. The board may require a report on the proposed work, with plans, specifications, and estimates, and said board may proceed with the work, making such revision of the estimates as may be necessary after hearing representations from all parties interested.

County or main highways thus aided by the Province are popularly called "Government roads." A main highway would naturally include along its route any improved county roads, or might be made up, of course, of a series of such county roads.

Legislative Authority—Action of the Counties.

The legislative authority for the above-stated provisions is as follows: Act for the improvement of public highways, R. S. O., 1914, chap. 40; amendment to this act entitled "An act to amend the highway improvement act," 5 Geo. V, chap. 16; the Ontario highways act, 5 Geo. V, chap. 17; the statute law amendment act, 5 Geo. V, 1915, sec. 29.

All this legislation is now in force except the act relating to main highways (the Ontario highways act, 1915, 5 Geo. V, chap. 17), and this exception will, it is officially announced, be proclaimed by the Ontario lieutenant governor in council on January 1, 1916.

Although 20 out of the 38 counties of Ontario have, with provincial help, developed efficient systems of county roads, these chances of provincial aid in road betterment have not as yet (except perhaps through the acceptance of encouragement in the townships) been taken advantage of in this consular district, nor, indeed, in the three counties (Dundas, Stormont, and Glengarry), of which Cornwall is the county seat. Consequently, the roads in this district are far from first class.

In Dundas County, however, Morrisburg, the western limit of this district, is bidding for the opportunity of being the southern terminus of the above-mentioned Whitney Memorial Road from Ottawa to the St. Lawrence River.

A New International Highway.

Beginning with preliminary surveys, the Ottawa-St. Lawrence Government road will doubtless be started in the spring of 1916 unless the unsettling of all conditions by the war prevents. Like the Meridian highway from Winnipeg, Manitoba, to the United States, this eastern road is intended to accommodate not only the farm traffic of the adjacent country, but also automobile travel entering Ottawa from within Canada and from the United States. Once the St. Lawrence international boundary bordering on New York State is tied to Ottawa by a modern stone road, there will be (in view of the links of good roads throughout the length of New York State) good

road connection between New York City, the metropolis of the United States, and Ottawa, the capital of Canada.

Authority for the construction of this Ottawa-St. Lawrence road would come from the above-mentioned Ontario highways act (5 Geo. V, ch. 17), when proclaimed on January 1 next. The construction and maintenance will be in charge of a commission or board of trustees to be appointed by the Ontario lieutenant governor in council. The road allowance will not be less than 66 feet wide. The roadway between ditches would be approximately 28 feet wide, with a central metalcd (stone, slag, etc.) driveway of from 10 to 16 feet in width. There are as yet no specifications nor is the type of road decided upon. In general features, however, the highway will correspond with the standard set by first-class New York State roads.

Cost of Construction—Alternative Routes.

The anticipated cost of construction of this Ottawa-St. Lawrence good road is \$10,000 a mile, or about \$600,000. Both the construction and the upkeep cost will be assessed on Ottawa and on the municipalities through which the road passes. The Province would contribute toward the cost about \$4,000 a mile, or \$240,000. Since Ottawa would benefit from the road out of proportion to the other municipalities, a larger sum than is required by the statute is proposed for Ottawa's quota, namely, \$180,000. The balance, or another \$180,000, would be assessed on the townships through which the road passes. To meet the immediate expenditure for the construction or maintenance of the road, the commission or board of trustees may issue bonds or debentures, which obligations may be guaranteed by the Province of Ontario.

Two alternative roads are proposed for this Government main road, both through strictly agricultural communities—one, Ottawa to Prescott, passing along the Rideau River and through the counties of Carleton and Grenville and the village of Kemptville; the other, Ottawa to Morrisburg, through Carleton and Dundas Counties and the village of Winchester. The decision of the route rests with the provincial government, with the city of Ottawa, and with the municipalities interested. The votes of the municipalities between Ottawa and the St. Lawrence, being each in favor of their own respective routes, would naturally cancel each other, and the choice would be left to Ottawa and to the provincial government represented by the deputy minister of highways at Toronto.

Competition for the Road.

The adherents of Morrisburg and Prescott are now active, through inspection tourists, banquets, council debates, etc., in advancing the merits of their respective towns for a terminus.

The Morrisburg parties claim that there is a better farming community between Ottawa and Morrisburg than between Ottawa and Prescott, and that the distance from Ottawa to Morrisburg (42 miles) is 16 miles shorter than from Ottawa to Prescott, which shorter distance at \$10,000 a mile represents a saving of \$160,000. They also call attention to the fact that Morrisburg has no railroad connection with Ottawa, whereas its neighboring towns (Prescott, Brockville, and Cornwall) have such connection; and that Morrisburg was the home of the late Premier Whitney, who led the en-

actment of the recent provincial good-roads legislation, and for whom the road is to be named.

The Prescott claimants, while not admitting all the contentions of the Morrisburgers, are emphasizing the superior ferry facilities from Prescott across the St. Lawrence. A regular and reliable ferry service, practically the year around, for both passengers and automobiles is available from Prescott to Ogdensburg, N. Y.—a thriving city. The St. Lawrence River between Prescott and Ogdensburg is unobstructed by islands, and at and near Ogdensburg are some of the good roads for which New York State is noted, all of which appeals to automobile tourists.

The New York town across from Morrisburg, Ontario, is Waddington, much smaller than Ogdensburg; and, while Waddington is also connected with good New York roads, the river there is obstructed by islands, and the ferry service consequently not very good.

This superiority in ferry service from Prescott and the influence of prominent men in Prescott, Ogdensburg, and Ottawa will, it is believed, bring about a decision in favor of the Prescott route.

Perhaps a compromise can be reached whereby the road will take in both places. It is thought possible to combine the advantages of the two routes by having the highway run from Ottawa to Morrisburg and thence from Morrisburg to Prescott, thus including a stretch of 20 miles along the St. Lawrence. If the calculation of the Morrisburgers as to distance is correct, such a looping route would be only 4 miles longer than from Ottawa direct to Prescott.

The people of Cornwall and vicinity are, of course, interested in having the Whitney Memorial Road take in Morrisburg, for then there would be a fine road available to Ottawa and the United States from Cornwall, 20 miles nearer than at Prescott. Moreover, if Morrisburg were the terminus of a first-class road, then the improvement of the road from Cornwall to Morrisburg (about 25 miles), either as a main highway or as a county road system, would doubtless be agitated.

Forerunner of Good Roads—Advice to American Manufacturers.

A first-class stone road between Hamilton and Toronto is, through special legislation, now nearing completion. If, by virtue of the broad legislation set forth above, Ontario embarks upon the expected extensive program of highway construction, not many years will elapse before the several stretches of good roads along Lake Ontario and the St. Lawrence River will form a continuous boulevard between Toronto and Montreal.

Parties in the United States interested in the sale of road-building implements for the construction of the Ottawa-St. Lawrence road should communicate with the Department of Public Roads and Highways, Toronto, Ontario, where can doubtless be obtained information as to probable needs and purchasers. Very likely the board of trustees in charge of the road construction will also have a voice in any purchases; but, as above stated, this board will not be appointed until after January 1, 1916, when the legislation authorizing the Whitney Memorial Road is to be proclaimed.

M. T. Dawe, director of agriculture in British East Africa, has been appointed agricultural adviser to the Government of Colombia.

PROPOSALS FOR GOVERNMENT SUPPLIES AND CONSTRUCTION.

[Correspondence should be direct with the offices named, and specifications can usually be obtained at the points where the goods are to be delivered or the work is to be performed. In cases where the time limit is too short to permit firms to submit tenders, they should ask to be placed on the mailing lists of such offices to receive notices calling for future supplies or work of a similar nature.]

Construction work, No. 2772.—Sealed proposals will be received at the Supervising Architect's office, Treasury Department, Washington, D. C., until December 20, 1915, for the construction complete (including mechanical equipment and approaches) of the United States post office at Humboldt, Tenn. Drawings and specifications may be obtained from the custodian of site at Humboldt or at the Washington office.

Bacon, No. 2773.—Sealed proposals will be received at the General Depot of the Quartermaster Corps, 115-123 East Ontario Street, Chicago, Ill., Quartermaster's Depot, United States Army, Kansas City, Mo., or Quartermaster's Depot, Omaha, Nebr., until November 17, 1915, for furnishing Serial Nos. 8 and 10 for 175,000 pounds of bacon. Proposals for delivery of Serial No. 8, bacon packed in veneer crates, of about 100 pounds net each, are invited and will be considered in making awards. Specifications for veneer crates furnished on application to the offices indicated.

Navy Department supplies, No. 2774.—Sealed proposals will be received at the Bureau of Supplies and Accounts, Navy Department, Washington, D. C., until November 23, 1915, for furnishing the following materials. Firms interested therein should make application to the Bureau of Supplies and Accounts, giving the schedule numbers desired: Schedule 8985, air hose, rubber fire hose, unlined linen fire hose, and suction hose; schedule 8986, linen napkins; and schedule 8988, library books. Bids will be received until November 30, 1915, for the following: Schedule 8975, 8-ton tandem road roller; schedule 8970, milling machines; schedule 8980, leather belting, cotton web belts, horizontal steering engines, flush brass handles, brass screws, machinists' vises, and 1½-inch rough white ash; schedule 8981, cast-iron pipe fittings, cast iron and wrought iron, and malleable iron unions; schedule 8982, punches, shears, wood trimmers, etc., Japan drier, and copper expansion joints; schedule 8983, safety, electric portable lanterns, and cast-iron frames for winches; schedule 8984, cotton and wool undershirts and drawers, and vinegar; schedule 8989, cone drive lathes, 14 inches and 6 feet; schedule 8990, portable boring bars, 3½ inches and 6 inches diameter, 10 feet long; schedule 8991, cylindrical surface condenser, and portable ventilating sets; schedule 8993, medium bar steel; schedule 8994, paint brushes; schedule 8995, pure lard oil, beeswax, lump borax, and pulverized silica; schedule 8996, Spanish cane for ship fenders, 3-gallon water filters and coolers, air hose, oak-tanned leather pump, side lights for motor boats, 72 inches, unbleached cotton sheeting; hand swabs, half-and-half solder bars, and round strip solder; schedule 8997, 1,000-pound folding platform scales, brass squirt cans, emery cloth, 4-pound boat grapnels, padlocks, brass nuts, garnet paper, soapstone pencils, screw drivers, steel and woven measuring tapes, machinists' steel bolt and nuts, vises, and steel or wrought washers; schedule 8998, wire bread baskets, platform scales weighing 600 pounds, glass salt and pepper shakers, and silver-plated ware; and schedule 8999, duplex telephone wire, and single stranded rubber-covered wire; schedule 9000, white ash, firsts and seconds, African and Mexican mahogany, New England spruce, spruce sticks for spars, 36 feet long, and hickory, elm, or oak sticks, 8 inches in diameter at small end; schedule 9001, steel conduit, interior communication cable, radio headgear receiver cords, magnet wire, rubber-insulated ignition wire circuits, single-conductor wire, and twin-conductor wire; schedule 9002, rectangular casting brushes, crucibles, flexible copper hose, brass bolts and nuts, steel bolts and nuts, regulus of antimony, and round monel metal; and schedule 9003, steam-plug cocks, composition pipe fittings, steel boiler tubes, composition unions, and rough brass valves, gate, etc. Bids will be received until December 7, 1915, for furnishing the following: Schedule 8978, cast-iron pipe fittings, lead pipe, wrought pipe, steel tubing, and valves, gate, etc.; schedule 8987, gas-producing apparatus; schedule 9004, pure sperm oil; schedule 9005, alcohol, copper paint, and North Carolina pine pitch; sched-

ule 9006, emery cloth, unlined linen hose, rigging leather, padlocks, and refrigerators; schedule 9007, sheet steel; schedule 9008, 3-inch round naval rolled brass, and globe angle valves, etc.; schedule 9009, seaworthy high-speed motor boat; and schedule 9010, linoleum. Bids will be opened December 14, 1915, for 1-ton automobile truck, schedule 8002.

Construction work, No. 2775.—Sealed proposals will be received at the Supervising Architect's office, Treasury Department, Washington, D. C., until December 18, 1915, for the construction complete (including plumbing, gas piping, heating apparatus, electric conduits and wiring, lift, and approaches) of the United States post office at Middletown, Ohio. Drawings and specifications may be obtained from the custodian of the site or from the Washington office.

AMERICAN GAIN IN JAPANESE SILK SHIPMENTS.

[Japan Daily Mail, Sept. 10.]

The report that the British Government contemplates the assessment of import duties on raw silk is received with indifference here among the trade, judged by sundry opinions so far expressed by veterans in the business. In the beginning of the Meiji era the raw-silk trade between Japan and Great Britain was very large, so much so that a branch was run in London by the Boeki-Shokai, the predecessor of the Kiito Gomei Kaisha of Yokohama, to handle the ever-increasing cargo from Japan, but now times have changed completely and the line is too insignificant to affect the trade here in any degree, even if it be restricted by taxes.

Great Britain lost her supremacy in the textile industry, and the part she played formerly is now assigned to France and the United States. As a result, the raw-silk trade between Japan and Great Britain has dwindled considerably. Last year's trade is estimated at 149,267 pounds, valued at \$461,333, which, though quite insignificant beside the total trade in the line, is still regarded as an advance, for the 1913 figure is placed at 92,124 pounds, valued at \$336,113.

WALL PAPER IN CHILE.

Commercial Attaché V. L. Havens stationed in Santiago, Chile, writes that a dealer in wall paper in that city told him recently that he was unable to buy a class of wall paper he desired in the United States. He has been buying wall paper in Germany at 7 pfennigs (1.6¢) per roll of 8 meters (about 8½ yards). The lowest quotation from the United States is 3½ cents per roll of 8 yards. Sales of 10,000 rolls should not be unusual in Chile if the price can be made to meet German competition. In the paper used in the houses of laborers there is no interest in quality.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau and its branch offices.]

Gas mantles, No. 19185.—A commercial agent of the Bureau reports that a firm in the United States which has connections in Australia desires an agency with a company able to handle a high-grade line of gas mantles.

Hats, No. 19186.—An American consular officer in Spain reports that a business man in his district desires to arrange for an exclusive retail agency for soft and stiff hats of medium and high-grade qualities. Correspondence and catalogues must be in Spanish.

Wire nails, etc., No. 19187.—A firm in the Netherlands is anxious to be placed in touch with American manufacturers interested in making agency connections for wire nails and galvanized corrugated iron sheets.

Hardware, soaps, cutlery, etc., No. 19188.—A commercial agent informs the bureau that an American living permanently in Brazil desires to act as agent for the following lines: Hardware, soaps, cutlery, hosiery, paints and varnishes, glassware, and paper goods.

Playing cards, wall paper, and feathers, No. 19189.—A report from an American consular officer in China states that a firm is desirous of corresponding with exporters of playing cards and wall paper, and with importers of duck and goose feathers. Correspondence may be in English or German.

General representation, No. 19190.—A commercial agent of the bureau reports that a man familiar with conditions in Brazil desires to become an agent for a manufacturer or a syndicate of manufacturers. It is stated that he can present good credentials.

Water pumps and motors, No. 19191.—An American consular officer in the Canary Islands reports that a firm desires to purchase a number of electrically driven water pumps and motors. Prices c. i. f. port of entry, if possible, and payment, cash against documents.

Coke ovens, etc., No. 19192.—A commercial attaché of the Department of Commerce reports that an engineering department in one of the South American Republics is contemplating building chambers for the carbonization of 100 tons of coal daily. Catalogues, literature, and full information from American firms manufacturing retort coke ovens, and apparatus for the utilization of ammonia, distillation of tar, and extraction of benzol are solicited.

Hosiery, No. 19193.—A report from an American consular officer states that a manufacturer's agent in the United Kingdom desires to be placed in communication with manufacturers of imitation silk hosiery with a view to securing an agency.

Brick, No. 19194.—A letter to the Bureau states that a firm in Canada desires names and addresses of face-brick manufacturers.

Paper doilies, No. 19195.—An American consular officer in China reports that there is a possible market for paper doilies in his district. Names of firms may be obtained from the Bureau or its branch offices.

Flags, No. 19196.—The commercial attaché of the Department of Commerce in France states that a business man is anxious to sell American-made flags. References given. Correspondence may be in English.

Buttons, snap fasteners, and gloves, No. 19197.—An American consular officer in Spain reports that a man is interested in the importation of buttons, snap fasteners for women's dresses, and knitted cotton gloves and imitation kid gloves. Samples of snap fasteners desired are submitted and may be examined at the Bureau or its branch offices. (Refer to File No. 68401.)

Machinery, No. 19198.—A letter to the Bureau from a business man in the Netherlands states that he desires catalogues and full information on tanning machinery.

SOCIETY ISLANDS RADIO STATION NEAR COMPLETION.

The radio station now being built by the French Government on Tahiti Island, Society Islands, will be ready to receive and transmit commercial messages before the close of 1915, the United States Bureau of Navigation announces.

The temporary station now in course of erection will be followed by a much more powerful plant. The plans of the temporary station contemplate a 10-kilowatt installation of the type used by the French Government, with a wave length of 600 meters. The towers, two in number, will be 100 meters in height. The station will be expected to reach Awanui, New Zealand; Suva, Fiji; and the Samoan Islands.

Immediately upon the completion of the temporary station work will begin on the permanent station. This permanent 300-kilowatt station will be operated by a 500-horsepower gasoline engine, and will use a wave length of 2,500 meters. There will be eight towers, each 100 meters high, erected in parallel rows of four towers. The space between the towers will be 250 meters, and 200 meters between parallels. There will be two antennæ, one of 600 meters wave length, the other of 2,500 meters.

With the permanent station it is expected that communication will be established with stations in Cochin-China; South America; Honolulu, Hawaii; San Francisco, Cal.; Sydney, Australia; and even in Martinique and Guadeloupe, West Indies. All material used in the construction of these stations is supplied by the French Government and is shipped from France.

Call letters have not been assigned to the station and rates are not obtainable at the present time.

CONSULAR TRADE CONFERENCES.

Consul William Dawson, of Rosario, Argentina, is now on leave of absence in the United States and will remain until about December 15, 1915. His address is 903 Goodrich Avenue, St. Paul, Minn.

Appointment of Chinese commercial attachés to Great Britain, Japan, Russia, France, Germany, Belgium, and the United States is being considered at Peking.

HIGHER PRICES AT LONDON FUR SALES.

At the main series of October fur sales in London the prices of most classes of skins offered showed an appreciable rise. According to the British press, advances of 50 per cent on the rates paid at the March series of sales were secured for wolf, cross fox, white, gray, and kit fox, 40 per cent for red fox, 30 per cent for fitch and Japanese fox, 25 per cent for beaver, 20 per cent for mink, 15 per cent for stone marten and silver fox, 10 per cent for marten and otter, with wolverine and kolinsky making improved figures, and bears, baum marten, ermine, civet cat, chinchilla, and blue fox all equaling the March level, and only Russian sable reported upon as selling irregularly. Wild cat and house cat made double prices, mole sold satisfactorily, and badger skins were unchanged. Squirrel did not, however, pass the hammer.

These increases are said to have been due to the considerable demand both in England and in neutral countries, rather than to scarcity of offerings. America was a keen buyer of all classes of furs, notably skunk and lynx, both of which are fashionable this year.

A slightly disturbing feature of the auctions, says the London Times, was the Board of Trade announcement, early in their progress, of the inclusion of furs in the list of goods which may not be exported to neutral countries except under license. This, it is stated, may tend still further to raise prices.

[The March auctions were discussed at length in *COMMERCE REPORTS* for May 8, 1915; reference to the other London sales was made in the issues for Feb. 13 and May 29.]

COMMERCIAL BRIEFS FROM CHILE.

[Commercial Attaché Verne L. Havens, Santiago.]

A company has been organized, called Sociedad Nacional de Calzado, at Santiago, to manufacture and sell shoes at wholesale and retail. It has a capital of 50,000 paper pesos (about \$8,300 United States gold) divided into 5,000 shares. The general manager is Felipe Santiago Espinosa, of this city, who transfers to the company his ownership of two patents registered in his name.

On August 2 a decree was issued by the Chilean Government, through the Minister of Interior, authorizing the governor of Valparaíso to borrow \$480,000 from the Guaranty Trust Co., of New York, through Wessel Duval & Co. The amount was quoted in American gold and not in pounds sterling, as has formerly been the custom.

The Chilean Government has approved the plans of the Antofagasta to Boliva railway to install a water system for the city of Mejillones, about 68 kilometers (42 miles) from Antofagasta, in the arid nitrate region on the coast. The time limit to begin and end operations of installation are one and three years, respectively, from July 26, 1915. The main offices of the railway are located at Antofagasta.

The 6 million barrels of salt produced in the United States in 1880 averaged in price \$0.81, while the 35 million barrels produced in 1914 averaged \$0.295.

NEW GOVERNMENT PUBLICATIONS.

The Superintendent of Documents, Washington, D. C., announces that he received in stock during the week ended November 6 the following new United States Government publications of a business character, which he will sell at the nominal prices affixed:

Trade Directory of Central America and the West Indies, Miscellaneous Series 22.—List of business houses in Central America and the West Indies, arranged primarily by countries, with the various industries in alphabetic order. Price, cloth, 60¢.

Markets for American Fruits, Special Consular Reports 62.—Valuable information relative to markets for American fruits in foreign countries, with the various countries arranged in alphabetical order, and suggestions as to the kinds of fruits used, methods of handling, etc.; reprint. Price, 10¢.

China and Indo-China Markets for American Lumber, Special Agents' Series 104.—Covering the lumber-trade situation in China, with imports of foreign woods, uses of timber, character of wood used, etc. Price, 5¢.

Repair and Maintenance of Highways, Public Roads Bulletin 48, reprint.—Covering repair of macadam, earth, gravel, and sand-clay roads, with article on road management, costs, dust prevention, etc.; illustrated. Price, 15¢.

Timber.—An Elementary Discussion of the Characteristics and Properties of Wood, Forest Service Bulletin 10; reprint.—A comprehensive discussion by Filibert Roth, Government expert, covering structure and appearance of woods, shrinkage, mechanical and chemical properties, durability, etc., with a list of the more important woods of the United States. Price, 10¢.

Drainage of Irrigated Land, Agriculture Department Bulletin 190; reprint.—Practical work, covering the objects of draining, open canals, covered drains, and construction. Price, 10¢.

Zacaton as a Paper-Making Material, Agriculture Department Bulletin 300.—Description of a new grass for paper making, giving botanical history, distribution, laboratory tests, physical tests, etc. Price, 5¢.

Phosphate Rock and Methods Proposed for Its Utilization as a Fertilizer, Agriculture Department Bulletin 312.—Covering various processes for treating phosphate rock and the manufacture of phosphoric acid and phosphoric fertilizers. Price, 5¢.

Daily Meals of School Children, Education Bureau Bulletin 3, 1909, reprint.—Practical information relating to feeding of school children, including the serving of food in schools, lunch rooms, cost of food, etc. Price, 10¢.

Vocational Guidance—Papers Presented at the Organization Meeting of the Vocational Guidance Association, Grand Rapids, Mich., October 21-24, 1913, Education Bulletin 14, 1914, reprint.—Covering the social, economic, practical, scientific, and professional phases of vocational guidance—Vocational guidance in the public school system, etc. Price, 10¢.

Education for the Home, Part 2, The States and Education for the Home—Rural Schools—Elementary Schools—High Schools—Normal Schools—Technical Institutes—Various Agencies and Organizations, Education Bureau Bulletin 37, 1914, reprint.—Relates to the teaching of domestic science and the household arts, with courses of studies, methods, etc. Price, 30¢.

Education for the Home, Part 3, Colleges and Universities, Education Bureau Bulletin 38, 1914, reprint.—Relating to domestic science, and the household arts, with courses of studies, methods, etc. Price, 25¢.

Civic Education in Elementary Schools as Illustrated in Indianapolis, Education Bureau Bulletin 17, 1915, reprint.—Covering the course of study, illustrative suggestions to civic teachers, type of lessons, etc. Price, 5¢.

Separate Advertising Matter for Consuls.

Consul Rufus Fleming, of Edinburgh, Scotland, suggests: "It is advisable that manufacturers and exporters, in writing to consular officers for the purpose of getting trade connections, should always send separate printed matter, as lists of goods, descriptions, illustrations, etc., printed on any part of their letter paper can not be fully utilized."

APPLE INDUSTRY OF PACIFIC NORTHWEST.

[Commercial Agent W. B. Henderson, Seattle, Oct. 27.]

The production of apples in the Pacific Northwest for 1914 and 1915, with the figures for the latter year estimated, may be stated as:

State.	1914	1915
Washington.....	<i>Boxes.</i> 8,300,000	<i>Boxes.</i> 7,082,000
Oregon.....	3,800,000	3,402,000
Idaho.....	1,700,000	1,700,000
Montana.....	900,000	1,056,000
Total.....	14,500,000	13,238,000

Three boxes of apples are equal to one barrel.

This Season's Shipments.

It will be understood, of course, that the crop is only 65 to 75 per cent moved and many of the details regarding the shipment, the price, and the markets are matters merely of conjecture. However, the figures given herein are reasonably correct.

The best authorities place the apple shipments of the present season out of the Pacific Northwest at 6,000 cars, which will average in the neighborhood of \$1.10 to \$1.25 per box, f. o. b. shipping point—not, however, net to the grower, to whom the price would be about \$0.15 per box less.

Apples exported to Europe from this section have been and will be this season very limited in amount. One of the largest fruit associations estimates that up to the present time it has exported only seven cars to Europe. About 1,200 cars are expected to go from this section direct to New York and some 200 cars have passed through Spokane for local and export trade.

Exports of Apples from Washington Customs District.

The exports of apples from the Washington customs district, by months, for 1914 and for 1915 up to the end of September, with some few shipments in October, appear in the following table:

Month.	1914			1915		
	Barrels.	Value.	Average per barrel.	Barrels.	Value.	Average per barrel.
January.....	5,279	\$22,853	\$4.33	8,728	\$19,619	\$2.25
February.....	6,782	27,615	4.07	11,508	24,304	2.11
March.....	6,082	25,390	4.16	10,402	19,066	1.83
April.....	2,142	10,022	4.68	3,789	8,414	2.22
May.....	1,258	6,470	5.14	3,130	10,037	3.21
June.....	1,083	2,626	2.42	119	452	3.83
July.....	1,735	6,370	3.69	673	2,043	3.04
August.....	3,653	10,566	2.89	1,059	3,426	3.21
September.....	13,333	38,014	2.85	12,838	33,083	2.58
October.....	18,525	48,290	2.61	61,003	83,271	3.26
November.....	23,840	50,187	2.10			
December.....	8,404	10,827	2.54			

* Partial figures.

The distribution of the exports so far from the Washington customs district, as shown by the customs officers' figures here, has been: To British Columbia, 14,078 barrels, valued at \$35,910; Hongkong,

56 barrels, value \$249; China, 250 barrels, value \$1,203; and to the Philippines, 618 barrels, value \$2,219. It will be noted that this statement does not take into consideration exports to European countries. Such shipments go principally by rail and to some extent, perhaps, through the Panama Canal to New York and find their way to foreign buyers through that port.

"KROONLAND" HEROES HARD TO LOCATE.

Secretary of Commerce Redfield is having considerable difficulty in locating several members of the former crew of the American steamer *Kroonland*, of the Red Star Line, in order to present to them the medals authorized by Congress in its resolution approved March 19, 1914. There remain at the present time 16 medals to be presented to officers and crew who have not yet been found.

On the 9th and 10th of October, 1913, the *Kroonland* went to the assistance of the burning steamer *Volturmo*, in the North Atlantic Ocean, and succeeded in rescuing 89 persons. For their gallant work the *Kroonland's* officers and crew received the thanks of Congress, and \$1,000 was appropriated by the above-mentioned resolution for the purchase of a solid gold watch and chain for Capt. Paul H. Kreibohm and 5 gold, 5 silver, and 29 bronze medals for the other officers and the crew. Secretary Redfield was authorized and directed to purchase the watch and medals and to present them.

Accompanied by Supervising Inspector General Uhler, of the Steamboat-Inspection Service, and Chief Clerk Havenner, of the Department, Secretary Redfield went to New York on January 9, 1915, and presented the watch and chain to Capt. Kreibohm, and medals to 9 of the officers and crew, the only ones who could be located at that time after diligent search and numerous inquiries. Since then 14 others have been found and have received their medals. The difficulty experienced in locating the brave men to whom the medals were awarded is illustrated in that one medal was delivered in London, England, while the recipient of another was found in the Belgian Army. The 16 to whom medals remain to be delivered are:

Frank Von Hymmen.
Alexander Sandilands.
Heike M. P. Janssen.
Gérard Frans Borren-
berg.
Ingolf Loode.
Franz Quednau.

Heinrich Schaub.
Henri Guellinckx.
Emil Böhme.
Desiré Auguste Coop-
man.
Ernst Benocke.
Léon Coppens.

Petrus Stobbelaar.
Gustav Ebling.
Alphons Roll.
August Friedrich Reck-
sügel.

The United States shipping commissioner at New York City and the manager of the International Mercantile Marine Co., New York City, are cooperating with the Department of Commerce in the effort to find these men.

Sheffield (England) University is starting a glass making research department, with classes at the university and at Castleford, Knottingly, Barnsley, and Wexborough. The 8,000 glassworkers in Yorkshire who, prior to the war, were turning out only cheap glass bottles, are taking up fine glassware production.

FIREARM TRADE OF THE PHILIPPINES.

[J. F. Boomer, correspondent, Manila, Sept. 8.]

There has been in recent years a considerable and significant change in the character of the firearms owned by residents of the Philippine Islands. In the earlier years of American occupation the preponderance of arms for defense, such as revolvers, was noticeable, whereas more recently sporting goods, such as shotguns and rifles, have outnumbered weapons of defense.

Deer and wild hog furnish hunting at all seasons of the year to those who among sportsmen are denominated "pothunters," while the wild carabao and timarau offer attractions to those who are drawn to the sport by the excitement of it. The islands also have their duck and snipe seasons. Snipe hatched in Siberia and the north of Asia winter in the Philippines, and during the season the sport attracts throngs of hunters and furnishes a market for a large number of shotguns and ammunition. The duck season, that is, for migratory ducks, which also cross the China sea to winter in the Philippines, corresponds in general with that for snipe. In the lake and lagoon areas near Manila sportsmen find good duck shooting, as a rule, from October to January.

Besides the sport of field hunting, considerable interest in trap shooting is maintained in Manila by two thriving gun clubs, the Cosmopolitan and El Tiro al Blanco, whose periodic shoots attract large crowds and are regarded as important events in the social life of the city. These clubs are made up of Europeans, Filipinos, and Americans, and count among their members some good marksmen.

Value of Imports.

Firearms and ammunition are handled in Manila nearly altogether by the houses that handle athletic and sporting goods, although one jewelry house carries them as a side line. The local dealers are Squires, Bingham & Co., Erlanger & Gallinger (both American firms), C. Alkan (French), and Alfredo Roensch & Co. (German).

At present practically all the firearms imported are of American manufacture, as the following statement of the island purchases for the past two years discloses:

Firearms and ammunition.	1913		1914	
	Total.	From United States.	Total.	From United States.
Revolvers and pistols, and parts of.....	\$41,822	\$41,634	\$7,455	\$7,366
Rifles, and parts of	60,846	60,390	30,412	30,097
Shotguns, and parts of.....	16,375	15,243	10,812	9,928
All other firearms.....	483,440	483,440	222,128	222,128
Cartridges.....	154,496	154,108	230,186	229,845
Gunpowder.....	319,376	319,376	109,199	109,199
Shot.....	4,234	2,009	5,412	3,294

Only in shot does the United States meet with any material competition, Germany supplying \$2,128 worth in 1913 and \$1,912 worth in 1914.

Calcium chloride as a by-product of salt making in the United States totaled 19,403 tons, worth \$121,766 in 1914.

BARBER-SUPPLY BUSINESS AT HONGKONG.

[Consul General George E. Anderson, Hongkong, Sept. 8.]

The barber business has been completely revolutionized in Hongkong in the past three years and most of the change has been directly to the benefit of trade in American barber supplies. As indicated in previous reports from this consulate general on the subject, the great change in the business came about four years ago, following the revolution in China, as a result of which the queue was discarded by the great mass of Chinese in Hongkong and the treaty ports, as well as in much of the interior of China. American-trained Chinese barbers, however, also have had much to do with the change and are responsible for the particular trend toward American supplies at present.

Previous to the revolution and to the change in style of hairdress worn by Chinese, the great mass of Chinese were served by itinerant barbers plying their vocation, with a stool, a basin, a few utensils, Chinese razors, and Chinese scissors. With the revolution came a demand for more fixed barber establishments and a large number of native shops were instituted in which native chairs were used, with some attempt to imitate foreign-style shops, and with some use of foreign supplies. The well-to-do Chinese frequented foreign-style shops, which are largely European in style and equipment and which used European supplies almost entirely. As a result of activity of American manufacturers some American supplies were sold in this field, however, and a few American chairs were introduced.

American-Trained Chinese Set the Pace.

About three years ago a Chinaman who had long been a resident of Sacramento, Cal., and who had graduated from an American school for barbers, came to Hongkong, bringing with him an outfit of American chairs and barber's supplies and implements, with which he set up a modest shop on the principal thoroughfare of Hongkong. He employed native barbers and commenced to train them in American styles and American methods and attracted a good trade. Two Chinese barbers also returned to Hongkong from Honolulu, and between them these two shops set the pace for all others and have forced the introduction of American chairs and equipment and the increasing use of American supplies in many shops. Native barbers have been given special training along American lines and the whole tendency of the progressive portion of the business or calling in Hongkong is American.

Chairs and equipment so far introduced have been imported direct. Just at present, as a result of general depression due to the war and the absence of a large portion of the normal foreign population of Hongkong, little is being done in the way of further expansion. The prospects of the trade, however, are distinctly favorable to American manufacturers. The new style shops are being patronized more and more generally by high-class Chinese people while the only reason they are not patronized by all the Chinese population is the scale of charges which approximates that maintained in most American cities. Most supplies in the way of disinfectants, cosmetics, perfumery, and the like are now bought locally through importing drug

concerns. With the resumption of normal trade conditions in this part of the world, it is likely that a firm making a specialty of American barber furniture and supplies can build up a good and permanent trade.

SEPTEMBER TRADE BY PRINCIPAL ARTICLES.

A new export level of \$300,000,000, reached for the first time in September, 1915, gives special interest to the statistics of foreign trade for that month, just published. To enable the Bureau of Foreign and Domestic Commerce, Department of Commerce, to comply with the numerous requests for advance information as to the articles making up that trade, the following condensation of tables shortly to appear in the "Summary of Foreign Commerce" for September has been prepared.

Articles and classes exported.	September—		9 months ending September—	
	1914	1915	1914	1915
Agricultural implements	\$700,000	\$1,100,000	\$20,600,000	\$10,400,000
Animals:				
Cattle	100,000	500,000	500,000	2,400,000
Horses	1,000,000	8,000,000	3,100,000	75,000,000
Mules		2,000,000	400,000	18,800,000
Brass and manufactures	400,000	5,200,000	4,100,000	31,800,000
Breadstuffs	46,400,000	39,600,000	172,500,000	423,400,000
Carrriages:				
Automobiles	1,500,000	10,700,000	22,700,000	85,600,000
All other	600,000	2,100,000	9,500,000	18,500,000
Chemicals, drugs, etc.	2,400,000	8,400,000	20,200,000	54,200,000
Copper and manufactures	5,600,000	9,600,000	95,600,000	83,600,000
Cotton:				
Raw	5,800,000	28,500,000	142,200,000	307,300,000
Manufactured	3,700,000	8,600,000	34,100,000	71,100,000
Electrical machinery, etc.	1,700,000	2,300,000	15,200,000	17,200,000
Explosives	700,000	18,100,000	4,900,000	54,300,000
Fiber manufactures	500,000	1,600,000	8,200,000	13,200,000
Fish and fish products	800,000	1,300,000	6,600,000	10,700,000
Fruits and nuts	3,000,000	3,800,000	16,200,000	23,100,000
Rubber goods	000,000	2,600,000	8,600,000	15,500,000
Iron and steel manufactures	12,500,000	38,400,000	152,800,000	251,100,000
Leather boots and shoes	1,300,000	5,500,000	12,400,000	29,800,000
Leather manufactures, other	2,000,000	9,400,000	26,700,000	94,600,000
Meats	10,000,000	18,000,000	97,700,000	194,800,000
Dairy products	500,000	1,200,000	2,700,000	15,700,000
Naval stores	600,000	500,000	12,200,000	9,300,000
Oilcake and oilcake meal	100,000	3,200,000	11,800,000	23,000,000
Oils:				
Mineral	13,000,000	12,400,000	108,200,000	106,200,000
Vegetable	800,000	1,900,000	11,200,000	23,800,000
Paints, colors, and varnish	600,000	800,000	5,000,000	6,600,000
Paper and manufactures of	1,500,000	2,100,000	15,200,000	15,900,000
Photographic goods	200,000	600,000	6,000,000	8,000,000
Sugar, refined	3,200,000	3,600,000	5,000,000	24,800,000
Tobacco manufactures	800,000	700,000	5,400,000	4,900,000
Tobacco, raw	3,700,000	6,000,000	32,000,000	33,000,000
Wood, lumber, and other manufactures	4,000,000	5,300,000	65,900,000	40,300,000
Wool manufactures	400,000	2,500,000	3,000,000	26,200,000
Zinc manufactures	2,500,000	3,300,000	3,200,000	21,500,000
Total, including articles not enumerated	156,100,000	300,700,000	1,467,400,000	2,532,500,000

Principal Articles Imported.

Increased arrivals of raw materials and diminished purchases of manufactures are the leading facts disclosed by an examination of the import statistics for September, 1915. The following table, prepared by the Bureau of Foreign and Domestic Commerce, shows the principal articles and groups of articles imported during Sep-

tember and the nine months ending with September, compared with corresponding periods of earlier years:

Articles and classes imported.	September—		9 months ending September—	
	1914	1915	1914	1915
Animals, chiefly cattle.....	\$2,100,000	\$2,000,000	\$17,300,000	\$13,300,000
Art works.....	2,300,000	1,500,000	14,200,000	9,000,000
Breadstuffs.....	1,600,000	2,100,000	25,000,000	14,100,000
Chemicals, drugs, etc.....	5,000,000	8,100,000	61,000,000	65,200,000
Cocoa, crude.....	1,500,000	2,200,000	15,500,000	23,400,000
Coffee.....	6,700,000	9,700,000	78,000,000	79,300,000
Copper in ore.....	800,000	1,600,000	9,500,000	10,300,000
Copper manufactures.....	800,000	4,500,000	13,700,000	22,000,000
Cotton:				
Raw.....	1,100,000	1,600,000	19,200,000	19,900,000
Manufactured.....	4,100,000	3,200,000	48,000,000	30,000,000
Earthen, stone, and china ware.....	600,000	700,000	7,000,000	5,000,000

TINNED PINEAPPLES IN THE BAHAMAS.

[Consul W. F. Doty, Nassau, New Providence, Oct. 27.]

An American corporation operates a factory at Nassau whose output of tinned pineapples during the first 5 years has been as follows:

Year.	Cases.	Value.
1910.....	43,041	\$44,971
1911.....	29,532	33,074
1912.....	27,536	25,201
1913.....	31,192	30,233
1914.....	33,070	36,696

The local supply of pineapples being insufficient, the company imported from Cuba 3,315 dozen in 1914, as compared with 31,862 dozen the previous year. Pineapple culture in the Bahamas is being revived.

CANADIAN PRODUCTION OF SALT.

[Consul O. Gaylord Marsh, detailed as vice consul, Ottawa, Canada, Sept. 20.]

Salt is found in the natural state in some form in nearly all parts of Canada, but the only deposits of present industrial and commercial value lie in the southwestern part of the Province of Ontario. Numerous saline mineral springs are known to occur in Nova Scotia, New Brunswick, and Quebec, but all attempts to manufacture salt from these springs on a commercial scale have been abandoned. Exploration in these Provinces has not disclosed deposits of salt. Saline mineral springs occur also in Manitoba, Saskatchewan, Alberta, Northwest Territories, and British Columbia, but they are of uncertain industrial and commercial importance. Borings in the west have encountered brines, rock salt, and salt formations, but these have not been exploited.

Table, Dairy, and Packing Salt.

The several plants in operation in the Ontario salt region produce principally table, dairy, and packing salt. One plant is now producing caustic soda and bleaching powder from sodium chlorine in the form of brine, but the allied industries using salt, either directly or indirectly, as a raw material have not been developed to any considerable extent.

Canada produces about 41 per cent of the salt consumed in the Dominion, the balance being imported principally for the use of the coast Provinces and the fisheries. The annual production has shown a small but steady increase during the past 10 years, the production for 1914 being 107,138 tons. The average number of men employed in the salt industry in 1913 was 251, receiving a total wage of \$178,386.

The imports of salt for the fiscal year ended March 31, 1915, were valued at \$517,610. Of this amount \$237,589 worth came from Great Britain, \$222,245 from the United States, \$21,153 from the British West Indies, \$25,645 from Spain, and \$10,557 from other countries. For the same period the exports of Canadian salt amounted to only \$5,509.

[Consul Felix S. S. Johnson, Kingston, Ontario, Sept. 21.]

Ontario's Beds of Salt Vary in Thickness.

Ontario salt is obtained by the evaporation of brine, which has leached out of rock salt from beds which occur in that part of the Province bordering on Lake Huron, the St. Clair River, Lake St. Clair, and the Detroit River. The salt area in Canada is about 3,000 square miles. The beds are known to vary in thickness. In some wells they occur in thin beds interstratified with dolomite and shale; the combined thickness of all these beds varying from 100 to 200 feet. In other localities, as at Windsor, the salt beds are of great thickness, one alone being 200 feet thick. The average depth at which the salt is found is more than 1,000 feet. There is a gradual increase in depth as one goes farther south.

The production from a few wells has hitherto been sufficient to supply the home demand. The southeast boundary of the salt area is unknown, as no drill records are obtainable from the district along the north shore of Lake Erie between St. Thomas and Chatham.

Discovery of salt in Ontario dates back to 1866. In that year the oil excitement was at its height in western Ontario on account of the

discovery of wells in the United States. A company was formed at Goderich with the object of drilling for oil. This company, with a small capital, commenced drilling on the north bank of the Maitland River.

Enterprise Abandoned Temporarily.

Through a series of layers of grayish limestone of varying hardness a depth of 686 feet was reached without encountering any signs of oil, and the stockholders decided to abandon the enterprise. One of the men interested, however, decided to continue drilling at his own expense, especially since the county council had offered a bonus of \$1,000 and the city a bonus of \$500, provided drilling was continued to a depth of 1,000 feet. His efforts were amply rewarded, for at a depth of 964 feet from the collar of the hole he encountered a solid bed of rock salt, into which he bored for a distance of 60 feet, thus completing 1,000 feet and securing the bonuses.

The shareholders who had previously abandoned the work desired to be allowed to pay up their assessments and were allowed to do so. The capital of the company was increased from \$10,000 to \$14,000, and in September, 1866, pumping commenced. The total capacity of the plant was in the neighborhood of 100 barrels per day. The salt produced found a ready market, so that at the end of the first year's operations the profits were considerable, dividends totaling 51 per cent.

The price then obtained for the salt was \$1.25 per barrel at the works. There are now 12 plants operated in the Ontario region for the production of salt, in all of which the method of evaporating the brine is employed. Up-to-date machinery (mostly American) is now installed at all of the works, and the plants compare favorably with those in the United States.

AMERICAN SAWMILLING IN THE BAHAMAS.

[Consul W. F. Doty, Nassau, New Providence, Oct. 27.]

The Bahamas Timber Co. (Ltd.) (American), having a lumber mill and ice plant at Wilson City, Abaco, milled nearly 7,000,000 feet of yellow pine during the calendar year 1914, a smaller amount than usual. Most of this pine was exported to Cuba. The company also made 1,293 tons of ice during the same period, mostly for Nassau. The amount paid to labor, American and local, amounted to \$107,140.

Crown timber lands in the Bahamas estimated at 2,434,661 board feet remain ungranted. On the island of New Providence there is an area of about 7 square miles and at Cocoa Plum Creek, Abaco, another of about 21 square miles bearing yellow-pine trees. Concessions for grants to cut this timber should be made to the Colonial Secretary, Nassau. The Bahamas Government is not disposed to sell small tracts except for building purposes.

A considerable purchase of American wire nails and the introduction of American gongs, with the likelihood of increased sales of American glue and high-grade shirts and collars, are among the results of the trade-extension efforts of the Dunfermline (Scotland) consulate during the past quarter.

SPORTING GOODS ON THE ISTHMUS OF PANAMA.

[Consul General Alban G. Snyder, Panama City, Oct. 11.]

A large amount of sporting goods of various classes is used on the Isthmus of Panama each year, and there is every reason to believe that as time passes and conditions become more settled quite a noticeable increase in many of these lines will follow. For the purposes of this report the "Isthmus" is taken to mean the Canal Zone and the cities of Panama and Colon. Outside of this section little sports equipment is used and there is not likely to be any greatly increased demand in the near future.

Baseball the Most Popular Sport.

From the beginning of the construction days of the canal baseball has proved the most popular sport on the Isthmus. Even in the early days Panama and Colon had fairly good teams which played games with visiting American warships. Shortly after construction work began on the canal a baseball league was organized, composed of clubs from the terminal points and towns along the line, and this league has continued with varying degrees of success ever since.

When the towns along the line were abolished about a year ago it was thought that the old baseball days were over. However, upon the arrival of the various United States Army regiments interest was revived, and last season the Isthmian League was reorganized with eight clubs to play for the governor's pennant. This league was composed of teams from Balboa and Administration on the Pacific side, Lincoln House and Cristobal on the Atlantic side, and the Fifth Infantry, Tenth Infantry, Fort Amador, and Corozal. The season which ended last May with Balboa winning the pennant was one of the most successful in Isthmian baseball. There is now talk of a 12-club league for next season, composed of six civilian and six Army teams, and it has been suggested that the league be divided into two sections, the winners in each playing a series of games for the championship.

Baseball is confined largely to the American element on the canal, but it has also taken considerable hold on the natives, and scores of children are seen playing ball on every available spot in the city limits. The National Institute of Panama has a team, and several prominent stores have organized and equipped teams at their own expense which play under the names of these firms.

Tennis Ranks Second in Popularity.

Next to baseball, tennis is probably the most popular game on the Isthmus. While the active season is about the same as for baseball—from January 1 to June 1—still, unlike baseball, it can be played and is played the year round.

The Isthmian Tennis Association is an organization consisting of eight clubs, with an active membership of 75 to 100. In addition to the association the Young Men's Christian Association owns several courts, bringing the number of those playing tennis up to between 150 and 200. The association holds five monthly tournaments in singles and doubles, in which only representatives of each club can enter, and five large tournaments open to all are also held. Twenty gold medals are given each year, valued at \$90 to \$100.

The association orders tennis goods for its members direct from the United States. The climate here is naturally hard on tennis rackets, and up to about a year ago considerable business was done in shipping rackets to the States for restringing. Now, however, nearly every member of the association restrings his own rackets, and does it as well as it can be done in the factory, and the principal business in this connection at present is in the purchase of gut for this purpose.

Football, Basket Ball, Cricket, and Golf.

Football was started here several months ago and a few games played, but it is hardly reasonable to expect such a violent form of exercise to gain much headway in this climate.

Basket ball and indoor baseball are played during the rainy season in the Young Men's Christian Association clubhouses on the Canal Zone, the season lasting from June 1 to December 31. Most of these clubhouses also have bowling alleys, on which tournaments are held from time to time. All supplies are ordered direct from the United States.

Cricket forms the chief amusement of the large West Indian colored element on the Isthmus, and huge crowds attend these games on Sundays and holidays. Cricket supplies are ordered from England direct as a general rule, although a few houses in Panama handle them to a small extent. Few, if any, of these supplies come from the United States.

Lack of interest and the difficulty in this country of constructing a suitable golf course and keeping it in proper condition have all worked against this game and prevented its being taken up on the Isthmus. Since the arrival of the Army contingent talk of constructing a course has been revived, and something definite may result therefrom in the near future.

Motorcycling, Riding, and Hunting.

Up to a short time ago little motorcycling was done and there were only a very few motorcycles on the Isthmus. An added interest was given to this form of amusement a few months ago by the organization of the Canal Zone Motorcycle Club, with headquarters at Ancon, C. Z. This club is growing rapidly and the members seem to take an active interest in its success. As employees of the Panama Canal get their merchandise in free of duty and at greatly reduced freight rates, the members all order their machines direct from the United States.

Only a few people own saddle horses in Panama, and this form of exercise has never been indulged in to any great extent, being confined chiefly to canal employees (such as the mounted police) who find it necessary in the performance of their duties.

While it is claimed that there is excellent deer, alligator, and bird shooting in the interior of Panama, the nature of the country and the hardships to be encountered are against its ever becoming very popular as a recreation. However, two gun clubs were organized on the Isthmus a few months ago—the Balboa Gun Club at Balboa and the Isthmian Trap and Rifle Club at Cristobal. These clubs have a membership numbering between 40 and 50 and give promise

of becoming very popular. Some fair scores have been made and a large amount of ammunition used.

As far as shotguns are concerned, however, only the cheaper grades of repeating and double-barreled guns are carried in stock by local dealers, and consequently a fair opportunity should exist for selling good-grade guns to the club members. Certainly the formation of these clubs will produce a demand for ammunition such as has never existed in this section before.

Fishing and Yachting.

There is good fishing in the Bay of Panama, but up to the present time this sport has never been indulged in as a pastime to any great extent by Americans or the better class of Panamanians. Such fishing as has been done has been carried on almost wholly by the lower-class natives, who simply fish for the market, using nets or the crudest kind of hand lines. Tackle to meet these simple requirements is carried in stock by the local hardware dealers.

Since the completion of the Gatun Spillway some very fine tarpon fishing has developed at that place. People with experience in this kind of fishing claim that it will eventually rival the famous tarpon fishing of Florida. There has been some talk of organizing a tarpon club, and if it should materialize a demand for good fishing tackle will doubtless follow.

There are splendid opportunities for motor boating and yachting in and around the Bay of Panama, but up to the present time little interest has been taken in the matter. The Balboa Yacht Club has been organized in the last few weeks, and a meeting called to ascertain the names of those desiring to purchase motor boats, yachts, and canoes. It is proposed to adopt some plan for purchasing all of these boats from one company in the United States, in order to get the benefit of the best possible rates.

How the Trade is Supplied.

It will be seen from the foregoing that there is a certain demand here for baseball, tennis, fishing, hunting, and other sporting goods, and present developments seem to indicate that the demand will increase rather than diminish as time passes. As most of these sports are carried on by the American population of the Canal Zone, the greater part of such supplies, as a general rule, will be ordered direct, and I would suggest that manufacturers get in touch with the various organizations mentioned in this report.

However, there will always be a certain outside demand for these goods, and Canal Zone organizations at times have to purchase in the local market when their supplies run short or orders fail to arrive.

For these reasons local firms [whose addresses may be obtained from the Bureau of Foreign and Domestic Commerce or its branch offices by referring to file No. 67796] will always carry certain lines and may increase their stocks should future developments justify it.

Aluminum production in the United States totaled 80 million pounds last year, against 15 million pounds in 1906 and only 83 pounds in 1883. This year's output may reach 100 million pounds, or about half the world's production.

PAPER-STOCK PRICE ADVANCE.

[Extract from Japan Times of Sept. 26 by Consul General George H. Seidmore, Yokohama.]

Paper millers are confronted with a difficulty hard to combat and not to be relieved in the near future. Simultaneously with the commencement of the war purchase prices quoted for the East were raised, and every time fresh orders have been placed higher figures have been quoted, but all former rises are easily surpassed in rapidity by the recent advances. Unbleached goods, for instance, have advanced from 6.28 sen (3.13 cents) per pound a fortnight ago to 7.1 sen (3.84 cents), while bleached goods have risen from 8.72 sen (4.34 cents) two weeks ago to 9.8 sen (4.88 cents). Compared with the prewar-order period these figures are a rise of 1.4 sen (0.7 cent), or 24 per cent, in unbleached goods and of 2.4 sen (1.2 cents), or 30 per cent, in bleached goods. Producers, backed up by those war orders, assume a strong attitude and will not contract for longer than a month or two. If pressed to deal in longer periods, they ask extremely high figures and repel all demands.

On the part of millers in this country, the prospect has so far been regarded with optimism rather than alarm, apparently under the impression that the reluctance on the part of producers to part with their holdings at ruling figures is their method to appreciate prices; but when the truth has dawned on them they have begun to negotiate in a hurry with producers.

Foreign paper millers may transfer at least part of their losses to be incurred to buyers, but this can not be done in the case of Japanese paper producers, whose market at present is very dull. Most producers with small means will have to suspend operations.

SIAM'S IMPORTS OF MINERAL OIL.

[Vice Consul Carl C. Hansen, Bangkok, Sept. 11.]

The imports of mineral oil into Siam for the fiscal year ended March 31, 1915, totaled 7,669,388 gallons, valued at \$1,115,226 gold, against 6,520,601 gallons, value \$874,123 for the preceding year. Imports included kerosene oil, benzine (gasoline), and liquid fuel.

The kerosene imports for the year under review amounted to 6,167,674 gallons, valued at \$959,785, of which 4,269,714 gallons were imported from Netherlands India and 1,897,960 gallons from United States.

Gasoline to the amount of 310,860 gallons, valued at \$102,837, was supplied by Netherlands India, and 23,944 gallons, value \$7,353, by the United States, while 907,892 gallons of liquid fuel came from Netherlands India and 259,018 gallons from Singapore during the fiscal year 1914-15. The total value of the liquid fuel imports amounted to \$45,251 for 1914-15 as compared with \$28,694 for the previous year.

Branch Offices of the Bureau of Foreign and Domestic Commerce.

New York, Room 409 United States Customhouse; Boston, eighteenth floor United States Customhouse; Chicago, 504 Federal Building; St. Louis, 402 Third National Bank Building; Atlanta, 521 Post Office Building; New Orleans, 1020 Hibernia Bank Building; San Francisco, 306 United States Customhouse; Seattle, 922 Alaska Building. Cooperative branch offices: Cleveland, Chamber of Commerce; Cincinnati, Chamber of Commerce; Los Angeles, Chamber of Commerce; Detroit, Board of Commerce; Philadelphia, Chamber of Commerce.

FOREIGN TRADE OPPORTUNITIES.

[Where addresses are omitted they may be obtained from the Bureau and its branch offices.]

Metal sheets for making buttons, No. 19199.—A firm in the United Kingdom informs an American consular officer that it is in the market for metal sheets for manufacturing buttons. Samples of the buttons desired are forwarded, and may be examined at the Bureau or its branch offices. (Refer to File No. 68395.)

Brushes, No. 19200.—An American consular officer in England reports that a company in his district desires an agency for scrubbing, shoe, and stove brushes, both machine and hand made.

Paper, No. 19201.—A firm of stationers and paper dealers in Greece desires to correspond with American manufacturers with a view to purchasing paper for newspapers. Samples of paper with details as to terms, manner of shipment, etc., are solicited. Prices should be c. l. f. destination, if possible, and payment will be arranged to suit sellers. Sample of paper showing quality desired has been forwarded and may be examined at the Bureau or its branch offices. (Refer to File No. 68435.) Correspondence may be in English.

Sewing machines, office supplies, etc., No. 19202.—An American consular officer in the Netherlands reports that a general agent in that country wishes to act as representative for manufacturers of sewing machines, calculators, typewriters, and office supplies generally. Correspondence should be in English or Dutch. References furnished.

Chloride of lime, No. 19203.—A manufacturer of lye in Spain informs an American consular officer that he is desirous of importing chloride of lime in large quantities. Quality and price are important, and it is suggested that samples be forwarded. Correspondence should be in Spanish.

Lumber, iron products, wire, copper, etc., No. 19204.—A commission firm in Argentina has informed an American consular officer that it wishes to secure the representation of American manufacturers and exporters of lumber, iron products, wire, copper, cottonseed oil, fresh fruits, preserved fruits, leather, rice, beans, caustic soda, tartaric acid, and cement. References furnished. Correspondence should be in Spanish.

Underwear and hosiery, No. 19205.—An American consular officer in England reports that a manufacturer's agent wishes to communicate with manufacturers and exporters of plain and fancy underwear and hosiery for women and children. C. I. F. quotations, together with catalogues and samples, are requested.

Hosiery, No. 19206.—A report from an American consular officer in Denmark states that a man wishes to correspond with manufacturers of silk hosiery suitable for men and women. Correspondence may be in English.

Upholstering cloth, No. 19207.—An importing firm in Portugal advises an American consular officer that it desires the agency of an American manufacturer of upholstering cloth and velvet. Terms have been cash, with discount after 30 or 60 days. Correspondence may be in English.

Handbags, No. 19208.—An American consular officer in England is informed that a business man desires to communicate with a manufacturer of women's handbags, with a view to securing an exclusive agency. References furnished.

Hosiery, tailors' braids, and cotton goods, No. 19209.—A report from an American consular officer in Denmark states that a man in his district desires to purchase hosiery, tailors' braid, and cotton goods. Samples of the braid desired are forwarded and may be examined at the Bureau or its branch offices. (Refer to file No. 68419.)

Hooks and eyes, No. 19210.—A firm in Portugal, writes an American consular officer, wishes to represent manufacturers of hooks and eyes of celluloid, brass, etc., for shoes. Correspondence may be in English.

BRAZIL WANTS SAMPLES OF AMERICAN CORN.

[Consul George H. Pickérell, Para, Sept. 25.]

An exposition now scheduled to open in Para on January 1, 1916, is planned to celebrate the three hundredth anniversary of the founding of this city. The committee having charge of the agricultural section of the exposition, taking advantage of the presence of a large number of people from the interior of the State, most of whom are interested in agriculture, and with the intention of developing a larger interest in agricultural matters, has decided to make a special feature of the development and progress of the corn industry. To this end it addressed the following note to the Para consulate:

The executive committee, desiring to include in the program of the next agricultural exposition a special section containing, besides photographs, samples of the different varieties of corn in the ear most cultivated in the United States and conforming to the standards adopted by that country, has the honor to solicit your official aid and assistance in the sense of obtaining the objects referred to above.

This would seem to present an excellent opportunity to draw the attention of Brazilian farmers to the high quality of American agricultural machinery.

[The First National Exposition of corn in Brazil, which was held in São Paulo last July, was described in *COMMERCE REPORTS* for August 30. Supplementing this article, Consul Maddin Summers has now forwarded four photographs of the exhibition, furnished him by Count Amadeu A. Barbiellini, its organizer. These photographs (which may be inspected at the Bureau of Foreign and Domestic Commerce and its branch offices by asking for file No. 67516) should be of interest in connection with the above announcement of a second corn exposition.]

RESULTS OF FOREIGN TRADE OPPORTUNITY SERVICE.

Consul F. Willoughby Smith, at Batum, Russia, reports that as a result of a cable which he transmitted in August, and which was published as Confidential Circular No. 802, a large order has been placed by a firm in Baku for wire rope for bailing oil. Consul Smith states that he is informed this order will amount to over \$100,000.

WIRE-DRAW RESULTS, BOSTON HARBOR AND EAST RIVER.

The value of the wire drag in finding hidden rocks and shoals is strikingly exemplified by the results recently obtained in the approaches to Boston Harbor and in East River by the United States Coast and Geodetic Survey.

In the approaches to Boston Harbor, a depth of 22 feet was found where $4\frac{1}{2}$ fathoms was previously charted, north of Outer Brewster Island. Tewksbury Rock was found to extend to the northward with a least depth of 27 feet, about 350 meters from the 8-foot spot. A depth of 27 feet was found between the Rock and Outer Brewster Island, where 29 feet was charted. On Martins Ledge 14 feet was found where 17 feet was charted, and 18 feet where $3\frac{1}{2}$ fathoms was charted. On Boston Ledge 18 feet was found where 4 fathoms was charted. The shoal off the north end of Point Allerton was found to have less depth than charted. A 23-foot shoal was found east from Point Allerton Beacon. A depth of 26 feet was found on the charted $4\frac{1}{2}$ -fathom shoal in the channel ESE. from Boston Lighthouse.

In East River, in addition to shoals previously reported, nine shoal spots, with depths from 20 to 27 feet, were found to the westward of North Brother Island. In this work, the drag was set at a maximum effective low-water depth of 40 feet. Many shoals were found which were entirely unsuspected. Shoals with less than 23 feet are dangerous at low tide to the deeper draft vessels passing through East River into Long Island Sound.

INVESTIGATION OF DAMAGE BY SMELTER SMOKE.

The Report of the Selby Smelter Commission has been published by the United States Bureau of Mines.

It describes in detail the methods used, some of them new, in determining the contamination of the air and the damage to trees, crops, and live stock by the smoke and fumes from the Selby Smelter, in California, and gives the conclusions of the commission on the methods used by the smelter company to prevent injury. The bulletin is of especial interest to metallurgical companies, municipal or State boards of health, and persons investigating damage by smelter smoke.

Owing to the expense involved in the preparation and publication of this bulletin and the limited printing funds available, it has been necessary to place a price of \$1.25 on the work. Orders should not be sent to the Bureau of Mines, but should be addressed to the Superintendent of Documents, Government Printing Office, Washington, D. C.

MERCHANDISE NEEDS IN AUSTRALIA.

[Sydney Herald, Oct. 2.]

General merchants were fairly busy yesterday, and on the whole prices were firm. There was a strong inquiry for harvesting requisites and hay forks, and hay rakes moved out freely. Fencing wire was still lightly stocked. No. 8 black was almost unobtainable, and the few small parcels available were worth \$80.30 a ton. To arrive shortly \$79 would have been accepted. The *Marie*, which is now in Melbourne, carries a shipment of wire for Sydney.

BRITISH DYESTUFF SITUATION.

[Vice Consul Hamilton C. Claiborne, Bradford, Oct. 16.]

By reason of the lack of fast colors, gray has become very fashionable in England, and the large quantities of dark-brown colors on hand before the war are said to be responsible for the present vogue of browns. Scarlets, pinks, and blues are reported to be very scarce, and in some instances fabrics containing such colors are sold without guarantee as to fastness.

There appeared recently in the local press the following notice in regard to the shortage of dyestuffs:

The old-fashioned processes that have been brought into use again owing to the scarcity of synthetic colors often give good enough results, but a great drawback is that they take up so much time. Take as an example the dyeing of a black all-wool serge. Before the war the dyeing was done in one bath with acid black in an hour to an hour and a half. Now the pieces have to be treated to two baths, first with bichromate and then with logwood, and the time of dyeing is doubled. The slower methods and the shortage of labor combined have reduced the output of some houses as much as 40 per cent. There is consequently much congestion and delay, which affect manufacturers and merchants very seriously by retarding the circulation of their capital and exposing them to the risk of a falling market.

At a recent meeting of color users held in Manchester a committee was formed to keep in touch with the British and Swiss sources of supply and to cooperate with the board of trade in obtaining the maximum amount of dyestuffs.

SWISS DYE MAKERS' PROFITS.

[Manchester Guardian, Oct. 29.]

The report of the Society of Chemical Industry, Basel, the largest of the Swiss color firms, shows a net profit (after providing \$535,000, as against \$175,000 last year, for depreciation, and placing \$195,000 towards a new pensions fund) of \$496,000, as against \$350,000. It is proposed to pay 16 per cent, as against 6 per cent and previous dividends of 10 per cent. Stocks are valued at \$462,000 only, as against \$1,324,000 last year, due to the demand for dyestuffs being so brisk that virtually no stocks are now held. The Clayton Aniline Co., Manchester, which is controlled by the Basel concern, is stated to have been very well occupied throughout the year, and the financial results have quite come up to expectations. A holding has been acquired in the Swiss Soda Works, Zurzach, a company formed for the manufacture of soda ash and caustic soda. This is the first undertaking of its kind in Switzerland, previous supplies of these chemicals having been obtained from Germany.

CALAIS LACE MAKERS ADVANCE PRICES.

[Consul J. B. Milner, Calais, Oct. 15.]

Since August 21 the great majority of Calais lace manufacturers have increased their prices, either by adding a certain percentage to the old prices or reducing former discounts; in some instances both price and discount are changed. In all these modifications the meaning is an increase of the market value of machine-made laces here of at least 10 per cent. The reason for these advances is found in the higher price of thread, a considerable demand for the kinds of lace sought by American import houses, and a shortage of help in the factories.

BRAZILIAN COFFEE EXPORTS IN SEPTEMBER.

[Consul Charles L. Latham, Santos, Oct. 6.]

During September 1,015,725 bags of coffee were shipped from the port of Santos, against exports totaling 1,125,295 bags in August and 535,295 bags in July. Of the September shipments 300,000 bags (of 132.38 pounds each) went to New York, 242,042 bags to New Orleans, 74,377 to Havre, 65,792 to Stockholm, 60,797 to Genoa, 55,965 to Amsterdam, 37,176 to Goteborg, 35,791 to London, 33,000 to Christiania, 27,657 to Marseille, 27,250 to Malmo, 16,934 to Buenos Aires, 15,753 to Copenhagen, 10,000 to Alexandria.

In the last week of the month the ruling freights for coffee were: To London, per 1,000 kilos (2,204.6 pounds), 110 shillings (\$26.75) and 5 per cent; to Havre, per 900 kilos (1,984.2 pounds), 120 francs (\$23.15) and 10 per cent; Genoa, per 1,000 kilos, 140 francs (\$27) and 10 per cent; Marseille, per 1,000 kilos, 145 francs (\$28); Bordeaux, per 900 kilos, 120 francs (\$23.15) and 10 per cent; ports in Spain, per 1,000 kilos, 130 francs (\$25.10) and 5 per cent; New York and New Orleans, per 60 kilos (132.38 pounds), \$0.75 and 5 per cent; Amsterdam, per 1,000 kilos, 110 and 130 shillings (\$26.75 and \$31.65) and 5 per cent; Stockholm, per 1,000 kilos, 150 shillings (\$36.50) and 5 per cent; Buenos Aires and Montevideo, 2.30 milreis (about \$0.58) per bag.

[Brazil's exports of coffee for the past two years were given in **COMMERCE REPORTS** for Oct. 30, 1915.]

ARGENTINE NOTES.

[Revista de Economía y Finanzas, Sept. 20.]

The total exports from Argentina during the first eight months of 1915 show an increase of 45 per cent in quantity and more than 50 per cent in value over the exports in the corresponding period of 1914. The gain in wheat alone was 160 per cent, the shipments amounting to 2,400,000 tons, or 1,470,000 tons more than in the first eight months of last year. Barley shipments increased 150 per cent, and increases of 40 to 80 per cent were shown in the export figures for other cereals and for lard, tallow, and jerked beef. This gain in the exports of foodstuffs is credited to the abnormal conditions in Europe.

[Review of the River Plate, Sept. 24.]

The recommendation of the Public Works committee authorizing the Central Cordoba Railway to construct a branch line to Centeno station was recently approved in the Senate.

The Province of Buenos Aires Water Works Co. is shortly to improve the water service of Adrogué by installing a reservoir tank of 2,400 cubic meters' capacity, a new well, two pumps, and a new machinery house, at an estimated cost of 143,441 paper pesos [\$63,114 American money].

Consular Trade Conferences.

Vice Consul Eugene Nabel, of Amsterdam, is on leave of absence in the United States, his address being 174 Broad St., Providence, R. I.

BRITISH COLUMBIA EXPORTS TO UNITED STATES.

[Vice Consul G. C. Woodward, Vancouver, British Columbia, Oct. 18.]

The exports from British Columbia to the United States, invoiced through the consulate general at Vancouver, for the three quarters ended September 30, 1915, including returned American goods and shipments to the Philippine Islands, amounted to \$18,158,852, as compared with \$10,454,091 for the corresponding period of the previous year, an increase of \$7,704,761. There was a decrease of \$489,460 in the value of returned American goods. The principal exports were:

Articles.	1914	1915	Increase (+) or decrease (-).
Animals	\$16,648	\$29,241	+ \$12,593
Animal products	619,040	404,115	- 214,925
Bonds		1,161,349	+1,161,349
Building material	68,729	44,375	- 24,354
Bullion	1,612,195	1,850,657	+ 238,462
Fish	430,709	278,871	- 151,838
Fruit, and products of	21,727	109,244	+ 87,517
Hardware and machinery	16,873	15,783	- 1,090
Household goods	208,627	208,460	+ 2,833
Junk	46,745	73,640	+ 26,895
Ores	1,602,494	6,523,534	+4,921,050
Provisions	352,401	313,425	- 38,976
Rubber		630,116	+ 630,116
Wood manufactures	4,021,635	5,622,451	+1,600,816
Other	150,677	147,941	- 2,736
Returned American goods	9,163,490	17,379,202	+8,215,712
Exports to Philippines	1,253,384	763,928	- 489,460
Exports to Philippines	37,213	15,722	- 21,491
Total	10,454,091	18,158,852	+7,704,761

The increase in exports of ore reported was due principally to the closing of the consular agency at Nelson, British Columbia. The invoicing of shipments from that district was diverted to the offices at Fernie and Vancouver.

NEW OLIVE-OIL PRICES IN SYRIA.

[Consul General W. Stanley Hollis, Beirut, Syria, Sept. 20.]

A small quantity of the olive oil of the new crop has been offered for sale on the local markets. This new oil always has a slightly strong flavor, which always disappears after the oil has been kept for some time. People prefer to buy oil for present consumption from the last crop and to wait some time before buying from the new crop. It was expected that the price of olive oil would continue to advance on account of the unfavorable crop this year, chiefly caused by climatic conditions and by the dense swarms of locusts which devastated the country, but, in view of the stringent economic situation of the country, the olive growers are more or less inclined to dispose of their crops as soon as possible, and to have cash rather than to keep their oil in stock.

The present market prices of olive oil are as follows: First quality, 16 piasters per oke (19.9 cents per pound); second quality, 14.20 piasters per oke (16.11 cents per pound). The piaster quoted is the market piaster, valued at 0.035306 in American currency.

NOTES FROM SOUTH INDIA.

[Consul Lucien Memminger, Madras, Sept. 21.]

Madras Port Trust Revenue and Expenditures.

From the administration report of the Madras Port Trust for 1914-15 it appears that the receipts of the trust from all sources were \$407,887, against \$495,572 (of which \$16,222 was the port fund contribution) in 1913-14. This represents a decrease of 17.7 per cent, or, if the port fund contributions be excluded, of about 14.9 per cent in the year under review.

The gross expenditure out of revenue, not counting contributions made by revenue to capital or repayment of debt, was \$306,980, or 75.26 per cent of the gross receipts; the corresponding percentage for 1913-14 was 62.97, and the average for the past 28 years 69.80. Excluding from working expenses the interest on loans, which in the year under review was \$125,686, actual working expenses came to 44.44 per cent of the regular harbor earnings, against 41.97 per cent in 1913-14.

Factories in Madras.
